Mr. COCKRELL. I ask that the report in regard to the catalogue of documents be printed in the RECORD and also as a separate document.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE LIBRARY,
Washington, D. C., July 28, 1893.

SIR: It gives me pleasure to inform you that the catalogue of the Senate library and its annex, which you requested me to prepare, was finished to-day.

You will remember that this request involved another, namely, that I hunt diligently in the annex to find the Senate documents of the first thirteen Congresses, and the House documents of the first nine Congresses, none of which were in this library. This involved a thorough search among 40,000 volumes stored in the basement of the Capitol. Some idea of the work performed may be gained by the statement that thousands of these volumes are arranged from three to five rows deep on their shelves, making it necessary in all such cases to remove from one to four rows of books for the sake of examining those in the back rows. Many of the cases are fifteen shelves high, and it required a ladder to reach them.

But the labor expended was abundantly rewarded. Seventy-nine of the lost volumes were found. They contain Senate documents of all the thirteen missing Congresses except the Second, and House documents of all the nine missing Congresses. It is quite possible that no Senate documents were printed by the Second Congress. Their Journal index of that Congress contains no reference to printing. The House of Representatives, by resolution, directed all heads of Departments to send their annual reports to that body; hence there was very little need of Senate printing. Or it may be that all the Senate volumes of that Congress were destroyed by the British in 1814, for we learn by Government documents that "the north wing of the Capitol was left after the fire in a much more ruinous state than the south wing."

A few of the seventy-nine volumes are bound in manuscript, just as they came from the authors. Some of them, it is believed, have never been printed.

Doubtless it will be a pleasure to you and to the Senate to know that these volumes have been found; for by their acquisition this library has become the best in the world for reference to the proceedings, the debates, and the documents of the United States Congress. This is verified by correspondence with the Boston Public Library and the British Museum, which are the best equipped with this line of books of all the libraries outside of this city.

During the first fourteen Congresses none of the documents were numbered, nor was their character indicated by marks. Each must be carefully examined to ascertain whether it is an executive or a miscellaneous document or a committee report. Nor are these volumes indexed, and very few of them have title pages. Further: In many volumes the documents of both Houses of Congress are bound together. There was no uniformity in this matter. Whoever had charge of the work seems to have gathered up whatever documents were at hand and had them bound. Hardly any two books have the same documents. They are nearly alike, but not duplicates.

For these reasons, and the added one that no consolidated index of the Senate documents has ever been printed, I have amplified the first fourteen Congresses of this catalogue nearly to an index. It must be a great convenience to all who have occasion to examine the books.

The remainder of this catalogue must speak for itself.

Hoping that its arrangement and mode of preparation will meet your expectation, it is herewith transmitted for your consideration.

On the first day of this month the number of books in the library and its annex was 74,956.

Respectfully,

E. T. CRESSEY,
Assistant Librarian.

Gen. ANSON G. McCOOK,
Secretary of the Senate.

REPORTS OF SERGEANT-AT-ARMS.

The VICE-PRESIDENT laid before the Senate a communication from the Sergeant-at-Arms of the Senate, submitting a full and complete account of all property belonging to the United States in his possession August 7, 1893; which was read, and, with the accompanying papers, ordered to lie on the table and be printed.

He also laid before the Senate a communication from the Sergeant-at-Arms of the Senate, transmitting a full and complete statement of all money received from sale of condemned property belonging to the United States from December 3, 1892, to date, and disposition made of same; which was read, and, with the accompanying papers, ordered to lie on the table and be printed.

SWEARING IN OF SECRETARY COX.

Mr. GORMAN. I suggest to the Chair, in view of the action taken at the special session of the Senate in regard to the officers of the body, that the Secretary-elect be now sworn in.

The VICE-PRESIDENT. The Secretary-elect of the Senate will come forward and receive the oath of office.

Mr. William R. Cox was escorted to the Vice-President's desk by Mr. Anson G. McCook, and the oath prescribed by law was administered to him.

NOTIFICATION TO THE HOUSE.

Mr. VOORHEES offered the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Secretary inform the House of Representatives that a quorum of the Senate is assembled, and that the Senate is ready to proceed to business.

PRESIDENT PRO TEMPORE OF THE SENATE.

Mr. COCKRELL. It gives me great pleasure to offer the resolution which I send to the desk and ask for its present consideration.

The resolution was considered by unanimous consent, and agreed to; as follows:

Resolved, That the Secretary inform the House of Representatives that the Senate has elected ISHAM G. HARRIS, a Senator from the State of Tennessee, President of the Senate *pro tempore*, in place of CHARLES F. MANDERSON, resigned, to hold and exercise the office in the absence of the Vice-President from time to time during the pleasure of the Senate in accordance with the terms of its resolution passed March 12, 1890.

NOTIFICATION OF ELECTION OF SECRETARY.

Mr. RANSOM submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That the Secretary wait upon the President of the United States and inform him that WILLIAM R. COX, of North Carolina, has been elected Secretary of the Senate; and that he make a similar communication to the House of Representatives.

NOTIFICATION TO THE PRESIDENT.

Mr. HARRIS submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That a committee consisting of two members be appointed, to join such committee as may be appointed by the House of Representatives, to wait upon the President of the United States and inform him that a quorum of each House is assembled, and that Congress is ready to receive any communication he may be pleased to make.

By unanimous consent, the Vice-President was authorized to appoint the committee on the part of the Senate, and Mr. HARRIS and Mr. SHERMAN were appointed.

HOUR OF MEETING.

On motion of Mr. FAULKNER, it was

Ordered, That the hour of the daily meeting of the Senate be 12 o'clock meridian, until otherwise ordered.

DEATH OF SENATOR STANFORD.

Mr. WHITE of California. Mr. President, it becomes my painful duty to announce to the Senate the death of my late colleague, Leland Stanford. I shall hereafter request the Senate to set apart a day for such remarks with reference to his memory as may be deemed proper. At present I shall content myself with moving that, as a mark of respect to the memory of the deceased, the Senate do now adjourn.

The motion was agreed to; and (at 12 o'clock and 25 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, August 8, 1893, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

MONDAY, *August 7, 1893.*

The members-elect of the Fifty-third Congress assembled in their Hall at 12 o'clock noon, and were called to order by Mr. JAMES KERR, Clerk of the last House of Representatives.

The CLERK. On the 30th of June, 1893, the President of the United States issued the following proclamation:

By the President of the United States of America.

A PROCLAMATION.

EXECUTIVE MANSION, *Washington, D. C., June 30, 1893.*

Whereas the distrust and apprehension concerning the financial situation, which pervade all business circles, have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of manufacture, and bring distress and privation to our farmers, and withhold from our workingmen the wage of labor:

And whereas the present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress:

Now, therefore, I, Grover Cleveland, President of the United States, in performance of a constitutional duty, do by this proclamation declare that an extraordinary occasion requires the convening of both Houses of the Congress of the United States at the Capitol in the city of Washington on the 7th day of August next, at 12 o'clock noon, to the end that the people may be relieved, through legislation, from present and impending danger and distress.

All those entitled to act as members of the Fifty-third Congress are required to take notice of this proclamation and attend at the time and place above stated.

Given under my hand and the seal of the United States at the city of Washington on the 13th day of June, in the year of our Lord 1893, and of the Independence of the United States the 117th.

[SEAL.] GROVER CLEVELAND.

By the President:

ALVEY A. ADEE,
Acting Secretary of State.

The time designated by this proclamation having arrived for the meeting of the Fifty-third Congress of the United States, the Clerk of the preceding House of Representatives will call the roll, which, by law, he is authorized to prepare, of the members-elect, pending which all persons not entitled to the privileges of the floor are requested to retire, in order that the members-elect may occupy the seats which have been prepared for them; and the Doorkeeper and the Sergeant-at-Arms are requested to see to it that the rules of the House in reference to admissions to the floor are rigidly and strictly enforced.

The Clerk also requests that the Representatives-elect will respond promptly and distinctly to their names as called, in order that their presence may be ascertained without difficulty.

The roll was then called, and the following-named members answered:

ALABAMA.

Richard H. Clarke.
Jesse F. Stallings.
William C. Oates.
Gaston A. Robbins.
James E. Cobb.
John H. Bankhead.

After the State of Michigan had been called, the Clerk said:

The Clerk begs leave to state, in reference to the certificate of election from the Fifth Congressional district of Michigan, that on December 22, 1892, there was filed in his office a certificate of election to the House of Representatives from that district, in due and authorized form, showing the election of Hon. George F. Richardson as a Representative to the Fifty-third Congress of the United States, and the name of the said George F. Richardson was, by the Clerk of the House, then duly placed upon the roll of Representatives-elect. Exactly similar certificates in every respect, certified to by the same State officers, were filed at other dates, as late as April 3, 1893, showing the election of Representatives to Congress from all the other districts of Michigan, and similar action was taken in each case.

On February 20, 1893, there was delivered to the Clerk an alleged certificate of election, signed by other persons (the State officers required by law to certify the election of members of Congress having been changed in the interim), which said certificate, accompanied by sundry papers, claimed to show the election of Hon. Charles E. Belknap, from the Fifth Congressional district of Michigan, as a Representative to the Fifty-third Congress. The Clerk refused to strike off the roll the name of George F. Richardson as a member-elect from this district, having already exercised the authority given to him by law. The matter is therefore submitted to the House, which, when organized, is, under the Constitution and the law, judge of the elections, returns, and qualifications of its own members.

The roll call having been concluded,

The CLERK. The Clerk announces that upon the roll call 348 Representatives-elect have responded to their names, being more than a quorum. The Clerk is now prepared to receive a motion looking to the election of a Speaker, as no other business is in order until a Speaker is elected.

ELECTION OF SPEAKER.

Mr. HOLMAN. Mr. Clerk, I move that the House proceed to the election of Speaker of the House of Representatives of the Fifty-third Congress.

The motion was agreed to.

The CLERK. Nominations for Speaker are now in order.

Mr. HOLMAN. I have the honor to place in nomination for election as Speaker Hon. CHARLES F. CRISP, of the State of Georgia. [Applause on the Democratic side.]

Mr. HENDERSON of Illinois. I have the honor to place in nomination for the same office Hon. THOMAS B. REED, a Representative-elect from the State of Maine. [Applause on the Republican side.]

Mr. KEM. I have the honor to place in nomination for the same position Hon. JERRY SIMPSON, of Kansas.

The CLERK (after a pause). If there be no objection, the nominations will be considered as closed.

There was no objection.

The CLERK. The Clerk will now proceed to call the roll of Representatives-elect, in order that their choice for Speaker may be ascertained.

Mr. BURROWS. Mr. Clerk, I believe it is usual to appoint tellers to ascertain the result of the election for Speaker.

The CLERK. The gentleman is correct; the matter was momentarily overlooked. The Clerk will appoint as tellers to assist in the tabulation of the vote Hon. A. G. CARUTH, member-elect from the State of Kentucky; Hon. HENRY H. BINGHAM, member-elect from the State of Pennsylvania; Hon. JOSEPH H. O'NEIL, member-elect from the State of Massachusetts, and Hon. ALBERT J. HOPKINS, member-elect from the State of Illinois. The gentlemen designated will kindly take their places at the Clerk's desk.

The tellers having taken their places, the House proceeded to vote *viva voce* for Speaker.

At the conclusion of the roll call,

Mr. CARUTH said: The tellers report that the total number of votes cast is 343, of which number Hon. CHARLES F. CRISP, of Georgia, has received 213, Hon. THOMAS B. REED, of Maine, 121, and Hon. JERRY SIMPSON, of Kansas, 7.

The following is the vote in detail:

FOR SIMPSON—7.

Baker, Kans.	Boen,	Harris,	Kem,
Bell, J. C.	Davis,	Hudson,	Pence.

The CLERK. Hon. CHARLES F. CRISP, a Representative-elect from the State of Georgia, having received a majority of all the votes cast, is duly elected Speaker of the House of Representatives for the Fifty-third Congress. [Applause.]

ADDRESS OF THE SPEAKER.

Mr. HOLMAN of Indiana, Mr. REED of Maine, and Mr. SIMPSON of Kansas, having been designated by the Clerk for that purpose, conducted Mr. CRISP to the chair.

The Speaker-elect, who was greeted with loud applause, said:

Representatives, profoundly grateful for this mark of your confidence, I shall strive to prove in some degree worthy of it by an honest effort to discharge the duties of the office upon which I am about to enter with fidelity, with courtesy, and with the strictest impartiality. [Applause.]

I am now ready to take the oath of office.

Mr. O'NEILL of Pennsylvania having been designated by the Clerk, administered to the Speaker-elect the oath prescribed by law.

PRAYER.

The SPEAKER. Before the Speaker proceeds to administer the oath of office to members, prayer will be offered by the Chaplain of the last House of Representatives.

Rev. W. H. MILBURN, D. D., offered the following prayer:

O God, in Whose hand our breath is, and Whose are all our ways, we devoutly pray that Thy blessing may rest upon Thy honored servants, the President and Vice-President of the United States, the Senators and Representatives now in extraordinary session assembled.

In this critical hour of the nation's life endow them, Thy servants, with supreme statesmanship and patriotism; inspire them with sound judgment and good counsel, that all their deliberations, decisions, and actions may be guided by Thy good Spirit to the welfare, the honor, and the prosperity of all the people.

Bring to naught, O Lord, the selfish schemes of men who seek their private gain in the public misfortunes; restore confidence in the minds of the people, dispel all fright and panic; and grant that the country may soon return to its accustomed way, crowned with prosperity and blessed with peace.

Keep far from our shores the pestilence; cover the homes of the whole land with the shadow of Thy wing; prosper the labor of the farmer, and grant, O Lord, that our whole country may give itself to Thy service, and ever remain as Thine own people. We pray Thee through Jesus Christ, our Saviour. Amen.

SWEARING IN OF MEMBERS.

The SPEAKER then proceeded to administer to the members in attendance the oath of office.

The members presented themselves as their names were called by States, and took respectively the oath of office provided by the law.

When the State of Michigan was called—

Mr. BURROWS. Mr. Speaker, I object to the oath of office being administered to Mr. Richardson, whose name appears on the roll, and hope, in accordance with the usage on such occasions, he will stand aside for the present.

Mr. O'FERRALL. Mr. Speaker, I did not understand the statement of the gentleman from Michigan.

Mr. BURROWS. I asked that Mr. Richardson, whose name appears on the roll as made up by the Clerk, from the State of Michigan, stand aside for the present. I have objected to the oath of office being administered to him.

The SPEAKER. The gentleman from Michigan will stand aside until the completion of the organization of the House.

SWEARING IN OF DELEGATES.

After the oath of office had been administered to the members-elect,

The SPEAKER said: The Clerk will now call the roll of Delegates elected to this House, and those who are present will also be sworn in.

The roll of Delegates being called, all the Delegates elected to the Fifty-third Congress came forward and took the oath of office required by law.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. PLATT, one of its clerks, announced that the Senate had elected ISHAM G. HARRIS, a Senator from the State of Tennessee, as President *pro tempore* of the Senate, in place of CHARLES F. MANDERSON, resigned.

Also that WILLIAM R. COX, of North Carolina, had been elected Secretary of the Senate.

The message also notified the House that a quorum of the Senate had assembled and was ready to proceed to business.

Also that a committee, consisting of two members, Mr. HARRIS and Mr. SHERMAN, had been appointed to join such committee as may be appointed by the House to wait upon the President of the United States and inform him that a quorum of each House had assembled, and that Congress was ready to receive any communication he may see proper to make.

CONTESTED SEAT, FIFTH DISTRICT OF MICHIGAN.

Mr. O'FERRALL. Mr. Speaker, I offer the resolution which I send to the desk.

The Clerk read as follows:

Resolved, That George F. Richardson be now sworn in as a Representative in this Congress from the Fifth district of the State of Michigan.

Mr. BURROWS. Mr. Speaker, I offer the resolution I send to the desk as a substitute for that offered by the gentleman from Virginia.

The Clerk read as follows:

Whereas the credentials upon which George F. Richardson claims a seat in the Fifty-third Congress from the Fifth Congressional district of the State of Michigan have been annulled and made void by reason of the judgment of the supreme court of that State; and

Whereas in pursuance and in compliance with such judgment and with the laws of said State, the State board of canvassers of Michigan have determined, declared, and certified that Charles E. Belknap is duly elected a Representative to the Fifty-third Congress of the United States of America from the Fifth Congressional district of the State of Michigan: Therefore,

Resolved, That Charles E. Belknap is entitled to be sworn in as a member of this House on his *prima facie* case.

Mr. O'FERRALL. Mr. Speaker, I demand the previous question on the original resolution and the amendment offered by the gentleman from Michigan.

Mr. BURROWS. Do I understand the gentleman from Virginia to demand the previous question?

Mr. O'FERRALL. I do.

Mr. BURROWS. That will cut off debate.

Mr. O'FERRALL. No, it will leave an hour, I understand, under the rules.

Mr. BURROWS. But we have no rules now.

Mr. O'FERRALL. Well, under the practice that prevails.

Mr. BURROWS. I hope the gentleman will not do that.

Mr. O'FERRALL. I do not desire to cut off debate. What time does the gentleman desire?

Mr. BURROWS. I should like to take the floor in my own right. I think I can get through with a statement of the case inside of an hour.

Mr. O'FERRALL. It seems to me that an hour ought to be sufficient altogether. Would the gentleman not be content with thirty minutes?

Mr. BURROWS. Mr. Speaker, there will be no time occupied on this side that is not necessary for a proper presentation of the case. I presume an hour will be ample for that purpose.

Mr. O'FERRALL. Say thirty minutes?

Mr. BURROWS. It would not be sufficient. An hour on this side will possibly be consumed. But, as I have said, there is no disposition to occupy time uselessly.

Mr. O'FERRALL. Very well, I am content. I shall agree to two hours' debate. One hour on each side, to be controlled on one side by the gentleman from Michigan and the other by myself.

The SPEAKER. Without objection that arrangement will be considered as agreed to.

Mr. HOPKINS of Illinois. But, Mr. Speaker, one moment. If I understand the resolution of the gentleman from Virginia, it provides for immediate action upon this case. It seems to me that there ought to be a little time left for those persons who may believe that this case should go to the committee.

Mr. OATES. Mr. Speaker, I hope the gentleman from Virginia will consent to let this matter go over until to-morrow.

Mr. O'FERRALL. What was the suggestion of the gentleman from Illinois?

Mr. HOPKINS of Illinois. I suggested that this be left open, so that if the House desires it the matter could be remitted to the Committee on Elections without seating either member.

Mr. OATES. Mr. Speaker, I request my friend from Virginia [Mr. O'FERRALL] to ask the postponement of the consideration of this resolution until to-morrow, or at least until after the members have drawn seats.

Mr. REILLY. I hope that will be done. That is a very good suggestion.

Mr. SPRINGER. I desire to include in that request the privilege that Mr. Richardson have his name called, and that he be permitted to draw a seat when his name is called, as if he were sworn in.

Mr. BURROWS. Oh no; I shall have to object to that.

Mr. SPRINGER. Unless that is done, I shall object to the request for postponement. He ought to be permitted to draw his seat.

The SPEAKER. The gentleman from Virginia [Mr. O'FERRALL] is recognized. The Chair will suggest to the gentleman, if it be agreeable to the House, that before entering upon the consideration of the right of this gentleman to be sworn in, the House might, by unanimous consent, be organized by the election of the other officers of the House, and the usual resolutions as to notification of the President and Senate might be adopted, so that there would be no delay in that respect.

Mr. O'FERRALL. I have no objection to that.

Mr. REILLY. I hope the gentleman from Michigan [Mr. BURROWS] will agree to a postponement of the consideration of the matter to which he has referred until to-morrow or some other day, and to let the organization of the House proceed regularly.

Mr. BURROWS. The suggestion just made is to suspend proceedings in reference to this matter until the organization of the House can be perfected, and to that there will be no objection.

Mr. HOLMAN. Mr. Speaker——

The SPEAKER. If there be no objection, the Chair will recognize the gentleman from Indiana [Mr. HOLMAN].

Mr. O'FERRALL. Is it understood that the case will retain its status?

The SPEAKER. The Chair understands that. It will retain its exact status.

ELECTION OF CLERK AND OTHER OFFICERS.

Mr. HOLMAN. Mr. Speaker, I submit the resolution which I send to the Clerk's desk, and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That James Kerr, of the State of Pennsylvania, be, and is hereby, elected Clerk of the House of Representatives of the Fifty-third Congress;

That Herman W. Snow, of the State of Illinois, be, and is hereby, elected Sergeant-at-Arms of the House of Representatives of the Fifty-third Congress;

That Alvin B. Hurt, of the State of Tennessee, be, and is hereby, elected Doorkeeper of the House of Representatives of the Fifty-third Congress;

That Lycurgus Dalton, of the State of Indiana, be, and is hereby, elected Postmaster of the House of Representatives of the Fifty-third Congress; and

That the Rev. Samuel W. Haddaway, of the State of Maryland, be, and is hereby, elected Chaplain of the House of Representatives of the Fifty-third Congress.

Mr. HENDERSON of Illinois. Mr. Speaker, I offer an amendment to the resolution just read, which amendment is in the nature of a substitute, and I ask the Clerk to read it.

The SPEAKER. The Clerk will report the resolution offered as a substitute by the gentleman from Illinois [Mr. HENDERSON].

The Clerk read as follows:

Amend by striking out all after the word "Resolved" and insert the following:

"That Edward McPherson, of the State of Pennsylvania, be, and is hereby, elected Clerk of the House of Representatives of the Fifty-third Congress.

"That Adoniram J. Holmes, of the State of Iowa, be, and is hereby, elected Sergeant-at-Arms of the House of Representatives of the Fifty-third Congress.

"That Charles W. Adams, of the State of Maryland, be, and is hereby, elected Doorkeeper of the House of Representatives of the Fifty-third Congress.

"That James W. Hathaway, of the State of Montana, be, and is hereby, elected Postmaster of the House of Representatives of the Fifty-third Congress.

"That Rev. Horace Reed, of the State of Illinois, be, and is hereby, elected Chaplain of the House of Representatives of the Fifty-third Congress."

The substitute was not agreed to.

The SPEAKER. The question now is upon agreeing to the resolution offered by the gentleman from Indiana [Mr. HOLMAN].

The resolution was agreed to.

SWEARING IN OF OFFICERS-ELECT.

The SPEAKER. The gentlemen named in the resolution just agreed to will come forward and take the oath of office.

The oath of office was then administered by the Speaker to the officers-elect of the House.

NOTIFICATION OF THE PRESIDENT AND SENATE.

Mr. McMILLIN. Mr. Speaker, I offer for present consideration the resolution which I send to the Clerk's desk.

The Clerk read as follows:

Resolved, That the Clerk be instructed to inform the President of the United States that the House of Representatives has elected CHARLES F. CRISP, a Representative from the State of Georgia, Speaker, and JAMES KERR, a citizen of the State of Pennsylvania, the Clerk of the House of Representatives of the Fifty-third Congress.

The resolution was agreed to.

Mr. OUTHWAITE. Mr. Speaker, I submit for present consideration the resolution which I send to the Clerk's desk.

The resolution was read, as follows:

Resolved, That a message be sent to the Senate to inform that body that a quorum of the House of Representatives have assembled; that CHARLES F. CRISP, a Representative from the State of Georgia, has been elected Speaker; that JAMES KERR, a citizen of the State of Pennsylvania, has been elected Clerk, and that the House is ready to proceed to business.

The resolution was agreed to.

Mr. SPRINGER. Mr. Speaker, I submit for immediate consideration the resolution which I send to the Clerk's desk.

The resolution was read, as follows:

Resolved, That a committee of three be appointed by the Speaker on the part of the House of Representatives, to join the committee appointed on the part of the Senate, to wait on the President of the United States and notify him that a quorum of the two Houses has assembled, and that Congress is ready to receive any communication he may be pleased to make.

The resolution was agreed to; and the Speaker appointed as such committee on the part of the House Mr. SPRINGER, Mr. McMILLIN, and Mr. REED.

CONTESTED SEAT, FIFTH DISTRICT OF MICHIGAN.

Mr. O'FERRALL. Now, Mr. Speaker, there seems to be a general disposition upon the part of members of the House to go into the drawing of seats before debate upon this question, which will perhaps occupy some time, is entered upon; and unless there be objection, I will move that we now proceed to the drawing of seats, and that this matter be taken up immediately after that shall have been completed.

Mr. BURROWS. There is no objection on this side to the request of the gentleman from Virginia.

The SPEAKER. Unanimous consent is asked that the further consideration of the resolution offered by the gentleman from Virginia be postponed until after the drawing of seats. Is there objection?

Mr. BROWN. Mr. Speaker, I suggest to the gentleman from Virginia that this matter be postponed until to-morrow, for two reasons. First, it would take quite a while to draw seats; and next, the attention of the House has been called to this question and members will be better prepared and informed to-morrow to form a judgment on the matter than they could be to-day.

The SPEAKER. The gentleman from Indiana asks unanimous consent that this matter go over until to-morrow.

Mr. O'FERRALL. Well, Mr. Speaker, after we get through with the drawing of seats, if there be any general disposition on the part of the House to postpone the consideration of the resolution until to-morrow, I will agree to it, but for the present I submit my request that the matter be postponed until after the drawing of seats.

The SPEAKER. Is there objection to the request of the gentleman from Virginia, that the consideration of this resolution be postponed until after the drawing of seats? [After a pause.] The Chair hears no objection.

DRAWING OF SEATS.

Mr. SPRINGER. Mr. Speaker, I offer the resolution which I send to the Clerk's desk.

The Clerk read as follows:

Resolved, That the House do now proceed to draw seats for Members and Delegates of the present Congress, in pursuance of Rule XXXII of the last House, and that when the names of members absent from the city on account of sickness are called, seats be selected for them by their colleagues.

Mr. McCREARY of Kentucky. Mr. Speaker, I desire to offer an additional resolution in connection with the drawing of seats.

The SPEAKER. Does the gentleman propose to amend the resolution?

Mr. McCREARY of Kentucky. Yes, sir.

The SPEAKER. The gentleman from Kentucky submits an amendment, which the Clerk will read.

The Clerk read as follows:

Resolved, That all ex-Speakers of the House of Representatives, duly elected members of the Fifty-third Congress, and that all Representatives in said Congress who have been elected to fifteen Congresses shall be called first in the order of their service, and allowed to select their respective seats before the regular drawing for seats commences.

The SPEAKER. The Chair will have the word "provided" inserted in the place of the word "resolved," so as to make the proposition an amendment.

The amendment as modified was agreed to.

Mr. WEADOCK. Mr. Speaker, I want to make an announcement in connection with the drawing of seats. My colleague, Judge Chipman, is detained at home by reason of sickness——

The SPEAKER. The question now is on agreeing to the resolution as amended.

The resolution as amended was agreed to.

Mr. WEADOCK. Mr. Speaker, I desire to state that Judge Chipman is detained at home by reason of illness; and I ask that Mr. BENTON McMILLIN, of Tennessee, be allowed to select a seat for him when his name is called.

The SPEAKER. The gentleman from Michigan states that his colleague [Mr. Chipman] is absent, sick, and asks unanimous consent that when the name of Judge Chipman is called the gentleman from Tennessee [Mr. McMILLIN] be allowed to select a seat for him.

Mr. DINGLEY. Do not the general terms of the resolution cover precisely such a statement?

Mr. HENDERSON of Iowa. It does not say which one of his colleagues shall select his seat.

The SPEAKER. The resolution covers that point, the Chair is informed.

Mr. WEADOCK. The request I submitted substitutes Mr. McMILLIN for a colleague. The desire is, not that one of Judge Chipman's colleagues select his seat, but that Mr. McMILLIN may make the selection; and therefore the motion is proper.

The SPEAKER. Without objection, then, the gentleman from Tennessee [Mr. McMILLIN] will be permitted to make a selection of a seat for the gentleman from Michigan [Mr. Chipman] when his name is called.

There was no objection.

Mr. KILGORE. Mr. Speaker, I think it would be proper to designate the particular portion of the Hall in which the seats of the Republicans and Populists shall be located. I suppose they want to be together.

The SPEAKER. That is a matter which has never been determined by the action of the House.

Mr. KILGORE. It was determined by the House at the organization of the last House.

The SPEAKER. The Chair does not so recollect, but thinks no formal resolution to that effect was agreed to. There may have been some understanding.

Mr. KILGORE. The motion was made by the gentleman from Georgia [Mr. Blount] that the Republicans occupy certain sections.

The SPEAKER. Has the gentleman from Texas any motion to submit?

Mr. KILGORE. I move that the House designate the particular portion of the Hall which the Republicans and the Populists, the minority parties of the House, shall occupy, the Democrats to occupy the remainder of the Hall.

Mr. HOPKINS of Illinois. The Republicans will take care of themselves.

Mr. KILGORE. I move that the Speaker designate the positions they shall occupy.

The SPEAKER. The Chair understands that the custom has always been to permit members to select places where they pleased, and that were unoccupied; and the resolution does not recognize any distinction between Republicans and Democrats. There is, of course, generally a kind of understanding among members as to what part of the Hall they shall be seated in. That is about all that has ever been done, so far as the Chair understands.

Mr. REED. Mr. Speaker, it has always, practically, been the custom for the parties to divide themselves by the main aisle, the Republicans taking this side [indicating] and the Democrats taking the other; and, in case of inequality of numbers, such as unfortunately now exists [laughter], the party which was most numerous took their seats, after they had filled up their own side, in what was left on the other side. That always resulted in filling up when the Republicans were in a minority, as they sometimes were [renewed laughter], from the center aisle as far as it was necessary for them to go. Two years ago, the number of Republicans being small, an understanding was entered into, for the benefit of the other side, by which they were allowed to take this section [pointing to first section west of main aisle]; but there has been a sufficient amount of change to permit us to go back to the old practice; and, after consultation with the Speaker and with several other members, an understanding was arrived at that we should revert to the old custom, and begin at the center aisle. I think that is suitable, proper, and fair, under all the circumstances.

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. SICKLES], the gentleman from Kentucky [Mr. STONE], and the gentleman from Iowa [Mr. HENDERSON] be permitted to select seats before the regular drawing begins.

Mr. GEISSENHAINER. Will the gentleman from Illinois [Mr. SPRINGER] include in his request the name of Dr. ENGLISH of New Jersey?

Mr. HATCH. And also the name of Mr. FYAN of Missouri.

Mr. SPRINGER. I have no objection.

Mr. ENLOE. The name of Mr. CALDWELL of Ohio ought to be added to that list.

The SPEAKER. Is there objection to the request of the gentleman from Illinois [Mr. SPRINGER] that the members named be permitted to draw seats before the regular drawing begins?

Mr. TAYLOR of Indiana. There is. I object.

The SPEAKER. Objection is made. The Clerk will read the rule in relation to the drawing of seats.

The Clerk read as follows:

RULE XXXII.

1. At the commencement of each Congress, immediately after the Members and Delegates are sworn in, the Clerk shall place in a box, prepared for that purpose, a number of small balls of marble or other material equal to the number of Members and Delegates, which balls shall be consecutively numbered and thoroughly intermingled, and at such hour as shall be fixed by the House for that purpose, by the hands of a page, draw said balls one by one from the box and announce the number as it is drawn, upon which announcement the Member or Delegate whose name on a numbered alphabetical list shall correspond with the number on the ball shall advance and choose his seat for the term for which he is elected.

2. Before said drawing shall commence each seat shall be vacated and so remain until selected under this rule, and any seat having been selected shall be deemed forfeited if left unoccupied before the call of the roll is finished, and whenever the seats of Members and Delegates shall have been drawn, no proposition for a second drawing shall be in order during that Congress.

The SPEAKER. The Chair will state that at times in the past some confusion has arisen from gentlemen occupying, even temporarily, seats on the floor before the completion of the drawing. Of course it is tedious for members to remain standing, especially for those whose names are drawn late, but the rule requires that before the drawing begins the seats in the Hall shall be vacated and shall not be occupied by any person for any purpose until selected by members under the rule, and it is obvious that even a temporary occupancy might very much restrict the freedom of members in making their selections. The Chair therefore asks gentlemen to retire to the rear of the railing, leaving the seats free to be selected and occupied as they are drawn.

Mr. CLANCY. Mr. Speaker, my colleague, Mr. Graham, is absent by reason of sickness, and I ask that I be permitted to select a seat for him when his name is called.

The SPEAKER. The gentleman has that right under the order. Under the resolution just adopted the gentleman from Maine, Mr. REED, as ex-Speaker, and the gentleman from Pennsylvania, Mr. O'NEILL, and the gentleman from Indiana, Mr. HOLMAN, who are now serving their fifteenth terms in Congress, are permitted to select seats before the drawing begins.

Mr. REED, Mr. O'NEILL of Pennsylania, and Mr. HOLMAN selected their seats.

The SPEAKER. Before the drawing begins the Chair will request members to answer when their names are called by the Clerk, because on previous occasions some confusion has arisen from uncertainty as to whether certain members were present and exercising their right of selection or not.

Mr. BRYAN (when Mr. McKeighan's name was called). Mr. Speaker, Mr. McKeighan being absent on account of sickness, I ask that my colleague, Mr. KEM, be allowed to draw a seat for him.

The SPEAKER. The Chair will again state that, under the terms of the resolution adopted by the House, where a member is absent any of his colleagues present may select a seat for him.

The name of Mr. Hull being called, Mr. HENDERSON of Iowa stated that he had received a request by telegraph to select a seat for him.

The Clerk having announced that the representation of the Tenth Congressional district of Ohio was vacant—

Mr. GROSVENOR. Mr. Speaker, I desire to inquire whether a seat can now be drawn, to be occupied by the Representative of that district when the vacancy shall have been filled.

The SPEAKER. Not under the terms of the resolution.

The drawing of seats was completed.

DAILY HOUR OF MEETING.

Mr. CATCHINGS submitted the following resolution; which was read, considered, and adopted:

Resolved, That until otherwise ordered, the daily hour of meeting of the House of Representatives shall be at 12 o'clock m.

LEAVE OF ABSENCE.

Mr. Hull, by unanimous consent, obtained leave of absence indefinitely, on account of illness.

CONTESTED SEAT—FIFTH DISTRICT OF MICHIGAN.

Mr. O'FERRALL. Mr. Speaker, I understand there is a general desire on the part of the House that the consideration of the case of Belknap and Richardson upon the question raised by the gentleman from Michigan [Mr. BURROWS] shall go over until to-morrow morning. I therefore give notice (and I do this, I believe, with the assent of the gentleman from Michigan) that immediately after the reading of the Journal to-morrow morning I will call up the matter for consideration. I move that the House do now adjourn.

CHANGES IN MEMBERSHIP OF FIFTY-THIRD CONGRESS.

The SPEAKER. Before taking the question on the motion for adjournment, the Chair will submit, to be printed in the RECORD, a list of changes in the membership of the House since the regular election.

There was no objection.

List of changes since the regular election of the Fifty-third House of Representatives.

District.	Name.	Date of vacancy.	Name of successor.
Seventh Massachusetts.	Henry Cabot Lodge†	Mar. 3, 1893	Wm. Everett.
Fourth Wisconsin	John L. Mitchell†	Mar. 3, 1893	Peter J. Somers.
Eighth Pennsylvania.	Wm. Mutchler*	June 23, 1893	Howard Mutchler.
Tenth Ohio	Wm. H. Enochs*	July 13, 1893	

† Resigned. * Died.

The SPEAKER. The question is on the motion of the gentleman from Virginia [Mr. O'FERRALL], that the House adjourn.

DEATH OF HON. WILLIAM H. ENOCHS.

Mr. GROSVENOR. If the gentleman from Virginia will withdraw that motion for a moment, I desire to announce the death of one of my colleagues.

Mr. O'FERRALL. I withdraw the motion.

Mr. GROSVENOR. Mr. Speaker, the painful duty devolves upon me to announce to the House of Representatives the death of my distinguished colleague, William H. Enochs, a Representative from the State of Ohio, who died at his home in the city of Ironton, Ohio, in the early morning of July 13 last.

I shall not detain the House at this time with any remarks upon his memory. His death came to us all with the suddenness and awfulness of a thunderbolt; and his colleagues upon this floor deeply lament his untimely death. Death came to him without a shadow of warning; and the news of the calamity fell with terrible force upon his family, his large number of personal friends, and the constituency he so well represented on this floor.

At some future time I shall ask the House to devote some time to the consideration of this sad event, and for the present I offer the resolutions which I send to the desk.

The Clerk read as follows:

Resolved, That the House has heard with sincere regret the announcement of the death of Hon. William H. Enochs, late a Representative of the State of Ohio.

Resolved, That the business of the House be suspended in order that the public services and private character of the deceased be thoroughly commemorated.

Resolved, That the Clerk of the House of Representatives be directed to communicate these resolutions to the Senate, and send a duly attested copy to the widow of the deceased.

The SPEAKER. As the Chair understands, these resolutions are offered that they may lie over for action hereafter.

Mr. GROSVENOR. That is the purpose. And now, Mr. Speaker, as a further mark of respect to the memory of the deceased member, I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 3 o'clock and 31 minutes p. m.) the House adjourned.

SENATE.

TUESDAY, *August 8, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

JOHN L. MITCHELL, a Senator from the State of Wisconsin, and ZEBULON B. VANCE, a Senator from the State of North Carolina, appeared in their seats to-day.

The Journal of yesterday's proceedings was read and approved.

MESSAGE FROM THE HOUSE.

Mr. KERR, the Clerk of the House of Representatives, appeared below the bar of the Senate and delivered the following message:

Mr. President, I am directed by the House of Representatives to inform the Senate that a quorum of the House of Representatives has assembled; that CHARLES F. CRISP, a Representative from the State of Georgia, has been elected Speaker; that JAMES KERR, a citizen of the State of Pennsylvania, has been elected Clerk; and that the House is ready to proceed to business.

Also, that a committee of three has been appointed by the Speaker on the part of the House of Representatives, to join the committee appointed on the part of the Senate, to wait on the President of the United States and notify him that a quorum of the two Houses has assembled, and that Congress is ready to receive any communication he may be pleased to make; and that Mr. SPRINGER, Mr. MCMILLIN, and Mr. REED have been appointed such committee on the part of the House.

SENATOR FROM CALIFORNIA.

Mr. WHITE of California presented the credentials of George C. Perkins, appointed by the governor of California a Senator from that State to fill, until the next meeting of the Legislature thereof, the vacancy caused by the death of Leland Stanford; which were read.

Mr. Perkins was escorted to the Vice-President's desk by Mr. WHITE of California, and, the oath prescribed by law having been administered to him, he took his seat in the Senate.

RECESS.

Mr. GORMAN (at 12 o'clock and 18 minutes p. m.). I move that the Senate take a recess until a quarter to 1 o'clock.

The motion was agreed to; and at the expiration of the recess (at 12 o'clock and 45 minutes p. m.) the Senate reassembled.

NOTIFICATION TO THE PRESIDENT.

Mr. HARRIS and Mr. SHERMAN, the committee appointed in conjunction with a similar committee of the House of Representatives to wait upon the President of the United States, appeared below the bar, and

Mr. HARRIS said: Mr. President, the committee appointed to wait upon the President of the United States and inform that a quorum of each of the Houses of Congress had assembled and were ready to receive any communication he might be pleased to send, have performed that duty, and were informed by the President that he would communicate with the two Houses immediately by a message in writing.

PRESIDENT'S MESSAGE.

At 12 o'clock and 47 minutes p. m., Mr. O. L. PRUDEN, one of the secretaries of the President of the United States, appeared below the bar, and said:

Mr. President, I am directed by the President of the United States to deliver to the Senate a message in writing.

The message was received from the secretary, and handed to the Vice-President.

The VICE-PRESIDENT. The Chair lays before the Senate the message of the President of the United States, which the Secretary will read.

The Secretary read the message, as follows:

To the Congress of the United States:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act, and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000. While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion amounted to a little more than $54,000,000, and that during the same period about $49,000,000 were paid by the Treasury in gold for the redemption of such notes.

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations amounting to about $150,000,000 on account of silver purchases, and has as a consequence, for the first time since its creation, been encroached upon.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock. That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been recently drawn from our Treasury and exported to increase the financial strength of foreign nations. The excess of exports of gold over its imports for the year ending June 30, 1893, amounted to more than $87,500,000.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force, leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

At this stage gold and silver must part company and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single handed.

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home, in the stability of currency values that capital

Mr. GEISSENHAINER. Will the gentleman from Illinois [Mr. SPRINGER] include in his request the name of Dr. ENGLISH of New Jersey?

Mr. HATCH. And also the name of Mr. FYAN of Missouri.

Mr. SPRINGER. I have no objection.

Mr. ENLOE. The name of Mr. CALDWELL of Ohio ought to be added to that list.

The SPEAKER. Is there objection to the request of the gentleman from Illinois [Mr. SPRINGER] that the members named be permitted to draw seats before the regular drawing begins?

Mr. TAYLOR of Indiana. There is. I object.

The SPEAKER. Objection is made. The Clerk will read the rule in relation to the drawing of seats.

The Clerk read as follows:

RULE XXXII.

1. At the commencement of each Congress, immediately after the Members and Delegates are sworn in, the Clerk shall place in a box, prepared for that purpose, a number of small balls of marble or other material equal to the number of Members and Delegates, which balls shall be consecutively numbered and thoroughly intermingled, and at such hour as shall be fixed by the House for that purpose, by the hands of a page, draw said balls one by one from the box and announce the number as it is drawn, upon which announcement the Member or Delegate whose name on a numbered alphabetical list shall correspond with the number on the ball shall advance and choose his seat for the term for which he is elected.

2. Before said drawing shall commence each seat shall be vacated and so remain until selected under this rule, and any seat having been selected shall be deemed forfeited if left unoccupied before the call of the roll is finished, and whenever the seats of Members and Delegates shall have been drawn, no proposition for a second drawing shall be in order during that Congress.

The SPEAKER. The Chair will state that at times in the past some confusion has arisen from gentlemen occupying, even temporarily, seats on the floor before the completion of the drawing. Of course it is tedious for members to remain standing, especially for those whose names are drawn late, but the rule requires that before the drawing begins the seats in the Hall shall be vacated and shall not be occupied by any person for any purpose until selected by members under the rule, and it is obvious that even a temporary occupancy might very much restrict the freedom of members in making their selections. The Chair therefore asks gentlemen to retire to the rear of the railing, leaving the seats free to be selected and occupied as they are drawn.

Mr. CLANCY. Mr. Speaker, my colleague, Mr. Graham, is absent by reason of sickness, and I ask that I be permitted to select a seat for him when his name is called.

The SPEAKER. The gentleman has that right under the order. Under the resolution just adopted the gentleman from Maine, Mr. REED, as ex-Speaker, and the gentleman from Pennsylvania, Mr. O'NEILL, and the gentleman from Indiana, Mr. HOLMAN, who are now serving their fifteenth terms in Congress, are permitted to select seats before the drawing begins.

Mr. REED, Mr. O'NEILL of Pennsylania, and Mr. HOLMAN selected their seats.

The SPEAKER. Before the drawing begins the Chair will request members to answer when their names are called by the Clerk, because on previous occasions some confusion has arisen from uncertainty as to whether certain members were present and exercising their right of selection or not.

Mr. BRYAN (when Mr. McKeighan's name was called). Mr. Speaker, Mr. McKeighan being absent on account of sickness, I ask that my colleague, Mr. KEM, be allowed to draw a seat for him.

The SPEAKER. The Chair will again state that, under the terms of the resolution adopted by the House, where a member is absent any of his colleagues present may select a seat for him.

The name of Mr. Hull being called, Mr. HENDERSON of Iowa stated that he had received a request by telegraph to select a seat for him.

The Clerk having announced that the representation of the Tenth Congressional district of Ohio was vacant—

Mr. GROSVENOR. Mr. Speaker, I desire to inquire whether a seat can now be drawn, to be occupied by the Representative of that district when the vacancy shall have been filled.

The SPEAKER. Not under the terms of the resolution.

The drawing of seats was completed.

DAILY HOUR OF MEETING.

Mr. CATCHINGS submitted the following resolution; which was read, considered, and adopted:

Resolved, That until otherwise ordered, the daily hour of meeting of the House of Representatives shall be at 12 o'clock m.

LEAVE OF ABSENCE.

Mr. Hull, by unanimous consent, obtained leave of absence indefinitely, on account of illness.

CONTESTED SEAT—FIFTH DISTRICT OF MICHIGAN.

Mr. O'FERRALL. Mr. Speaker, I understand there is a general desire on the part of the House that the consideration of the case of Belknap and Richardson upon the question raised by the gentleman from Michigan [Mr. BURROWS] shall go over until to-morrow morning. I therefore give notice (and I do this, I believe, with the assent of the gentleman from Michigan) that immediately after the reading of the Journal to-morrow morning I will call up the matter for consideration. I move that the House do now adjourn.

CHANGES IN MEMBERSHIP OF FIFTY-THIRD CONGRESS.

The SPEAKER. Before taking the question on the motion for adjournment, the Chair will submit, to be printed in the RECORD, a list of changes in the membership of the House since the regular election.

There was no objection.

List of changes since the regular election of the Fifty-third House of Representatives.

District.	Name.	Date of vacancy.	Name of successor.
Seventh Massachusetts.	Henry Cabot Lodge†	Mar. 3, 1893	Wm. Everett.
Fourth Wisconsin	John L. Mitchell†	Mar. 3, 1893	Peter J. Somers.
Eighth Pennsylvania.	Wm. Mutchler*	June 23, 1893	Howard Mutchler.
Tenth Ohio	Wm. H. Enochs*	July 13, 1893	

† Resigned. * Died.

The SPEAKER. The question is on the motion of the gentleman from Virginia [Mr. O'FERRALL], that the House adjourn.

DEATH OF HON. WILLIAM H. ENOCHS.

Mr. GROSVENOR. If the gentleman from Virginia will withdraw that motion for a moment, I desire to announce the death of one of my colleagues.

Mr. O'FERRALL. I withdraw the motion.

Mr. GROSVENOR. Mr. Speaker, the painful duty devolves upon me to announce to the House of Representatives the death of my distinguished colleague, William H. Enochs, a Representative from the State of Ohio, who died at his home in the city of Ironton, Ohio, in the early morning of July 13 last.

I shall not detain the House at this time with any remarks upon his memory. His death came to us all with the suddenness and awfulness of a thunderbolt; and his colleagues upon this floor deeply lament his untimely death. Death came to him without a shadow of warning; and the news of the calamity fell with terrible force upon his family, his large number of personal friends, and the constituency he so well represented on this floor.

At some future time I shall ask the House to devote some time to the consideration of this sad event, and for the present I offer the resolutions which I send to the desk.

The Clerk read as follows:

Resolved, That the House has heard with sincere regret the announcement of the death of Hon. William H. Enochs, late a Representative of the State of Ohio.

Resolved, That the business of the House be suspended in order that the public services and private character of the deceased be thoroughly commemorated.

Resolved, That the Clerk of the House of Representatives be directed to communicate these resolutions to the Senate, and send a duly attested copy to the widow of the deceased.

The SPEAKER. As the Chair understands, these resolutions are offered that they may lie over for action hereafter.

Mr. GROSVENOR. That is the purpose. And now, Mr. Speaker, as a further mark of respect to the memory of the deceased member, I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 3 o'clock and 31 minutes p. m.) the House adjourned.

SENATE.

TUESDAY, *August 8, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

JOHN L. MITCHELL, a Senator from the State of Wisconsin, and ZEBULON B. VANCE, a Senator from the State of North Carolina, appeared in their seats to-day.

The Journal of yesterday's proceedings was read and approved.

MESSAGE FROM THE HOUSE.

Mr. KERR, the Clerk of the House of Representatives, appeared below the bar of the Senate and delivered the following message:

Mr. President, I am directed by the House of Representatives to inform the Senate that a quorum of the House of Representatives has assembled; that CHARLES F. CRISP, a Representative from the State of Georgia, has been elected Speaker; that JAMES KERR, a citizen of the State of Pennsylvania, has been elected Clerk; and that the House is ready to proceed to business.

Also, that a committee of three has been appointed by the Speaker on the part of the House of Representatives, to join the committee appointed on the part of the Senate, to wait on the President of the United States and notify him that a quorum of the two Houses has assembled, and that Congress is ready to receive any communication he may be pleased to make; and that Mr. SPRINGER, Mr. MCMILLIN, and Mr. REED have been appointed such committee on the part of the House.

SENATOR FROM CALIFORNIA.

Mr. WHITE of California presented the credentials of George C. Perkins, appointed by the governor of California a Senator from that State to fill, until the next meeting of the Legislature thereof, the vacancy caused by the death of Leland Stanford; which were read.

Mr. Perkins was escorted to the Vice-President's desk by Mr. WHITE of California, and, the oath prescribed by law having been administered to him, he took his seat in the Senate.

RECESS.

Mr. GORMAN (at 12 o'clock and 18 minutes p. m.). I move that the Senate take a recess until a quarter to 1 o'clock.

The motion was agreed to; and at the expiration of the recess (at 12 o'clock and 45 minutes p. m.) the Senate reassembled.

NOTIFICATION TO THE PRESIDENT.

Mr. HARRIS and Mr. SHERMAN, the committee appointed in conjunction with a similar committee of the House of Representatives to wait upon the President of the United States, appeared below the bar, and

Mr. HARRIS said: Mr. President, the committee appointed to wait upon the President of the United States and inform that a quorum of each of the Houses of Congress had assembled and were ready to receive any communication he might be pleased to send, have performed that duty, and were informed by the President that he would communicate with the two Houses immediately by a message in writing.

PRESIDENT'S MESSAGE.

At 12 o'clock and 47 minutes p. m., Mr. O. L. PRUDEN, one of the secretaries of the President of the United States, appeared below the bar, and said:

Mr. President, I am directed by the President of the United States to deliver to the Senate a message in writing.

The message was received from the secretary, and handed to the Vice-President.

The VICE-PRESIDENT. The Chair lays before the Senate the message of the President of the United States, which the Secretary will read.

The Secretary read the message, as follows:

To the Congress of the United States:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act, and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000. While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion amounted to a little more than $54,000,000, and that during the same period about $49,000,000 were paid by the Treasury in gold for the redemption of such notes.

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations amounting to about $150,000,000 on account of silver purchases, and has as a consequence, for the first time since its creation, been encroached upon.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock. That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been recently drawn from our Treasury and exported to increase the financial strength of foreign nations. The excess of exports of gold over its imports for the year ending June 30, 1893, amounted to more than $87,500,000.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force, leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

At this stage gold and silver must part company and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single handed.

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home, in the stability of currency values that capital

refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners. Foreign investors, equally alert, not only decline to purchase American securities, but make haste to sacrifice those which they already have.

It does not meet the situation to say that apprehension in regard to the future of our finances is groundless and that there is no reason for lack of confidence in the purposes or power of the Government in the premises. The very existence of this apprehension and lack of confidence, however caused, is a menace which ought not for a moment to be disregarded. Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our unparalleled growth and resources, might be favorably passed upon. But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

This matter rises above the plane of party politics. It vitally concerns every business and calling and enters every household in the land. There is one important aspect of the subject which especially should never be overlooked. At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding or may even find profit in the fluctuations of values; but the wage-earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is practically defenseless. He relies for work upon the ventures of confident and contented capital. This failing him, his condition is without alleviation, for he can neither prey on the misfortunes of others, nor hoard his labor. One of the greatest statesmen our country has known, speaking more than fifty years ago, when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

These words are as pertinent now as on the day they were uttered, and ought to impressively remind us that a failure in the discharge of our duty at this time must especially injure those of our countrymen who labor, and who, because of their number and condition, are entitled to the most watchful care of their Government.

It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once. The maxim "He gives twice who gives quickly," is directly applicable. It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing. We may hope, too, that calm counsels will prevail and that neither the capitalists nor the wage-earners will give way to unreasoning panic, and sacrifice their property or their interests under the influence of exaggerated fears. Nevertheless, every day's delay in removing one of the plain and principal causes of the present state of things enlarges the mischief already done and increases the responsibility of the Government for its existence. Whatever else the people have a right to expect from Congress they may certainly demand that legislation condemned by the ordeal of three years' disastrous experience shall be removed from the statute books as soon as their representatives can legitimately deal with it.

It was my purpose to summon Congress in special session early in the coming September that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people as shown by their suffrages desire and expect, and to the accomplishment of which every effort of the present Administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once and before all other subjects be considered by your honorable body.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

GROVER CLEVELAND.

EXECUTIVE MANSION,
August 8, 1893.

Mr. VOORHEES. I move that the message just read be ordered printed, and referred to the Committee on Finance.

Mr. STEWART. The message had better lie on the table. We may want to make some remarks about it.

Mr. VOORHEES. I suppose the Senator can address the Senate upon the subject of the message just as well after it is referred, as if it were on the table. The usual course is to order the President's message printed and referred to a committee.

Mr. STEWART. Very well, let it go.

Mr. VOORHEES. As a matter of course, there will be no obstruction to debate if Senators desire to discuss it. Let the message be ordered printed at once.

The VICE-PRESIDENT. The message will be referred to the Committee on Finance, if there be no objection.

Mr. VOORHEES. The order should be made that the message be printed at once, so that we may have it here to-morrow.

The VICE-PRESIDENT. It will be so ordered.

Mr. DOLPH. I give notice that after the conclusion of morning business, if there be time and it is the pleasure of the Senate to hear me, I shall address the Senate upon that portion of the President's message recommending the repeal of the Sherman law.

PETITIONS AND MEMORIALS.

Mr. CULLOM presented a petition of the board of directors of the Chicago (Ill.) Board of Trade, praying for the repeal of the purchasing clause of the so-called Sherman silver law, and the enactment of legislation authorizing the Secretary of the Treasury to sell, at not less than par, $250,000,000 of bonds, payable in gold coin fifty years after date, bearing interest at a rate not exceeding 4 per cent, the proceeds thereof to be used, in the discretion of the Secretary, in the redemption of currency notes of any class already issued; and, also, for an amendment to the national banking act, permitting national banks to issue currency to the par value of their bonds; which was referred to the Committee on Finance.

He also presented a petition of sundry business men of Chicago, praying for the admission of the Territory of Arizona into the Union as a State; which was referred to the Committee on Territories.

He also presented a petition of the Illinois Society of Engineers, praying that an appropriation be made for testing the strength of material of all American woods; which was referred to the Committee on Agriculture and Forestry.

Mr. CULLOM. I also present a large number of petitions, which accumulated during the last extraordinary session of the Senate, of citizens of Champaign, Gallatin, Franklin, Randolph, Clay, Clinton, White, and Christian counties, all in the State of Illinois, praying for the appointment of a committee to investigate the combine formed between millers, railroads, and elevators for the purpose of depreciating the price of wheat. I move that they be referred to the Committee on Agriculture and Forestry.

The motion was agreed to.

Mr. HILL. I present a petition of the Chamber of Commerce of the State of New York, praying for the repeal of what is known as the Sherman silver law, and for the appointment of a representative commission to inquire into the whole subject of the currency, to report at the next regular session of Congress. I move that the memorial be referred to the Committee on Finance.

The motion was agreed to.

Mr. VEST presented resolutions adopted at a mass meeting of citizens of Kansas City, Mo., favoring home rule for Ireland and indorsing the action of Hon. William E. Gladstone in the English House of Commons; which were referred to the Committee on Foreign Relations.

He also presented resolutions adopted at a mass meeting of Democrats of Polk County, Mo., praying for the repeal of the silver-purchasing clause of the Sherman law of 1890, and for the free coinage of silver; which were referred to the Committee on Finance.

He also presented the petitions of F. W. Biebinger and other business men of St. Louis, Mo., and of Albert Marty and other business men of Kansas City, Mo., praying for the repeal of the silver-purchasing clause of the Sherman law of 1890, that no substitute of any sort be enacted, and for the appointment of a commission to take into consideration the currency question; which were referred to the Committee on Finance.

He also presented a petition of wholesale merchants of St. Louis, Mo., praying for the repeal of the silver-purchasing clause of the Sherman law of 1890, and remonstrating against the free

coinage of silver; which was referred to the Committee on Finance.

Mr. BLACKBURN. I have been requested to present the petition of sundry citizens of Versailles, Ky., praying for the repeal of the silver-purchasing clause of the Sherman act of 1890, and that a commission be appointed to consider and recommend a scientific plan of currency based on the experience of other countries and adequate to the requirements of a great commercial nation. I move its reference to the Committee on Finance.

The motion was agreed to.

Mr. DAVIS presented the petitions of George S. Spaulding and other citizens of Alexandria, Minn., and of the Board of Trade of Faribault, Minn., praying for the repeal of the silver-purchasing clause of the Sherman act of 1890; which were referred to the Committee on Finance.

He also presented a memorial of the Cigar Makers' Union, No. 98, of St. Paul, Minn., remonstrating against the repeal of the silver-purchasing clause of the Sherman law of 1890; which was referred to the Committee on Finance.

Mr. VILAS presented a petition of the Board of Trade of Lacrosse, Wis., praying for the repeal of the Sherman silver law of 1890; which was referred to the Committee on Finance.

Mr. SHERMAN presented petitions of the Chamber of Commerce of Cleveland, Ohio, and of sundry business men of Mansfield, Ohio, praying for the repeal of the clause in the act of 1890 requiring the purchase of silver bullion; which were referred to the Committee on Finance.

Mr. MANDERSON presented petitions of the Commercial Club of Hastings, Nebr., of the Board of Trade and of the Commercial Club of Omaha, Nebr., and of sundry citizens of Lincoln, Nebr., praying for the repeal of the silver-purchasing clause of the Sherman law of 1890; which were referred to the Committee on Finance.

Mr. QUAY presented petitions of the Commercial Exchange of Philadelphia, of business men and merchants of Indiana County, of the Trades League of Philadelphia, of the Grocers and Importers' Exchange of Philadelphia, of the Hardware Merchants and Manufacturers' Association of Philadelphia, of the Chamber of Commerce of Pittsburg, and of the Board of Trade of Erie, all in the State of Pennsylvania, praying for the repeal of the silver-purchasing clause of the Sherman law of 1890; which were referred to the Committee on Finance.

He also presented a petition of the Erie (Pa.) Board of Trade, praying that an increased appropriation be made for the postal service; which was roferred to the Committee on Post-Offices and Post-Roads.

He also presented resolutions adopted by the Junior Order United American Mechanics and Patriotic Order Sons of America of Franklin County, Pa., praying for the passage of the Chandler immigration bill, the use of the Bible in the public schools, and the placing of the American flag on public schoolhouses throughout the United States; which were referred to the Committee on Immigation.

He also presented numerous petitions of merchants, business firms, and corporations of the city of Philadelphia, Pa., indorsing resolutions of the Trades League of Philadelphia, Pa., praying for the repeal of the silver-purchasing clause of the Sherman law of 1890; which were referred to the Committee on Finance.

Mr. CALL presented a petition of sundry citizens of Florida, praying that an appropriation of $200,000 be made for the purpose of establishing and maintaining an agricultural college and university to be located near Terra Ceia Bay, Manatee County, Fla.; which was referred to the Committee on Agriculture and Forestry.

Mr. MITCHELL of Oregon, presented a petition of the State Grange, Patrons of Husbandry, of Marion County, Oregon, praying for the construction of the Nicaragua Canal; which was referred to the Committee on Foreign Relations.

He also presented a petition of the State Grange, Patrons of Husbandry, of Marion County, Oregon, praying for the adoption of an amendment to the Constitution of the United States providing for the election of United States Senators by direct vote of the people; which was referred to the Committee on Privileges and Elections.

He also presented a petition of the Chamber of Commerce of Portland, Oregon, praying for the repeal of the silver-purchasing clause of the Sherman law of 1890; which was referred to the Committee on Finance.

He also presented a petition of the State Grange, Patrons of Husbandry, of Marion County, Oregon, praying Congress to immediately reopen the mints of the country to the free and unlimited coinage of both silver and gold on equal terms, at the present ratio of 16 to 1, that the Government use the coins of both metals without discrimination, and that the metallic currency be supplemented by the use of United States notes in sufficient amounts to prevent the contraction of the currency of the people by the hoarding of gold by the banks, to the end that the volume of money shall not fluctuate, thereby unsettling the value of our farms, our stock, and our products, and opposing the repeal of the present law, known as the "Sherman law," unless a law providing for an enlarged use of silver or for its free coinage be enacted in lieu thereof; which was referred to the Committee on Finance.

He also presented a petition of Grand Prairie Grange, No. 28, Patrons of Husbandry, of Junction City, Oregon, praying for the passage of legislation prohibiting dealings in options and futures; which was referred to the Committee on the Judiciary.

Mr. WALTHALL presented the petition of sundry business men of Natchez, Miss., praying for the repeal of the silver-purchasing clause of the Sherman law without the enactment of any substitute at the present session, and for the appointment of an expert commission to consider and recommend a scientific plan of currency, etc.; which was referred to the Committee on Finance.

Mr. KYLE presented a memorial of 19 citizens of Clark County, South Dakota, remonstrating against the repeal of the Sherman silver law; which was referred to the Committee on Finance.

Mr. HALE presented a petition of the Portland (Me.) Board of Trade, praying for the early and unconditional repeal of the purchasing clause in the Sherman silver law; which was referred to the Committee on Finance.

Mr. DOLPH presented a petition of the Legislature of Oregon, praying for the passage of legislation restricting immigration into the United States; which was referred to the Committee on Immigration.

He also presented a petition of the Legislature of Oregon, praying for the construction of the Nicaragua Canal by the Government; which was referred to the Committee on Foreign Relations.

He also presented a petition of the General Assembly of Oregon, praying for the passage of legislation opening the World's Columbian Exposition on Sunday; which was referred to the Committee on the Quadro-Centennial (Select).

He also presented a petition of the General Assembly of Oregon, praying for the establishment of a road department; which was referred to the Committee on Post-Offices and Post-Roads.

He also presented a petition of the General Assembly of Oregon, instructing the Senators and requesting the Representatives in Congress from that State to vote for a law creating a Cabinet officer of Secretary of Labor; which was referred to the Committee on Education and Labor.

He also presented a petition of the Portland (Oregon) Methodist preachers' meeting, praying for the repeal of the Chinese registration act of May 5, 1892; which was referred to the Committee on Foreign Relations.

BILLS INTRODUCED.

Mr. HILL introduced a bill (S. 1) to repeal certain sections of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes;" which was read the first time by its title.

Mr. HILL. I ask that the bill be read at length and referred to the Committee on Finance.

The bill was read the second time at length, and referred to the Committee on Finance, as follows:

Be it enacted by the Senate and House of Representatives, etc., That sections 1, 3, and 4 of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," are hereby repealed.

SEC. 2. This repealing act, however, is not to be construed as an abandonment of bimetallism, but it is hereby declared that the policy of using both gold and silver as the standard money of the country shall be established, and to the accomplishment of that end the efforts of the Government shall be steadily and safely directed.

Mr. STEWART introduced a bill (S. 2) to restore the right of coinage; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 3) to supply the deficiency in the currency; which was read the first time by its title.

Mr. STEWART. I ask that the bill be read at length. It proposes to provide temporary relief, and I should like to make a short explanation of it.

The bill was read the second time at length, as follows:

Be it enacted by the Senate and House of Representatives, etc., That the Secretary of the Treasury be, and he is hereby, directed to issue silver certificates of the character and denominations as now provided by law equal in amount to the silver bullion in the Treasury purchased under the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issuance of Treasury notes thereon, and for other purposes," in excess of the amount necessary, at its coining value, to redeem the Treasury notes issued under said act, and to use the same, or so much thereof as may be necessary, to provide for any deficiency in the revenues of the Government, and to use the balance of such certificates in the purchase of United States 4 per cent bonds at the market price thereof, not exceeding 12 per cent premium

on the face value of such bonds; and the Secretary shall, as fast as practicable, coin such excess of silver and hold the same for the redemption of the certificates provided for by this act.

SEC. 2. That the Secretary of the Treasury be, and he is hereby, further directed to issue $100,000,000 of United States legal-tender notes of the character and description of the United States legal-tender notes now outstanding, and purchase with such notes United States 4 per cent bonds, at the market price, not exceeding 12 per cent premium on the face value of the bonds so purchased, and the bonds purchased under the provisions of this act shall be held in the Treasury as security for the redemption of the Treasury notes issued under this act.

Mr. STEWART. I should like to call the attention of the Finance Committee to this bill. My effort in drawing it has been to give immediate relief, without involving the discussion of the whole financial question; on the one hand without involving the discussion of increasing the circulation of the national banks, against which both Houses have so frequently voted, and also without involving the question of supplying additional currency by restoring the laws of free coinage as they existed until 1873, because the condition of the country is such that before measures so important as either of those could be determined much harm would take place. Before the recommendation of the President could be considered and discussed here many worthy citizens would be ruined and much injury would result to the whole country.

Now, I do not propose to inquire into how this panic came, or whose fault it was. There is no time for that now. When the house is on fire we must put out the flames first. There is a currency famine in the country. Banks are closing their doors, the masses are being thrown out of employment, and before any relief can be reached great distress will occur. The repeal of the Sherman act may or may not do good. I think it would do great harm and add much to the present financial trouble, but that may or may not be true. We know very well if we could put out some currency for immediate use it would be a great relief.

There are $49,000,000 of silver bullion in the Treasury which is subject to be coined and silver certificates issued for it. They have been coining part of it and issuing silver certificates, but there is no authority in the Treasury Department to issue the certificates until it is coined. This bill authorizes the Department to issue certificates immediately for the amount they have on hand and coin it afterwards. There is $49,000,000. Then the bill further provides for the issuance of $100,000,000 of greenbacks, as they are called, Treasury notes, and purchase bonds, and put the bonds in the Treasury and hold them as security for the notes. The notes can be retired with these bonds at any time hereafter. If this could be done nearly $150,000,000 of money would be furnished to the country and it would give immediate relief.

My information is that the savings banks have a very large amount of 4 per cent bonds which they hold as investments. It is impossible for them to convert those bonds into currency. They have been compelled to require sixty days' notice before they can pay their depositors. That is creating great distress and great alarm. If they could convert their bonds immediately into currency and relieve the stringency it certainly would give us time to think over the matter and mature something that will meet the judgment of the American people.

I do not think that this is a time for angry discussion. What ought to be done ought to be done deliberately. What I propose is that we shall give immediate relief and then consider the general proposition, and it seems to me that we should not stand here and discuss the question while the country is in such a terrible state of panic. It appears to me that it would be unpatriotic for any man to get up any discussion before immediate relief is given. The silver men do not believe that they can allow the act of 1890 to be repealed because they think that is monometallism, and they will have to struggle against it. They believe that that would be the end of silver coinage forever. They can not give up that act and you can not expect them to do it.

But we do not want to be placed in a position where we must contend for what we believe should be contended for. We do not want to be charged with doing anything to hinder relief while the country is suffering as it now is. I appeal to the Senate if this is not the right scheme, to adopt some scheme to get out currency at once, and then we may, if possible, stop this panic and give prosperity to the country. These are mere suggestions. If this bill is not in the right form, any temporary measure that will give immediate relief, so that we can discuss these questions calmly, is what I am in favor of.

I call the particular attention of the Finance Committee to this scheme and ask them to examine it and adopt it, or some scheme of this nature, that does not involve the whole money question, but which will get out immediate currency and stop the panic. I call upon the committee as patriotic citizens to lend their aid to that first before we take up the general question of finance

The VICE-PRESIDENT. The bill will be referred to the Committee on Finance.

Mr. BATE introduced a bill (S. 4) to repeal all statutes relating to supervisors of elections and special deputies; which was read twice by its title, and referred to the Committee on Privileges and Elections.

Mr. DAVIS introduced a bill (S. 5) to increase the appropriation for the erection of a public building at St. Paul, Minn.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 6) to authorize the construction of a steel bridge over the St. Louis River between the States of Wisconsin and Minnesota; which was read twice by its title, and referred to the Committee on Commerce.

Mr. HUNTON introduced a bill (S. 7) for the relief of Henry F. Errett, administrator; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 8) to authorize the coinage of a standard silver dollar and to restore its legal-tender character, and for other purposes; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 9) to repeal all acts and parts of acts discriminating in taxation against the circulating notes of State banks and State banking associations, and for other purposes; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 10) to repeal all statutes relating to supervisors of elections and special deputies, and for other puposes; which was read twice by its title, and referred to the Committee on Privileges and Elections.

He also introduced a bill (S. 11) to equalize taxation and impose an income tax, and for other purposes; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 12) to provide for the free coinage of silver bullion, and for other purposes; which was read twice by its title, and referred to the Committee on Finance.

Mr. GALLINGER introduced a bill (S. 13) to provide for the purchase of a site and the erection of a public building thereon at Nashua, in the State of New Hampshire; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 14) to provide for the purchase of a site and the erection of a public building thereon at Dover, in the State of New Hampshire; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 15) for the erection of an equestrian statue of Maj. Gen. John Stark in the city of Manchester, N. H.; which was read twice by its title, and referred to the Committee on the Library.

He also introduced a bill (S. 16) granting a pension to Nettie N. Seaver; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 17) granting a pension to Julia A. Hill; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 18) for the relief of Secor & Co., Perine, Secor & Co., and the executors of Zeno Secor; which was read twice by its title, and referred to the Committee on Claims.

Mr. JONES of Arkansas introduced a bill (S. 19) for the relief of the Little Rock and Memphis Railroad Company; which was read twice by its title, and referred to the Committee on Claims.

Mr. MITCHELL of Oregon introduced a bill (S. 20) to establish a uniform system of bankruptcy throughout the United States; which was read twice by its title.

Mr. MITCHELL of Oregon. This is what is known as the Torrey bankruptcy bill. There are some provisions of the bill I should wish to amend before I give the measure my cordial support. I am in favor of the general principle of the bill. I move that it be referred to the Committee on the Judiciary.

The motion was agreed to.

Mr. VEST introduced a bill (S. 21) to fix the number of grains of gold and silver in the gold and silver coins of the United States, and for other purposes; which was read the first time by its title.

Mr. MORRILL. Let the bill be read at length.

The bill was read the second time at length, and referred to the Committee on Finance, as follows:

Be it enacted by the Senate and House of Representatives, etc., That from and after the passage of this act the silver coins of the United States shall contain the following quantities of silver, that is to say: each dollar shall contain 464.4 grains of pure silver and 516 grains of standard silver; each half dollar shall contain 232.2 grains of pure silver and 258 grains of standard silver, and each quarter dollar shall contain 116.1 grains of pure silver

and 129 grains of standard silver; the dime, or 10-cent piece, shall contain 46.4 grains of pure silver, and 51.6 grains of standard silver.

SEC. 2. That the coins mentioned in the previous section shall have on them the devices and superscriptions provided for coins of like denomination now coined, and shall be legal tender at their nominal value for all debts and dues, public and private, except when otherwise expressly stipulated by contract; and any owner of silver bullion may deposit the same at the mints of the United States at Philadelphia, San Francisco, and New Orleans to be coined into dollars, or into half dollars, or quarter dollars, at the option of the Secretary of the Treasury, of 516 grains, 258 grains, and 129 grains, respectively, for his benefit.

SEC. 3. That any holder of the coins authorized by this act may deposit the same with the Treasurer or any assistant treasurer of the United States in sums of not less than $10 and receive therefor certificates of not less than $10 each, corresponding with the denominations of United States notes. The coins deposited or representing the certificate shall be retained in the Treasury for the payment of the same on demand. Said certificates shall be receivable for customs, taxes, and all public dues, and when received may be reissued.

SEC. 4. That the Secretary of the Treasury shall, within two years from and after the passage of this act, cause all the silver coins of the United States hitherto minted of the denominations of one dollar, half dollars, and quarter dollars, as well as the Treasury notes issued under the law of July 14, 1890, to be withdrawn from circulation by exchanging the same, or causing the same to be exchanged at their nominal value for silver certificates of like denominations, representing silver coins of the weight and fineness provided for by this act; and the silver certificates thus issued shall be in all respects similar to those provided for in the preceding section, and shall, like them, be receivable for customs, taxes, and public dues, and when received may be reissued, and that on and after the expiration of the two years above mentioned, all the silver coins hitherto minted of the denominations of one dollar, half dollar, and quarter dollar, as well as the Treasury notes issued under the law of July 14, 1890, shall cease to be legal tender.

SEC. 5. That all silver coins coined prior to the passage of this act shall be recoined as early as practicable into coins of like denominations of the weight and fineness authorized by section 1.

SEC. 6. That a sum sufficient to carry out the provisions of this act is hereby appropriated out of any moneys in the Treasury not otherwise appropriated.

SEC. 7. That the Secretary of the Treasury is hereby authorized to adopt such rules and regulations as may be necessary to enforce the provisions of this act.

SEC. 8. The section 1 of an act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, be, and the same is hereby, repealed.

Mr. VEST introduced a bill (S. 22) making appropriation for the purchase of ground and the erection thereon, in the city of Washington, D. C., of a building to be used as a hall of records; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 23) to authorize the construction of bridges across the Missouri River between its mouth and the mouth of the Dakota or James River, and across the Mississippi River between the mouth of the Minnesota River, in the State of Minnesota, and South Port, in the State of Louisiana, and across the Illinois and Des Plaines rivers between the mouth of the Illinois and the city of Joliet, in the State of Illinois, and to prescribe the character, location, and dimensions of the same; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 24) to provide for the compulsory education of Indian children; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 25) to amend "An act to regulate commerce," approved February 4, 1887; which was read twice by its title, and referred to the Committee on Interstate Commerce.

He also introduced a bill (S. 26) to further amend an act entitled "An act to regulate commerce, approved February 4, 1887," as amended March 2, 1889; which was read twice by its title, and referred to the Committee on Interstate Commerce.

He also introduced a bill (S. 27) to place on the pension rolls the name of John J. Chapman; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 28) for the relief of Arthur P. Selby; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 29) to amend an act entitled "An act to establish a court of private land claims, and to provide for the settlement of private land claims in certain States and Territories," approved March 3, 1891; which was read twice by its title, and referred to the Committee on Private Land Claims.

He also introduced a bill (S. 30) for the relief of Jacob Kern; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 31) to permit the withdrawal of certain papers and the signing of certain receipts of John Finn or his attorney; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 32) fixing the compensation of United States district attorneys, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 33) to restore Eugene Wells to the Army; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 34) fixing the compensation of the clerks of the circuit and district courts of the United States, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 35) to create a bureau in the Department of Agriculture for giving public information of the production and shipping of live stock; which was read twice by its title, and referred to the Select Committee on the Transportation and Sale of Meat Products.

He also introduced a bill (S. 36) to extend the jurisdiction of courts in Oklahoma Territory and of the United States court in the Indian Territory; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 37) for the relief of Robert McGee; which was read twice by its title, and referred to the Committee on Indian Depredations.

He also introduced a bill (S. 38) to prohibit monopoly in the transportation of cattle to foreign countries; which was read twice by its title, and referred to the Select Committee on the Transportation and Sale of Meat Products.

He also introduced a bill (S. 39) fixing compensation of United States marshals and deputies, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 40) to regulate the removal of causes by Federal corporations; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 41) for the relief of Joseph Edward Montgomery; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 42) to amend section 1910 of chapter 2, title 23, of the Revised Statutes of the United States; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 43) to amend sections 2474 and 2475 of the Revised Statutes of the United States setting apart a certain tract of land lying near the headwaters of the Yellowstone Park as a public park; which was read twice by its title, and referred to the Committee on Territories.

He also introduced a bill (S. 44) to provide for the erection of a public building for the use and accommodation of the post-office at Mammoth Hot Springs, in the Yellowstone National Park; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. KYLE introduced a bill (S. 45) for the relief of W. H. Ward; which was read twice by its title, and referred to the Committee on Patents.

Mr. POWER introduced a bill (S. 46) to increase the circulation of national banks, and for other purposes; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 47) to authorize the Missouri River Power Company of Montana to construct a dam across the Missouri River; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 48) to provide for the erection of a public building in the city of Great Falls, Mont.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. WHITE of California introduced a bill (S. 49) to provide for the erection of a public building at San Francisco, in the State of California; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 50) in aid of the California Mid-Winter International Exposition; which was read twice by its title, and referred to the Committee on Finance.

Mr. CHANDLER introduced a bill (S. 51) for the final settlement of the claims of the State of New Hampshire for the reimbursement of national bounties advanced to recruits mustered into the service of the United States under the President's call of October, 1863; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 52) in amendment of the provisions of the Revised Statutes relative to national banks; which was read twice by its title, and referred to the Select Committee on National Banks.

Mr. HOAR introduced a bill (S. 53) to repeal so much of the act of July 14, 1890, as provides for the purchase of silver; which was read twice by its title, and referred to the Committee on Finance.

Mr. MURPHY introduced a bill (S. 54) to authorize the New York and New Jersey Bridge Companies to construct and maintain a bridge across the Hudson River between New York City and the State of New Jersey; which was read twice by its title, and referred to the Committee on Commerce.

Mr. HARRIS introduced a bill (S. 55) to amend section 1014

of the Revised Statutes of the United States, in relation to the arrest of offenders against the United States escaping from one district or State into another; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 56) for the relief of E. B. Crozier, executrix of the last will of Dr. C. W. Crozier, of Tennessee; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 57) for the relief of the legal representatives of Henry S. French; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 58) for the relief of William Clift; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 59) for the relief of W. J. Smith and D. M. Wisdom; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 60) for the relief of William S. Stokes, M. M. Brien, sr., Thomas Waters, and William T. Haskins; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 61) for the relief of Pearson C. Montgomery, of Memphis, Tenn.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 62) for the relief of the La Grange Synodical College, of La Grange, Tenn.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 63) for the relief of the legal representatives of Samuel Tate, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. DOLPH introduced a bill (S. 64) to increase the appropriation for the purchase of site and the erection of a public building at Portland, Oregon; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 65) to provide for the construction of a public building at Salem, Oregon; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 66) to provide for the construction of a public building at Baker City, Oregon; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 67) to amend an act entitled "An act for the relief of certain settlers on the public lands, and to provide for the repayment of certain fees, purchase money, and commissions paid on void entries of public lands;" which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 68) to provide for the sale of desert lands in certain States and Territories; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 69) to grant to the State of Oregon townships 27, 28, 29, 30, and 31 south, in ranges 5 and 6 east of the Willamette meridian, in the State of Oregon, for a public park; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 70) to aid the several States and Territories to reclaim the arid lands within their boundaries; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 71) for the relief of John W. Lewis, of Oregon; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Public Lands.

He also introduced a bill (S. 72) to provide for the survey and construction of a wagon road from Gold Hill Station, Jackson County, Oregon, to Crater Lake; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 73) for the relief of William J. Cornell and Joseph M. Cornell; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 74) to provide for the classification and disposition of the public lands, the protection and administration of the public forest reservations, and for other purposes; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 75) for the relief of Thomas Guinean; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 76) for the relief of William P. Keady; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 77) to establish an assay office at Portland, in the State of Oregon; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 78) to establish an assay office at Baker City, in the State of Oregon; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 79) to authorize a corrected patent to be issued for the donation land claim of Wheelock Simmons and wife; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Public Lands.

He also introduced a bill (S. 80) granting a pension to Sarah A. M. Blackford; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

He also introduced a bill (S. 81) for the relief of Lorenzo Wyett Mulvany; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 82) granting a pension to Wilson Rittenhouse; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 83) granting a pension to James H. Preston; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 84) to extend the time for filing certain claims for compensation for horses and other property lost in the military service of the United States; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 85) for payment of balance unpaid on Oregon and Washington Territory Indian war claims for suppression of Indian hostilities in 1855 and 1856, as found due by commission appointed by Secretary of War, consisting of Gen. Rufus Ingalls, Capt. A. J. Smith, and Hon. L. F. Grover, pursuant to act of Congress, and disallowed by Third Auditor of the Treasury, as per his report of February 7, 1860; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 86) to amend the act approved February 25, 1885, entitled "An act to authorize a retired list for privates and noncommissioned officers of the United States Army who have served for a period of thirty years or upward;" which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 87) to extend the time for adjudicating certain claims; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 88) to pay the citizens of Oregon for supplies audited by Philo Callender, commissioner; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 89) referring the claim or claims of Eugene F. Arnold, administrator of William H. Arnold, to the Court of Claims; which was read twice by its title, and referred to the Committee on Claims.

He also introduce a bill (S. 90) to provide for the sale of the unsold portion of the Umatilla Indian Reservation; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 91) to enlarge the jurisdiction and to fix the compensation of United States commissioners in Alaska, to regulate appeals from their judgments, to provide for the appointment of additional commissioners, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 92) to create and establish the pilot service of the United States, and to regulate the pilotage of vessels in ports and harbors along the coast of the United States; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 93) to provide for fortifications and other seacoast defenses; which was read twice by its title, and referred to the Committee on Coast Defenses.

He also introduced a bill (S. 94) to provide for the establishment of a gun factory for the finishing and assembling of heavy ordnance on the Pacific coast; which was read twice by its title, and referred to the Committee on Coast Defenses.

He also introduced a bill (S. 95) to provide for the punishment of the violations of treaty rights of aliens; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 96) to provide for the formation and government of municipal corporations in Alaska; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 97) for the relief of Mrs. M. P. Sawtelle; which was read twice by its title, and referred to the Committee on Indian Depredations.

Mr. STEWART introduced a bill (S. 98) to establish a military post near the town of Reno, in Washoe County, in the State of

Nevada; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 99) to secure the relinquishment of the Indian title to a portion of the Pyramid Lake Reservation, in Nevada, and to the entire Walker River Reservation, in said State, and for other purposes; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 100) to reimburse certain persons who expended moneys and furnished services and supplies in repelling invasions and suppressing Indian hostilities within the territorial limits of the present State of Nevada; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 101) to reimburse the States of California, Oregon, and Nevada for moneys by them expended in the suppression of the rebellion; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 102) for the erection of a public building at Reno, State of Nevada; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 103) for the relief of P. S. Corbett; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 104) for the relief of Gen. Napoleon J. T. Dana; which was read twice by its title, and referred to the Committee on Pensions.

Mr. MARTIN introduced a bill (S. 105) granting to the Chicago-Topeka Light, Heat and Power Company, a corporation organized under the laws of Illinois, the right to erect and maintain a dam or dams across the Kansas River, within Shawnee County, in the State of Kansas; which was read twice by its title, and referred to the Committee on Commerce.

Mr. QUAY introduced a bill (S. 106) to authorize the purchase of a site for the Government Printing Office; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 184) for the relief of Capt. Ceran St. Vrain's company of New Mexico Mounted Volunteers; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 185) to provide for pay and certificates of honorable service to the officers and men of Foster's Cavalry Battalion, Missouri Volunteers; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 186) for the relief of Charles Wagemann; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 187) for the relief of Frederick Gramm; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 188) for the relief of Ernest Ulrich; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 189) for the relief of John M. Davis; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 190) for the benefit of sundry persons residing in the vicinity of Jefferson Barracks, Mo.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 191) for the relief of George A. Orr; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 192) for the relief of Joseph W. Carmack; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 193) for the relief of John S. Neet, jr.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 194) for the relief of Napoleon B. Giddings; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 195) for the relief of Ezra S. Havens; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 196) for the relief of the legal representatives of Douglas Dale, deceased; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 197) for the relief of Cogswell & Co.; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 198) to authorize the Secretary of the Interior to settle the claims of the legal representatives of S. W. Marston, late United States Indian agent at Union Agency, Indian Territory, for services and expenses; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 199) for the relief of E. R. Shipley; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 200) for the relief of Moses Pendergrass; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. COCKRELL also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Claims:

A bill (S. 201) for the relief of Charles P. Chouteau, survivor of Chouteau, Harrison & Valle;

A bill (S. 202) for the relief of John S. Logan;

A bill (S. 203) for the relief of John F. W. Dette;

A bill (S. 204) for the relief of Samuel A. Lowe;

A bill (S. 205) for the relief of the Catholic Church at Macon City, Mo.;

A bill (S. 206) for the relief of Aaron Bell;

A bill (S. 207) granting jurisdiction and authority to the Court of Claims in the case of the towboat Future City, her barges, cargoes, etc.;

A bill (S. 208) for the relief of Joseph Diehl, of Moniteau County, Mo.;

A bill (S. 209) for the relief of L. W. Pritchett;

A bill (S. 210) for the relief of Wetmore & Bro., of St. Louis, Mo.;

A bill (S. 211) for the relief of St. Charles College;

A bill (S. 212) for the relief of William Wolfe, of Shelbina, Shelby County, Mo.;

A bill (S. 213) for the relief of James Price;

A bill (S. 214) for the relief of D. K. Ponder, of Ripley County, Mo.;

A bill (S. 215) for the relief of William Phipps, William Blankenship, and the legal representatives of Moses Summers, deceased;

A bill (S. 216) for the relief of Edwin F. Mathews;

A bill (S. 217) for the relief of the heirs of James Bridger, deceased;

A bill (S. 218) for the relief of Sarah E. B. Smith;

A bill (S. 219) granting jurisdiction and authority to the Court of Claims in the case of the towboat Future City, her barges, cargoes, etc.;

A bill (S. 220) for the relief of Mary J. Bealmear;

A bill (S. 221) for the relief of Henry M. Cannon, administrator of the estate of James Cannon, deceased;

A bill (S. 222) for the relief of William M. Pleas;

A bill (S. 223) for the relief of Isham T. Owen, of Missouri;

A bill (S. 224) for the relief of William P. Buckmaster;

A bill (S. 225) for the relief of John L. Peters; and

A bill (S. 226) for the relief of the legal representatives of Henry Drehman.

Mr. COCKRELL also introduced the following bills; which were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (S. 227) for the relief of Dicey Bobbitt;

A bill (S. 228) granting a pension to Thomas J. Reid;

A bill (S. 229) granting a pension to Broadus G. Roberts;

A bill (S. 230) granting a pension to Myra Freeman;

A bill (S. 231) granting a pension to Virginia A. Owen, widow of John Owen, deceased;

A bill (S. 232) granting a pension to James Reed, jr.;

A bill (S. 233) granting a pension to Ambrose J. Vanarsdale;

A bill (S. 234) granting a pension to Anderson Morton;

A bill (S. 235) granting a pension to William T. Hutton;

A bill (S. 236) granting a pension to William H. Shivers;

A bill (S. 237) to pension Mrs. Ann Bradford, mother of William K. Bradford;

A bill (S. 238) granting a pension to Henry Sands;

A bill (S. 239) granting a pension to James M. Ray;

A bill (S. 240) for the relief of Henry C. Rose;

A bill (S. 241) for the relief of Mrs. Mary L. Roderick;

A bill (S. 242) for the relief of the heirs of Catherine E. Nelson;

A bill (S. 243) granting a pension to E. C. Curtis;

A bill (S. 244) granting a pension to James Callison;

A bill (S. 245) granting a pension to Nancy E. Neely, widow of Alexander Neely;

A bill (S. 246) granting a pension to Levi C. Faught;

A bill (S. 247) granting a pension to Typpo S. Williams;

A bill (S. 248) for the relief of R. W. Barber;

A bill (S. 249) for the restoration of Zerelda Cobbs to the pension roll;

A bill (S. 250) granting a pension to Dora Sauer, widow of Peter Sauer, deceased;

A bill (S. 251) granting a pension to Eli Browning;

A bill (S. 252) granting a pension to Lucy F. Watson, widow of Joseph W. Melton, deceased;

A bill (S. 253) granting a pension to Maria Hall, widow of Joseph E. Doak, deceased;

A bill (S. 254) granting a pension to James F. Crump;

A bill (S. 255) granting a pension to John G. Hanna;

A bill (S. 256) granting a pension to Margaret Garrison, widow of James S. Garrison;

A bill (S. 257) for the relief of Eliza Dickerhoff, widow of Louir Dickerhoff, deceased, of Company A, Cape Girardeau (Mo.) Home Guards; and

A bill (S. 258) granting a pension to Henry Hahman.

Mr. COCKRELL also introduced a bill (S. 259) in relation to the binding of certain public documents; which was read twice by its title, and referred to the Committee on Printing.

Mr. DOLPH introduced a joint resolution (S. R. 1) calling on the President to take such measures as he may deem necessary to consummate the agreement between the Governments of Spain

and the United States for the relief of Antonio Maximo Mora, a naturalized citizen of the United States; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Foreign Relations.

Mr. MITCHELL of Oregon, introduced a joint resolution (S. R. 2) authorizing the issue of duplicate medals where the originals have been lost or destroyed; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. VEST introduced a joint resolution (S. R. 3) in regard to the export trade in cattle; which was read twice by its title, and referred to the Select Committee on the Transportation and Sale of Meat Products.

He also introduced a joint resolution (S. R. 4) to maintain the parity of gold and silver; which was read the first time by its title, and the second time at length, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the American people from tradition and interest favor bimetallism and the free and unlimited coinage of both gold and silver, without discriminating against either metal.

That it is also the established policy of the United States to maintain the parity of the two metals, so that the debt-paying and purchasing power of every dollar shall be at all times equal.

That it is the duty of Congress to speedily enact such laws as will effectuate and maintain these objects.

Mr. VEST. I ask that the joint resolution lie on the table and be printed. I shall call it up, unless prevented by some privileged question, to-morrow or the day after.

The VICE-PRESIDENT. The joint resolution will lie on the table and be printed.

Mr. CALL introduced a joint resolution (S. R. 5) to permit the sculptor to exhibit the statues of Columbus and Isabella in Statuary Hall; which was read twice by his title, and referred to the Committee on the Library.

Mr. COCKRELL introduced a joint resolution (S. R. 6) to provide for the settlement of the claims of the officers and enlisted men of the various militia organizations of the State of Missouri for horses and equipments lost while engaged in the military service of the United States; which was read twice by its title, and referred to the Committee on Military Affairs.

BUSINESS OF THE SESSION.

Mr. LODGE submitted the following resolution; which was read:

Whereas Congress has been called in extraordinary session on account of the unfortunate condition of business; and

Whereas some measure of relief can be obtained by the immediate and unconditional repeal of the purchasing clauses of the silver act of 1890: Therefore,

Resolved, That the Committee on Finance be instructed to report at once to the Senate a bill to repeal the purchasing clauses of the silver act of 1890, and that a vote be taken in the Senate on said bill on Tuesday, August 22, at 2 o'clock p. m., unless it is sooner reached.

Mr. LODGE. I ask for the immediate consideration of the resolution.

Mr. TELLER. What does the Senator ask?

Mr. LODGE. I ask for immediate consideration.

Mr. TELLER. The Senator from Massachusetts knows that that can not be done.

Mr. HARRIS. Let the resolution go over and be printed.

The VICE-PRESIDENT. There is objection to the present consideration of the resolution.

Mr. LODGE. It goes over until to-morrow, I understand, under the rule.

The VICE-PRESIDENT. The resolution will go over and be printed.

Mr. MCPHERSON. I should like to have the resolution again read.

Mr. VEST. Let it be again read.

The VICE-PRESIDENT. The resolution will be again read.

The Secretary again read the resolution.

The VICE-PRESIDENT. The resolution has been ordered to be printed, and it goes over.

HOUR OF MEETING.

Mr. HALE submitted the following resolution; which was read:

Resolved, That on and after Thursday, August 10, 1893, until otherwise ordered, the hour of the meeting of the Senate shall be at 11 o'clock in the forenoon.

Mr. COCKRELL. Let that go over.

Mr. HALE. Mr. President, only one word. The President has very aptly and in no uncertain voice given a business for the Senate and, the other House to attend to. He has quoted the maxim that "He gives twice who gives quickly." My object in introducing the resolution, which fixes the hour of the meeting of the Senate at 11 o'clock on and after Thursday next, is to strengthen his hand by increasing the length of the working day and decreasing the number of days which must elapse before Congress adopts the legislation which he recommends.

I do this seriously, because the private convenience and comfort and health of every member of Congress in Washington is now in accord with the public interests. There is no man now here upon either side of this Chamber who does not desire, so soon as his duty can be performed, to avoid the heat of this, it may be, pestilential city and hie him homeward. There is no great business interest in the country that does not demand, as the President has demanded, swift action; and how can we better indicate our purpose to that end than by using all of the days as they come up before us? There are no other committees at work. There will be no other legislation. Everybody understands that we have come here for one purpose, and that is to deal with the financial question strictly—the currency—and, over and above all things, the repeal of the purchase part of the Sherman act.

Mr. COCKRELL. And tariff reform.

Mr. HALE. The President has given us that chart of our action. The only thing that can be said against adopting the resolution is that our friends upon the other side who have the responsibility and must frame and mature legislation will not know what to do with this time if we give it to them. I can not myself believe that that is true. Under the guidance of the President of the United States the course is easy. It may be taken at once; the sooner the better.

I do not propose (because this side is modest and does not attempt to control the order of business) to put the resolution upon its passage to-day, although by the resolution of my friend from Massachusetts [Mr. LODGE], which we can not pass until to-morrow morning, and which we will undoubtedly then pass, by giving two-thirds of the Republican vote for it with perhaps a majority upon the other side, I am admonished that we can not do this too quickly. If we are to take a vote upon this important matter, as my friend indicates, on the 22d day of this month at precisely 2 o'clock, we ought to begin to meet at 11 o'clock; and as my friend from Massachusetts [Mr. HOAR], has suggested, 10 o'clock would be better even than 11; and I am willing to so modify it.

But I do not propose to put the resolution to a vote. The rules require that it shall go over for a day; and then I am inclined to think that I shall move to refer it to the Committee on Finance. The path then is plain and simple to my friend from Indiana [Mr. VOORHEES], the chairman of that committee. He has always been sound on the money question, and is supposed to have strengthened, if possible, his soundness on that question. He can get his committee together to-morrow; they can report to-morrow afternoon a joint resolution repealing the purchase part of the Sherman act; and we can at 11 o'clock on Thursday morning, as my resolution indicates, set ourselves seriously to the business of the country, which it demands us to do. We have nothing else to do.

The President has made a perfunctory allusion to the necessity for tariff legislation, but there is not a man within the sound of my voice who does not know that the Democratic party in the present condition of the finances and business of the country no more dare to tackle the tariff question than a sane man would dare to grasp a wire charged with electricity. We are here for the one purpose of dealing with this other question, and we on this side of the Chamber want immediate action. We want the Senator from Indiana to report a bill in accordance with the suggestion, and the patriotic suggestion, of the President of the United States, so that we may get at it on Thursday morning and set ourselves to work. We shall pass such a measure in only one way, and that is by sitting here days and nights and Sundays. There is no other way; but that will come afterwards.

The Committee on the Order of Business upon the other side of the Chamber, who have the responsibility, will report such a resolution, and we upon this side, or a large majority, shall sustain them in it; and we will get this business done. We have got to sacrifice our personal conveniences. We have got to come here and suffer and stand ready to vote at any time, day or night or Sunday. I ask that the resolution may go over.

Mr. GORMAN. Mr. President, I can not, for one, permit the remarks of the Senator from Maine to pass without notice. This Congress has been assembled by the President in extraordinary session because of a great emergency, one that appalls not only the people of this country, but all the world. The President has said, and said well, in his message that the remedy which is to be applied, the measure intended for relief, is above and beyond party in its consideration. I am not astonished, and have not been, at some of the resolutions looking to haste which have emanated from the other side to-day, so that partisan advantage may come from such movements. The mover of each of the resolutions understands as well as I do, and as the country does, that it is only small politics which suggested their introduction.

I am amazed that the Senator from Maine, with all of his ex-

perience and patriotism and desire to serve the country, as I have no doubt he has, should have been carried away by the little current which seems to have swept over the other side of the Chamber during the morning hour. As the Senator from Maine knows, and as the country knows, we can not dispose of this question on the moment, and to-morrow. The Senator knows full well that members on both sides of the Chamber are divided in opinion as to the proper remedy to be applied. The President has presented a view clear and emphatic upon one side, but there are other views, and Congress is to determine precisely what shall be done. That decision can not be reached to-day or to-morrow; and in my judgment it is belittling the question; it is trifling with the great commercial interests of this country for us to seek small advantages on either side of the Chamber.

Mr. HALE. I agree with what the Senator says about the importance of this subject and the fact that men are honestly divided in opinion about it; but does not the Senator, who is equally patriotic with any of us, agree with me that the sooner we can get this matter before the Senate and begin the debate, wherein every Senator will and should have an opportunity of expressing his mind, the better? The resolution I have offered does not in any way involve any time when we shall stifle debate and bring the question to an issue, but it is in the interest of commencing the discussion of the subject-matter and disposing of it as promptly as possible. Is not the Senator in favor of that?

Mr. GORMAN. If the Senator from Maine had been present and had listened to what has occurred to-day, he would have known that the Senator in charge of the great financial committee of the body, the Senator from Indiana [Mr. VOORHEES], freely accorded the right to the Senator from Oregon [Mr. DOLPH] to open the debate upon this question. Not a moment is to be lost. No moment has been sacrificed. We have listened to the message of the President, and referred it at once to the Committee on Finance; but before that committee can have time to read the message in cold print or consider the suggestions which have been made on the other side of the question, an attempt is made for partisan advantage—it can not be for anything else—to show that the other side is most anxious to go on.

The Senator from Maine knows that we can not proceed with greater haste. I say to the Senator that whatever differences may be developed—and there are wide differences of opinion on this question, and we all know that fact—the subject should be considered and acted upon without undue haste.

Mr. HALE. Does the Senator see any reason on the single, distinct proposition of the repeal of the purchase part of the Sherman act why the majority of the Committee on Finance should not report its conclusions one way or the other on Thursday next?

Mr. GORMAN. Mr. President, the legislation which we are called upon by the President of the United States to repeal is legislation which was considered, not in a partisan spirit, but it took time to enact it, and it will take time, as we all know, to get the committee together, to ascertain their views, and obtain their report to this body. Nobody can know better than the Senator from Maine that the universal experience of this body has been that we absolutely gain time and hasten the moment when we can come to a vote by giving our committees ample opportunity to confer and by giving Senators ample time to confer with each other.

I hope when a measure comes here to be voted upon, in whatever form it may come, that it will come after a conference of members on this side and members upon the other side of the Chamber. I trust that we may all rise above mere partisanship and settle the matter in the interests of the country. I hope that nothing will be done upon the other side to excite party feeling upon this. Whilst we might go back and say that the present condition of affairs is the result of your action, I think anything like crimination or recrimination ought to be discarded at this session.

Mr. President, I do trust that from this time forth it will be thoroughly understood that we are all here to serve our country; it is a serious and awful condition of affairs which we are confronting, and we must take the question up deliberately and calmly, with a view to the enactment of legislation which will give relief.

Mr. VOORHEES. Mr. President——

Mr. HALE. Will the Senator from Indiana allow me a moment?

Mr. VOORHEES. Yes.

Mr. HALE. I only wish to say that my proposition is a serious proposition with the view and end of strengthening the hands of the President. If there is any one thing in the President's message that rings out after his wont in undoubted and in no uncertain voice it is the appealing cry for immediate action.

Mr. President, it is not quite in the natural vein of the Senator from Maryland, who is a broad-minded and patriotic legislator, to charge the attempt of Senators on this side to uphold his President's hands as being done for a party purpose. The keynote of my resolution and of the resolution of the Senator from Massachusetts [Mr. LODGE] is the President's message, speaking in its clear tones to us to-day, and the Senator from Maryland will not be able, by taunting us with seeking partisan advantage, to deter the large majority on this side of the Chamber from standing up to the President in his patriotic attempt to pass a measure that shall relieve the business interests of the country. No taunt from that side, sir, that a partisan advantage is sought, will prevent Republicans upon this side, not in a foremost and pushing way, but following the patriotic sentiment upon the other side, upholding their hands at every stage of this controversy in the direction of sound money and relieving the business embarrassments of the country.

Mr. VOORHEES. Mr. President, the Committee on Finance will be convened the day after to-morrow. I shall call the committee together by notice to-morrow, and it will convene Thursday morning to take up this great question as it ought to be taken up, far away from the reach of charlatanism and cheap demagogy such as we have been listening to here at this time.

The idea of dealing with this condition in the hop, skip, and jump style suggested by the Senator from Maine is amazing in in the Senate of the United States, and the haste with which the Senator springs forward to undo what he himself has helped to do is another surprising feature. The Senator from Maine forgets that every curse of the Sherman act comes home to roost on that side of the Chamber, and not on this.

Every vote that passed it through this body was cast by that side of the Chamber and not one by this. Not a single vote on our side was given for that miserable act. I voted against it on its passage, and for the same reason, because of its degradation of one of the precious metals of this country, I shall vote for its repeal. I never believed in it; I do not now; but the idea of the Senator from Maine arraigning this side of the Chamber and appealing to me personally to make haste to undo the infamy and fraud which he himself voted to fasten on this country is about the most refreshing thing that I have witnessed in twenty years of public life. [Laughter and applause in the galleries.]

The PRESIDING OFFICER (Mr BLACKBURN in the chair). The Senator will suspend for a moment until the Chair reminds the occupants of the galleries that under the rule of the Senate applause must not be indulged in, and if it be repeated the Chair will direct the Sergeant-at-Arms to clear the galleries.

Mr. HALE. Will the Senator yield to me for a moment?

Mr. VOORHEES. I yielded a while ago to the Senator. The Senator knows that in spite of his political predilections I like him and must oblige him, and I suppose I shall have to yield.

Mr. HALE. I think we like each other. I only wish to say, while not agreeing with the Senator as to the responsibility for the Sherman act—because that is a subject to be debated hereafter, and members upon one side and the other participated in the passage of that act for one reason or another—if it has worked ill and is practically an infamy, as he says, what reason can he give why we should not be in haste to repeal it? What harm is there, what inconsistency is there, supposing it to be true, as he says, and we have found it working mischief, in hurrying the repeal of that act as early as possible?

Mr. VOORHEES. Let me finish. I took the Senator in his own attitude. He is penitent; he is sorry for what he has done; he is in sackcloth and ashes, and he is crying, "Woe is me; hurry up, so that I can undo this deed." He is racked with remorse. That is the attitude he occupies here. I know the Senator from Maine—and he will pardon me, for I do not mean to be personally offensive at all—is not sincere in supposing this great financial question can be disposed of in this way. The Senator from Ohio [Mr. SHERMAN], the distinguished member of the Finance Committee sitting just beyond him, knows the question can not be met in this kind of way. The point presented by the Senator from Maine is out of the reach of reasonable debate, and I simply reply to him in the manner I do because his suggestion is worthy of no other kind of reply.

If there is such evil in the Sherman act—and it is full of evil, not perhaps so full as some people think it is, though it is full enough to be repealed—we ought to repeal it, and I expect to vote for its repeal; but when the Senator appeals to me as chairman of the Finance Committee to hurry, I can not help but remind him that I am appealed to to undo his own wrongdoing, to undo the flagrant piece of legislation of which he complains, and I remind Senators on the other side of the Chamber that they are in no attitude to speak up and say, "Hurry; let us undo this deed." It is your own deed; it is your own legislation, and we are called upon in this hot summer month of August not to

correct Democratic legislation, not to sit on errors of our own, but to sit on your errors. We are called here in extra session at the sacrifice of all the ease and comforts of life to meet an issue made by you and not by us.

I had not the slightest idea of speaking in a partisan sense, as I am doing now, but it was forced upon us by the wonderfully inopportune remarks, as it seems to me, of the Senator from Maine. I repeat myself. I am not here because I have erred, or because the Senator from Missouri [Mr. COCKRELL], here before me, or my brethren on this side of the Chamber have erred, but because Senators on the other side have erred. Whose name does this act bear? The name of the most distinguished Republican in the United States. His name has been borne aloft with this act. I did not believe in it at the time. I predicted evil when it was passed. I told the distinguished Senators who are near me from the Western silver States that it was a wrong movement, and they ought not to have accepted it as a compromise at the time; but I did not believe it would effect as much evil as it has. Now, in the face of these evils, the Republican side of the Chamber ask us to hurry and undo them. We will undo them as fast as we can, with method and in order, but not in haste, or in a spirit of disregard to all the methods of procedure which prevail in important legislation.

I trust that we shall hear no more of this. I regret extremely to have to say what I have said, but to sit here silent and be taunted by the other side with not sufficient haste in correcting their own errors is something that human nature can not abide with very much patience.

Mr. SHERMAN rose.

Mr. VOORHEES. I will yield to the Senator from Ohio if he desires to speak.

Mr. SHERMAN. I wish to say a few words, but not until the Senator is through. I do not wish to disturb him.

Mr. VOORHEES. I only wish to say a word further, and then I shall yield to the Senator from Ohio.

I wish to approach this question in a becoming spirit. There is a great and perilous condition of affairs, I think, based on many misapprehensions and many misrepresentations as to the real cause of the trouble, but, whatever they may be, we are American Senators and should approach the discharge of these great duties we are called here to perform in a becoming spirit, not as jockeys mount their steeds to catch the advantage at the start by crowding one person or another. These great interests are in our hands, and the jockey movement of the Senator from Maine, I trust, will meet with no repetition or imitation hereafter.

Mr. SHERMAN. Mr. President, with some of the remarks made by the Senator from Indiana I cheerfully concur. I believe that the Senate of the United States ought to meet the question presented by the President with deliberation, with moderation, with candor, and with fairness. I do not myself wish to enter into any political debate, but there is one fact I must impress upon my friend from Indiana, and that is that the passage of the act which he has referred to was caused by the imminent danger of the two Houses of Congress agreeing to the free coinage of silver. A portion of our Republican friends, whom we regard as political as well as personal friends also, committed themselves in favor of the free coinage of silver.

The Democratic party, in almost unbroken phalanx, committed themselves to the same policy. There can be no doubt about that. The House of Representatives sent us a bill providing for the purchase of four and one-half million dollars' worth of silver bullion. The Senate, by a very decided vote, I think by some twenty-odd majority, passed a substitute providing for the free coinage of silver. I was one of those who believed that that would be a very grave and serious peril to our country—not to one party, but to the whole country—that it would place us in a position to demonetize gold and adopt silver as the single standard, to detach ourselves from the great commercial nations of the world and join the inferior nations, where poverty or large populations compel them to the use of silver alone. Therefore the act which has been misnamed the Sherman act, with which I had nothing more to do than several others, was adopted as an expedient to defeat the free coinage of silver. That was the object, the aim, and the desire.

If this is to be regarded as a mere political question, I must say that my honorable friends on the other side, together with some Republicans who voted with them for the free coinage of silver, are responsible for the terms of that act. Every provision of that act is wise, conservative, and just, except the one which it is now sought to repeal, and the repeal of which I shall vote for with the greatest pleasure. It was yielded, as Senators around me here know, with great reluctance, and yielded only after full consideration. We sometimes resort to extreme measures to prevent greater evils; we sometimes take medicine in undue proportion in order to prevent an acute disease; we have resorted to the horrors of war in order to prevent the dissolution of the Union. Extreme measures are required for extreme cases, and the act referred to was passed for the purpose I have stated.

There is the condition of affairs. The question whether the act shall be repealed and what provision shall be substituted in its place is to be discussed here with frankness and fairness, I hope. What the Senator has said gives me great assurance that this can be done. If he and his friends are prepared now to vote for the repeal of the purchasing clause of the act of 1890, we will concur with them; we will join with them, with all our friends, the friends of silver and the friends of gold, to consider every measure that may be proposed which will ease the public mind from the apprehension of the perils which now confront us, or rather from the fears which now disturb the people, because I think the fears are far greater than the perils of the situation.

Mr. VOORHEES. Let me ask the Senator from Ohio one question. Surely the Senator from Ohio does not think this measure should be disposed of without reference and consideration properly made in the Committee on Finance, does he?

Mr. SHERMAN. No, sir; I do not. I say that I believe the time will come, and probably is not far distant, when the Senate, like every other body of eighty men, will be compelled to resort to some expedient by which the majority can put an end to debate; but I do not wish to see that applied in this case. I wish to see the broadest discussion. I believe if there ever was a time that general latitude should be allowed for free discussion it is on such a question as that now presented, and every Senator should have an opportunity to express his opinion.

Then I think we can appeal to those in the minority who resist the proposed measures of relief recommended by the President, as members of the Senate of the United States, as patriotic Republicans or as patriotic Democrats, not to extend their arguments and speeches to an undue length in order to prevent the immediate relief demanded by the President of the United States. I will not hurry or hasten any man in the expression of his opinion, but I believe the time will come, after we have considered this matter with moderation and with patience and deliberation; when we shall reach some common agreement which will relieve the public from the distrust they now labor under; which will free manufacturing establishments from the fear now threatening them of a change in the tariff laws of the United States, and which will free the people of our country who have their humble hoardings in the savings banks from the apprehensions of peril which induce them to apply for their money now deposited in the banks and in actual circulation among the people and to hoard it away—all these measures of relief I believe will come from a moderate, timely, patient, and nonpartisan consideration of this subject.

With these remarks, reserving to myself the opportunity at some other time to express myself more freely and more fully, I leave the matter to the Senate. I shall vote for no measure of extreme urgency to force a vote. I believe we can always appeal to the generous and manly sentiment of the Senate of the United States. If the Senate should show by a determined majority a desire to repeal the act in question, I believe the minority will yield to that desire and do what Senators have done in all times, in the midst of war as well as in peace, yield to the will of the majority wherever it is constitutionally expressed.

Mr. VEST. Mr. President, all partisan discussion is to be deprecated at this time; but the Senator from Ohio has made an extraordinary statement, which, in justice to all of us, should now be considered further.

If I understand the Senator, he states that the Sherman act, as it is called, was enacted to prevent the passage of a free coinage bill by Congress. Is that the correct statement?

Mr. SHERMAN. Not exactly, because I regarded the House bill, if the Senator will allow me, which proposed to buy four and one-half million dollars' worth of silver bullion, and which now would buy about 6,500,000 ounces, as a very dangerous measure. It was to defeat that measure of the House of Representatives, and also to prevent the enactment of a free coinage bill, as passed by the Senate, that the compromise measure was finally agreed upon.

Mr. VEST. I understand from the latter part of the Senator's statement that the so-called Sherman bill was enacted into law in order to prevent the worse calamity, in his view, of the enactment of a free coinage law. Then that implies the extraordinary statement that the President of the United States, at that time Gen. Harrison, of Indiana, would have signed such a bill in order that it should go upon the statute books.

Mr. SHERMAN. Not at all.

Mr. VEST. Nothing is better known than that it was simply impossible to pass such a bill over the Executive veto.

Mr. SHERMAN. If the Senator will allow me, I will say that

I trust the time will never come when we shall either try to compel or induce the President of the United States to save us from a calamity which we are able to save the country from by the action of the Congress of the United States. I do not depend upon Presidential vetoes.

Mr. VEST. That may be true, Mr. President, but the assumption implied in the statement of the Senator from Ohio is that this doubtful measure, as he has often repeated upon this floor, this measure of doubtful public policy and expediency was enacted in order to escape a much greater evil. That, as a matter of course, carries with it the assumption that if the two Houses of Congress had voted in favor of that bill it would have become a law. I have seen a statement from the Senator from Ohio that he did not think it was right to put the President of the United States, at that time General Harrison, in that alternative or with that conjuncture presented to him.

Mr. SHERMAN. If the Senator will allow me, I will say that the President, by a happy expression in his message, has declared exactly the nature of that bill. It was "a truce" between the friends and the enemies of the free coinage of silver, and the expression is very aptly put and very truly put.

Mr. VEST. It was a most remarkable truce, Mr. President, when every intelligent man in Congress knew that a free coinage bill could not become a law, and the Senator from Ohio does not escape the logical conclusion by stating that we have no right to assume that the President of the United States will do one thing or the other. It is as well known that Gen. Harrison, on account of the platform on which he was elected, on account of his many public utterances, on account of his whole history as a public man, would have vetoed a free coinage bill as that the Senator from Ohio is the distinguished leader of his party to-day.

I am compelled to say—and I hope I shall not be compelled to make any other partisan utterances in this debate—since it has been thrust upon us by the Senator from Maine [Mr. HALE], the Sherman law was passed in order to relieve a Republican President of the United States from vetoing a free coinage bill, which would have lost California, Oregon, Nevada, and other silver-producing States to the Republican party.

Mr. TELLER. Mr. President I do not question that the Senator from Maine speaks by authority when he speaks for the President of the United States, but I resent for myself and for my associates on this side who believe with me any claim on his part that he speaks for the Republican party of the Senate or of the United States. He may speak for himself; he may speak for the New England Senators who surround him; but he has no right to speak for us. We have not made him our mouthpiece and we are not likely to do so.

The Senator from Oregon [Mr. DOLPH] desires to address the Senate, but I have asked his indulgence for only a moment, as I shall return to this subject probably on an occasion when I shall have more time than now.

I want to refer to the very subject mentioned by the Senator from Missouri [Mr. VEST] who has just taken his seat; that is, to the statement made by the Senator from Ohio [Mr. SHERMAN] that the Sherman law was passed to save the country from a free coinage act. The Senator from Ohio was the chairman of the conference committee which framed that act, and on the floor of the Senate, when he made the report, he stated in the most emphatic manner that the House of Representatives had determined in a very positive way that no free coinage bill could pass that body.

Mr. President, I say here now with all due deference to the honorable Senator, and trying to keep as closely within the rules of Senatorial decency and courtesy as the circumstances will admit, that that statement is an afterthought. The records will not support it. The matter was brought here in that shape for the reason that it was supposed it would quiet the agitation and would maintain intact in the Northwest the Republican column of States. We were told in plain, unmistakable language that this might be a sop to our people, which would save us and save our political organization in that great section of the country, and that we could get nothing better.

I repeat, Mr. President, there was not a man in this body, nor anywhere else, who gave attention to this subject who did not know we had reached a point where it was absolutely impossible to pass a free coinage act. I, myself, from my seat on the floor, made the statement that, bad as I thought the bill was, pronouncing it, as I did, absolutely illogical, and founded upon no financial principle whatever, I should vote for it because it gave to the people an increased currency at a time when they needed it, and because there was a lingering hope that it might in some way raise the price of a product of my State, and because we could not secure free coinage.

History of the act will bear me out in the assertion that it was admitted on the floor by everybody that we had reached a point where the free coinage of silver could not be secured at that session; and I should not have gone home to my people with this makeshift, which we are now told was a truce that was to be violated on the first opportunity, if there had been a ghost of a chance to have secured the passage of a free coinage act.

Mr. President, I knew, as did the Senator from Ohio, and as he practically stated on this floor, that the House would not pass a free coinage bill. I knew further from the mouth of the President of the United States himself that, if Congress passed such a bill, he intended to veto it. We were in a condition to accept whatever was tendered to us by the party then in power.

Mr. President, I shall not take the time of the Senate now to discuss this question. There will be ample time for discussion, whether the Senate meets at 11 o'clock, or 10 o'clock, or at any other hour.

The Senator from Ohio very kindly tells us that he will not favor a clôture rule—not at present, at least. Perhaps that depends upon our good conduct. I want to say that we have passed through one period when an effort was made to secure a clôture rule in this body. The attempt was a disastrous failure, and I predict, whether the Senator from Ohio is for or against a clôture rule at this time or at any other, it is not likely to become a rule of this body.

The question presented to the Senate is a great question. It outweighs the tariff. It is beyond doubt the greatest question which has been presented to the American people at any time; equal, in my judgment, in importance to the question whether the country should remain united or be divided.

Mr. STEWART. More important.

Mr. TELLER. It is a question whether we shall go to a gold standard or whether we shall maintain the double standard; and we who believe that that would bring disaster to us and disaster to the world do not intend to be frightened either by suggestions of clôture or by a public clamor demanding this or that, which has been gotten up in a certain section of the country, nor because public opinion, to which we are all somewhat inclined to bow, may make unreasonable demands on us.

Mr. President, as a Senator of this body, as a representative, in part at least, of a sovereign State, I come here to act upon my judgment in the interests of my constituents and in the interests of the whole country. Executive advice goes for nothing unless it convinces my judgment. Public clamor passes my ears without going into them when I know that it is unreasoning public clamor, when I know that it is not based on common sense; and even the distinguished Senator from Ohio can not convince me that this most wonderful and astonishing panic, unlike anything in the history of the world, arises out of a distrust by the American people of the currency of the country.

Mr. PEFFER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Kansas?

Mr. TELLER. Certainly.

Mr. PEFFER. I should like to inquire of the Senator from Colorado when he is speaking of public clamor, whether he has heard any part of that public clamor coming from the men and the women who do the work in this country—the farmers and the mechanics and the wage workers—whether he can point to a single body of organized laboring men anywhere in the country, unless it be only those who are in the class of skilled workmen and who are receiving high wages and have bank accounts—whether any part of the clamor to which he refers, and whether what we are now calling public sentiment did not come originally from the speculators in Wall street and afterwards from the satellites who revolve around that sacred spot in this country, widening as the influences from the inspiring center widens?

Mr. TELLER. I think the Senator from Kansas has stated the conditions better than I could. The public clamor is not from the productive agencies of this country; it is not from the men who create the wealth of the country; it is not from the great conservative forces of the country; it is from the moneyed centers, and the moneyed centers alone.

I was referring to the claim that this was a panic created by fear of the currency. There has been exhibited nowhere in the United States a doubt as to the currency of this country. Silver dollars, silver certificates, greenbacks, and gold alike go to the private locker to be locked up. Why? Simply because the holder is afraid that if he neglects to get it to-day he will not be able to get it to-morrow. He is not afraid that it will depreciate on his hands.

It is the height of folly to say that this is a panic caused by distrust of the currency. Every dollar is as good as another, except to-day, I believe, and yesterday in the city of New York they were paying a little more for silver dollars, or, that I may

be exact, just twice the premium on silver dollars that was being paid on gold.

Mr. President, simply, this is a currency famine. It has no relation to the Sherman law, except that the Sherman law has put $148,000,000 of money in circulation, and to that extent it has relieved the necessities of the people and mitigated the severity of the panic. Otherwise it has no more relation to it than the transit of Venus.

Mr. President, there will be a time, as I said before, for full discussion of this subject. It will not be concluded on the 22d of August, as the Senator from Massachusetts [Mr. LODGE], who offered a resolution, seems to think. It will extend beyond that. It will extend beyond that, not because of a disposition on the part of those who oppose its repeal to protract or delay coming to a vote, but because a question of so much importance can not be discussed and disposed of properly in thirty days or in sixty days. So I shall have ample opportunity to discuss this subject in all its phases.

As the Senator from Oregon kindly yielded to me, I shall not detain him longer.

The PRESIDING OFFICER. The resolution of the Senator from Maine having been objected to, goes over under the rule.

Mr. HALE. I stated that I desired that the resolution should go over under the rule, purposing to-morrow to move that it be referred to the Committee on Finance. Senators need not be sensitive about what is contained in the resolution. There is nothing in it which in any way seeks to limit debate or to apply cloture, which I am not now and never have been in favor of, but the object of the resolution is to give to the Senate more time each day to consider this important subject, and I repeat the sooner we get at it the better.

THE PRESIDENT'S MESSAGE.

Mr. DOLPH. Mr. President, the President of the United States, moved thereto by the business depression and financial disturbances everywhere prevailing, and assuming that the present condition of the country is the result of the operation of the so-called Sherman law, has convened Congress in extraordinary session and urged upon it in his message of to-day the immediate repeal of that law. Whether or not it would be wise under existing circumstances to repeal this law, the claim or the assumption that it is the principal cause of the prevailing business and financial condition of the country should not be permitted to go unchallenged.

The present financial and industrial condition of this country should surprise no one. It has been predicted for years by those who believe the prosperity of the country can only be maintained by the protection of American industries. The present condition is the logical result of the success at the Presidential election of November last of the party which declares that protection of American industries is robbery, and stands pledged to reverse the policy which for more than thirty years has given us an era of prosperity such as this or no other country has ever before enjoyed—a policy which has caused civilization to sweep across a continent, which has opened mines of the useful metals and started the wheels of new industries in the South, which has largely transferred the industries abroad once supported by our people to our own shores to furnish them employment, which has caused the continent to be covered with a network of railroads along whose lines great centers of industry have sprung up, with great manufacturing establishments giving profitable employment to millions of American citizens.

Over all this great industrial system hangs a dark cloud of uncertainty and fear, an impending blow threatening its destruction. And so the wheels of progress are stopped. The fires are suffered to go out in furnaces, the machinery of great establishments is idle, and idle men seek employment. The importer will not import dutiable goods when he fears that soon his competitors can import them free of duty. The manufacturer will not produce his products in excess of the present demand when he fears that his surplus product may be compelled to compete with free foreign products. He will buy raw materials for present needs only while the prospect is before him of soon being able to supply himself with raw materials of foreign production free of duty; and so the importer, the merchant, the manufacturer to avoid disaster curtail their operations.

The wholesale merchants, the bankers, and all classes of creditors press collections, settlements are forced, and financial losses, business failures, and bankruptcies are the result. The Sherman law is not the sole or even the principal cause of the present financial depression, and its repeal will not cure our financial and industrial ills. No permanent improvement in the industrial situation need be expected while the destruction of the protective system is threatened or feared. No legislation by which domestic industries will be injured or destroyed, by which the products of foreign labor will be admitted to free or to greater competition with domestic products, which will result in transferring domestic industries to foreign countries, and giving labor now performed by American citizens to foreigners, will help to restore confidence or bring business prosperity.

After the Democratic majority in Congress shall have settled upon a tariff policy, and formulated and enacted its tariff revision, whether such revision shall be general or be destructive only with a few American industries, such as the wool and tinplate industries, the business of the country will adjust itself to the changes, and we may enjoy a halting, intermittent prosperity with lower wages to laborers, but a sound, permanent, prosperity in this country will not, in my judgment, be again enjoyed until we are assured of the success of the Republican party and its control of both Houses of Congress, and that a policy is to be adopted and maintained by which the industries, the capital, and the labor of this country are to be preferred to those of foreign countries.

Necessity for the repeal of the Sherman law, if such a necessity exists, has been created by the success of the Democratic party, the threat of free trade and the predictions by the Democratic press and Democratic politicians of disaster to follow from the operation of the Sherman law, made in a systematic effort to secure the repeal of that law at the last session of Congress under a Republican Administration.

There are so many widely differing views upon the silver question, so many diverse financial plans proposed, so many erroneous opinions concerning our coinage laws, our financial system, and the character and functions of money, that it may be useful to refer briefly to some of the elementary principles of political economy which can not be disregarded by Congress if it would provide the country with a sound, safe, and honest currency.

Labor employed in the creation of useful articles is the source of all wealth. A useful product of labor is a thing of value. It may be a product of agriculture, for which the farmer plows and sows and reaps, availing himself of what nature has furnished him at hand; the fertile soil, the warmth of the sun, the early and later rains, or it may be the gold and silver for which the miner patiently delves in the great treasure vaults of nature, or the more useful products of iron and coal which require the labor of men to extract them from the earth and fit them for use, or it may be a coat, a hat, a watch, or a steam engine. All the things by which we are fed, clothed, and sheltered, which add to our convenience, comfort, and pleasure are the products of labor. They are valuable because they are adapted to the use of man. But one man can not make all the things he needs, or at least he does not. Hence we have diversity of labor, and one man mines gold and silver, another cultivates the soil, another raises sheep and grows wool, another manufactures cloth, another manufactures clothing, and so on.

Now, the man who works the mine or grows wool must have food and clothing and many other things. If there were no money or medium of exchange the manufacturer of cloth might buy wool of the wool-grower and give him cloth in exchange, but the wool-grower might not need the cloth. He would need provisions and clothing. He might take cloth and find a manufacturer of clothing who would exchange clothing for it, and he might possibly exchange cloth for groceries, and the groceryman might in turn exchange cloth for something that he needed; but this would be a very tedious and unsatisfactory manner of conducting commercial exchanges. Hence the necessity of a medium of exchange—a tool of exchange—so that when the wool-grower carries his wool to the manufacturer of cloth or to some middleman and sells it, instead of taking cloth in exchange for it, he can receive this medium of exchange to the amount of the value of his wool, and this medium can in turn be exchanged for any other commodity which he may need.

This medium we call money. If we could conceive of the first community which invented money assembling together to choose such a medium we could probably obtain a pretty good idea of why gold and silver came to be selected. Such a medium should possess considerable intrinsic value; that is, be capable of being used for a great many useful purposes. It should be tolerably scarce, and hard to obtain, so as to be proportionately valuable, easily transported, and pass currently from hand to hand. It should be plenty enough, however, to answer the requirements of commerce, and it should be capable of being easily subdivided and changed in form.

Diamonds would not be selected, because they are not plentiful enough and could not be divided. Gold seems to possess all the essential requirements for money, and it is undoubtedly for this reason that it was selected. Silver partakes in some degree of the same quality, although it is more abundant and more easily obtained. Therefore it has been selected and used for money

and made a legal tender for the payment of debts, in some countries for all sums and in others for limited sums only.

Sometimes in the exigencies of commerce the purchaser may not have this medium of exchange, money, in sufficient quantities to pay for his purchases, and hence he buys on credit. That is the promise to pay money at a future day. This promise may be a mere verbal promise or even an implied agreement; in which case it is called a book account, or it may be given in writing in a form required by commercial law and usage, and then it is a note, a bond, or a bill of exchange. In either case it is an obligation to pay money at a future day; it is not money itself. It may be worth all the money it calls for or it may not be. This depends upon the willingness of the promisor to pay, and his ability to do so, and the power of the creditor to force him to pay.

When the war of the rebellion broke out it required a great deal of money to carry it on, and there were many reasons which rendered it difficult for the Government to obtain money, that is, gold and silver. In its extremity the United States, to enable itself to meet its engagements, to pay the soldiers, to furnish arms, transportation, and supplies, not having gold and silver enough, issued its promise to pay money in the future. Some of these were promises to pay certain amounts of money at the expiration of a fixed period with interest semiannually at fixed rates. These were the Government bonds. Then it issued Treasury notes or greenbacks of various denominations, so as to pass from hand to hand as money, which were nothing but acknowledgments of indebtedness, without any time being fixed for their payment or any agreement to pay interest. Congress made these notes legal tender for the payment of private debts.

As the legal tenders possessed no intrinsic value and were debts payable only at the pleasure of the United States, and as the war progressed portions of the people began to fear that the South would prevail and that the States remaining in the Union would be either unwilling or unable to redeem these promises, they rapidly depreciated in value until they were worth no more than 35 cents on a dollar; but as the prospects of subduing the rebellion and maintaining the Union increased they gradually appreciated in value, and after the war was closed continued to appreciate until they reached about the value of 90 cents on the dollar; that is, a dollar in greenbacks was worth 90 cents in gold.

Congress after a while passed the resumption act—that is, fixed a day when the Government would pay its notes in coin if presented to the Secretary of the Treasury, and provided one hundred millions of gold in the vaults of the Treasury to pay them. But all at once the legal-tender notes became worth their face in gold and the gold in the Treasury was not needed. The people preferred to keep the promises of the Government to pay the money when the Government was ready to redeem them.

The legal tenders and all Treasury notes are evidences of debt of the Government and possess no intrinsic value. They are made by law to perform some of the functions of money. They are made legal tender for the payment of private debts and public dues, and their value depends entirely upon the provisions made by law for their redemption in coin—that is to say, upon the fact that they are convertible into that which has intrinsic value.

We have several kinds of currency in circulation, performing the functions or some of the functions of money. There is the gold coin double eagle, eagles, half eagles, quarter eagles, etc. These gold coins are legal currency—that is, they have been declared by law to be a legal tender for the payment of private debts and public dues, but they also possess such intrinsic value that if you should melt them up into bullion the bullion would be just as valuable as the coin. In fact, when they are exported, the fact that they are coined with the devices provided by our laws upon them adds nothing to their value; their value depends entirely upon their weight.

Then we have the silver coin, which is also by law made a legal tender for the payment of private debts, and is receivable for public dues. The intrinsic value of the silver dollar, like the intrinsic value of the gold dollar, is the value of the bullion it contains, which at present is about 60 cents in gold.

The silver dollar in the payment of debts and public dues is required by law to pass for one hundred cents. Forty cents of the value of every silver dollar is based upon the credit of the Government. It is true that the Government has not agreed to redeem the silver currency in gold upon presentation to the Treasury, but it has promised to receive it as the equivalent of gold for public dues, of which we collect about $500,000,000 annually. This is a qualified redemption in gold, and this provision, with the general expectation that the Government will maintain this currency upon a parity with gold, has so far kept the silver dollar at par with the gold dollar.

There are also the gold and silver certificates, which perform the functions of money. They are receipts for gold and silver deposited in the Treasury. They are redeemable upon presentation at the Treasury in gold or silver coin as the case may require. They are like wheat receipts issued by warehousemen, which call for a given number of bushels of wheat upon presentation, and pass from hand to hand instead of the wheat, until some holder is ready to present them to the warehouseman and exchange them for the wheat.

Any person may take gold not less than $10 in amount to the Treasury and deposit it and receive a gold certificate, and the gold is kept in the Treasury, to be returned to the holder of the receipt when it is presented. The same thing is true of silver certificates.

Then there are the legal-tender notes, possessing, as I have said, no intrinsic value, but redeemable in gold on presentation to the Treasury. They are, therefore, worth their face in gold. There are about $346,000,000 of this currency.

We have also another kind of national currency, the Treasury notes issued under act of 1890. They were issued for the purchase of silver bullion at the market price at the time of purchase. The silver bullion is stored in the Treasury vaults theoretically, if not legally, as security for the payment of the notes, and the law provides that the notes shall be redeemed upon presentation in coin—gold or silver coin—at the option of the Secretary of the Treasury. The gold coin and the gold certificates constitute an absolutely safe currency, for the coin is intrinsically worth its face, and the certificates can be exchanged for gold upon presentation at the Treasury.

The legal-tender notes are equally safe, for they are redeemable upon presentation at the Treasury in gold. A hundred millions of dollars in gold is kept in the Treasury as a reserve for the payment of these notes, and the Secretary of the Treasury is authorized to sell bonds for gold, if necessary, for their redemption. The silver coin and silver certificates and Treasury notes stand on a different footing. The intrinsic value of the silver coin in gold, as I have said, is about 60 cents on the dollar. The silver certificates are redeemable in silver. The Treasury notes may be paid in silver coin. There is no provision of law for redeeming this silver coin and currency in gold, except the provision for the receipt of it as the equivalent of gold in payment of public dues.

If Congress should repeal the law requiring silver coin and silver currency to be received for public dues, the value of the silver coin, the silver certificate, and the Treasury notes would at once depreciate until they would be worth no more on the dollar than the value of the silver bullion in a silver dollar. To repeat, the gold and silver coin possess intrinsic value. The gold coin is intrinsically worth its face; the silver coins are intrinsically worth about 60 per cent of their face. The gold certificates and the silver certificates are the obligations of the Government, and are valuable because they are convertible on demand into gold and silver. The legal-tender and Treasury notes are evidences of debt of the Government, but possess no intrinsic value and are valuable only because the legal-tender notes can be converted into gold upon presentation to the Treasury, and the Treasury notes can be converted into coin, gold or silver coin, at the option of the Treasury, upon presentation for payment.

While silver and gold possess intrinsic value, and for that reason, in part, are adapted to use as money, it must not be supposed they have a fixed relative value; that is to say, that a certain amount of silver is always worth a certain amount of gold. Considered as bullion, they are but products of labor, just as wheat, potatoes, cotton, and wool are products of labor, and it would be no more absurd to suppose that the relative value between potatoes and wheat, or cotton and wool is fixed, so that 2 or 4 bushels of potatoes are always equal in value to the value of a bushel of wheat, or that 5 pounds of cotton is always equal in value to a pound of wool, than to suppose that a given number of ounces of silver, say 16 or 20, is always equal in value to an ounce of gold.

The value of each metal, like the value of every other product of human labor, is fixed by the supply and the demand. This is the reason why the use of the two metals as money under free coinage of both is impossible without the concurrent use of the two metals as money, at an agreed ratio, by a sufficient number of commercial nations to maintain the ratio of their intrinsic value at the legal ratio agreed upon.

Some persons who demand free coinage of silver in the United States at the ratio of 16 to 1 appear to believe that gold and silver have naturally a fixed value relatively one to the other, and that the United States adopted that natural relative value by the coinage acts of 1834 and 1837. The relative intrinsic value of the two metals, as I have said, is fixed by the universal and imperative law which fixes the price of every product of human industry in the world's market.

The value of silver as compared with gold has been, with the

exception of a comparatively brief period, constantly fluctuating since authentic history began. Five hundred years before the Christian era an ounce of gold was worth 13 ounces of silver. At the beginning of the Christian era an ounce of gold was worth 9 ounces of silver. Three hundred and fifty years later it required 15 ounces of silver to buy 1 ounce of gold. Two hundred and fifty years later still an ounce of gold was worth 18 ounces of silver. About the close of the fifteenth century the ratio was about 1 to 10; by 1688 the value of gold had again increased until an ounce of gold was worth 16 ounces of silver. For nearly two centuries this ratio was substantially maintained by the use of both metals as money by the principal commercial countries of Europe. When silver was demonetized by Germany and its coinage suspended by France and the Latin Union this ratio was no longer maintained, and the relative value of silver to gold has since greatly fallen and has been constantly fluctuating.

Until an international agreement can be secured between the principal commercial countries of the world for the free coinage of silver at an agreed ratio so that the intrinsic value of the silver product of the world as measured in gold can be maintained at the legal ratio agreed upon, each nation must determine for itself whether it will have a gold or a silver standard. A double standard is impossible. The two metals will not circulate together unless the parity of their value can be maintained. To-day the following foreign countries have the silver standard: India, China, Mexico, Japan, and most of the Central and South American States. The following have gold standards: Brazil, British possessions in North America, Denmark, Egypt, Finland, German Empire, Great Britain, Liberia, Norway, Portugal, Sweden, Turkey. The following have legally a gold and silver standard, but in fact a gold standard. They have no free coinage of silver, and silver coin is maintained in domestic circulation on a parity with gold by some provision for its redemption in gold or by its receipt for public dues: Argentine Republic, Belgium, Chile, Cuba, France, Greece, Haiti, Italy, Netherlands, Spain, and Switzerland. Those people who propose free coinage for the United States propose that we shall change our measure of value from gold to silver and join India, Mexico, China, and other countries having a silver standard, and that silver shall be the basis upon which all the transactions in this country shall be conducted.

Our own experience is sufficient to show that it is impossible under free coinage to maintain in circulation both gold and silver when either is undervalued by the legal ratio. The coinage law of 1792 established the ratio of 1 to 15 between gold and silver. The intention of Congress was to adopt the commercial ratio between the two metals in the markets of the world. But gold was undervalued and could not be kept in the country, and its place was supplied with Spanish milled dollars and small, abraded silver coins. The ratio of France being at the same time 1 to 15½, France took all our gold under a law that is universal and inevitable. To secure the retention and circulation of gold in this country the acts of 1834 and 1837 were passed. The ratio under those laws was 1 to 16. Gold was overvalued and silver left the country under the operation of the same law. To enable us to retain in this country silver subsidiary coins the act of 1853 was passed, reducing the amount of silver in half dollars and other fractions of a dollar, discontinuing free coinage of subsidiary coin and providing for its coinage by the Government from silver purchased by it, upon which it received the profit.

Does anyone suppose for a moment that when Congress established a mint and fixed a ratio between gold and silver at 15 to 1 on the advice of Hamilton, or when in 1834 the ratio of 16 to 1 was adopted for silver and gold, if silver and gold had been of the value relatively to each other they are to-day the ratio of 15 to 1 or 16 to 1 would have been adopted? It is familiar history that Hamilton endeavored to adopt as the legal ratio the then commercial ratio between the two metals in the markets of the world, and that Congress in 1834 designed to make the ratio such that gold would remain in this country, whether under it we could keep silver or not.

Some persons have proposed that a new legal ratio between gold and silver should be established by law, say a ratio of 20 to 1, and the mints be opened for the free coinage of silver at this ratio; but this proposition is impracticable, would surely give us a silver standard and drive gold out of circulation, would not increase the price of silver bullion or benefit silver producers, and would be no better for the country than free coinage at the present legal ratio. If we are to abandon gold as the standard, and to adopt the silver standard, it is not material whether a silver dollar is worth 50 per cent or 90 per cent of the gold dollar. If we could maintain in the world's markets the actual commercial and intrinsic ratio of value between gold and silver at some legal ratio we could adopt, then the question would be solved; but we can not.

This can only be done by the united action of the principal commercial nations of the world. If we should adopt by law a legal ratio, which at the time was the same as the commercial ratio of value of the two metals, before a dollar could be coined under it, silver, which fluctuates every day in price, might fall until the legal ratio and the ratio of the intrinsic value of the two metals would be widely different; and under free coinage at the ratio adopted only one metal would be coined or remain in circulation. Such a proposition shows a failure upon the part of those who make it to comprehend the first principles of the silver question.

Others have advocated free coinage of both gold and silver without an attempt to make the silver dollar the equivalent of the gold dollar, but letting the intrinsic value of gold and silver fix the current money value of gold and silver coin; in other words, that we should have two standards, a gold standard and a silver standard; but this is impracticable. In such a case one or the other of the two metals would have to be measured by the other, or we would require a third standard to measure them both.

Gold being the standard of value of all the great commercial countries, and the medium in which public dues must be paid and foreign debts settled, the silver coin under such circumstances would be but a commodity in foreign countries. Gold would disappear, and the depreciated silver currency be our standard of value, and the measure of commercial transactions or our exchanges conducted on the silver standard would be mere barter.

We hear occasionally such nonsense as that the Creator intended by providing both gold and silver that they should both be used as money, and that gold and silver are the money of the Constitution. The ratio of value between gold and silver, as I have shown, has been in all times subject to great fluctuations. There is nothing in the Constitution about the use of both gold and silver as money, or concerning the ratio to be maintained between them. The truth is that under free coinage both gold and silver could not be maintained in circulation or both used as money in any civilized country without a stable ratio between the intrinsic or market value of gold and silver bullion.

While gold and silver both possess qualities which render them peculiarly fitted for use as money, their natural value as a tool of commerce is their intrinsic value, and when either metal, as is the case in the United States with silver to-day, is made by a provision for its exchange, for the other to possess a value in excess of its intrinsic value, this value is imparted to it because it can be converted into something more valuable than it is.

The Government stamp can not create good money. All money must possess intrinsic value or be convertible into that which has intrinsic value. I have referred on another occasion and in another place to the interesting fact that after the discovery of gold on the Pacific coast gold dust was largely used as a medium of exchange, and that before the establishment of the branch mint at San Francisco private parties manufactured gold coins of the weight and fineness of the United States gold coins, and in subdivisions as low as 25 cents. They were not made in imitation of the United States coin and were not legal tender, but they were worth as much, and passed as currently everywhere, as the gold coins of the United States. There probably was not a case in all the history of California where any creditor refused to receive them in payment of debt. When it was needed private enterprises supplied for the public use a more convenient medium of exchange than gold dust.

When the branch mint was established the Government did that for the public convenience which private parties before had done. This incident shows that while the stamp of the Government, and legal-tender enactments are necessary to make legal-tender money, it requires neither the Government stamp nor statutes to make a convenient medium of exchange when that medium possesses the necessary intrinsic value, while, on the other hand, the depreciation of the legal-tender notes during the war shows that neither the Government stamp nor legislative enactments making a currency legal tender can always make good money. Neither the Government stamp nor their legal-tender qualities gave the legal-tender notes the value they did possess as a medium of exchange, but this was imparted to them by the promise of the Government to redeem them in money, and when the day of payment was fixed and provision was made for their payment they became good for their face, because they were convertible into gold at par.

If private parties were to coin silver bullion into coin of the weight and fineness of the standard silver dollars such coin would be worth no more than its market value as bullion and would not circulate anywhere as a medium of exchange.

The silver rupee of India, the Mexican dollar, and the silver coins of China, and of every other country having free coinage of silver, are worth no more even in the countries where they are coined than the value of the silver they contain. The reason

that the standard silver dollar of the United States is worth 100 cents in the United States and even in Mexico, although it contains less silver than the Mexican dollar, is because the United States has put the standard silver dollar into circulation, virtually saying this coin, though intrinsically worth only what the silver it contains is worth as bullion in the markets of the world, is issued upon the pledge of the Government that it shall be accepted as the equivalent of a gold dollar in payment of all Government dues.

If Congress were to provide that all public dues should be paid in gold, and substitute no provision for the redemption of silver currency in gold, the standard silver dollar would become immediately worth less in the United States and everywhere than the Mexican silver dollar.

By the free coinage of silver it is proposed that anyone shall be permitted to take to the mints of the United States 371¼ grains of pure silver, now worth, say, 60 cents, and receive for it a standard silver dollar, which is to be a legal tender in payment for private debts at its face and receivable as the equivalent of a gold dollar for public dues, or, as provided in the Stewart bill of last Congress, which passed the Senate, receive for his 60 cents' worth of silver bullion a Treasury note which is a legal tender in payment of private debts and receivable in payment of public dues at its face. The whole object of the Stewart bill was to make the Government the purchaser of all silver bullion offered at the mints at the rate of 100 cents for 60 cents' worth of bullion.

If there are now premonitions of the depreciation of the silver dollar when it is coined only by the Government, and its coinage is limited, and its cost to the Government is only its intrinsic value, what would happen if the mints were thrown open for the coinage of silver on private account and private parties presenting the bullion to the mints were to receive a profit equal to the difference between the value of the bullion offered and the face value of the coin or Treasury notes received in exchange for it and the Government were to lose an amount equal to the profit of individuals?

It seems impossible that anyone should suppose for a moment that the silver dollar or Treasury notes received in exchange for silver bullion under such a law could be maintained equal to a gold dollar. It could not be. Before the first dollar under a free coinage law could be coined, the silver dollar could be worth no more than the value of the bullion it contained.

The merits or demerits of any measure for the use of silver as money to day must be determined by existing conditions. The question whether previous financial legislation has been wise or unwise is immaterial. The ratio of the value of silver to gold to-day, and not the ratio in 1873, is the important matter for consideration. Since 1873 silver has depreciated in value about 40 per cent. The product of silver increased from 63,000,000 ounces in 1873 to 140,000,000 ounces in 1891. The coinage of silver has been discontinued for many years by the principal countries of Europe. Many persons believe that with free coinage of silver we would be flooded with the world's silver.

The stock of full legal-tender silver coin in the principal countries of Europe approximates $1,100,000,000, of which $430,000,000 are stored in the vaults of five banks, and could be thrown upon our markets without delay. I have never feared that free coinage of silver in the United States would cause the world's silver to be dumped upon us, because I have never believed that with free coinage the silver dollar would possess any greater value than the bullion it contained.

Of course, if under free coinage the silver dollar could be maintained the equivalent in value of a gold dollar we would speedily get all the silver of the world, and citizens of the United States and subjects of foreign countries and foreign governments themselves would undoubtedly avail themselves of the privilege of presenting at our mints 60 cents' worth of silver, receiving for it a legal-tender note, and converting that note into gold. The United States would become the purchaser of all the silver in the world—bullion, coin, and old silverware—paying a dollar in gold for 60 cents' worth.

But it is absurd to suppose that if everyone was permitted to carry silver bullion to the mints to be coined there would be any alchemy in the process that would double the value of silver bullion. It is as absolutely certain as anything can be that under free coinage the value of the silver dollar would depreciate until it was worth no more as money than the value of the bullion contained in it. As soon as this occurred, the profits to silver owners in exchanging silver bullion for silver coin would cease and there would be no longer any inducement to take silver bullion to the mint to be coined. Silver, like every product of human labor, would be sold in the markets for what it would bring for use in the arts or for money.

The amount of silver coined under free coinage would be variable, and would depend upon a variety of circumstances. But little over eight million silver dollars were coined from the establishment of the mint until 1873, and it is not likely any great amount would now be coined under free coinage. With free coinage of silver, silver would be the standard for all our business transactions. Our $700,000,000 of gold would be withdrawn from circulation; the circulating medium would be greatly contracted, and the products of industry greatly diminished. Free coinage would not increase the price in gold of any commodity. The price of everything we import would still necessarily be paid in gold. If more silver dollars were received by the producer for his products, more silver dollars would be required to purchase everything which he consumes.

For instance, if the farmer should receive $1 in silver for a bushel of wheat, that silver dollar would go no further than 60 cents in gold or so much gold as in the world's markets would buy a silver dollar. The value of property measured in silver would be at once advanced to offset the depreciation in the standard of value. The last thing to be advanced would be the price of labor. Although the price of everything consumed by the laborer would be nearly doubled in value, it would be a long time, and after many a struggle, before the laborer would succeed in getting two silver dollars in lieu of the one gold dollar he now receives for his labor.

All producers and laborers would lose by the change in our standard of value, and only bankers, brokers, money-changers, and middlemen would profit by it. All salaries and pensions would be paid in silver and all appropriations of the Government expended in silver. The disturbance of our financial condition which would result from adopting a silver standard would produce great financial stringency, force the immediate collection of debts, increase the rate of interest, demoralize business, throw labor out of employment, impair the credit of the Government, bring home for collection our State, municipal, and corporation bonds held abroad, impair confidence, bring upon us ruin and bankruptcy.

If existing debts were paid in depreciated silver it would be robbing the creditor, because they have all been contracted with reference to the present standard, and 95 per cent of them since the great depreciation in silver.

India, one of the countries until recently having free coinage of silver or coining silver on private account, has hitherto been a great consumer of silver bullion for ornaments and coinage, and has been pointed to by the advocates of free coinage as an example of prosperity with free coinage of silver. The amount coined has been large, but not uniform, some years being a hundred per cent more than others. The following table shows the amount, expressed in dollars, of silver annually minted during the period of sixteen years, and shows the consumption of silver in India for coin:

1875	$23,890,686	1885	$48,487,114
1876	12,410,636	1886	27,121,414
1877	30,518,415	1887	44,142,013
1878	73,741,556	1888	35,207,132
1879	28,122,004	1889	37,927,814
1880	40,002,173	1890	57,931,323
1881	20,682,625	1891	32,670,498
1882	29,386,322		
1883	24,927,400	Total 17 years	500,562,656
1884	17,353,531	Annual average	34,150,744

The amount coined in 1890 is estimated at $30,000,000. The silver rupee of India contains 186 grains of pure silver; the half, quarter, and eighth rupees are of corresponding weights. The coinage of both metals until the recent action of the India government was practically free, provided the amount presented was equal to 50 tolos of gold or a thousand tolos in silver. There was a duty of 1 per cent upon all gold and silver brought to the mints. Gold was not coined in any considerable amount, and the business of the country was conducted upon a silver standard. The stoppage of the coinage of silver on private account in India is not an abandonment of the silver standard. Silver is still the standard, and will continue to be whether the government coins silver on its own account or not.

It is said this action of the government of India is intended to have the effect to prevent the further decline of the value of the rupee, but upon what this expectation is based is not stated. The value of the rupee will be fixed hereafter, as heretofore, by its value as silver bullion in the London market. It will still be measured in all London and in all foreign transactions by gold, and the discontinuance of free coinage by throwing the silver bullion heretofore coined in India on private account on the world's markets has depreciated, and will continue to depreciate, the intrinsic value of the rupee.

The claim sometimes made that silver has not fallen in value in India, and that the silver rupee in the interior of India will purchase as much wheat or as much of the other products of labor is absurd; it is incredible. The price of wheat in London is fixed in gold by the world's supply and demand. It is impossible that there could be to the exporter of wheat from India a

profit equal to the fall in the price of silver since 1873. Such a state of things could not exist ten days in any country under the sun. Competition among English wheat-buyers would speedily raise the price of wheat in India to an approximation of its gold price in London.

I am informed that the price of wheat is fixed in the export cities of India by the price in London and the cost of transportation, insurance, etc. The statement is undoubtedly an invention intended to make farmers believe that in some way the price of their commodities is affected by the depression of silver. Not every country which uses silver as money has a silver standard. In the United States we have about $500,000,000 of silver currency, but our standard is gold, and the difference between our gold and the intrinsic value of our silver currency rests upon the obligation of the Government to redeem it in gold.

England, although having a gold standard since 1816, has about $100,000,000 of silver, subsidiary coin, used in small transactions. France has $700,000,000 of silver and $900,000,000 of gold, but has a gold standard, and her silver passes at par upon the faith of its redemption, and an actual redemption in gold, and this is the case in every country which maintains in circulation silver upon a parity with gold. In all these countries silver is redeemable in some manner in gold; free coinage of silver has been discontinued, and the stock of silver is not increased. On the contrary, in every country where there is free coinage of silver the purchasing power of silver coin is precisely the market value of the bullion it contains.

Mr. PEFFER. Will the Senator from Oregon allow me to interrupt him?

Mr. DOLPH. For a question.

Mr. PEFFER. I do not wish to interrupt the Senator, but in view of the fact that I have received some inquiries from friends in different parts of the country, I wish to ask the Senator whether he understands that the Government of the United States, represented by the Secretary of the Treasury, has been in the habit of redeeming silver dollars with gold?

Mr. DOLPH. Not on their presentation to the Treasury, but they are never refused and can not be refused when they are paid either for internal-revenue taxes or duties at the custom-house, and that, as I said, is a qualified redemption of them in gold. It is a redemption to the extent of $500,000,000 annually in gold.

Mr. HOAR. The Senator is not discussing the act of 1890?

Mr. DOLPH. No, I am not discussing the act of 1890; that deals with the redemption of Treasury notes; that is another matter, to which I shall come directly.

Mr. PEFFER. Does the Senator understand that I have a right to take a silver dollar to the Treasury of the United States and ask a gold dollar for it?

Mr. DOLPH. No, you have not the right to do that; but if you had internal-revenue taxes to pay or if you were an importer and had to pay duties you could pay them in silver dollars, in silver certificates, or other silver currency. As I said before, that is a qualified redemption of the silver currency in gold, and that is the provision of law to-day which, in my judgment, together with the expectation of the people of this country that the parity will be maintained between the silver dollar and the gold dollar, and that if the present provisions are not sufficient for that purpose other provisions will be made for it, that keeps the silver dollar and the gold dollar at a parity.

Mr. HOAR. I am sorry to interrupt my friend, but I should like to put a question for my own information. Does not the Senator from Oregon understand that if the maintenance of the parity required the exchange of silver for gold whenever it was presented for that purpose to the Treasury, the obligation of the act of 1890 would rest upon the Treasury to do it? That would be necessary, as I understand it.

Mr. DOLPH. I do not understand that there is anything in the act of 1890 that requires the Treasurer of the United States to receive standard silver dollars or silver certificates in exchange for gold, nor do I believe that under the act of 1890 the Treasurer had any right to redeem Treasury notes with gold from the gold reserve in the Treasury. I think that his option was gone when the free gold in the Treasury was exhausted.

There is persistent and gross misrepresentation concerning the manner in which the act of 1873 discontinuing the free coinage of the silver dollar was enacted. The recent article by ex-Secretary Boutwell in the Boston Herald giving the facts concerning the manner in which the law of 1873 was passed should set the question at rest, but it will not. I quote the following from ex-Secretary Boutwell's article:

> The act known as the act for the demonetization of silver was passed in 1873, and upon a distinct recommendation made in my annual report to Congress in December, 1872. The statement so often made and so generally believed, that the provision was introduced and passed surreptitiously, was without any foundation, as will appear from quotations from my report, which I shall incorporate in this article.

The country had due and full notice of the policy proposed, and, if the friends of a silver currency were ignorant of the movement, the fault was their own. Not only was there no concealment, but, on the other hand, the change proposed was announced early and definitely. For myself, I can say that I never hesitated to avow the authorship of the measure, and I have been ready always to assign the reasons by which I was influenced.

In 1860 the American silver dollar was more valuable than the gold dollar, according to the statute ratio between the metals, in the sum of about 4 cents. From that time onward the difference in favor of silver diminished gradually, and in 1872 the difference had disappeared.

At that time the power drill had been invented and its value established. The use of dynamite was well understood, and the number and richness of the silver mines in the Rocky Mountains justified the conclusion that silver would deteriorate in value with each succeeding year.

On this theory of the then future my policy was based. We were then on a gold basis as far as the use of the metals had a part in our financial affairs; we were a principal producer of gold, and the most important steps had been taken in the work of bringing the Treasury note to the standard of gold coin.

In the same report I advised the coinage of a silver dollar, known as the trade dollar, in value superior to the Mexican dollar, which was then in use almost exclusively in the commerce of China and the East Indies. This coin, which was not current in the United States, became the means of a very considerable export of silver to the East.

These two measures were designed to maintain a gold basis, in competition with England, our principal rival, and to substitute American silver for Mexican silver in our dealings with the countries using that metal. As evidence of the facts alleged, I introduce the following extracts from my report of 1872:

> In the last ten years the commercial value of silver has depreciated about 3 per cent as compared with gold, and its use as currency has been discontinued by Germany and some other countries. The financial condition of the United States has prevented the use of silver as currency for more than ten years, and I am of opinion that upon grounds of public policy no attempt should be made to introduce it, but that the coinage should be limited to commercial purposes, and designed exclusively for commercial uses with other nations.
>
> "The intrinsic value of a metallic currency should correspond to its commercial value, or metal should be used only for the coinage of tokens redeemable by the Government at their nominal value. As the depreciation of silver is likely to continue, it is impossible to issue coin redeemable in gold without ultimate loss to the Government; for, when the difference becomes considerable, holders will present the silver for redemption, and leave it in the hands of the Government to be disposed of subsequently at a loss. If the policy should be adopted of issuing silver coin irredeemable, but whose intrinsic and nominal value should correspond to gold, the time must come when the country would suffer from the presence of a depreciated silver currency, not redeemable by the Government nor current in the channels of trade.
>
> "Therefore, in renewing the recommendations heretofore made for the passage of the mint bill, I suggest such alterations as will prohibit the coinage of silver for circulation in this country, but that authority be given for the coinage of a silver dollar that shall be as valuable as the Mexican dollar and to be furnished at its actual cost. The Mexican dollar is used generally in trade with China, and is now sold at a premium of about 8 per cent over the actual expense of coining. As the production of silver is rapidly increasing, such a coinage will at once furnish a market for the raw material and facilitate commerce between the United States and China."

In a speech made by me before the Massachusetts Republican Club in Boston some time ago, in discussing this matter, I said:

> There has been much misrepresentation about the manner in which the act of 1873 was passed, and, although the statement that the act was clandestinely passed has been many times disproved, it is constantly reiterated by the advocates of free coinage. The truth is that in the official statement which accompanied the bill by which free coinage of the silver dollar was discontinued when it was transmitted from the Treasury Department to Congress, attention was called to the fact that by the bill the coinage of the silver dollar was to be discontinued. That fact was also stated more than once on the floor of both the Senate and the House.
>
> The bill was many times printed. It was pending in more than one Congress and received careful scrutiny by committees of both Houses of Congress; it was then a matter of indifference to Congress and to the country whether the provision for the free coinage of silver dollars was continued or not. Silver had been undervalued since the laws of 1834 and 1837 were passed. Silver dollars could not be kept in the country. As I have said, only a little over eight millions of silver dollars had been coined at our mints in all our history.
>
> If the law of 1873 had not been passed when France and the Latin Union discontinued silver coinage, this country would have been compelled to have done the same, or to have gone to the silver standard. If the act of 1873 had not been passed, no silver dollars would have been coined between 1873 and 1878, or, if coined, they would have left the country as bullion. If the act of 1873 had not been passed after silver was demonetized by Germany and its coinage discontinued by France and the Latin Union, our gold would have disappeared and the silver of the world would have begun to come to us.
>
> The results which would have followed the continuance of free coinage of silver in this country at the legal ratio would have been disastrous in the extreme. It would have made silver the currency and the silver dollar at its intrinsic value the measure of all values in this country. The only standards with which our financial standing under such a condition can be compared are those of India, China, Mexico, and other countries having a silver basis. With our mints open to free coinage of silver when the price of 371¼ grains of pure silver fell below $1 in gold of our coinage, silver would have been our only metallic currency in circulation and the basis of all commercial transactions.
>
> Gold would have ceased to circulate, as it has in other countries under similar circumstances, and the purchasing power of our currency and the price of all our products of human industry would have fluctuated as the price of silver bullion rose and fell in the world's markets. The credit of the Government would have been impaired. Foreign capital would have been permanently withdrawn from the country, our foreign trade demoralized, our prosperity destroyed, and the development of our great resources stopped. But under the financial policy adopted and pursued by the Government the national credit has grown stronger and stronger until it is better than ever before in our history, and better than that of any other nation of the world.
>
> Our once depreciated paper currency, on account of our wise financial policy, is to-day preferred for all common transactions in this country and passes current in other countries. Our national debt has been refunded at greatly reduced rates of interest, and has been rapidly paid off. Our bonds are at a premium, our public debt is decreasing, the rate of interest on Government securities is continually growing less, all of which prove the wisdom of the policy we adopted. The great development of our resources, the

rapid increase of our wealth, and our long-continued prosperity attest the wisdom of maintaining the public credit.

Our mines have been opened, our forests cleared, our vast public domains settled, railroads constructed, great manufacturing industries established, employment provided for labor, national and individual prosperity promoted, and the nation made rich. In my judgment free coinage of silver would not only provide a depreciated standard as the measure of value of all commodities, but would demoralize business, contract the circulating medium, and give us a currency which would fluctuate in value as the price of silver bullion rose and fell, destroy our prosperity, and bring upon us disaster and ruin.

The operaton of the Bland act and the Sherman law was recently stated in an authorized interview with Secretary Carlisle. He said:

The operations of the United States Mint commenced in 1792, and from that time to 1873, a period of eighty-one years, the total amount of silver dollars coined was $8,045,838. In 1873 the coinage was stopped by act of Congress, but in 1878 it was resumed under the so-called Bland-Allison act, by the terms of which the Secretary of the Treasury was directed to purchase and coin into standard silver dollars of 412½ grains each, not less than $2,000,000 worth nor more than $4,000,000 worth of silver bullion each month, and between the date of the act and the 14th of July, 1890, a period of twelve years, there was coined $378,166,793.

In addition to this there has been coined from trade dollars $5,088,472, and from the seigniorage of bullion purchased and coined under the act July 14, 1890, the sum of $6,641,109, making in the aggregate $389,896,374 in full legal-tender silver money issued by the Government since 1878. Of this amount only $58,016,000 was in actual circulation on the first day of the present month, the remainder being held in the Treasury as part of the assets of the Government, or being represented by outstanding certificates.

The act of July 14, 1890, requires the Secretary of the Treasury to purchase 4,500,000 fine ounces of silver bullion each month, and it provided that he should continue the coinage of silver dollars, at the rate of $2,000,000 per month, till the 1st day of July, 1891, and under this act there has been coined $29,408,461, which makes a total coinage of silver dollars under all acts since 1878, $419,294,835, or more than fifty times as much as was coined during a previous period of eighty-one years. In addition to the silver bullion purchased by the Government since 1878 and coined as above stated, the Secretary of the Treasury has purchased under the act of July 14, 1890, and now holds in the vaults of the Treasury uncoined, 124,292,532 fine ounces of silver bullion, which cost the people of the United States $114,229,920, and is worth to-day at the market price of silver $103,411,386, thus showing a loss of $10,888,530.

By the terms of the act the Secretary was required to pay for all silver bullion purchased by the issue of new United States Treasury notes, payable in coin, and it provided that upon demand of the holder of any such notes they should be redeemable in gold or silver coin, at the discretion of the Secretary, it being in the language of the act the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law. In the execution of this policy of Congress it is the duty of the Secretary when the necessity arises to exercise all the powers conferred upon him by law in order to keep the Government in a condition to redeem its obligations in such coin as may be demanded, and to prevent the depreciation of either as compared with the other.

The records of the Treasury Department show that during the eleven months beginning May 31, 1892, and ending May 1, 1893, the coin Treasury notes issued for the purchase of silver bullion under the act of July 14, 1890, amounted to $49,861,184, and that during the same period the amount of such notes paid in gold was $47,745,173. It thus appears that all silver bullion purchased during that time, except $2,216,011 worth, was paid for in gold, while the bullion itself is stored in the vaults of the Treasury, and can neither be sold nor used for the payment of any kind of obligation. How long the Government shall thus be compelled to purchase silver bullion and increase the public debt by issuing coin obligations in payment for it is a question that Congress alone can answer. It is evident that if the policy is continued and the Secretary of the Treasury be compelled to issue bonds or otherwise increase the interest-bearing debt, it will be done for the purpose of procuring gold with which to pay for silver bullion purchased under the act referred to.

There is to be added to our stock of silver bullion the purchases made since this interview was had. The intrinsic value of the silver dollar is to-day $0.56; present value of an ounce of silver, $0.726. Under the Bland and Sherman acts we have purchased 460,000,000 ounces of silver at a loss, at the present prices of silver bullion, of $134,957,000.

Mr. MITCHELL of Oregon. May I interrupt my colleague at this point?

Mr. DOLPH. Certainly.

Mr. MITCHELL of Oregon. I understood my colleague to say he did not think the Secretary of the Treasury had any right, after the $100,000,000 limit had been reached in the gold reserve, to redeem the Treasury notes put out under the Sherman act in gold.

Mr. DOLPH. That is my impression about the law.

Mr. MITCHELL of Oregon. The only other way to redeem them would have been in silver?

Mr. DOLPH. In silver.

Mr. MITCHELL of Oregon. Now, suppose he had redeemed them in silver, would that or would it not have destroyed the parity?

Mr. DOLPH. I do not think it would, but still it may be that the action of the Secretary of the Treasury, whether legal or otherwise, did affect the value of the silver dollar.

Mr. STEWART. Let me ask the Senator from Oregon whether he is aware of the fact that the French Government has $260,000,000 of silver in its treasury and $700,000,000 in circulation, and all its obligations are payable the same as ours in either silver or gold?

Mr. DOLPH. I am aware that in France there is a silver circulation of $700,000,000. I am not prepared to admit that the Senator is correct when he says that there are $260,000,000 in the French treasury in addition to the $700,000,000.

Mr. STEWART. No, that is a part of it.

Mr. DOLPH. Part of the circulation is contained in the Bank of France. There are, I suppose, $250,000,000 or $260,000,000 in the Bank of France. France also has $900,000,000 in gold. The Bank of France pays out gold or silver at its option, just as the Secretary of the Treasury redeems the Treasury notes at his option in gold or silver coin, and silver is received for Government dues the same as in the United States. They have substantially the same provisions we have for the use of silver; but coinage by the Government and coinage for individuals of silver has been stopped and there is no further increase of the silver in circulation. With $900,000,000 in gold, under similar provisions to our own, they manage to maintain a parity between silver and gold.

Mr. STEWART. Can a person take any paper of France and obtain gold for it for exportation?

Mr. DOLPH. I do not know what the provision is as to the exportation of gold. There may be some provision against it. I suppose that the Bank of France, being a government institution, could itself regulate that matter.

Mr. STEWART. Is not that the fact?

Mr. DOLPH. I will take the Senator's word for it.

Mr. STEWART. That is the fact.

Mr. DOLPH. I will not state as a fact what I do not know.

Mr. STEWART. That is the fact. Now, with regard to Germany, will she pay out gold for paper? Does she not compel them to take silver? Is there any government except ours that will exercise the discretion given it to protect the country in favor of exporters and against the people? Is there any other government? I defy any Senator to tell me of any other government that has robbed the people of gold and given the creditors the preference when the option belonged to the government.

Mr. DOLPH. I am informed by a Senator near me that there is no government but ours that puts out paper money and redeems it in gold.

Mr. STEWART. What construction does the Senator put upon what are claimed to be the mandatory clauses which provide that the Secretary of the Treasury shall coin sufficient of the bullion purchased to provide for the redemption of the notes? I say that all the trouble which has grown up and all of the disgrace which has been heaped on the act of 1890 is the result of maladministration and not of unwise law.

Mr. DOLPH. I do not construe that provision to require the Secretary of the Treasury to coin silver unless he finds it necessary for the purpose of redeeming the notes in silver; he may have a right under the act of 1890 to use the gold reserve for the purpose of redeeming notes issued under that act in gold. But I do not believe he has. I believe he acted contrary to the requirements of law when he continued to redeem the Treasury notes of 1890 with gold after the reserve had been encroached upon.

Mr. STEWART. I will not interrupt the Senator from Oregon now, but at the proper time I shall show the various arrangements made to get gold into Austria and the action of different parties. I shall give a detailed history of the manner in which our gold was sent abroad and how this trouble was produced.

Mr. DOLPH. One of the causes that sends gold abroad is a balance of trade against us. Gold is the standard of all the commercial countries of Europe, and all our imports from there must be paid for in gold.

A tariff that causes what we consume to be made at home tends to increase our exports and diminish our imports, and to bring gold to us instead of sending it out of the country. Then American travelers must provide gold for their expenses in Europe, and they carry a great deal of gold abroad annually, but the principal cause of the drain of gold from this country is the fact that we are debtors to the people of foreign countries, and when they demand payment we must send the gold abroad to liquidate our indebtedness.

During our recent financial disturbances there was a large exportation of gold. The stock of free gold in the Treasury—that is, the amount of gold over and above the $100,000,000 reserved for the redemption of legal Treasury notes—was exhausted and the reserve was encroached upon. This condition, in my judgment, was largely caused by the fear of our European creditors that we would go to the silver standard in the United States, and the consequent disposition on their part to recall their investments in this country. If we should adopt free coinage of silver and go to a silver basis, whenever an American citizen should go abroad he would be compelled to exchange the silver currency of the United States for gold, paying a premium equal to the difference between the intrinsic value of the two metals, and the same thing would be true concerning the payment of any balance of trade against us and of the payment of our foreign creditors.

There is a great deal of absurd talk about the friends of silver

and the enemies of silver. I am neither a friend of gold nor an enemy of silver. I am in favor of the use of the two metals as money whenever possible. The advocates of free coinage denounce those who oppose free coinage of silver as the enemies of silver, and as gold bugs, etc. Nothing could be more unjust. No legislation favored by those who believe that the gold standard should be maintained is for the purpose of discriminating against either metal.

I have no doubt but that the repeal of the Sherman law, the cessation of the purchase of silver by the Government, and the throwing of the 4,500,000 ounces of silver monthly now purchased by the United States upon the markets of the world, would still further depreciate the price of silver; but the Sherman law has failed to keep up the price of silver bullion, and threatens under existing conditions, for which the law is not responsible, to force us to a silver standard.

I do not believe that the free coinage of silver would maintain the price of silver bullion or benefit silver producers, while it would bring disaster upon the country. I claim to have been a better friend to the producers of silver than those who have favored free coinage. I have never thought that the purchase of silver by the Government and coining it into silver standard dollars required to be received at their face for public and private dues, or storing it in the vaults of the Treasury, was in accordance with sound financial principles; in other words, that such a course could be continued indefinitely, and the parity between the gold and silver dollar be maintained. In a speech which I made in the Senate on the 19th of May, 1890, I said:

The silver coin of the United States, coined under the Bland act and now stored in the Treasury vaults, may be compared to a leaning tower. The fact that a silver dollar is intrinsically worth but about 80 cents on the dollar is the law of gravitation that is constantly pulling the whole mass downward to the level of the price of silver bullion. The fact that the Government receives it in payment of public dues upon a par with gold and redeems the certificates in gold if preferred by the holder is the counteracting force that prevents the fall; but every month's coinage represents a course of material that raises the height of the tower and carries it towards the center of gravity, which, once reached, the law of attraction will precipitate the mass downward. That there is such a line between the opposing forces, beyond which we can not safely pass, is conceded by most people in this country, and because some persons have miscalculated its position and the precise time when it will be reached does not prove that it does not exist.

Mr. PEFFER. Mr. President——

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Oregon yield to the Senator from Kansas?

Mr. DOLPH. For a question?

Mr. PEFFER. Just a question.

Mr. DOLPH. Certainly.

Mr. PEFFER. The importance of the subject which the Senator is discussing is my only excuse for interrupting him, if it is an interruption. I wish to ask the Senator what, in his opinion, maintains the value of gold?

Mr. DOLPH. The same thing that maintains or fixes the value of every other product of human industry.

Mr. PEFFER. Is there any other product of human industry whose value is fixed in the law?

Mr. DOLPH. The value of gold is not fixed by law. The law simply provides what shall constitute a dollar. That dollar might be worth 25 cents of our present dollar, or it might be worth five times the value of the gold dollar. The fact that gold is used for money as well as for ornaments and in the arts helps to maintain its value, but that may be said as well of silver. That is but an additional use of the metal which helps to fix its value.

Mr. PEFFER. I wish to ask the Senator, then, whether it is not the law that a certain number of grains of pure gold shall be put into a certain coin, say a quarter eagle, and that its value shall be a certain sum, say $2.50, and whether the value of gold is not fixed by the law and maintained by the law.

Mr. DOLPH. No, not at all. If a legal enactment would give what is called money value, if the stamp of the Government or the device of the Government upon the metal would give it value, you might just as well make money out of iron and copper as of silver or gold.

Mr. HAWLEY. It is a mere enactment providing a name for so many grains.

Mr. DOLPH. It is a mere enactment giving a name to so many grains of gold and providing what its functions as money shall be.

Mr. PEFFER. Then I want the Senator to answer my original question, what makes the value of gold? What maintains its value?

Mr. DOLPH. Its use, its adaptation to the uses of man, the fact that it is useful for a great many purposes, for ornaments, for implements, or for table service, and for coinage as money.

I wish to quote some remarks I made in the Senate when the conference report on the Sherman law was under consideration in this body. I then addressed the Senate as follows:

Mr DOLPH. Mr. President, I intend to vote for this measure. I vote for it because I consider it as different from the free coinage of silver as night is from day. I think the conferees did well to make haste to report such a measure, for it is pretty generally understood that a disagreement of the conferees might have led to the passage of a free-coinage bill. I vote for this measure for a very different reason from that which has been given by some Senators for supporting it, namely, that it is an approach to free coinage.

On the contrary, this bill distinctly announces the fact that it is the intention of Congress by the bill to maintain the present standard, the gold standard, whereas, in my judgment, free coinage would have put the country upon a silver basis, would have put all our revenues upon that basis, and all our expenditures, as well as the price of all commodities, and the wages of every laboring man in the country upon the same basis. The soldier would have received the amount of pension he now receives in gold in dollars worth 80 cents on the dollar of the present standard. Every employé in the Government would have been paid in the same depreciated currency. In my judgment, gold would have been withdrawn from circulation, the Government would have had no power to supply anything in its place, and free coinage of silver would not have supplied as much silver coin as we have been coining under the Bland act.

There would under free coinage be no inducement to bring silver to the mines unless, as supposed by some, a man could come in one door of the mint with silver at from 72 to 80 cents on the dollar and take out at another door a silver dollar worth a dollar in gold. That is improbable. The moment the silver dollar became worth no more than the bullion in it there would be no more inducement to take silver bullion to the mint than to sell it in the open market. We had free coinage for eighty years, and in two years, I think, or three years past, we have coined more under the forced purchase of silver by the Government than we coined of silver in the whole eighty years when we had free coinage.

I vote for this bill also not without some misgiving. I think there is some danger in it. There will be danger in any measure by which the volume of silver coin or silver certificates which are redeemable in silver dollars containing but 80 cents' worth of bullion, measured by the standard of gold, is largely increased.

The question naturally arises, how much can the volume of this character of currency be increased without passing the point at which the receiving of these certificates for public dues and all the efforts of the Secretary of the Treasury in redeeming them in silver or gold, as he may have either metal, can maintain them at par with the gold dollar?

So, when I vote for this measure, I do it with my eyes open, knowing that there is danger lurking in it. But it is so different from free coinage, so far removed from free coinage, that I vastly prefer it to that.

As I said before, there is a reasonable fear that if there should be disagreement we would get a free-coinage bill. Instead of criticising the gentlemen who have changed their views upon this question, have seen such sudden light and been so suddenly converted, I feel like congratulating them on their conversion to sound principles of currency. We read of a man who was traveling towards Damascus and breathing out threatenings and slaughter against the early Christians, that he saw a great light and was instantaneously converted, and the whole trend and purpose of his life was changed.

I read this to show how I considered the Sherman law at the time the conference report was agreed upon.

I believe, however, with the continuance in power of the Republican party, the Sherman law might have continued in force for some time to come without any disastrous effects. The repeal of the Sherman law without any substitute by throwing upon the markets of the world monthly the 4,500,000 ounces of silver bullion now purchased monthly by the Government, should the present production of silver continue, will necessarily greatly depreciate the price of silver bullion.

It will stop the increase of our circulating medium by the issue of Treasury notes. It will not, in my judgment, restore confidence or greatly improve the business situation. I fear, on the contrary, that it will make it worse. It may, however, prevent what is threatened, viz, the parting company of the silver and gold dollar, and enable the Government to float its load of silver currency upon our present stock of gold. This will only be the case, however, by the repeal of the law unaccompanied by any measure calculated to shake confidence in the financial ability of the Government, and by such a decided action of Congress as to make it certain that there is no further danger of free coinage of silver, and that it is the policy of the Government to maintain the gold standard, and to redeem and retire the silver currency by substituting Treasury notes redeemable in gold on presentation, or to maintain our present circulation of silver currency at par with gold under the present or additional provisions for its redemption in gold.

Some persons talk about the redemption of our silver currency in gold as if it were, like our legal-tender currency, redeemable on presentation. Others ignore entirely the provision which has been made by law for the redemption of silver currency in gold, and point to the fact that standard silver dollars pass current at their face in this country as evidence that free coinage of silver would make the legal ratio in the United States between gold and silver 16 to 1, the actual ratio of the intrinsic value of the two metals.

I do not believe that the Secretary of the Treasury is authorized under the Sherman act to redeem the Treasury notes issued under it in gold when the gold reserve is encroached upon, or to sell bonds to obtain gold to redeem them. They should, under the law, have been paid in silver coin when there was no longer gold with which to redeem them without encroaching upon the gold reserve, but the course pursued by the Secretary of the Treasury no doubt helped to maintain the parity between gold and silver.

In several of the States and Territories one of the principal industries is silver mining. The owners of silver mines and those engaged in dependent industries are interested in having a market for the products of the mines at prices for silver bullion which will make mining profitable and the mining regions

prosperous. Their reasonable demands upon the General Government, in this regard, have heretofore been more than complied with.

Under the Bland act the Government became a forced purchaser of silver to the value of $2,000,000 per month, and under the Sherman act of 4,500,000 ounces of silver bullion per month, all in a vain endeavor to prevent the further depression of silver bullion. I greatly sympathize with these people, and if some one can devise a scheme by which silver mining can be protected without injustice to other interests quite as deserving and without danger to our finances and our credit, I should be very glad to support it.

It is evident that the Sherman law, even if it could be safely continued, will not be sufficient to keep up the price of silver bullion, and owing to its depreciation, silver mines are already closing down. Undoubtedly the law has helped to sustain the price of silver by withdrawing from the world's market so large an amount of silver bullion.

While I have reluctantly concluded, notwithstanding the disastrous effect of the repeal on the price of silver bullion and the silver-mining industry, that the Sherman law should be repealed to prevent greater disaster, I am not willing to admit that that law is responsible for existing financial and business conditions, and I do not expect its repeal will greatly relieve us from such conditions. The proposition to repeal the provision of the Sherman law, authorizing the purchase of silver bullion, to receive my support, must not be connected with any other measure which would be equally or more injurious to the credit of the Government and the finances of the country, such as the removal of the tax upon State-bank issues or free coinage of silver.

Mr. PEFFER. In further explanation of the reason why I asked a question of the Senator from Oregon, I wish to read section 9 of the act of Congress approved April 2, 1792, it being chapter 16 of the laws of that year:

And be it further enacted, That there shall be from time to time struck and coined at the same mint coins of gold, silver, and copper of the following denominations, values, and descriptions, viz: Eagles, each to be of the value of ten dollars or units, and to contain two hundred and forty-seven grains and four-eighths of a grain of pure or two hundred and seventy grains of standard gold. Half eagles, each to be of the value of five dollars, and to contain one hundred and twenty-three grains and six-eighths of a grain of pure or one hundred and thirty-five grains of standard gold. Quarter eagles, each to be of the value of two dollars and a half, and to contain sixty-one grains and seven-eighths of a grain of pure or sixty-seven grains and four-eighths of a grain of standard gold. Dollars or units, each to be of the value of a Spanish milled dollar as the same is now current, and to contain three hundred and seventy-one grains and four-sixteenth parts of a grain of pure or four hundred and sixteen grains of standard silver.

The remainder of the section provides for the coinage of half dollars, quarter dollars, dimes, half dimes, cents, and half cents; and in each individual case the law provides, just as it did as to the articles I have already read about, how much gold, how much silver, how much copper shall be put into each one of the several coins and the value thereof under the constitutional provision authorizing Congress to coin money and to regulate the value thereof. This explains the reason why I dare to insist that the law gives value to metal in coin, as I do.

SENATOR FROM MONTANA.

Mr. HOAR. I ask that the unfinished business be laid before the Senate.

The PRESIDING OFFICER (Mr. BLACKBURN in the chair). The order of morning business being closed, the Chair will lay before the Senate the unfinished business, which will be stated.

The Secretary read the resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. HOAR. I thought it was my duty, having this matter in charge by the direction of the committee, to have it laid before the Senate so that it may have whatever right of way it is entitled to; but I do not propose to ask its consideration without conference with the gentlemen on the other side of the Chamber.

Mr. GRAY. May I ask, for information, what is the resolution? I did not exactly catch it.

Mr. HOAR. It is the Lee Mantle resolution; and I stated that I thought it was my duty, having the matter in charge, that it should not lose whatever title to precedence it has; but it is not my purpose to ask the Senate to proceed with its discussion without conference with the gentlemen on the other side of the Chamber.

The PRESIDING OFFICER. The resolution called up by the Senator from Massachusetts comes up under the rules as the unfinished business before the Senate.

Mr. COCKRELL. I move that the Senate adjourn.

The motion was agreed to; and (at 4 o'clock and 8 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, August 9, 1893, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

TUESDAY, *August 8, 1893.*

The House met at 12 o'clock m.

The Chaplain, Rev. SAMUEL W. HADDAWAY, offered the following prayer:

Almighty and Everlasting God! Thou who rulest amidst the armies of Heaven and presidest over the deliberations of men, be pleased to grant us Thy presence and Thy blessing at this hour. We praise Thee for permitting Thy servants to assemble in their legislative capacity. We praise Thee and we adore Thee for all the manifestations of Thy grace and Thy truth unto us. Thy servants have come together in session extraordinary—a session that will involve extraordinary duties, the assumption of extraordinary responsibilities, and the necessity of extraordinary blessings from God. May it please Thee to vouchsafe these unto us; and may the beneficent results of the action of this legislative body be felt far and wide among all sections of our country and among all classes of our people; and may the annals of this Fifty-third Congress go down to the ages to come, full of the assurance that it has contributed very largely to the peace, to the plenty, and to the prosperity of the nation. We ask this for Christ's sake. Amen.

The Journal of yesterday's proceedings was read, corrected, and approved.

SWEARING IN OF MEMBERS.

The SPEAKER. If there are any members present to-day who were not here yesterday they will please come forward and take the oath of office.

Mr. W. A. McKeighan, a Representative-elect from the State of Nebraska, and Mr. John E. Reyburn, a Representative-elect from the State of Pennsylvania, presented themselves and were duly qualified by taking the oath of office prescribed by law.

ANNUAL REPORT CLERK HOUSE OF REPRESENTATIVES.

The SPEAKER laid before the House the annual report of the Clerk of the House of Representatives, embracing the period from July 1, 1892, to June 30, 1893; which was ordered to be referred to the Committee on Accounts when appointed.

SALES OF WASTE PAPER, DOORKEEPER'S OFFICE.

The SPEAKER also laid before the House a communication from the Doorkeeper of the House of Representatives, transmitting report of the sales of waste paper during the term of the Fifty-second Congress; which was also referred to the Committee on Accounts when appointed.

BOOKS, PAMPHLETS, ETC., FOLDING ROOM.

The SPEAKER also laid before the House a communication from the Doorkeeper, transmitting an inventory of books, pamphlets, maps, etc., in the folding room of the House of Representatives on the 7th day of August, 1893; which was ordered to be referred to the Committee on Accounts when appointed.

RECESS.

Mr. O'FERRALL. Mr. Speaker, I ask unanimous consent that the House take a recess for twenty minutes. I do this with the consent of the gentleman from Michigan [Mr. BURROWS].

I gave notice on yesterday that immediately after the reading of the Journal I would call up the election matter of Belknap and Richardson, from the State of Michigan. I learn, however, that the President's message will probably be here in a few minutes, and believe it to be the desire of the House to have that read before going into the consideration of the contested-election case.

Mr. BURROWS. There will be no objection to that course.

The SPEAKER. The Chair is informed that the Senate has taken a recess until 12:45.

Mr. O'FERRALL. I will modify my motion, and move that the House take a recess for fifteen minutes.

The motion was agreed to; and accordingly (at 12 o'clock and 30 minutes p. m.) the House took a recess for fifteen minutes.

AFTER THE RECESS.

The recess having expired, the House, at 12:45 p. m., resumed its session.

REPORT OF COMMITTEE TO WAIT ON THE PRESIDENT.

Mr. SPRINGER. Mr. Speaker, on behalf of the committee appointed on yesterday by the Speaker to join such committee as may be appointed by the Senate to wait upon the President of the United States and notify him that a quorum of the two Houses had assembled, and that Congress was ready to receive any communication he might see proper to make, I wish to state that we have performed that duty, and I am instructed by the committee to say that the President will communicate in writing a message at once.

THE PRESIDENT'S MESSAGE.

A message from the President, by Mr. Pruden, one of his secretaries, was communnicated to the House.

[For the message see Senate proceedings.]

The SPEAKER. The message will lie on the table for the present.

CONTESTED SEAT—FIFTH MICHIGAN DISTRICT.

Mr. O'FERRALL. Mr. Speaker, I now call up for consideration the contested-election matter from the State of Michigan.

I ask that the Clerk read the original resolution and also the substitute proposed by the gentleman from Michigan [Mr. BURROWS].

The Clerk read as follows:

Resolved, That George F. Richardson be now sworn in as a Representative in this Congress from the Fifth district of the State of Michigan.

The substitute was read, as follows:

Whereas the credentials upon which George F. Richardson claims a seat in the Fifty-third Congress from the Fifth Congressional district of the State of Michigan have been annulled and made void by reason of the judgment of the supreme court of that State; and

Whereas in pursuance and in compliance with such judgment and with the laws of said State, the State board of canvassers of Michigan have determined, declared, and certified that Charles E. Belknap is duly elected a Representative to the Fifty-third Congress of the United States of America from the Fifth Congressional district of the State of Michigan: Therefore,

Resolved, That Charles E. Belknap is entitled to be sworn in as a member of this House on his *prima facie* case.

Mr. O'FERRALL. Mr. Speaker, on yesterday an understanding was reached that there would be an hour's debate on each side, one hour to be controlled by the gentleman from Michigan [Mr. BURROWS] in support of his substitute, and one hour to be controlled by myself in support of the original resolution. I reserve the time allotted to those who intend to support the original resolution, and the gentleman from Michigan can control his hour.

Mr. BURROWS. I would suggest, Mr. Speaker, to the gentleman from Virginia whether, in support of his resolution, he ought not to have read at least the credentials of Mr. Richardson, in order that they may be before the House at this time.

Mr. O'FERRALL. I think the suggestion a good one, and ask the Clerk to read the certificate issued to Mr. Richardson.

The Clerk read as follows:

CERTIFICATE OF ELECTION.

We, the undersigned, State canvassers, from a careful examination of the election returns from all the counties composing the Fifth Congressional district of the State of Michigan, as received by the secretary of state, do determine as the result of our investigation that George F. Richardson has been, by the greatest number of votes, duly elected a Representative to the Fifty-third Congress of the United States of America for and on the part of the State of Michigan, in accordance with the laws of said State, at the election holden on the 8th day of November, 1892.

Witness our hands, at Lansing, this 17th day of December, 1892.

ROBT. R. BLACKER,
Secretary of State.
FREDERICK, BRAASTAD,
State Treasurer.
GEO. T. SHAFFER,
Commissioner State Land Office.

STATE OF MICHIGAN, *Office of the Secretary of State, ss:*

I, Robert R. Blacker, secretary of state of the State of Michigan, do hereby certify that I have compared the foregoing copy of the determination of the board of State canvassers with the original, on file in this office, and that it is a correct transcript therefrom and of the whole of such original.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State of Michigan, at Lansing, this 17th day of December, in the year of our Lord 1892.

[SEAL.]

ROBT. R. BLACKER,
Secretary of State.

Mr. O'FERRALL. Mr. Speaker, I also ask that the certificate of election issued to the gentleman from Michigan [Mr. BURROWS] be read.

The SPEAKER. The Chair will state that that can be read in the time of the gentleman from Virginia [Mr. O'FERRALL]. Does the gentleman reserve his time for the present?

Mr. O'FERRALL. I will let the certificate be read in my time.

Mr. BURROWS. Mr. Speaker, if the House will give me its attention, I can state in a very few words all there is of this case.

Mr. O'FERRALL. Mr. Speaker, if the gentleman from Michigan [Mr. BURROWS] will allow me, I asked for the reading of the certificate upon which the gentleman from Michigan [Mr. BURROWS] himself holds his seat.

The SPEAKER. The Chair understood that was to be read when the gentleman from Virginia took the floor in his own time.

Mr. BURROWS. Charles E. Belknap and George F. Richardson each hold a certificate of election to the House of Representatives of the Fifty-third Congress, and both of these certificates are regular in form, signed by the proper officers of the State authorized by our statutes to sign such certificates, and I have no doubt that the holder of either of these certificates, unchallenged, would be entitled *prima facie* to a seat in this House. Both, however, can not be admitted, and it becomes necessary for the House of Representatives, in the exercise of its constitutional duty, to "determine the election, qualifications, and returns of its own members," to pass upon this *prima facie* case. The Clerk of the House very properly stated, in his explanation of his action—

The matter is therefore submitted to the House, which, when organized, is, under the Constitution and the law, judge of the elections, returns, and qualifications of its own members.

The fact that the Clerk of the House placed upon the roll the name of George F. Richardson will, I presume, be conceded by all as adding nothing to and detracting nothing from the force of either certificate. Mr. Payne, in his work on elections, very properly says:

This provision—

Speaking of the provision authorizing the Clerk to make up the roll—

is also constitutional if its effects terminate with the preparation of the roll. For it is no violation of the constitutional provision, which makes the House the sole judge of the credentials (which are the returns) for a Clerk of the preceding House to pass judgment thereon if that judgment is to remain with the Clerk, and is not to be in any way thrust upon the House. But if the object and effect of the statute, either standing alone or connected with the rules of the preceding House, were to encourage the Clerk in any attempt to impose his judgment respecting the credentials and his roll, framed in accordance therewith, upon the House at its organization it would be unconstitutional and void; because while Congress has the power to prescribe the form and substance of the credentials, the House is the sole judge of the credentials under the Constitution, and Congress is powerless to constitute any other tribunal, authority or person to judge thereof.

The power to judge of the elections, returns, and qualifications of its members to determine its own rules, and to choose its own officers, which is conferred by the Constitution upon the House, is in its character absolute and exclusive. No other body, tribunal, or authority can in any case exercise that power, or any part of it. * * * Of course it was competent for Congress to authorize any citizen, whether he had or had not ever been a Clerk of the House of Representatives, to make up such a roll; but if there was any attempt, in this act, to authorize the ex-Clerk to appear, as a functionary, at the organization of the new House, or to give his roll any constitutional place in that proceeding, or to furnish any rules or regulations for the occasion, that attempt was wholly unconstitutional and void.

So this case stands before the House without receiving any additional force from the action of the Clerk in placing the name of Mr. Richardson on the roll. We must, therefore, gentlemen, pass upon this case as if, for the first time, at this moment, these two claimants appeared at the bar of this House, holding each the evidences of title to a seat in this body.

Now, what is this case? The certificate of Mr. Richardson has been read. Another certificate will be read, a certificate issued by the same authority, declaring Mr. Belknap duly elected. That comes about in this way: The Fifth Congressional district of Michigan is composed of three counties; but for the consideration of this matter it will only be necessary to bear in mind the name of one county, the county of Ionia. Under the laws of Michigan each polling place is presided over by inspectors of election. The law requires that these inspectors, when the polls close, shall canvass the vote and declare the result.

The statute is as follows:

After the count of the tickets or ballots has been completed, the result shall immediately be publicly declared, and the number of votes received by each candidate or person on the ticket shall be publicly declared by one of the inspectors. The inspectors shall then prepare a statement of the result in duplicate, showing the whole number of votes for each office, the names of the persons for whom such vote was given, and the number each person received. Such certificate, when certified by the officers, duly signed, shall be delivered, one copy to the township clerk, to be filed by him in his office, and the other to the inspector appointed by the member to attend the county canvass.

Acting under this law, the inspectors of every polling place in the Fifth district made their reports to the county clerks of the respective counties. The law provides that on the Tuesday following the election the board of county canvassers shall convene and canvass the vote and declare the result. The board of county canvassers did convene, but the board of county canvassers in the county of Ionia were petitioned by Mr. Richardson, under a presumed right, under our statute, for a recount of the ballots in Ionia County.

The board granted the request and entered upon a reëxamination of the ballots; sent for every ballot box and the ballots from every polling place, and then recounted the votes from day to day, commencing November 15, and ending on the 17th day of December; and on the 17th day of December they made their report to the secretary of state, who, together with the commissioner of the land office and the State treasurer, constitute, *ex officio*, the canvassing board and the certifying board of the State.

Mr. COBB of Alabama. Will the gentleman allow me a question right there?

Mr. BURROWS. I would prefer that the gentleman do not interrupt me until I get through. I desire to make a continuous statement.

The boards of the several counties canvassed the vote and made their reports. When the State board canvassed the vote

they found upon that canvass that Mr. Richardson was elected by a majority of 10 votes out of a poll of 42,000—a plurality of 10 votes, as there were three candidates. The Ionia board completed its canvass on the 17th of December. On the 17th of December, the same day, the canvassing board of the State issued a certificate, and that certificate, five days later, on the 22d of December, was filed with the Clerk of this House, and the name of Mr. Richardson placed on the roll.

On the 23d of December, the day after Mr. Richardson's certificate was filed, and the day of the convening of our supreme court, Mr. Belknap instituted proceedings in the supreme court for a mandamus to compel the board of county canvassers of Ionia County to recount the votes and returns from the various precincts in that county.

Let me say right here that had the board of Ionia County counted the vote as returned by the inspectors of elections, Mr. Belknap had a plurality in the district of 19. That is conceded, publicly declared at the polling places, and not doubted by anyone. But this canvassing board, under an assumed authority, to which I shall refer later, in their canvass threw out 54 votes that had been given to Mr. Belknap, which wiped out his plurality of 19 and elected Mr. Richardson by 35 votes; and then, to make it eminently fair, they threw out 25 votes of Mr. Richardson so as to leave him a plurality of 10 in the district.

As I stated, proceedings were had in the supreme court to compel the board of county canvassers of Ionia County to reconvene and count the votes as returned. You will permit me to read from the opinion of the court:

Charles E. Belknap *vs.* Board of Canvassers of Ionia County. Filed February 3, 1893.

Proceedings were instituted on December 23, a hearing was had in January, and the court rendered the opinion in January.

Mr. DINGLEY. That is the supreme court of Michigan.

Mr. BURROWS. That is the supreme court of the State of Michigan.

Petition of Charles E. Belknap for a mandamus to compel the board of canvassers of Ionia County to reconvene and canvass the votes cast for petitioner according to the original returns. (Granted.)

Then it gives the attorneys of the relator and the attorneys of the respondent.

Per curiam: This is an application for a mandamus to compel the board of canvassers of Ionia County to reconvene and canvass the votes cast for petitioner according to the original returns made to the county clerk. The petition sets forth that according to the original returns made to the several county clerks of the district he was elected Representative in the Federal Congress, and the answer does not deny that allegation.

The House of Representatives is made the judge of the election and qualification of its own members, and it is now well settled that act No. 206 of the laws of 1887, 3 How. Stats., 234a, under which the recount was had, has no application to such a case. (Weston *vs.* Probate Judge, 69 Mich., 600; Naumann *vs.* Board of Canvassers, 73 Mich., 252; Newton *vs.* Board, and Wheeler *vs.* Board, filed December 24, 1892; State *vs.* Canvassers, 36 Wis., 498; Keeler *vs.* Robertson, 27 Mich., 116.)

It follows that the board of canvassers of Ionia County was wholly without authority in the premises.

Then, passing by that, the opinion of the court——

Mr. Speaker, if the pages and those near the Speaker will make less noise, I will be obliged.

The SPEAKER. The House will be in order.

Mr. BURROWS (reading). The respondent must be held to have acted without authority.

It will be the duty of the board to reconvene and recanvass the votes of Ionia County according to the original returns, and to report the result to the secretary of state. It will then be the duty of the State board of canvassers to reconvene and recanvass the vote for Congressman in the Fifth district and issue a certificate accordingly. In the meantime Mr. Richardson has his remedy, should he desire a recanvass of the Kent County votes according to the original returns in that county. The mandamus will therefore issue as indicated without costs. Hooker, C. J., took no part in the decision.

Mr. BROWN. Was Mr. Richardson, whose name is upon the House roll, a party to that proceeding?

Mr. BURROWS. He was not, of course, a party on the face of the proceeding, but he appeared by counsel and put in an answer. The mandamus was in the usual form. I will read a portion of it:

In the name of the people of the State of Michigan.

To the board of county canvassers of Ionia County, and to each member of said board, and to the county clerk of Ionia County:

Whereas Charles E. Belknap was duly elected Representative to Congress from the Fifth Congressional district of Michigan, according to the original returns made to the several county clerks of said district—

Remember, that in the answer made by the respondent that fact was not denied—

And whereas it was your duty to canvass the votes cast November 8, 1892, for Representative in Congress, according to the original returns filed with the county clerk of Ionia County from the inspectors of election in said county; and

Whereas we have been informed by the complaint of said Charles E. Belknap that you, not having been ignorant, have disregarded your duty in the premises and made other and different returns from those demanded of you by law:

We therefore, being willing that due and speedy justice should be done to the said Charles E. Belknap in this behalf as it is reasonable, do command and firmly enjoin you that immediately after the receipt of this our writ, you do, without delay, and on Tuesday, February 9, 1893, at 1 o'clock in the afternoon, reconvene at the office of the county clerk of the said county of Ionia, in the court-house in the city of Ionia, and immediately recanvass the said votes of Ionia County for Representative in Congress according to the said original returns, and forthwith thereafter report the result thereof to the secretary of state according to law.

The board did reassemble on the 9th day of February, and they made their return to the supreme court in the following language:

STATE OF MICHIGAN, *County of Ionia, ss:*

We hereby certify and return that the board of county canvassers of Ionia County has reconvened and recanvassed the votes of the said Ionia County for Representative in Congress, and made a report of said votes cast November 8, 1892, according to the original returns thereof filed with the county clerk of Ionia County, to the secretary of state, as commanded in the annexed writ.

The amended returns being before the board of State canvassers, that board hesitated about taking action, as a previous certificate had already been issued. Thereupon Mr. Belknap proceeded in the supreme court for a mandamus to compel the State board of canvassers to recanvass the vote as now reported to the secretary of state, and in that case the court made an order, which I will read in part:

Relator was a candidate for Representative in Congress at the election held in November last. Upon the returns made to the State board of canvassers as then constituted the certificate of election was delivered to his opponent. On January 1, 1893, the State officers constituting said State board of canvassers retired from office and the newly elected State officers entered upon the duties of their respective offices. Upon application made by relator to this court a mandamus issued to the board of county canvassers of Ionia County, requiring that board to reconvene and recanvass the returns of the votes of that county for Congressman and report the result to the secretary of state. Belknap *vs.* Board, 54 N. W. Rep., 376. That recanvass has been had, and the result thereof has been reported to the present secretary of state.

The court state in detail what that result was, and then they say further:

Relator now asks that the present board of State canvassers may be directed to convene and canvass the returns as they now appear, and that they may be further directed to include in such canvass the votes cast in the second precinct of the township of Lyons. We think the case must be treated as though the returns had not been received until the present State officers had entered upon their duties. Certain State officers *ex officio* constitute the board of canvassers. The old board neglected no duty. They canvassed the returns which were before them, and certain of the returns so canvassed were held to be invalid. It is the duty of the present State officers constituting the board of canvassers to canvass the returns as now presented.

Upon the second question presented, the certificate of the chairman and clerk of the board of county canvassers is in due form. This, if unimpeached, would be sufficient for the board to act upon; but a return shows that a resolution was adopted to exclude the vote of the Second precinct of Lyons Township, on the ground that it was not certified as required by section 130, How. Stat., the board assuming that that section controlled. It is at least doubtful whether the force of this resolution is not overcome by the subsequent vote adopting the tabulated statement made by the committee, which included the vote of both precincts. Furthermore, if section 130 applies at all, it applies to both districts alike. But we think, as applied to the present case, section 130 was, so far as it relates to the manner of the return by inspectors, superseded by act No. 190, of the laws of 1891. Section 1 of that act provides that in elections of certain officers, including members of Congress, the supervisor, two justices, township clerk, and assessor, if there be one, shall be inspectors of election, provided that in all voting precincts where by special enactment provisions exist for designating inspectors of election, said provisions are not to be superseded, but such officers shall be inspectors of election under this act.

The provisions of the general law are therefore adopted in elections for member of Congress, etc., only so far as they relate to the designation of inspectors, but their duties are defined by the provisions of act No. 190, laws of 1891. Section 38 of that act is as follows: "After the count of the tickets or ballots has been completed, the result shall be immediately publicly declared, and the number of votes received by each candidate or person on the ticket shall be publicly declared by one of the inspectors. The inspectors shall then prepare a statement of the result in duplicate, showing the whole number of votes for each office, the names of the persons for which such votes were given, and the number each person received. Such statement, when certified by the inspectors and duly signed, shall be delivered, one copy to the township clerk, to be filed by him in his office, and the other to the inspector appointed by the board to attend the county canvass." The act makes no provision for the consolidation of the returns from two or more precincts in a township. There is no object in such consolidation, except in cases where an election is held for township officers, and there is no provision for a canvassing board as distinct from the board of election inspectors. The board will therefore be directed to include in their canvass the votes of both districts of the said township of Lyons. A mandamus will issue accordingly, but without costs.

The court then issued its mandate to the board of State canvassers in the following terms:

This cause coming on for argument, and counsel having been heard for respective parties, and due consideration thereof having been had by the court, and the court being of the opinion that it is the duty of the present State officers constituting the State canvassing board to canvass the returns from the Fifth Congressional district of this State: Thereupon it is ordered that a peremptory mandamus issued out of and under the seal of this court to compel the said respondents, above named, constituting the board of canvassers of this State, to forthwith canvass the returns of the votes cast November 8, 1892, for member of Congress from the Fifth Congressional district of this State, as returned and now on file in the office of the secretary of state, and to canvass the returns from the county of Ionia according to the tabulated statement of the canvassing board of said county, without reference to the resolution rejecting the vote from Lyons Township; and upon the completion of such canvass to forthwith issue a certificate of election as a member of Congress from the Fifth Congressional district of this State to the person found to be entitled thereto.

Mr. BROWN. Will the gentleman permit a question?

Mr. BURROWS. I would prefer to complete the statement of the case before yielding.

Mr. BROWN. The question I desire to ask the gentleman is intended to settle an important matter of fact. I wish to ask him whether Mr. Richardson, whose name is upon the House roll, was a party to either of these mandamus proceedings. I am led to believe, and do believe, that he was not a party to either of them.

Mr. BURROWS. He was not a party to the mandamus proceedings, because the proceedings were against the canvassing board, to compel them to recanvass the vote in Ionia County. The whole question in this case turns upon this point: The board undertook to recanvass the vote in Ionia County under a certain statute, and the supreme court of the State of Michigan declared that they had no authority whatever under the statute to do any such thing, and that therefore their action was null and void, and it was to correct that illegal action that the mandamus was issued.

When the second canvass was made by the canvassing board of the State in obedience to the mandate of the supreme court, Mr. Belknap was found to be elected, and a certificate issued to him, which I will ask the Clerk to read.

The Clerk read as follows:

CERTIFICATE OF ELECTION.

We, the undersigned, State canvassers, from a careful examination of the election returns from all the counties composing the Fifth Congressional district of the State of Michigan, as received by the secretary of state, do determine, as a result of our investigation, that Charles E. Belknap has been by the greatest number of votes elected a Representative to the Fifty-third Congress of the United States of America, for and on the part of the State of Michigan, in accordance with the laws of said State and the decision of the supreme court of Michigan annulling the certificate heretofore illegally issued to George F. Richardson and is issued in lieu thereof, at the election holden on the 8th day of November, 1892.

Witness our hand, at Lansing, this 14th day of February, A. D. 1893.

JOHN W. JOCHIM,
Secretary of State.
JOSEPH F. HAMBITZER,
State Treasurer.
JOHN G. BERRY,
Commissioner State Land Office.

STATE OF MICHIGAN, *Office of the Secretary of State, ss:*

I, John W. Jochim, secretary of state of Michigan, do hereby certify that I have compared the foregoing copy of the determination of the board of State canvassers with the original on file in this office, and that it is a correct transcript therefrom and the whole of such original.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State of Michigan, at Lansing, this 14th day of February, in the year of our Lord 1893.

[STATE SEAL.] JOHN W. JOCHIM, *Secretary of State.*

Mr. BURROWS. Mr. Speaker, I desire to state to my friend from Indiana [Mr. BROWN], who asks whether Mr. Richardson was made a party to this proceeding, that of course he could not have been made a party. The proceeding was against the county canvassing board and against the canvassing board of the State. But Mr. Richardson's attorney appeared in both cases, and defended the proceedings.

Mr. BROWN. I have failed to find such a statement in the papers; but we will answer that point in the discussion on our side. Meanwhile will my friend allow me to ask him this question: Is it not true that the State board of canvassers that issued the certificate to Mr. Richardson went out of office on the 1st day of January of this year——

Mr. BURROWS. Yes, sir.

Mr. BROWN. And that another set of officers issued the certificate to Mr. Belknap?

Mr. BURROWS. Certainly, there is no question about that; that matter is perfectly plain, and I have so stated. Nevertheless the supreme court of the State of Michigan directed that board to recanvass the vote and to give the certificate to the person shown to have been elected; and the board that made the second certificate occupied the same offices as did the board that gave the first certificate.

Mr. BROWN. The reason I asked the question was because I believe the law to be that when such a board has discharged its duty that is the end of the matter.

Mr. BURROWS. I desire to occupy my own time; and if my friend will not interrupt me, I shall be obliged to him.

I desire to state in this connection that Mr. Belknap's certificate was filed with the Clerk of this House, and also a certified copy of the opinion of the supreme court nullifying the certificate of Mr. Richardson. I wish to incorporate in the RECORD a full copy of the opinion of the supreme court, and also a copy of the mandamus.

The documents are as follows:

Supreme court of Michigan. [54 N. W. Rep., 376.] Charles E. Belknap *vs.* Board of Canvassers of Ionia County. Filed February 3, 1893.

Per curiam: This is an application for a mandamus to compel the board of canvassers of Ionia County to reconvene and canvass the votes cast for petitioner according to the original returns made to the county clerk. The petition sets forth that according to the original returns made to the several county clerks of the district, he was elected Representative in the Federal Congress, and the answer does not deny that allegation.

The House of Representatives is made the judge of the election and qualification of its own members, and it is now well settled that act No. 208 of the laws of 1887, 3 How., Stats. 234, under which the recount was had, has no application to such a case. (Weston *vs.* Probate Judge, 69 Mich., 600; Naumann *vs.* Board of Canvassers, 73 Mich., 252; Newton *vs.* Board, and Wheeler *vs* Board, filed December 24, 1892; State *vs.* Canvassers, 36 Wis., 498; Keeler *vs.* Robertson, 27 Mich. 116).

It follows that the board of canvassers of Ionia County was wholly without authority in the premises.

The answer sets up that relator filed a petition for a recount in the county of Kent, and that such recount was had, and that while relator objected to the action of the Ionia County board on the ground that the petition was not filed in time, yet he did not question the power of the board. It is, however, alleged that by the original returns relator was elected. His right, therefore, to a certificate did not depend upon a recount in Kent, and the petition filed in Ionia County was not predicated upon nor rendered necessary by the recount in Kent. Mr. Richardson was in no sense misled or prejudiced by either the recount in Kent or the failure to object to the recount in Ionia instituted by himself.

It is next urged that the returns having been made, and the certificate having been issued, the relator's only remedy is a contest in the House of Representatives. The point is ruled by Roemer *vs.* Board of Canvassers, 90 Mich., 27. It is further insisted that inasmuch ast he answer alleges that the recount in Ionia County was fair and impartial, and resulted in such an increase of the vote for Mr. Richardson as to entitle him to the certificate of election, it would be unjust to set aside such recount.

In Maynard *vs.* Board of Canvassers, 84 Mich., 228, it was held that where the facts are not in dispute, and it appeared that the relator is not entitled to the office, the court will not compel the issue of a certificate by mandamus. In the present case the petition alleges unfairness and partiality in the recount, and a large number of copies of ballots, certain of which were counted for Mr. Richardson, and others of which were evidently cast for relator, and rejected by the committee, are attached to the petition. A comparison of these copies negatives any presumption of fairness and impartiality that might otherwise exist. While the answer of a majority of the board contains a general denial of the allegations of unfairness and partiality, and contains a general allegation that the alleged copies of the ballots are not true copies, yet said answer does not attempt to indicate in what respect such copies differ from the originals.

Two answers are presented, one signed and sworn to by twelve members of the board, and another signed and sworn to by nine members. The latter admits the allegations of fraud, unfairness, and partiality, and that the copies of the ballots are true copies, while the former denies the allegations of fraud, unfairness, and partiality, and alleges that the copies are not true copies. A determination of the essential facts in this controversy must depend upon a reëxamination by the proper tribunal of the original ballots. It can not be said upon the paper before us that the fairness and impartiality of this recount are undisputed, and therefore the case does not come within the rule laid down in the Maynard case above cited.

The respondent must be held to have acted without authority. It will be the duty of the board to reconvene and recanvass the votes of Ionia County according to the original returns, and to report the result to the secretary of state. It will then be the duty of the State board of canvassers to reconvene and recanvass the vote for Congressman in the Fifth district and issue a certificate accordingly. In the meantime Mr. Richardson has his remedy, should he desire a recanvass of the Kent county votes according to the original returns in that county. The mandamus will therefore issue as indicated without costs. Hooker, C. J. took no part in the decision.

Correct. CHARLES C. HOPKINS, *Clerk.*

THE MANDAMUS.

In the name of the people of the State of Michigan.

To the board of county canvassers of Ionia County, and to each member of said board, and to the county clerk of Ionia County:

Whereas Charles E. Belknap was duly elected Representative to Congress from the Fifth Congressional district of Michigan, according to the original returns made to the several county clerks of said district; and

Whereas it was your duty to canvass the votes cast November 8, 1892, for Representative in Congress, according to the original returns filed with the county clerk of Ionia County from the inspectors of election in said county; and

Whereas we have been informed by the complaint of said Charles E. Belknap that you, not having been ignorant, have disregarded your duty in the premises and made other and different returns from those demanded of you by law:

We therefore, being willing that due and speedy justice should be done to the said Charles E. Belknap in this behalf as it is reasonable, do command and firmly enjoin you that immediately after the receipt of this our writ you do, without delay, and on Tuesday, February 9, 1893, at 1 o'clock in the afternoon, reconvene at the office of the county clerk of the said county of Ionia, in the court-house in the city of Ionia, and immediately recanvass the said votes of Ionia County for Representative in Congress according to the said original returns, and forthwith thereafter report the result thereof to the secretary of state according to law. And how you shall have executed this our writ make known to us before our supreme court in the city of Lansing on Tuesday, the 14th day of February, A. D. 1893, and have you then and there this writ.

STATE OF MICHIGAN, *County of Ionia, ss:*

We hereby certify and return that the board of county canvassers of Ionia County has reconvened and recanvassed the votes of the said Ionia County for Representative in Congress, and made a report of said votes cast November 8, 1892, according to the original returns thereof filed with the county clerk of Ionia County, to the secretary of state as commanded in the annexed writ.

Dated, February 9, 1893.

LOREN C. FALES,
Chairman of Board of County Canvassers of Ionia County.
L. DELOS BURCH,
Clerk of Ionia County.

STATE OF MICHIGAN,
In the supreme court clerk's office, ss:

I, Charles C. Hopkins, clerk of the supreme court of the State of Michigan, do hereby certify that the annexed is a true and correct copy of the writ of mandamus issued in said cause with returns inclosed therein, on file in said court in said cause; and that I have compared the same with the original, and that it is a true transcript therefrom, and the whole of said original.

In testimony whereof, I have hereunto set my hand and affixed the seal of said supreme court, at Lansing, this 24th day of February, A. D. 1893.

[SEAL.] CHARLES C. HOPKINS, *Clerk.*

I think that under the circumstances the Clerk of this House should in the first instance have put Mr. Belknap's name on the roll; but he seems to have been under the impression that there is something sacred about that roll, and that if, as in this case, he puts a name upon the roll he has no power afterward to change the roll, whatever may be the proofs subsequently offered—a position which I may be permitted to say seems to me utterly absurd. I have in my hands the records of a case very similar to this; and I think if the Clerk had in the present instance followed the precedent set by Mr. George M. Adams, of Kentucky, the Clerk of the House when Samuel J. Randall was Speaker, he would have avoided much difficulty. In that case, when the State of Florida was reached during the reading of the roll, the Clerk made the following statement:

In reference to the State of Florida, the Clerk, without objection, will make a statement as to the reasons by which he was controlled in placing upon or withholding from the roll the names of the members from this State, about which he imagines there may be some diversity of opinion in the minds of the Representatives-elect.

Now, if my friend will listen he will see that in the Florida case a point was made very much like that which he makes in this case.

From the State of Florida certificates were received, signed by Marcellus L. Stearns as governor of Florida, with the seal of the State attached, certifying that William J. Purman was elected in the first, and that Horatio Bisbee was elected in the Second district of said State. These certificates bear date respectively December 9 and December 14, 1876, and seem to be regular in form.

An election seems to have intervened and the officers were changed on the 1st day of January.

But in reference to the First district, two certificates were subsequently received, signed by George F. Drew, governor of Florida, with the seal of the State attached, and bearing date respectively January 12 and February 26, 1877.

Now, I ask the gentleman to mark this:

These certificates recite the fact that the canvass of the vote upon which the certificate in favor of Mr. Purman was based had been declared by the supreme court of Florida to be illegal, and that another canvass had been made in obedience to the order of the supreme court of Florida, which canvass resulted in the election of Robert H. M. Davidson as Representative from said district.

A MEMBER. Mr. Davidson was a Democrat, was he not?

Mr. BURROWS. He was the Democratic candidate returned as elected from that district, upon the decision of the supreme court of that State.

Under such circumstances the Clerk felt bound to place on the roll from the First district of Florida the name of Robert H. M. Davidson, whose credentials show that he was elected in accordance with the laws of the State of Florida as interpreted by the supreme court of that State.

And the House approved that action; and Mr. Davidson was seated.

Now, Mr. Speaker, I have stated all there is of this case. Mr. Richardson secured his certificate by the action of the board of county canvassers of Ionia County in recanvassing the vote of that county under a statute which the supreme court of our State declared was not applicable to the case; and the court declared that the board of canvassers had no power to make the recanvass. But Mr. Richardson's certificate rests upon that illegal report from Ionia County, and the supreme court has nullified it, destroyed it; and another return is made upon which Mr. Belknap is shown to have been elected by a plurality of 19.

I do not care to detain the House further. I have stated this matter in outline, and I only regret that both certificates, with all the documentary evidence, could not go to the Committee on Elections when appointed (or to a special committee with authority to report at any time) to determine the *prima facie* case as between these two claimants; for I am quite sure, when the facts are clearly understood, that the members of this House, with the oath of office fresh upon them, will not so far disregard the obligation of that oath as to admit to membership in this body a gentleman who upon the face of the returns it is conceded was not elected, and whose certificate has been declared null and void by the highest judicial tribunal of a State which he seeks to represent.

May I ask how much time I have occupied?

The SPEAKER. The gentleman has occupied thirty-three minutes.

Mr. BURROWS. I wish to reserve the remainder of my time.

Mr. HEARD. Before the gentleman from Michigan resumes his seat will he permit an inquiry?

Mr. BURROWS. Certainly.

Mr. HEARD. I am not familiar, of course, with the details of the Michigan law of elections. I wish to ask the gentleman from Michigan a question in regard to one point. I suppose the application made by Mr. Richardson for a recount in Ionia County was based on an alleged mistake or something inaccurate which was embodied in the original returns?

Mr. BURROWS. I do not know. But that is entirely immaterial. We will assume that it was.

Mr. HEARD. Very well. Then my friend says the statute invoked by Mr. Richardson for the purpose of securing a recount in that county had no application; or, in other words, that it was held by the supreme court that it did not warrant any such recount.

Mr. BURROWS. Certainly.

Mr. HEARD. Then is there any provision in the law of the State of Michigan, applicable to such cases, which Mr. Richardson could have invoked for the purpose of securing the correction of a manifest error if it had been discovered?

Mr. BURROWS. There is not, except possibly errors in the form of the returns.

Mr. HEARD. The return, then, of the original canvassing board of the county was absolutely final, although a mistake might have later appeared to have been made?

Mr. BURROWS. Under the laws of the State of Michigan, and under the decision of the supreme court, as they have directed in the decision upon the mandamus proceedings, they compelled the board of county canvassers of Ionia County to return the vote as reported to them from the various precincts of the county.

Mr. HEARD. And there was no power in the law of Michigan to correct a mistake?

Mr. BURROWS. Oh, a mistake of signing, or something of that kind——

Mr. HEARD. But I mean a mistake affecting the correctness or validity of the returns.

Mr. BURROWS. They had no authority under the decision of the supreme court to do what they undertook to do, namely, bring in the boxes, recount the ballots, and change the original returns.

Mr. HAYES. I would like to ask the gentleman from Michigan a question.

Mr. BURROWS. Certainly.

Mr. HAYES. I understand the gentleman from Michigan expresses a desire to have the certificates with all of the papers go to some committee and let them report upon the *prima facie* case?

Mr. BURROWS. Certainly.

Mr. HAYES. But that is not the motion of the gentleman.

Mr. BURROWS. That is true. I was compelled to draft the resolution as I did in its present shape. But I am so confident of the case, and that the House will do justice if gentlemen will take time to examine the matter, that I am content if the House shall see proper to adopt the suggestion of the gentleman.

Mr. HAYES. But why not make that motion?

Mr. BURROWS. Possibly I may do so. I am in hopes, however, that it will not be necessary.

Mr. HAYES. That strikes me very favorably as a mode of disposing of this question.

Mr. BURROWS. I reserve the remainder of my time.

Mr. O'FERRALL. I yield now twenty minutes to the gentleman from Michigan [Mr. WEADOCK].

Mr. WEADOCK. Mr. Speaker, I apprehend that the only question before this House is, which one of these two gentlemen has the *prima facie* case? Our contention is that that *prima facie* case rests with Mr. Richardson, whose name is on the roll of members, and who ought now to be sworn in; that any question arising as to whether this or that gentleman has the *prima facie* case is one for the House itself to determine, and for the House only, and that the opinion of the supreme court of the State of Michigan, upon a law which they confess in their opinion has no application to this case, should have no more weight or influence in its consideration by the House than their opinion as to the repeal of the Sherman law, or any other question that gentlemen of undoubted integrity and ability may see fit to express themselves upon when it was not judicially before them for consideration.

If the opinion had ended with the statement that as the Michigan statute providing for a recount did not apply to elections for Representatives in Congress, as they had previously held in relation to election of the mayor of Grand Rapids, where the common council was properly held to be the "judge of the election, etc., of its own members," for the same reasons they might have given in these cases. (Weston's case, 69th Mich.)

Under the laws of Michigan the officers named by my colleague [Mr. BURROWS] constitute the canvassing board of the State. That board met at the proper time. They canvassed the returns that were before them. They issued a certificate of election to Mr. Richardson in the same form as that held by my colleague [Mr. BURROWS], and in the same form as that held by myself, and the Clerk of the House, properly acting upon that certificate, placed the name of Mr. Richardson upon the roll.

The first person to invoke the action of this law, which the supreme court says does not apply, was the contestant, Mr. Belknap. Upon one day he filed a petition for a recount. On the next day he withdrew it. On the next day he refiled it, and the vote in the county of Kent, in which both these gentlemen

reside, was recounted, and upon that recount the second board acted in giving their certificate to Mr. Belknap. So far as the throwing out of the votes is concerned, while it is claimed that 35 votes were thrown out as against Mr. Belknap, 921 votes were thrown out, as I am advised, about two-thirds of them having been cast for Mr. Richardson, by a board that was two-thirds Republican; and so far as the merits of the question are concerned—which we are not to touch upon now—we will be amply able to meet them when the time comes, if it ever comes.

Now, what did Mr. Belknap do? There had been a recount under this statute in the county of Ionia, and Mr. Belknap mandamused that board. Mr. Richardson was not heard at that time, although men who were his attorneys appeared and made an answer for the board. But in the meantime, and before the second certificate was issued, the political aspect of Michigan had changed. The three Democratic officers who formed the board in December had gone out of office, and in their places were three Republicans, elected at this same election. Then the supreme court undertook by mandamus to convene the new board.

Under the statutes of Michigan the attorney-general of the State of Michigan is the proper person to appear when any State officer is cited to answer in a court. The attorney-general of Michigan was the only State officer elected who was a Democrat; and instead of the attorney-general of Michigan being invited to appear for that canvassing board, Mr. Belknap's private attorneys, the same attorneys, as shown by the official documents, who appeared in the process against the county of Ionia, conducted the proceedings against the State board in the mandamus proceedings to compel this new board to convene and issue a new certificate to Mr. Belknap, upon the vote as it should have been canvassed, as they say, by the Ionia board, and upon the vote as it was recounted by the county board in Kent County.

Then we have this position, that the supreme court of Michigan, acting partly upon a statute which they admit has no application to this question, directed the new board to convene. The old board being *functus officio*, all its duties having been performed, and as has been well said by the gentleman from Missouri [Mr. HEARD] whether rightly or wrongly performed, whether they were correct or whether they were wrong, that matter had passed into a judgment. It could not be questioned or attacked anywhere except in this House, and here alone. The court say the old board omitted no duty, but they direct that certain votes should be counted by the board, thus giving a small plurality for Mr. Belknap. Having done this, the alleged certificate for Mr. Belknap was presented to the Clerk of thus House, and the Clerk did the only thing he could do, and that was to lay the matter before the House, having placed the name of Mr. Richardson upon the roll where it properly belonged.

Let me invite the attention of the gentleman from Michigan, [Mr. BURROWS] to the fact that the opinions of the supreme court of Michigan have not heretofore commanded that great respect upon his side of the House in Congressional contests which they seem to elicit now. In the case of Baldwin *vs.* Trowbridge, in the Thirty-ninth Congress, the report of which I have before me, the supreme court of Michigan, which was Republican at that time, had decided that the soldiers' voting law was unconstitutional.

Upon the legal votes cast in the Pontiac district in the State of Michigan Mr. Baldwin had been elected a member of this House. Upon the votes cast, including the soldier vote, Mr. Trowbridge had been elected a member of this House; and notwithstanding the fact that that was conceded, and there was no question of fact in the case, it was purely a question of law, this House, by a vote of 108 to 30, held that this man, who was elected not by the legal voters of the State of Michigan, as had been decided by the supreme court, but the man who was elected by illegal votes, was entitled to a seat in this House, and was seated accordingly.

We are not conceding for a moment that Mr. Richardson was not fully and fairly elected by the legal votes of the Fifth district; but we are not required at this time to go beyond the question as presented to the House, namely, which of these gentlemen has the *prima facie* case.

Mr. TURNER. There is no contest in this case.

Mr. WEADOCK. There is no contest in this case. There could be no contest on the part of Mr. Richardson. He had his certificate. He was entitled to be a member of the House; and if any contest could arise, it could only be as to which gentleman was elected. That question could only arise under the Federal statutes, and be taken up and disposed of in this House.

Now, it was conceded that both of these——

Mr. WILSON of West Virginia. Was the recount in Ionia County made in pursuance of the mandate of the supreme court of Michigan, and made by the same officers as made the original count?

Mr. WEADOCK. It was.

Mr. HEARD. But did not the supreme court direct how that count should be made?

Mr. WEADOCK. The board of canvassers have the power to reject returns that are not in legal form, and acting under that power they had rejected certain returns. The supreme court directed the county board to reconvene, and also directed them how they should count the votes, and directed them to count the votes they had formerly rejected.

Mr. BRETZ. Who was returned by the original returns?

Mr. WEADOCK. Mr. Richardson.

Mr. JOHNSON of Indiana. Will the gentleman permit me a question?

Mr. WEADOCK. No, sir.

The gentleman from Michigan [Mr. BURROWS] states that Mr. Richardson asked for a recount. It is only fair to state that both gentlemen asked for a recount; and in the case presented to the state board no question was made as to the recount in Kent County, where the great majority of the votes of the district lie.

Now, a few words with reference to the powers of the Michigan board of canvassers. That board is composed of the secretary of state, the state treasurer, and the commissioner of the general land office. Any two of these officers constitute a quorum.

Mr. Richardson's certificate is signed by the three officers. The terms of these three gentlemen expired on the 31st day of December, and they went out of office. And now our contention is that when they had assembled and canvassed the votes their duty was purely ministerial. The statutes provide when it shall be done—"on or before the 15th day of December." They met within that time and canvassed the votes. Of course it took some time to complete it and they adjourned from day to day, but it was all completed and the votes were properly canvassed. The supreme court says that "the old board did its duty fully." They issued a certificate to Richardson, and there was an end of the case except so far as a contest before this House might be instituted. No contest was instituted before the House, and Mr. Richardson is plainly entitled to be sworn in.

Now, the gentleman from Michigan [Mr. BURROWS] states that this certificate of Mr. Belknap is in the usual form. He certainly does not mean that; because the certificate of Mr. Belknap is partially in the usual form, and then it goes on to say "that a decision of the supreme court of Michigan annulling certificate heretofore illegally issued to George F. Richardson," this "is issued in lieu thereof."

It is dated February 14, 1893, and is signed John W. Jochim, secretary of state; Joseph F. Hambitzer, State treasurer; John G. Berry, commissioner State land office, the officers constituting the canvassing board.

Now, upon its face this shows that Mr. Belknap has not a *prima facie* case, but that some proceedings had been instituted by which a question had arisen between these two certificates, and that, and that alone, as it seems to me, is the question before the House. There can be no discussion and no question, I apprehend, between us as to what the powers of the Michigan canvassing board are. There is no dispute there, but the sole question is whether or not an *ex parte* judgment of the supreme court of the State of Michigan in a suit in which they themselves say they had no jurisdiction shall bind Mr. Richardson or this House in any way, and whether that would be a ruling force in determination of a question which the court agrees belongs solely to this House.

Mr. TURNER. Will the gentleman pardon an inquiry? This mandamus and this subsequent recount by the State board occurred after the whole proceedings had been completed, up to the final certificate; it did not occur in an intermediate way or *pendente lite*, but the action of the constituted authorities had been completed even to giving the certificate to Mr. Richardson upon the original returns.

Mr. WEADOCK. That proceeding on the part of Mr. Belknap was instituted, carried on, and the judgment rendered after the name of George F. Richardson had been placed upon the roll of this House.

Mr. TURNER. Well, that would seem to make it clear that the proceeding of Mr. Belknap here would relate to the merits of the question, and not to the *prima facie* case?

Mr. WEADOCK. Why, certainly. And the question of the validity of the court was one for this House alone.

It is no question of the issuance of the certificate. The court said that the old board had acted properly; but the question was——

Mr. TURNER. And the proper way to annul the certificate was by a regular contest?

Mr. WEADOCK. Certainly; by a regular contest and in no other way. Now, the question of the number of votes either this way or that does not affect this case at all.

If Mr. Belknap had a majority of 1 of the legal votes cast, of course he would be entitled to the certificate. But when Mr. Belknap submits his case, as he must submit it to the canvassing board, and that board decides against him, that is an end of the proceedings under the law, so far as this case is concerned, until it is brought before this House by a regularly instituted contest. The gentleman from Michigan [Mr. BURROWS] is right when he says that the question here lies within a very narrow compass.

By all precedents the *prima facie* case lies with Mr. Richardson, and the resolution of the gentleman from Virginia [Mr. O'FERRALL] ought to pass, and Mr. Richardson ought now to be sworn in as a member of this House.

Mr. HEARD. Will the gentleman permit an inquiry?

Mr. WEADOCK. Yes, sir.

Mr. HEARD. If I understand correctly the statement made by the gentleman from Michigan [Mr. WEADOCK], Mr. Belknap, the contestant, relies upon the efficacy of a recount in one county and the rejection of a recount in another county, made under the same authority?

Mr. WEADOCK. He does exactly that.

Mr. BURROWS. How is that?

Mr. WEADOCK. Because there was a recount in Kent County, and upon that recount——

Mr. BURROWS. Will my friend allow me to state that Mr. Belknap, after Mr. Richardson had made an application for a recount in Ionia County, made an application for a recount in Kent County, but immediately withdrew it?

Mr. WEADOCK. Yes; and then——

Mr. BURROWS. Wait a moment. Then Mr. Richardson petitioned the board for a recount of the vote at three precincts, whereupon Mr. Belknap asked that the whole vote be recounted if they were going to recount a part of it.

Mr. WEADOCK. The gentleman is correct. The entire vote was recounted and Mr. Belknap lost one vote.

The entire vote was recounted and upon that vote as recounted this canvassing board acted under the mandate of the supreme court.

Mr. BURROWS. Exactly.

Mr. WEADOCK. So that Mr. Belknap evidently wants the vote recounted in one county and not in another?

Mr. BURROWS. But Mr. Belknap did not——

Mr. WEADOCK. And the supreme courts say that if Mr. Richardson is dissatisfied with the recount in Kent County he can have a mandamus to compel the board to count that vote just as it was originally counted.

Now, one word as to the attorneys in these proceedings. I hold in my hand the Northwestern Reporter, in which is reported the case of Belknap *vs.* Board of Canvassers of Ionia County, and the attorneys in that case for Charles E. Belknap, the relator, were the same who appeared for Mr. Belknap in the case against the State board, and the board of State canvassers were represented, not by the Hon. Adolphus A. Ellis, the attorney-general of Michigan, who was the only State officer elected by the Democrats, but by L. B. Gardner and William H. Fraser, neither of whom represented Mr. Richardson in any way. So that this was an *ex parte* application and to all appearances one in which the gentleman who seeks to contest this seat had the advantage of having the counsel on both sides. [Laughter.] The law of the case is clearly with Mr. Richardson, and the resolution offered by the gentleman from Virginia should be adopted.

Mr. O'FERRALL. Mr. Speaker, how much time has the gentleman from Michigan occupied?

The SPEAKER. He has occupied nineteen minutes. He has one minute left.

Mr. O'FERRALL. Does the gentleman from Michigan [Mr. BURROWS] desire to occupy the floor now?

Mr. BURROWS. I do not at this time.

Mr. O'FERRALL. Then I yield twenty minutes to the gentleman from Illinois [Mr. SPRINGER].

Mr. SPRINGER. Mr. Speaker, I do not know that I shall occupy all the time the gentleman from Virginia has yielded to me. This case is a very clear one. It simply involves the *prima facie* right of a member to a seat upon this floor. There is no doubt but that Mr. Richardson does hold, and has presented to the Clerk of this House, a certificate which upon its face entitles him to be sworn in as a member of this House. I need not argue a question of that kind. The mere assertion, in connection with the facts of this case, is sufficient. The gentleman from Michigan [Mr. BURROWS], who has objected to this certificate, holds his seat on this floor upon a certificate issued by the same persons at the same time. His certificate and the one in question here are in exactly the same terms, except that the one contains the name of JULIUS C. BURROWS and the other the name of George F. Richardson. In all other respects, I repeat, the certificates are precisely the same, issued by the same persons, at the same time, under the same circumstances, and based upon the same general class of returns, the board having jurisdiction of the returns of the whole State.

After these certificates were issued they were presented to the Clerk. The gentleman from Michigan, who has just spoken [Mr. BURROWS], presented his; and the gentleman who is now asking to be seated presented his. The Clerk entered the names upon the roll. The roll was then complete. The persons constituting the returning board in Michigan—the secretary of state, the treasurer, and the commissioner of the general land office—ceased to be officials by the expiration of their terms; and their successors who were elected at the November election, at the same time as this Congressional election, entered upon their duties in January, 1893.

These new officials had no legal jurisdiction to deal with the matter of the returns of members of Congress because their predecessors in office on the day prescribed by the statute of the State had met and performed that duty. And when those gentlemen met they had before them all the returns that were then made; they canvassed all those returns; they discharged their full duty; and every function that the laws of Michigan had vested in those gentlemen as returning officers was completely discharged when they issued their certificate and adjourned without day. From that time forward those officials were *functus officio*. They had no power to reconvene themselves; their successors had no power to reconvene themselves.

Mr. COX. I would like to ask the gentleman this question: Is there any statute of the State of Michigan that authorizes a canvassing board clothed with the same authority as its predecessors, and in law the same board, to revise the action of its predecessors after they go out of office?

Mr. SPRINGER. There is not. The only statute upon the subject is the one which requires the board to meet at the time it did meet; and when it met it had all the returns before it; it discharged all its duties; it counted all the returns; it completed its work, and adjourned without day.

Mr. BURROWS. Do I understand the gentleman to hold that a subsequent board had no authority to make another count, even if ordered to do so by the court?

Mr. SPRINGER. I hold that a subsequent board had no authority to assemble if the predecessors of that board had completed the work which the law required them to perform and had adjourned without day.

Mr. BURROWS. Then the gentleman differs with the supreme courts of several of the States.

Mr. SPRINGER. That is very possible; but I will show the gentleman that I am in accord with the authorities on this subject which will be found in the books generally. I concede that there are several cases in which under circumstances of this kind a mandamus has been issued; but in all such cases the court held that the returning board in the first instance had not discharged its duty; that it had left undone work which had been committed to it; that it had failed to discharge what was required of it by the statute—had either failed to count a portion of the returns or had improperly thrown out returns, exercising jurisdiction which did not belong to it. But in no case, so far as I can find in the books, was the returning board ever reconvened after it had discharged all its duties as required by statute and adjourned without day.

Mr. PATTERSON. The gentleman will allow me a single inquiry. As I understand this case, the canvassing board of Ionia County and the State board had both canvassed these returns and the certificate had been given to Mr. Richardson, and that certificate had been filed with the Clerk of this House before these proceedings in the supreme court of Michigan were instituted at all.

Mr. SPRINGER. Certainly.

Mr. PATTERSON. Now, if that be true is it not also true that this House alone has jurisdiction of the case after the filing of that certificate; in other words, could proceedings be properly instituted in the State of Michigan subsequent to the canvass and after the filing of the certificate here, in that way practically usurping the jurisdiction of this House? Does not the *prima facie* case rest upon the fact that the certificate was filed with the Clerk before any proceedings were instituted in the courts of Michigan?

Mr. SPRINGER. That is just the point I was about to state, that a conclusion having been reached, the certificate having been issued by the canvassing board, and the board having adjourned without day, the statute of Congress prescribes the remedy to be pursued thereafter. If the defeated candidate is not satisfied he can institute an election contest. If you will turn to the United States statutes you will find that within thirty days

after such a count as was had in this case, the defeated candidate may give notice to the other party of his intention to contest the election, and upon the receipt of such notice certain proceedings are to take place. An election contest then arises, and the contest must be pursued as pointed out in the statutes of the United States. The power of the supreme court of any State over the case has ceased. Such a tribunal can no more undertake to override the certificate first issued than it can undertake to override the constitutional power of this House to judge of the elections, returns, and qualifications of its own members.

I desire to call the attention of the House to the action of this body itself in a similar case. In the Forty-sixth Congress, at the assembling of the first session, which was a called session of that body, two certificates of election were presented from the State of Florida, one by Mr. Hull and the other by Mr. Bisbee. The Clerk placed on the roll of the House the name of Mr. Hull. It was objected by gentlemen on the floor that a subsequent certificate had been granted, under mandamus proceedings by the supreme court of Florida, to Mr. Bisbee, and a motion was made to seat him on the credentials presented. The supreme court of Florida had declared the certificate of Mr. Hull to be void and ordered the issuance of one to Mr. Bisbee, which was done.

This, as I have said, was in the Forty-sixth Congress, and that body adopted a resolution that Mr. Hull be sworn in, a resolution in the precise terms as that now pending before us, except of course as to the names of the parties. That resolution was considered and adopted by 140 affirmative votes to 136 in the negative. This House, therefore, has decided that a certificate issued under the circumstances which Mr. Richardson presents here can not be annulled by a subsequent action of the State board of canvassers, and that is the opinion in accordance with those cited in the books.

Permit me now, Mr. Speaker, to read an extract from McCrary on the Law of Elections, third edition, page 154, as bearing upon this subject.

Mr. BURROWS. Before the gentleman proceeds will he allow me to ask him a question?

Mr. SPRINGER. I will yield for a question, not for an argument, however.

Mr. BURROWS. I think the gentleman from Illinois makes a mistake in the citation of the last case from the State of Florida. I think he will find on examination that there was nothing to show that another certificate had been issued, by order of the supreme court; but the point was made that there were only some papers before the House.

Mr. SPRINGER. The gentleman from Michigan can examine the case for himself,

Mr. BURROWS. I have done so and think the gentleman from Illinois is in error.

Mr. SPRINGER. On page 154 of McCrary on the Law of Elections it is stated:

A canvassing board having once counted the votes and declared the result according to law, has no power or authority to make a recount. When this duty is once fully performed it is performed once and forever, and can not be repeated.

That is quoted from Bowen *vs.* Hixon, 45th Missouri, page 340, and the case of Gooding *vs.* Wilson in the Forty-second Congress. In the case of Bowen *vs.* Hixon here cited the court say:

To suppose that it could be renewed—

That is a recount—

that the canvass of one day could be repeated the next, and counter certificates be issued to different contestants, as new light or influence was brought to bear upon the mind of the clerk, would render the whole proceeding a farce.

And in Gooding *vs.* Wilson the report of the committee has this language:

On examination of precedents, it does not appear that this House favors the setting aside of official and formal counts, made with all the safeguards required by law, on evidence only of subsequent informal and unofficial counts, without such safeguards. No instance was cited at the hearing where the person entitled by the official count was deprived of his seat by a subsequent unofficial count. On principle it would seem that if such a thing were, in the absence of fraud in the official count, in any case admissible, it should be permitted only when the ballot boxes had been so kept as to be conclusive of the identity of the ballots, and when the subsequent count was made with safeguards equivalent to those provided by law. In the absence of either of these conditions, the proof, as mere matter of fact, and without reference to statutory rules, would be less reliable, and therefore insufficient.

And further:

In Minnesota it has been held, in accordance with the principle just stated, that if the board of canvassers, after canvassing the votes, adjourn without day—

As in this case—

their power in the premises is at an end, and they can not reassemble, neither can a count by mandamus compel them to reassemble or give them any power in case of their so doing.

That case was decided in the contest between Clark *vs.* Buchanan, reported in 2d Minnesota, page 346; and this is the substance of all of the authorities summed up in McCreary on Elections, this being the conclusion of the authorities quoted upon this subject, to the effect that when this duty of canvassing the returns was once performed, as in this case, it was done forever as far as the board of canvassers was concerned, and the board became *functus officio*, and no subsequent act could legally reconvene them or revive their powers.

In order to determine whether the subsequent board had power in the premises, you must consider the question independently of the mandamus subsequently issued; because, if this supreme court could issue the mandamus to the returning board, then in office, to do this work, that returning board had the power to do it without the mandamus; because the supreme court could not give the board a jurisdiction which it did not have under the law. It could only enforce the jurisdiction which it had. And when a returning board performs its duty in November, issues its certificates, and adjourns without day, goes out of office on the 1st of January and is succeeded by newly elected persons coming in at that time, does any gentleman say that the new returning board, composed of those newly elected persons, could go to the returns on file, recount them, and issue a certificate on their own motion?

I think the statement of that proposition destroys every pretense of right in the contestant in this case, Mr. Belknap, to a *prima facie* claim to a seat upon this floor. The returning board, not having the power of itself to reconvene, and not having the power if it did reconvene to go over the work of its predecessors, the supreme court could not give it any more power than it had before.

Mr. HAYES. The gentleman states that if the board had performed its duty and adjourned it could not further act, and that the court could not empower it to act. Now, suppose the board had not performed its duty, but had proceeded on an entirely false construction of the law.

Mr. SPRINGER. In such cases the courts have caused them to reconvene and do their duty, when they have not done it according to law.

Mr. HAYES. Is not that this case precisely?

Mr. SPRINGER. Not at all. There is no pretension that they had not counted all the votes and acted upon everything before them when they were first in session. They did perform their duty in the first instance. I have before me Payne on Elections, the work cited by the gentleman from Michigan [Mr. BURROWS]. There are several authorities in this book cited by the gentleman from Michigan [Mr. BURROWS] in regard to the power of the court, and reference is frequently made to the fact that where a board had not performed its duty and had left undone what was clearly its ministerial duty to do, in that case a mandamus issued; but the authorities in Payne on Elections cited by the gentleman from Michigan [Mr. BURROWS], after having been reviewed at length, are summed up in this case on page 764, in an application for a mandamus made to the supreme court of New York.

It was alleged that the board of county canvassers had illegally and unjustly rejected the returns of one precinct, and had illegally and unjustly refused to canvass the votes of that precinct, and, as a consequence, had erroneously determined the result of the election as to one of the county officers, and the court was asked to command the board to make a new canvass for the purpose of correcting the error. The statute contained no provision authorizing adjourned meetings of the board, except for the purpose of obtaining corrections of precinct returns, in which case the adjournment was limited to three days. The court held that, to entitle the applicant to the mandamus, it must appear that he had a legal right to demand that something should be done by the defendants—

That is, the canvassing board—

which they had not done; that it must appear that he had no specific legal remedy for the enforcement of that right, and must also appear that it was still in the power of the defendants to perform the acts required; that after the board of canvassers had met and organized according to law, and had proceeded to estimate the votes of the county, made the statement prescribed by the statute, determined the result of the election, and caused a copy of their determination to be published, filed, and made a part of the record, and had dissolved, its members were *functi officio*, and a mandamus would not be granted to compel them to reorganize and canvass the omitted precinct return, and change their determination of the result accordingly, even though it appeared that they had erred in the rejection of the precinct return in question.

This was decided in the case of The People *vs.* Supervisors, 12 Barber's Reports, page 217.

Now, gentlemen will find that that is the current of all the authorities upon this subject; and there never was a case coming to this House where the *prima facie* right of a member to his seat was more perfectly made out and sustained by the record than in this case.

Now, in order to attack this certificate, it must appear from something on the face of it that it is irregular; and upon the face of it, as I said before, it is precisely the same as the certificate of the gentleman from Michigan [Mr. BURROWS]. It gives just as good *prima facie* right to a seat as that gentleman has.

And if Mr. Richardson is not entitled to be sworn in the gentleman who has made this objection was not entitled to be sworn in, for in all respects they are on all fours and like each other; but

in this case there was an attempt through a partisan court, elected at the same time this election took place, and subsequently came into office, to perform duties which they have no power under the laws of Michigan to perform. Mr. Richardson, in this case, having complied with the law of the State, having presented the credentials to the Clerk of this House, who under the law, as he was empowered to do, fixed his name upon the roll, his functions were at an end and Mr. Richardson's right to a seat upon this floor is perfect.

Mr. O'FERRALL. Now, Mr. Speaker, I would be glad if the gentleman from Michigan would occupy his time now. How much time has been consumed?

The SPEAKER *pro tempore* (Mr. RICHARDSON of Tennessee in the chair). The gentleman from Michigan has twenty-five minutes remaining and the gentleman from Virginia twenty-one minutes.

Mr. BURROWS. I wish to occupy a moment. This matter is turning out, Mr. Speaker, as I expected. It will be dragged into politics, and, if possible, induce the members of this House to do an injustice. It is stated that there was an election in Michigan and a change of officers on the 1st day of January. What of it? Suppose there was a change. The canvassing board empowered to canvass the returns was just the same after the election as before. It may be proper in this connection to state——

Mr. WEADOCK. I hope, Mr. Speaker, we will have better order.

Mr. BURROWS. This is better order than we usually have on an election case where members have already made up their minds. The gentleman states that Mr. Belknap asked for a recount in Ionia and Kent Counties. Mr. Belknap had filed a petition for that purpose, but it was withdrawn.

Mr. WEADOCK. And refiled.

Mr. BURROWS. Mr. Richardson selected three precincts in the county of Kent and wanted a recount in those precincts, and then Mr. Belknap insisted that if a recount was to be had of those three precincts the recount should extend to the whole county. That was all there was of that, and that was the only step Mr. Belknap took towards getting a recount of the vote.

But as I was saying, this case, like all cases in the House of Representatives, is at once dragged into the slough of politics, and it will be a happy day in the history of this country when all contests for seats in this House are taken entirely away from the House and decided by an impartial tribunal; and it is for that reason that I suggested, and am hopeful that the Committee on Elections when appointed, or a special committee of the best lawyers of this House, and I do not care to which party they belong, may take these certificates and the documentary evidence and determine the question as to who has the *prima facie* case.

But I am amazed at the position taken by some gentlemen on the other side, and especially by the distinguished gentlemen who has just taken his seat [Mr. SPRINGER], that after the board of State canvassers had canvassed the vote and declared the result and the certificate to Mr. Richardson issues and his name is placed on the roll, that there is no power in the court of the State of Michigan to compel a canvass of that vote. I call his attention to the fact that he differs with the supreme court of several of the States. This canvassing board of the State is not a board created for the special purpose of canvassing the returns, but had other duties under the laws. They are the canvassing board by virtue of their office.

The gentleman read from Paine, and he read about the only case he could find that holds the doctrine which he sees fit to present to this House, namely, that the board of canvassers having once determined the matter, there is no power to reconvene the board, nor can the court order it. I call his attention to page 756, where I read:

> The court will ascertain the contents of the return as delivered to the canvassers, and will by mandamus compel them to canvass such return.

That is a case reported in 65 Mo.

> In a case decided by the supreme court of Kentucky, the canvassers had given the certificate of election to the competitor of the petitioner before the issue of the alternative writ. The court awarded a peremptory writ, compelling the canvassers to grant a certificate of election to the petitioner. The court said: "Nor do we regard it as an available objection that the board has already acted in the matter as in this case. Inferior judicial tribunals can not be controlled in their action by mandamus. They can be compelled to act; but, having discretion in all judicial questions, they must, in such cases, be allowed to determine how they shall act. It is not so, however, with ministerial officers. Until they have performed the exact duty imposed upon them by the law, they must be considered as in default.

And in this case the Ionia board did not perform their exact duty; they did something else—

> Until they perform the exact duty imposed upon them by law they must be considered as in default; and in a case like this it would be a legal anomaly to allow the examining board to rely upon the fact that they had issued the certificate of election to a party who had not received the largest number of votes, contrary to an express provision of the law, as a sufficient reason why they should not be compelled to perform an imperative duty.

Mr. SPRINGER. Will the gentleman allow me now?

Mr. BURROWS. I can not yield. I have only a few moments left, and I shall be obliged if the gentleman will not interrupt me. That case was decided in the State of Kentucky.

> The supreme court of Kentucky has also held—

And I am fearful that this will disturb the position of my friend from Illinois—

> the supreme court of Kentucky has also held that in case the canvassers go out of office pending an application for a mandamus to compel them to issue a certificate of election to the person shown by the returns to have received the highest number of votes, the mandamus, when granted, will operate upon such persons as may, by law, compose the board of canvassers at the time it is granted.

That was exactly this case——

Mr. SPRINGER. No, sir; there was no mandamus pending when the board went out of office.

Mr. BURROWS. My dear sir, there was.

Mr. SPRINGER. Not in the supreme court.

Mr. BURROWS. There was.

Mr. SPRINGER. The supreme court had not issued the mandamus against these officers.

Mr. BURROWS. Not against these officers; but the proceedings were instituted on the 23d of December and the board went out of office on the 1st of January.

> The supreme court of Kentucky has also held that in case the canvassers go out of office pending an application for a mandamus to compel them to issue a certificate of election to the person shown by the returns to have received the highest number of votes, the mandamus when granted will operate upon such persons as may, by law, compose the board of canvassers at the time the mandamus is granted.

Mr. SPRINGER. I have a case——

Mr. BURROWS. I must decline to be interrupted, simply because I have not time to yield.

> In a case decided by the supreme court of Kansas the canvassers had declared the plaintiff's competitor elected to the office of county clerk and had adjourned, and the first question decided by the court was whether, after these facts, the court could, by mandamus, compel the canvassers to reassemble and make a correct canvass. This question was decided in the affirmative. The court said: "The canvass is a ministerial act, and part performance is no more a discharge of the duty enjoined than no performance. And a candidate has as much right to insist upon a canvass of all the returns as he has of any part, and may be prejudiced as much by a partial as by a total failure. The adjournment of the board does not deprive the court of the power to compel it to act, any more than the adjournment of a term of the district court would prevent this court from compelling, by mandamus, the signing of a bill of exceptions by the judge of that court which had been tendered to him before the adjournment."

I might add that the gentleman from Illinois [Mr. SPRINGER]—of course unintentionally—picked out about the only case which would sustain his position. I now yield ten minutes to the gentleman from Pennsylvania [Mr. DALZELL].

Mr. DALZELL. Mr. Speaker, I shall assume that the facts connected with this case have already been sufficiently discussed to put them entirely into the possession of the House, so that it will be unnecessary now for me to make any recital of them. The question under discussion has no relation to the ultimate right of either of these parties to a seat in this House. The question at present is simply as to a *prima facie* right; or, in other words, as to what the Clerk ought to have done, in making up the roll of this House, with respect to these two applicants for membership.

Now, the Revised Statutes (section 31) provide that "in making up the roll of members at the first meeting of a Congress, the Clerk of the next preceding House shall place thereon the names of those persons and of such persons only whose credentials show that they were regularly elected in accordance with the laws of their States, respectively, or the laws of the United States."

Now, it will be observed that this statute points out the party who shall make the roll, to wit, the Clerk of the House; it designates the parties who shall be put on that roll, to wit, those whose credentials show that they were regularly elected, in accordance with the laws of their respective States or of the United States. It prescribes, furthermore, impliedly at least, the time at which the Clerk of the House shall make up the roll in accordance with the credentials of its members, to wit, upon the assembling of Congress.

I pause here to say that nobody, therefore, can be deceived by the claim that because the Clerk, upon the receipt of an early certificate, put the name of the party presenting that certificate upon his roll, he ceases to have the authority afterward to strike off that name and put on the name of another; for it will be observed the time at which this roll is to be made up is upon the organization of the House; and the parties whose names are to be placed on that roll are the parties who at that time have presented to the Clerk credentials showing that they had been elected in accordance with the laws of their respective States or of the United States.

Now, bearing in mind the time at which the roll is to be made up, and the provisions of law applicable to the making up of that

roll, we come down to the situation as it was presented to the Clerk yesterday when this House met in extraordinary session. What was that situation? He found that he had one more certificate from the State of Michigan than there were Representatives, under the law, from that State; in other words, he found that in a certain district two parties presented each a certificate and claimed a right to a place on the Clerk's roll in the organization of this House. What was his duty under the circumstances? His duty, I take it, was to inquire whose credentials showed that he was regularly elected in accordance with the laws of the State of Michigan. How should he ascertain that fact as between these two certificates? I say he was to ascertain that fact, first, from the certificates themselves; and secondly, if there were any decisions of the supreme court of the State of Michigan that qualified those certificates or either of them in any respect, then he was to take into consideration those decisions.

Now, in what respect did those certificates differ, and in what respect did they agree? They both came from the properly constituted board, legally authorized under the laws of the State of Michigan to issue a certificate under the circumstances. They agree in that respect. They differ in this respect: that one of those certificates which is earlier in date than the other is expressly annulled by the second, and that that annulment is vouched for as valid by the decision of the highest tribunal of the State—the ultimate exponent so far as we know, in an examination of this kind, of the law of the State of Michigan.

But gentlemen on the other side of the House say that the board was *functus officio* when it issued its first certificate. I submit that a board elected for two years is not *functus officio* until the expiration of its term; and I further submit the proposition that a board—even a temporary board—can not become *functus officio* by the nonperformance of a duty, and if it can not become *functus officio* by the nonperformance of a duty it can not become *functus officio* by the illegal performance of a duty.

Now, then, putting ourselves in the place of the Clerk—and what the Clerk has wrongfully done, if he has wrongfully done anything, the House will correct—putting ourselves in the position of the Clerk, we find that on the day when his roll was to be made up it appeared to him by the regularly issued certificate of the duly authorized board of the State of Michigan that Mr. Belknap was entitled to the seat; and it appeared to him further that the certificate was issued not alone upon the authority of this board but in accordance with the decision of the highest tribunal known to these two citizens, Mr. Belknap and his opponent, contesting here for a place on this floor.

What, then, Mr. Speaker, was the duty of the Clerk of this House? Is it not perfectly plain that it was his duty to put on the roll the name of the man whose credentials showed that he was regularly elected in accordance with the law of the State of Michigan—Mr. Belknap?

And, sir, it is too late for Congress to go back upon the proposition that it is bound in the first instance, always, by the decision of the court of last resort in the different States with respect to the construction of their own statutes. It is a rule of the Supreme Court of the United States, and it is the rule of this House.

In the last Congress, many gentlemen here will call to mind the fact that because the supreme court of the State of Pennsylvania had so construed a statute as to give—carrying out that construction—a seat here to a member on that side of the House instead of to a member on this side of the House who held the certificate of election, this House, following the decision of the supreme court of the State of Pennsylvania in the case of Craig *vs.* Stewart, turned out the latter and put in Craig.

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Mr. DALZELL. Mr. Speaker, I hope my friend from Michigan will yield to me just a minute longer.

Mr. BURROWS. Very well.

Mr. DALZELL. I only want to say in addition that over from that last Congress I hear a voice, and it is the voice of my honored friend from Virginia [Mr. O'FERRALL], chairman of the last Committee on Elections, in his report to this House in the contested case of Noyes *vs.* Rockwell, from the State of New York, and he uses this language:

> Your committee are of the opinion that the decision of the court of last resort of a State upon the construction of a statute of that State, and in a matter before them involving the construction of a statute of that State, should be binding upon them.

And therefore they held that under the decision of the State court of appeals of New York, affirming the lower court, Noyes was *prima facie* elected. I ask my friend from Virginia to apply to this case the law he laid down then, and in that event he will be compelled to say that Charles E. Belknap's name shall go on the roll of this House as *prima facie* entitled to a seat therein.

Mr. O'FERRALL. I now yield ten minutes to the gentleman from Indiana [Mr. BROWN].

Mr. BROWN. Mr. Speaker, I do not believe that a majority of the questions which have been discussed here, in connection with the pending case, are questions for the House to consider and determine at this time. It seems to me that these questions are such as ought to go with the case to the Committee on Elections after that committee has been appointed, and has been charged with the consideration of this case.

The question as to the validity of these certificates and what action, if any, the supreme court of the State of Michigan has taken with regard to them, is one which, under the rules of the House heretofore, has first been committed to the jurisdiction of the Committee on Elections, considered by that committee, and reported by it to the House, and acted on by the House. But the question as to who should be sworn in as a member of this House on his *prima facie* claim to a seat here is one which the House may act on and should act on at the time the House is being organized, and he presents himself to take his oath of office. But inasmuch as questions have been considered in the course of this discussion going to the merits of the case I will briefly state its status.

The laws of the State of Michigan with regard to elections provide that any candidate for an office, after the close of an election, may have the votes cast at such election recounted by the board of county canvassers, and empowers such board to send for and open the ballot boxes and recount the vote by a committee of its members. Mr. Belknap recognized the validity of this law by petitioning the proper authorities of Kent County for a recount of the vote of that county under this statute. He withdrew his petition the next day, but refiled it a few days thereafter.

Mr. Richardson asked a recount as to Ionia County. The State board made the canvass from the reports certified up from the Congressional district, and ascertained that Mr. Richardson had received a plurality of ten votes, and on the 17th day of December last the State board issued to him his certificate of election as a member of the Fifty-third Congress. The certificate is in due form, valid on its face, and was issued by competent authority.

On the 1st day of January last the State officers of Michigan, constituting the State board of canvassers for that State, who made the canvass of the votes cast at the last Congressional election in the district in question, went out of office, and their successors were inducted into office. On the 23d day of December, shortly before this board of canvassers went out of office, Mr. Belknap filed his petition for a proceeding in mandamus in the supreme court of Michigan against the board of canvassers of Ionia County alone, and his petition was to have the statute declared null and void so far as it was applicable to the election of members of Congress. This petition of his was filed on the 23d day of December, 1892, one day after Mr. Richardson's certificate had been filed with the Clerk of this House.

I will not comment upon the decision now of the supreme court of Michigan, because I think it is immaterial respecting the right of Mr. Richardson to be admitted at once to a seat in this House and sworn in as a member on his *prima facie* case.

Another mandamus proceeding was instituted to compel the State board of canvassers of Michigan to canvass the returns of all the counties in the district, and in doing so to canvass the returns from Ionia County with the recount had on Mr. Richardson's petition eliminated. Whether the supreme court had jurisdiction or not is a question to be considered, in my judgment, more appropriately when the whole contest comes before the House for determination after having been considered by the Committee on Elections. But I think I can safely say at this time, that when a canvassing board has convened and made its canvass and declared the result its duty is ended.

It can not reconvene itself, nor can it be compelled to reconvene and revise or reverse its former action, in the absence of a statute expressly authorizing such proceedings. The new board of canvassers had no duty to perform until after the next general election was held.

But these are questions to be considered later on. Now, I will state briefly the reasons why I think Mr. Richardson should be sworn in at once. Primarily, at the very commencement of the creation and organization of this House of Representatives, it was the American belief and the common law of our people, so to speak, that every district in the United States should be represented on this floor during every moment of time. So it is now. This House has no right to take away one hour of time that any Congressional district ought to be represented here. What right has this House to postpone for any length of time the swearing in of a qualified gentleman who appears with a certificate of election valid on its face?

Therefore I protest against the honeyed words of my friend from Michigan [Mr. BURROWS], who says: "Send both of these gentlemen to the Committee on Elections," to sleep away possibly six months of the right of the people of that district to be represented on this floor. Why shall not Mr. Richardson be

sworn in now? The law of Congress for the organization of this House provides that—

Before the first meeting of each Congress the Clerk of the next preceding House of Representatives shall make a roll of the Representatives-elect and place thereon the names of those persons and such persons only—

Says the statute—

whose credentials show that they were regularly elected according to the laws of the States respectively, or the laws of the United States.

This statute confers authority and jurisdiction on the person named in it, the Clerk of the preceding House of Representatives, and upon him alone, to make up the roll of membership of this House. His jurisdiction is exclusive to make up the roll of the membership for the House of Representatives soon to convene, and in making up such roll I maintain that in a case where a number of certificates of election come to him from the same district, showing different claimants from the same district for a seat in the same House of Representatives, his jurisdiction in such a case is judicial. He is to hear, determine, and decide, and when he does decide, his decision stands until this House, under its own rules, after full investigation, reverses it. And when his decision is made, and in pursuance of it he enters on the roll of membership the name of some person claiming a seat here, he thereby makes a part of the record of this House; and for this reason the claimant, Mr. Richardson, not only has a *prima facie* case, because of the certificate of election he holds, but he has another *prima facie* case, so to speak, because his name is on the roll, and no one can strike it off save this House of Representatives alone.

His certificate of election and his name being entered on the roll of membership of this House by the officer whose sworn duty by law it was to make up such roll of membership, entitles him to be sworn in at once. Otherwise his district will for the time being go unrepresented. I do not mean to say, nor am I understood as saying that his name being on the roll of membership concludes this House from striking it off and seating another person; but during the investigation he is entitled to membership here, and to continue as a member until this House investigates the whole case and decides against him.

[Here the hammer fell.]

Mr. O'FERRALL. Mr. Speaker, I believe I have eleven minutes remaining?

The SPEAKER The gentleman from Virginia [Mr. O'FERRALL] has eleven minutes remaining, and the gentleman from Michigan [Mr. BURROWS] has five minutes remaining.

Mr. O'FERRALL. I understand the gentleman from Michigan [Mr. BURROWS] does not propose to consume his five minutes——

Mr. BURROWS. Oh, yes; I propose to occupy my time.

Mr. O'FERRALL. Will you occupy it now, please?

Mr. BURROWS. Before yielding to the gentleman to whom I shall yield, I wish to state that perhaps, in view of the direction in which this discussion is drifting, it will be of service to the House to know that the opinion of the court in all these cases was prepared and delivered by the Democratic member of the bench. I do not know whether that will have any influence or not. I now yield to the gentleman from Alabama [Mr. OATES].

Mr. OATES. Mr. Speaker, I have listened to this discussion with considerable interest, and in the brief time that I have had to look into the case, I have become impressed with the idea that it ought not to be decided upon the discussion and investigation that we have had, which is too slight; and it would make a precedent of too great importance to be established in this sort of perfunctory way. I understand there is no regular contest, and the two gentlemen claiming the seat come here each on a *prima facie* case, and hence it is very important that it should be properly decided.

I agree with my friend from Indiana [Mr. BROWN] in much that he has said, and he said it quite well and with great force. But, sir, by what authority does a member come here and claim his seat? By the authority of his State; and when the certificate of Mr. Richardson was presented to the Clerk of this House the Clerk did right in putting his name on the roll. The Clerk also did right in calling the attention of the House to the fact that he had put his name upon the roll under the peculiar circumstances, and the subsequent certificate of election that came in favor of Mr. Belknap. So that while the Clerk had something to do, something to decide, and decided correctly under the lights before him, it is not conclusive to this House, nor ought it to be accepted in every case. We act rationally, and as intelligent men; and ought we, simply because the Clerk put on the roll the name of a man which first reached his office, determine that he is entitled to the seat? Now, I think not.

Now the State of Michigan speaks, and in two voices—one coming primarily from the State board of canvassers. Subsequently the State board of canvassers speaks again, with the supreme court of the State behind them. Now, which is the true voice of the State? That is the question to be determined. Some gentlemen think the supreme court decided right, and others assail that decision. Have we had time to investigate it and see which stands on the better ground? I think not. Now, sir, no man can undertake to say on this floor, who has not been informed of the case and who has not had time to look into the statutes, whether the decision of the court was right or wrong. It is a grave matter to be determined without investigation, that a supreme court of a State has made a partisan decision or a wrong decision. My understanding is that that court, in respect to its politics, is a mixed court, and that the opinion pronounced in one of these cases was by a Democrat.

Mr. BURROWS. Both.

Mr. OATES. Politics ought not to enter into a question of this character. It is a question of law; and it is far more important that that question should be properly decided than that either of these gentlemen be seated during the brief period that would elapse before a decision could be had.

We can afford to do right, and it always pays men to do right, and we want to avoid the danger of doing wrong in this case; and if I had to vote now I might vote to seat Mr. Richardson; but I want to know that I am doing right, and I wish to offer an amendment——

The SPEAKER. The time of the gentleman from Alabama has expired.

Mr. OATES. As a substitute for the proposition now pending.

The SPEAKER. The previous question has been demanded.

Mr. O'FERRALL. And I reserve all points of order.

Mr. BURROWS. The point of order is made. Can not the point of order be allowed to rest for a moment until debate is closed, so as to see whether the point of order is good?

The SPEAKER. The demand for the previous question would cut off debate. What is the motion of the gentleman from Alabama?

Mr. OATES. My motion is simply to send the case to the Committee on Elections, when constituted, to consider, and that it should report at the earliest opportunity who has the better claim.

Mr. BURROWS. May I suggest, for a moment, that it be considered offered—not pending perhaps, but just offered—and then we will determine the question whether it is in order or not.

Mr. WEADOCK. I raise the question of order that the previous question has been ordered, which cuts off amendments.

Mr. BURROWS. Well, if that is to be the course, I insist that the point of order is not well taken. The previous question has not been ordered.

The SPEAKER. Demanded.

Mr. BURROWS. I think the Chair will find on examination that the previous question has not been demanded.

Mr. O'FERRALL. Oh, yes.

The SPEAKER. If the gentleman will look at the RECORD it seems to be quite plain.

Mr. BURROWS. Does the Chair desire to have the point of order considered?

The SPEAKER. The Chair will hear the gentleman on the point of order.

Mr. BURROWS. I call attention of the Chair to the RECORD of yesterday.

After the gentleman from Virginia [Mr. O'FERRALL] had introduced his resolution and I offered an amendment in the way of a substitute I find the following:

Mr. O'FERRALL. Mr. Speaker, I demand the previous question on the original resolution and the amendment offered by the gentleman from Michigan.

Mr. BURROWS. Do I understand the gentleman from Virginia to demand the previous question?

Mr. O'FERRALL. I do.

Mr. BURROWS. That will cut off debate.

Mr. O'FERRALL. No, it will leave an hour, I understand, under the rules.

Mr. BURROWS. But we have no rules now.

Mr. O'FERRALL. Well, under the practice that prevails.

Mr. BURROWS. I hope the gentleman will not do that.

Mr. O'FERRALL. I do not desire to cut off debate. What time does the gentleman desire?

Mr. BURROWS. I should like to take the floor in my own right. I think I can get through with a statement of the case inside of an hour.

Mr. O'FERRALL. It seems to me that an hour ought to be sufficient altogether. Would the gentleman not be content with thirty minutes?

Mr. BURROWS. Mr. Speaker, there will be no time occupied on this side that is not necessary for a proper presentation of the case. I presume an hour will be ample for that purpose.

Mr. O'FERRALL. Say thirty minutes?

Mr. BURROWS. It would not be sufficient. An hour on this side will possibly be consumed. But, as I have said, there is no disposition to occupy time uselessly.

Mr. O'FERRALL. Very well, I am content. I shall agree to two hours' debate. One hour on each side, to be controlled on the one side by the gentleman from Michigan and the other by myself.

Now, if the Speaker will observe, when the demand was made for the previous question it was upon the theory that an hour upon each side would be allowed for debate under the rule. I then stated that if the previous question should be ordered it

would cut off debate; whereupon the gentleman from Virginia [Mr. O'FERRALL] said, "I do not desire to cut off debate." When I stated the effect of the previous question and expressed a hope that he would not demand it and thus cut off debate he said that he did not desire to cut off debate. I took that as a withdrawal of the demand for the previous question.

The SPEAKER. Of course the gentleman from Michigan [Mr. BURROWS] knows quite well that the effect of ordering the previous question is something further than the mere cutting off of debate. The gentleman from Virginia [Mr. O'FERRALL] might have desired to cut off amendments, but not to cut off debate. His statement was merely that he had no desire to cut off debate. His object might have been to have the demand for the previous question pending in order to cut off amendment.

Mr. O'FERRALL. That was my desire. I did not wish to restrict debate at all, but I did desire to cut off amendment. That was my object.

Mr. SPRINGER. Mr. Speaker, I suggest that after the two hours' debate have been exhausted, the gentleman from Virginia [Mr. O'FERRALL] is entitled to the floor. The two hours were to be devoted to debate and not to amendment. They were granted for the purpose of debate, and when the debate is exhausted, I hold that it is the duty of the Chair to recognize the gentleman from Virginia [Mr. O'FERRALL] to control the further parliamentary proceedings in regard to these resolutions. He is now upon the floor for that purpose, and he has the right to control the floor; otherwise the opposition could take the matter out of the hands of the gentleman having charge of it.

Mr. DINGLEY. Mr. Speaker, I desire to make one suggestion in relation to this matter. I understand that the motion of the gentleman from Alabama [Mr. OATES] is to commit. I desire to ask whether or no, under the parliamentary law modified by the practice of this House, the motion to commit would not be admissible even after the motion for the previous question?

The SPEAKER. The argument has treated this as an amendment.

Mr. DINGLEY. I understood it to be really a motion to commit.

Mr. BURROWS. I suppose that is the substance of it, a motion to commit to the Committee on Elections; and a motion to commit, even after the previous question is ordered, would clearly be in order under the common practice.

The SPEAKER. The Chair will hold that as an amendment this is not now in order, and when the gentleman from Virginia [Mr. O'FERRALL] concludes his remarks the question can be taken as to referring the matter or committing it.

Mr. OATES. Mr. Speaker, I will make the motion to commit it to the Committee——

Mr. O'FERRALL. The gentleman can not take me off the floor. He can make his motion afterwards. I now yield three minutes to the gentleman from Missouri [Mr. HEARD].

Mr. HEARD. Mr. Speaker, I desire to ask the attention of the House to only one point in this case. It is very clear to my mind that the case should go to a committee for full examination, and that the House should not assume to change the status which we find existing here until the investigation is made before that committee, and which can not be properly made elsewhere. It must be evident to the mind of every member of this House who has listened to the discussion, that the rights of the parties to this controversy can be disclosed only by an examination of the vote cast in Ionia County. Mr. Belknap was elected but for the recount of that vote. That recount was made under a statute which was supposed to give authority to make it. Whether the statute did give such authority or not, that recount was made by the same board which had made the original count, and, being made later, it was presumably made honestly in correction of errors found in the original count.

The recount was not made by a new board coming into office by a political change; it was the work of the same board sitting in judgment upon their own prior action. They found such errors in the first count as to change the result and cause the State board to award the certificate of election to Mr. Richardson. Now, when the supreme court, after a change of administration, orders a recount, how does it do it? Does it order a recount to be made of the ballots there, as from the beginning? Oh, no. It orders that the State board shall be convened in extraordinary session, and when the board is ordered to convene it is by the same order directed not to take cognizance of a recount or to make a new and correct one, but to count the original returns, or to repeat the original count, which presumably contained errors which the first recount had corrected.

I say that the recount asked for by Mr. Richardson was made by the board that made the original count, and if the members of that board were honest men, as we have a right to assume, they but corrected the errors in the first count by the result certified in the second. At any rate the method of counting, the tabulation, etc., adopted by the board in Ionia County should be examined into by the only power now competent to make that examination—this House of Representatives, acting in the first instance through its Committee on Elections. Mr. Belknap has not come here in the regular way; he is not here upon a regular election contest. If he were, all these facts pertaining to the first count and the recount of those ballots in Ionia County, and even the ballots themselves, would appear. He is here seeking the seat upon a technicality. Let him seek his right by the only proceeding that can properly determine the questions affecting the real merits of this case. The right to this seat depends on who really carried Ionia County, and this House can not decide that question without an examination of all the facts involved; and the mandate of the supreme court, relied on by the contestant, not only failed to provide for that, but actually prevented it by ordering the first count to be accepted as final, although the board which made it had subsequently tried to correct errors therein, which errors gave contestant the vote of said county, and therefore his only title to a seat in this House.

Mr. O'FERRALL. Mr. Speaker, unless the House of Representatives proposes to surrender its right to pass upon the election and qualifications of its own members to another tribunal, it must seat Mr. Richardson upon the certificate which he holds. His certificate is regular in form and comes from a board which was duly authorized and empowered to canvass the returns, declare the result, and grant the certificate under the laws of the State of Michigan.

The supreme court of Michigan undertook to annul this certificate upon the ground that the canvassing board had erred in judgment in granting the certificate, and issued a mandamus requiring the board, whose membership had in the meantime been changed, to meet and canvass the returns in a manner prescribed by the court, and to issue a certificate to Mr. Belknap, the competitor of Richardson.

It is not my desire to criticise the action of any court; nor do I intend to criticise the action of the supreme court of Michigan in this case. But I must exercise my own judgment in this matter, and upon an examination of the question involved, with all due deference to that honorable court, I must dissent from its judgment.

I insist that the board of State canvassers having met in pursuance of law and canvassed the returns, declared the result, and issued the certificate of election to Richardson, it was *functus officio*, and there was no power anywhere to reconvene it or require it to reverse its action. Its action was final, and irrevocable so far as it could be affected by any tribunal except the House of Representatives upon a proper presentation of error and upon an issue involving the merits of the case not the mere *prima facie* right.

I insist that when the certificate was issued to Richardson he acquired a vested right which could not be wrested from him by an *ex parte* proceeding, such as was taken in this case against the board of State canvassers.

The gentleman from Michigan [Mr. BURROWS] referred to a decision of the supreme court of Kansas. He claimed that under that decision it was within the province of the supreme court of Michigan to reconvene the State board of canvassers in this case and by mandamus require the board to annul its former decision and issue the certificate to Belknap. I have not been able to read the decision cited by the gentleman, but I have here a later decision of the supreme court of Kansas—a decision rendered since the election of last fall—and it is directly opposite to the ruling referred to by him.

The court says:

> Considering all the facts and circumstances of this case presented upon the trial, as no fraud, wrong, or other official misconduct is imputed to the members of the State board of canvassers, or either of them, in receiving and counting the returns complained of, we must hold that they did not improperly reject any returns or refuse to canvass any proper returns. When the board adjourned, on the 1st day of December, 1892, the members thereof had fully discharged all of their duties; and it is too late now to say that they can voluntarily, or by compulsion, meet again, as canvassers, to examine and pass upon the returns of the election of November, 1892.
>
> As a body, the board of State canvassers is *functus officio*—officially dead. It has no power of resurrection, so as to consider the returns of the election of November, 1892, and this court can not animate its dead body with the breath of life. Not only has its power in the premises ended, but its successors have no authority to reassemble, or act again upon the election returns.

Now apply this decision to the case under discussion. It will be found sustaining the position which I take, that the mandamus of the supreme court of Michigan was improperly awarded, or that there was nothing in existence upon which it could operate. The State board of canvassers, in the language of the court, was dead, and the court had no power to resurrect it or animate its dead body with the breath of life.

Let us bear in mind that the only question before the House is the *prima facie* right of Mr. Richardson to a seat on this floor.

If any wrong was done Mr. Belknap, if any error was committed, if any votes were rejected or counted improperly for either party, this House can and will mete out justice. It is true, Mr. Belknap has not instituted a contest in due form, but I will vote for a resolution directing the Committee on Elections, when appointed, to investigate all the facts and make a report upon the merits.

Mr. Speaker, I shall not detain the House longer. I repeat, the only question upon which we are now to pass is the *prima facie* right of Mr. Richardson. As to this there can not, in my opinion, be any doubt. I believe he is entitled to the seat he claims, and ought to be sworn in without delay.

I now demand the previous question on the resolution submitted by me and the substitute offered by the gentleman from Michigan [Mr. BURROWS].

The SPEAKER. The gentleman from Virginia [Mr. O'FERRALL] demands the previous question upon the resolution and substitute.

Mr. BURROWS. What has become of the proposition of the gentleman from Alabama?

Mr. OATES. The Speaker, I understand, ruled it out of order.

Mr. DINGLEY. I move to refer the resolution and substitute to a special committee of five, to report within ten days.

Mr. O'FERRALL. Is that motion in order?

The SPEAKER. Does the gentleman make any point on the motion?

Mr. O'FERRALL. I raise a point of order upon it. I do not desire to discuss it. Let the Chair pass upon it.

The SPEAKER. The House is now acting without any rules framed by itself, and the Chair is inclined to hold that until the adoption of rules——

Mr. DINGLEY. Before that, Mr. Speaker, I desire to call the attention of the Chair to a ruling of Speaker Carlisle in the Forty-ninth Congress.

The SPEAKER. The Chair has the ruling in question before him and was going to read from it:

Until the adoption of rules, the rules and practice of the House in former Congresses constituted the principal part of the parliamentary law of the House of Representatives.

That is a ruling in the Fiftieth Congress, of Speaker Carlisle. I have the ruling before me, but have not had time to examine it.

The Chair will hold, subject to correction on further examination, if the Chair becomes convinced that it is erroneous, that the motion of the gentleman from Maine to refer this matter to a special committee of five to be appointed by the Chair, with authority to report within ten days, is in order, and the question will be first taken on that motion.

Mr. BURROWS. I suppose the gentleman from Maine means together with the certificates and all the documentary features in the case.

The SPEAKER. With all the papers, the Chair will assume.

The question was taken on the motion of Mr. DINGLEY; and on a division there were—ayes 118; noes 170.

Mr. DINGLEY. On that question, Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 128, nays 193, not voting 33; as follows:

YEAS—128.

So the motion to refer was rejected.

During the roll call—

Mr. WRIGHT of Pennsylvania. Mr. Speaker, my colleague, General Lilly, has not been sworn in. He desires to have his vote recorded.

The SPEAKER. In the absence of objection the Chair will administer the oath of office to the gentleman from Pennsylvania.

Mr. Lilly having appeared at the desk, was qualified by affirmation according to law. His vote was then recorded as above.

The SPEAKER. The question now is on ordering the previous question.

The previous question was ordered.

Mr. BURROWS. I ask, Mr. Speaker, that the substitute on which the vote is now to be taken be read.

The substitute proposed by Mr. BURROWS was read, as follows:

Whereas the credentials upon which George F. Richardson claims a seat in the Fifty-third Congress from the Fifth Congressional district of the State of Michigan have been annulled and made void by reason of the judgment of the supreme court of that State: and

Whereas in pursuance and in compliance with such judgment and with the laws of said State, the State board of canvassers of Michigan have determined, declared, and certified that Charles E. Belknap is duly elected a Representative to the Fifty-third Congress of the United States of America from the Fifth Congressional district of the State of Michigan: Therefore,

Resolved, That Charles E. Belknap is entitled to be sworn in as a member of this House on his *prima facie* case.

Mr. BURROWS. On that I demand the yeas and nays.

Mr. BROWN. Will it be in order to strike out the preamble?

The SPEAKER. The previous question has been ordered.

Mr. BROWN. It is a good "whereas."

Mr. BURROWS. It is a truthful "whereas."

The yeas and nays on the substitute of Mr. BURROWS were ordered.

The question was taken; and there were—yeas 114, nays 199; not voting 41, as follows:

YEAS—114.

So the substitute was not agreed to.

The result of the vote was then announced as above recorded.

The SPEAKER. The question now is on the resolution offered by the gentleman from Virginia [Mr. O'FERRALL].

The resolution was agreed to.

Mr. O'FERRALL. I ask that the gentleman from Michigan [Mr. Richardson] be now sworn in.

The oath of office was then administered to Mr. Richardson by the Speaker.

COMPENSATION OF SESSION EMPLOYÉS.

Mr. HOLMAN. Mr. Speaker, I ask leave to submit for present consideration the joint resolution which I send to the Clerk's desk.

The joint resolution was read, as follows:

Joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress.

Resolved, etc., That the appropriations made in the legislative, executive, and judicial appropriation act for the fiscal year 1894, approved March 3, 1893, for compensation of session employés of the Senate and House of Representatives, be, and the same are hereby, made available from and including the 7th day of August, 1893, until the close of the first session of the Fifty-third Congress; and persons employed under said appropriations shall be paid from the date of their actual employment, without regard to the date of their respective oaths of office, and at the rates per diem or per month as provided in said act.

Mr. HOLMAN. Mr. Speaker, this joint resolution seems to become necessary from the fact that in a correspondence between the Clerk of the House and the First Comptroller, the First Comptroller holds that the appropriations made for the first session of this Congress are not available for the present session. For that reason it seems to be necessary to adopt this resolution.

Mr. DINGLEY. I think the decision of the First Comptroller makes the adoption of this resolution necessary.

Mr. HOLMAN. I ask that the correspondence between the Clerk and the First Comptroller be printed in the RECORD.

The SPEAKER. Without objection the correspondence will be printed in the RECORD.

The correspondence is as follows:

CLERK'S OFFICE, HOUSE OF REPRESENTATIVES U. S.,
Washington, D. C., August 7, 1893.

To the Speaker of the House of Representatives:

SIR: The act entitled "An act making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1894, and for other purposes," makes provision, *inter alia*, for the salary of the following employés:

"HOUSE OF REPRESENTATIVES.

"Office of the Clerk: * * * One assistant index clerk, during the session and three months after its close, three hundred and one days, at $6 per day, $1,806. * * *

"Clerks and messengers to committees: * * * For thirty-six clerks to committees, at $6 each per day during the session, $45,144.

"Office of Doorkeeper: * * * Three folders during the session, at $70 per month each, $1,449.84 * * *; thirty-three pages * * * during the session * * * at $2.50 per day, $17,242.50; two messengers during the session, at $70 per month each, $966.56; ten laborers during the session, at $60 per month each, $4,143.20. * * *

"Office of Postmaster: * * * Three messengers during the session, at $800 each, four messengers at $100 per month each during the session, $2,761.76."

Anticipating the meeting of the called session of Congress on August 7, I submitted the following questions to the First Comptroller for his opinion:

"1. Can the clerks, pages, messengers, and laborers, designated as session employés in the act above cited be appointed and placed upon the rolls at the called session without further legislation?

"2. If so, then to what pay will they be entitled respectively for services during that session?

"3. Can the salaries of these session employés for services at the extra session be paid out of the appropriations contained in the act of March 3, 1893, cited above. If not, is there any appropriation available for that purpose?"

The First Comptroller, in his reply, expresses the following opinion:

"TREASURY DEPARTMENT, FIRST COMPTROLLER'S OFFICE,
"*Washington, July 20, 1893.*

"SIR: Yours of the 17th, asking whether certain employés of the House provided for in the legislative, executive, and judicial appropriation act, approved March 3, 1893, can be placed upon the rolls at the called session without further legislation, has been received.

"The employés mentioned in the office of the Clerk are one assistant index clerk and thirty-six clerks to committees. In the office of the Doorkeeper there are three folders, thirty-three pages, two messengers, and ten laborers. In the office of the Postmaster there are three messengers.

"All these employés have attached as a qualification to their payment these words: 'During the session,' except in the case of the assistant index clerk in the office of the Clerk, which has the following qualification: 'During the session and three months after its close, 301 days.'

"The language 'during the session' must be taken to refer to the regular session provided for by law, which would begin on the first Monday in December, to wit, December 4, 1893. That was the only session which at the time the act was passed could have been within the contemplation of Congress, for it was the only session that was necessarily required, and the words therefore, 'the session,' must refer to the session Congress knew would be held. But in the same act there is found the following clause: 'That wherever the words "during the session" occur in the foregoing paragraphs they shall be considered to mean 209 days.' Two hundred and nine days is the exact number of days from December 4, the day of the beginning of the regular session, to June 30, the end of the fiscal year 1894, both days inclusive, and the appropriation made for the payment of these employés is calculated exactly on the basis of 209 days, except in the case of the index clerk, calculated on the basis of 301 days, 92 days in addition to the 209 days provided for the other employés—said 92 days being exactly the number of days in the three months after the close of the fiscal year 1894.

"The conclusion is irresistible that the appropriation to pay these employés of the House was meant to be confined to the regular session beginning in December, and was not to apply to the special or called session, which was not within the contemplation of Congress when the appropriation act was passed.

"In answer, therefore, to your several questions, I have to say that these employés can not be paid out of said appropriation act; that therefore they can not be placed upon the rolls, because there is no appropriation made for their payment, or other provisions of law requiring or authorizing their employment.

"Very respectfully,

"R. B. BOWLER, *Comptroller.*"

"Hon. JAMES KERR,
"*Clerk House of Representatives.*"

It would seem, therefore, that there is at present no legal authority for the appointment of session employés at this extra session of Congress; that

there are no moneys available out of which the salaries of such employés can be paid for services at the extra session. If, however, the appointment of the session employés named in the act of March 3, 1893, be authorized for this session and at the salaries fixed in that act, it will require the following amounts of money to pay such salaries:

Capacity.	Aug. 7-31.	Sept.	Oct.	Nov.	Dec. 1-3.	Total.
1 assistant index clerk, $6 per day	$150.00	$180.00	$186.00	$180.00	$18.00	$714.00
35 clerks to committees, $6 per day	5,400.00	6,480.00	6,696.00	6,480.00	648.00	25,704.00
3 folders, $70 per month	169.35	210.00	210.00	210.00	20.31	819.66
33 pages, $2.50 per day	2,062.50	2,475.00	2,557.50	2,475.00	247.50	9,817.50
2 messengers, $70 per month	112.90	140.00	140.00	140.00	13.54	546.44
10 laborers, $60 per month	483.70	600.00	600.00	600.00	58.00	2,341.70
3 messengers, $800 per session	287.02	344.43	355.91	344.43	34.41	1,366.23
4 messengers, $100 per month	322.50	400.00	400.00	400.00	38.70	1,561.20
Total	8,987.97	10,829.43	11,145.41	10,829.43	1,078.49	42,870.73

Respectfully submitted.

JAMES KERR,
Clerk House of Representatives.

Mr. BLANCHARD. I wish to ask the gentleman from Indiana [Mr. HOLMAN] if the adoption of this resolution will enable the mileage of members to be paid now?

Mr. HOLMAN. No; it will not. It only applies to the session employés.

Mr. BLANCHARD. I am very sorry to hear the statement of the gentleman. [Laughter.]

Mr. HOLMAN. I ask the previous question.

The previous question was ordered.

The joint resolution was then agreed to.

JOHN T. CHANCEY.

Mr. HOLMAN. I have another resolution which I wish to offer, to which, I am satisfied, there will be no objection. I send the resolution to the Clerk's desk and ask for its immediate consideration.

The resolution was read as follows:

Resolved, That John T. Chancey be continued in the service of this House as heretofore until otherwise ordered, and that he be paid as heretofore.

Mr. HOLMAN. Mr. Speaker, I wish to say in behalf of that resolution that a similar resolution was adopted by this House in the last Congress. Mr. Chancey is the oldest employé of the House, and the minority of the House have requested his appointment. A similar courtesy was extended by the Democrats to the Republicans in the Forty-seventh Congress and in the Fifty-first Congress. I hope there will be no objection to the resolution.

The resolution was agreed to.

On motion of Mr. HOLMAN, a motion to reconsider the votes by which the last two resolutions were agreed to was laid on the table.

ADJOURNMENT UNTIL THURSDAY NEXT.

Mr. CATCHINGS. Mr. Speaker, I move that when the House adjourns to-day it adjourn to meet on Thursday next.

Mr. MARSH. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. MARSH. I rise to present a petition to this House.

The SPEAKER. The gentleman from Mississippi [Mr. CATCHINGS] has made a motion. The gentleman from Mississippi moves that when the House adjourns to-day it adjourn to meet on Thursday next.

The motion of Mr. CATCHINGS was agreed to.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. CHIPMAN, indefinitely, on account of sickness.

COMMITTEE ON RULES, ETC.

Mr. CATCHINGS. Mr. Speaker, I offer the resolution which I send to the Clerk's desk, and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That the Speaker appoint a committee on rules, on accounts, on enrolled bills, and on mileage, each to consist of the same number of members as is provided for by the rules of the Fifty-second Congress, and that the rules of the Fifty-second Congress be referred to the committee on rules.

Mr. CATCHINGS. On that I demand the previous question.

The previous question was ordered.

Mr. HOOKER of Mississippi. I hope my colleague from Mississippi [Mr. CATCHINGS] will withdraw his resolution so far as it refers to the appointment of a committee on rules, that committee to be constituted of the same number as in the last House.

The SPEAKER. The previous question has been ordered.

Mr. HOOKER of Mississippi. There ought to be a larger committee on rules. My idea has always been that five members of that committee are not a sufficient number, and I do not think the House ought to adopt the resolution in that form without consultation and conference upon the subject.

The SPEAKER. The question is upon the adoption of the resolution.

The resolution was agreed to.

Mr. MARSH. Mr. Speaker——

The SPEAKER. The Chair understands that the gentleman from Illinois [Mr. MARSH] desires to present a petition.

Mr. MARSH. I desire to present a petition from working people in the district which I have the honor to represent.

The SPEAKER. The petition will go through the petition box.

Mr. MARSH. Mr. Speaker, I ask that that petition be read.

Mr. REILLY. Mr. Speaker——

The SPEAKER. The gentleman from Pennsylvania [Mr. REILLY] is recognized.

DEATH OF HON. WILLIAM MUTCHLER.

Mr. REILLY. Mr. Speaker, since the adjournment of the House, a few short months ago, Death in his inexorable tyranny has laid claim to one of the most honored and faithful members of this body, and it becomes my painful duty to formally announce to the House the death of our late lamented colleague, Hon. William Mutchler, a Representative in this House for many years from the State of Pennsylvania.

In doing so it is not my purpose or that of his colleagues at this time to indulge in any eulogy on his life, his valuable services, and his high character, but we propose to ask the House at an early day to lay aside its public business and pay such tribute to his life and character as his memory deserves.

On the 23d of June last, at his home in the city of Easton, surrounded by his beloved family, his spirit passed away.

Pennsylvania, that great Commonwealth which he so much honored and so long and ably served, has in his death, as has his country at large, suffered a great, irreparable loss. I think I may say that there never has been shown by the services of a member of this House any higher degree of zeal, fidelity, and ability in the discharge of duty than characterized the life and services of Mr. Mutchler on this floor.

He was esteemed and respected by all, and I think I may safely say, and echo the sentiments of his fellow-members, that he bore that highest test of manhood "that he who knew him best loved him most."

I now offer the resolutions which I send to the Clerk's desk.

The Clerk read as follows:

Resolved, That the House has heard with deep regret and profound sorrow of the death of Hon. William Mutchler, late a Representative from the State of Pennsylvania.

Resolved, That the Clerk be directed to communicate a copy of these resolutions to the Senate and send a duly attested copy to the widow of the deceased.

Resolved, That as a further mark of respect to our deceased colleague the House do now adjourn.

The resolutions were unanimously adopted; and accordingly (at 4 o'clock and 30 minutes p. m.) the House adjourned until Thursday next at 12 o'clock m.

SENATE.

WEDNESDAY, *August 9, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read, corrected, and approved.

PAYMENT OF SESSION EMPLOYÉS.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress; in which it requested the concurrence of the Senate.

Mr. COCKRELL. I ask that the joint resolution from the House of Representatives be laid before the Senate, and that, after being read, it be referred to the Committee on Appropriations.

The joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress was read the first time by its title and the second time at length, and referred to the Committee on Appropriations.

ADJOURNMENT.

Mr. GORMAN. I move that the Senate adjourn.

Mr. PLATT. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. DAVIS (when his name was called). I am paired with the Senator from Indiana [Mr. TURPIE]. If he were present I should vote "nay."

Mr. CAMERON (when Mr. QUAY'S name was called). My colleague [Mr. QUAY] is paired with the Senator from Alabama [Mr. MORGAN]. If my colleague were here he would vote "nay."

The roll call was concluded.

Mr. MANDERSON (after having voted in the negative). I withdraw my vote and announce a pair with the junior Senator from Kentucky [Mr. LINDSAY]. I have a general pair with the senior Senator from Kentucky [Mr. BLACKBURN], but I transfer the pair to the junior Senator.

The result was announced—yeas 48, nays 21; as follows:

YEAS—48.

Allen,	Gibson,	McPherson,	Shoup,
Bate,	Gordon,	Martin,	Smith,
Berry,	Gorman,	Mills,	Stewart,
Blackburn,	Gray,	Mitchell, Wis.	Teller,
Butler,	Hansbrough,	Murphy,	Vance,
Caffery,	Harris,	Palmer,	Vest,
Call,	Hill,	Pasco,	Vilas,
Camden,	Hunton,	Perkins,	Voorhees,
Cockrell,	Irby,	Power,	Walthall,
Coke,	Jones, Ark.	Pugh,	White, Cal.
Dubois,	Jones, Nev.	Ransom,	White, La.
Faulkner,	Kyle,	Roach,	Wolcott.

NAYS—21.

Allison,	Gallinger,	McMillan,	Sherman,
Cameron,	Hale,	Mitchell, Oregon	Stockbridge,
Chandler,	Hawley,	Morrill,	Washburn.
Cullom,	Higgins,	Peffer,	
Dixon,	Hoar.	Platt,	
Dolph,	Lodge,	Proctor,	

NOT VOTING—16.

Aldrich,	Daniel,	Lindsay,	Quay,
Brice,	Davis,	Manderson,	Squire,
Carey,	Frye,	Morgan,	Turpie,
Colquitt,	George,	Pettigrew,	Wilson.

So the motion was agreed to; and the Senate (at 12 o'clock and 18 minutes p. m.) adjourned until to-morrow, Thursday, August 10, 1893, at 12 o'clock m.

SENATE.

THURSDAY, *August 10, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

WILLIAM LINDSAY, a Senator from the State of Kentucky, appeared in his seat to-day.

The Journal of yesterday's proceedings was read and approved.

ADJOURNMENT TO MONDAY.

Mr. GORMAN. I move that when the Senate adjourn to-day it be to meet on Monday next.

Mr. LODGE. On that I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CHANDLER (when his name was called). On this question I am paired with the junior Senator from New Jersey [Mr. SMITH]. If he were present I should vote "nay."

Mr. DAVIS (when his name was called). I am paired with the Senator from Indiana [Mr. TURPIE]. If he were present I should vote "nay."

Mr. QUAY (when his name was called). Previous to the departure of the Senator from Alabama [Mr. MORGAN] for Europe in the discharge of his duties as a member of the Bering Sea Commission a pair was arranged between us covering all questions upon which a vote might be taken except the Nicaragua Canal bill and the Hawaiian business. I therefore withhold my vote. If the Senator from Alabama were present I should vote "nay."

The roll call was concluded.

Mr. PLATT. I have a general pair with the Senator from Virginia [Mr. HUNTON], who has voted. It is understood that upon this vote I am paired with the junior Senator from New York [Mr. MURPHY], who has been compelled to leave the city. If he were present I should vote "nay."

Mr. DOLPH. Has the senior Senator from Mississippi [Mr. GEORGE] voted?

The VICE-PRESIDENT. He has not voted, the Chair is advised.

Mr. DOLPH. I am paired with the senior Senator from Mississippi [Mr. GEORGE], and will not vote.

Mr. CAREY (after having voted in the negative). I should like to inquire if the Senator from South Carolina [Mr. IRBY] has voted?

The VICE-PRESIDENT. He has not voted.

Mr. CAREY. I desire to withdraw my vote, as I am paired with that Senator.

Mr. MCPHERSON. I am paired with the Senator from Delaware [Mr. HIGGINS]. If he were present I should vote "yea" and he would vote "nay."

Mr. ALLISON. I desire to state that my colleague [Mr. WILSON] is absent from the sessions of the Senate on account of illness.

Mr. MANDERSON (after having voted in the negative). I find that the Senator from Kentucky [Mr. BLACKBURN], with whom I have a general pair, has not voted. I therefore withdraw my vote.

The result was announced—yeas 40, nays 16; as follows:

YEAS—40.

Allen,	Gordon,	Martin,	Stewart,
Berry,	Gorman,	Mills,	Teller,
Butler,	Gray,	Mitchell, Oregon	Vance,
Caffery,	Harris,	Palmer,	Vest,
Call,	Hill,	Peffer,	Vilas,
Camden,	Hunton,	Pettigrew,	Voorhees,
Cockrell,	Jones, Ark.	Power,	Walthall,
Coke,	Jones, Nev.	Pugh,	White, Cal.
Faulkner,	Kyle,	Ransom,	White, La.
Gibson,	Lindsay,	Roach,	Wolcott.

NAYS—16.

Aldrich,	Dixon,	Lodge,	Proctor,
Allison,	Gallinger,	McMillan,	Shoup,
Cameron,	Hale,	Morrill,	Stockbridge,
Cullom,	Hoar,	Perkins,	Washburn.

NOT VOTING—29.

Bate,	Dolph,	McPherson,	Sherman,
Blackburn,	Dubois,	Manderson,	Smith,
Brice,	Frye,	Mitchell, Wis.	Squire,
Carey,	George,	Morgan,	Turpie,
Chandler,	Hansbrough,	Murphy,	Wilson.
Colquitt,	Hawley,	Pasco,	
Daniel,	Higgins,	Platt,	
Davis,	Irby,	Quay,	

So the motion was agreed to.

ADJOURNMENT.

Mr. COCKRELL. I move that the Senate do now adjourn.

Mr. CHANDLER. On that I ask for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. CAREY (when his name was called). I am paired with the Senator from South Carolina [Mr. IRBY], and I withhold my vote.

Mr. CHANDLER (when his name was called). Upon this question I am paired with the junior Senator from New Jersey [Mr. SMITH]. If he were present I should vote "nay."

Mr. DAVIS (when his name was called). I am paired with the Senator from Indiana [Mr. TURPIE]. If he were present I should vote "nay."

Mr. MCPHERSON (when his name was called). I am paired with the Senator from Delaware [Mr. HIGGINS].

Mr. MANDERSON (when his name was called). I am paired with the Senator from Kentucky [Mr. BLACKBURN].

Mr. PLATT (when his name was called). I am paired on this question with the junior Senator from New York [Mr. MURPHY]. If he were present I should vote "nay."

Mr. QUAY (when his name was called). On this question I am paired with the Senator from Alabama [Mr. MORGAN].

The roll call was concluded.

Mr. VEST. I desire to state that the junior Senator from Ohio [Mr. BRICE] is detained from the Senate by illness. He is not paired, but can not possibly attend.

The result was announced—yeas 39, nays 18; as follows:

YEAS—39.

Allen,	Gibson,	Martin,	Teller,
Bate,	Gordon,	Mills,	Vance,
Berry,	Gorman,	Mitchell, Oregon	Vest,
Butler,	Gray,	Palmer,	Vilas,
Caffery,	Harris,	Peffer,	Voorhees,
Call,	Hill,	Pettigrew,	Walthall,
Camden,	Jones, Ark.	Pugh,	White, Cal.
Cockrell,	Jones, Nev.	Ransom,	White, La.
Coke,	Kyle,	Roach,	Wolcott.
Faulkner,	Lindsay,	Stewart,	

NAYS—18.

Aldrich,	Dolph,	Lodge,	Proctor,
Allison,	Gallinger,	McMillan,	Stockbridge,
Cameron,	Hansbrough,	Morrill,	Washburn.
Cullom,	Hawley,	Perkins,	
Dixon,	Hoar,	Power,	

NOT VOTING—28.

Blackburn,	Dubois,	McPherson,	Quay,
Brice,	Frye,	Manderson,	Sherman,
Carey,	George,	Mitchell, Wis.	Shoup,
Chandler,	Hale,	Morgan,	Smith,
Colquitt,	Higgins,	Murphy,	Squire,
Daniel,	Hunton,	Pasco,	Turpie,
Davis,	Irby,	Platt,	Wilson.

So the motion was agreed to; and the Senate (at 12 o'clock and 17 minutes p. m.) adjourned until Monday, August 14, 1893, at 12 o'clock m.

HOUSE OF REPRESENTATIVES.

THURSDAY, *August 10, 1893.*

The House met at 12 m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of Tuesday was read and approved.

RECESS.

Mr. BAILEY. Mr. Speaker, I move that the House take a recess until 1 o'clock.

The question was taken; and the Speaker announced that the noes seemed to have it.

Mr. BAILEY. I demand a division.

Mr. SPRINGER. I hope this motion will prevail, as at that time there may be a proposition submitted to the House for immediate consideration.

Mr. BURROWS. It is not debatable.

The question was taken; and there were—ayes 76, noes 127.

Mr. BAILEY. I demand tellers, Mr. Speaker.

Tellers were ordered; and Mr. BAILEY and Mr. REED were appointed to act as tellers.

The House again divided; and the tellers reported—ayes 126, noes 98.

So (at 12 o'clock and 20 minutes) the House was declared in recess.

The recess having expired, the House reassembled at 1 o'clock p. m.

Mr. SPRINGER. Mr. Speaker, I move that the House do now adjourn.

The question was taken; and the Speaker announced that the noes seemed to have it.

Mr. SPRINGER. Division.

The House proceeded to divide; and when the affirmative vote had been counted

Mr. REED said: We had better save the time of the House. I call for the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 178; nays 138; not voting 39; as follows:

YEAS—178.

Dunphy,	Hopkins, Pa.	O'Ferrall,	Wolverton.
Everett,	Houk, Tenn.	Ray,	

So the motion was agreed to.

The SPEAKER. Before announcing the result the Chair will announce the Committee on Rules.

The Clerk read as follows:

The Speaker, Mr. CATCHINGS, Mr. OUTHWAITE, Mr. REED, and Mr. BURROWS.

The result of the vote was then announced as above recorded; and accordingly (at 1 o'clock and 30 minutes p. m.) the House adjourned.

HOUSE OF REPRESENTATIVES.

FRIDAY, *August 11, 1893.*

The House met at 12 o'clock m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

REGENT OF THE SMITHSONIAN INSTITUTION.

The SPEAKER. To fill the vacancy in the Board of Regents of the Smithsonian Institution occasioned by the resignation of Mr. LODGE of Massachusetts, the Chair announces the appointment of Mr. R. R. HITT of Illinois.

RULES COMMITTEE GRANTED LEAVE TO PRINT.

The SPEAKER. The Committee on Rules desire to have an order made that they may have leave to have printed such matter as may be found necessary in connection with the rules, or other subjects that may come before them.

There was no objection, and it was so ordered.

LEAVE OF ABSENCE.

By unanimous consent, Mr. FLETCHER was granted leave of absence until Monday next.

SILVER.

Mr. WILSON of West Virginia. Mr. Speaker, I desire to offer a bill for the present consideration of the House.

The bill was read, as follows:

An act to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Be it enacted, etc., That so much of the act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes," as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding one dollar for 371.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed: but this repeal shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law.

Mr. BLAND. Mr. Speaker, I desire to present to the House an order embodying an agreement as to the mode in which proceedings shall be had in the consideration of the bill just offered, on which order I shall demand the previous question, with the statement——

Mr. CANNON of Illinois. Before that is done——

Mr. BLAND (continuing). With the statement that we shall offer our bill, not as an amendment to the bill just read, but as a substitute for it.

Mr. CANNON of Illinois. Before that is done, Mr. Speaker, I would like——

Mr. BLAND. I do not yield.

Mr. CANNON of Illinois. Well, I rise to a parliamentary inquiry.

The SPEAKER. The gentleman from Illinois rises to a parliamentary inquiry.

Mr. CANNON of Illinois. I desire to ask how this bill, if no point of order is made against it, is to be considered. Is it first to be referred to a committee under the rules, or is it to be considered in Committee of the Whole House, or is it to be considered in the House as in committee?

The SPEAKER. The Chair will state to the gentleman from Illinois that, in the absence of rules providing how the bill shall be considered, it is a matter for the House itself to determine. The House can refer the bill if it desires to do so, or can consider it directly, or can dispose of it in any way that it desires.

Mr. CANNON of Illinois. Then I understand that the bill is not subject to a point of order, sending it to a Committee of the Whole House or a standing committee of the House.

The SPEAKER. In the judgment of the Chair it is not.

Mr. BLAND. Mr. Speaker, I ask that the resolution that I have sent up be adopted as the order of the House pending the proceedings in the consideration of the bill just offered by the gentleman from West Virginia, and, if the House adopts that order, I have a bill to present as a substitute for the one that is pending.

The SPEAKER. The Chair will state the question. The gentleman from West Virginia [Mr. WILSON] offers a bill in the absence of any rules of the House, and the gentleman from Missouri [Mr. BLAND] offers a resolution providing for the method in which the House shall consider that bill. The Clerk will report the resolution of the gentleman from Missouri.

The resolution was read, as follows:

Ordered by the House, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.

Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

Mr. BLAND. Mr. Speaker, I demand the previous question.

Mr. CANNON of Illinois. Mr. Speaker——

Mr. BRECKINRIDGE of Kentucky. I would like to make an inquiry.

The SPEAKER. One moment. The Chair did not understand exactly from the reading of the resolution what the length of the debate is to be. Is the general debate to close at the end of eight days?

Several MEMBERS. Eleven days.

The SPEAKER. The Chair did not clearly understand that. The gentleman from Kentucky (Mr. BRECKINRIDGE), as the Chair understands, rises to a parliamentary inquiry.

Mr. BRECKINRIDGE of Kentucky. My inquiry is whether the words describing the various amendments which may be offered (which are simply amendments providing for the free coinage of silver at the ratio of 16 to 1, then 17 to 1, and so on) are so limited that no amendment can be offered changing the statutes now in force as to the power of the Secretary of the Treasury to issue silver certificates upon the silver dollars if a new ratio be agreed upon.

Mr. BLAND. That will be included in the bill which I propose to introduce.

Mr. BRECKINRIDGE of Kentucky. As the law is now those certificates can be issued only upon dollars coined on a ratio of 16 to 1. If we increase the ratio, making it for instance 20 to 1, the assets of the Treasury are instantly reduced nearly $100,000,000. Some members might be in the attitude of being willing to vote for an increased ratio and yet not willing to do so without accompanying legislation——

Mr. BLAND. That is provided for in the bill which I propose to offer.

Mr. BRECKINRIDGE of Kentucky. But it is not provided for in this order. It seems to me that the order ought to be broad enough and clear enough and unambiguous enough for us to know when we vote for it that something more is to be provided in those amendments than merely free coinage of silver and the change of the ratio.

Mr. BLAND. There can be no difficulty or dispute about that matter. The only difficulty we had in the conference was as to the particular ratios to be voted upon and the time for debate. The bill which I have ready now to offer, and which will be before the House all the way through, provides for the issue of silver certifiiates on whatever dollars may be coined.

Mr. BRECKINRIDGE of Kentucky. Will the gentleman, then, assent to the suggestion that before a vote is taken on the previous question, he send his bill to the table and allow it to be read, so that we may understand its provisions?

Mr. BLAND. I have no objection to that.

Mr. BRECKINRIDGE of Kentucky. I think that course would be most satisfactory to the House.

Mr. HENDERSON of Iowa. I rise to a parliamentary inquiry. The resolution speaks of the time being controlled by the two sides. According to an agreement which appears to have been made on the other side, the original bill now before us is introduced by the gentleman from West Virginia [Mr. WILSON], and this proposition for the consideration of a substitute comes from the gentleman from Missouri [Mr. BLAND]. This accords with the statement we have seen in the papers that there are two sides to this question on the other side of the House. Are those the two sides referred to in the resolution, or does the language mean the Republican side and the Democratic side? [Laughter.]

The SPEAKER. The Chair will state——

Mr. BLAND. We hope to have the gentleman from Iowa on our side in this matter.

Mr. BOUTELLE. Which is "our side"?

The SPEAKER. The Chair understands that under the terms of the resolution the power of recognition would remain in the Chair, and the Chair would understand the "two sides" to mean the opposite sides of any question that might be up.

Mr. GROSVENOR. We are to have before us the bill which has been introduced, and also various propositions by way of amendment. The situation can not be summarized as comprising simply two questions, or one question with two sides. There seems to be one question with a great many sides.

The SPEAKER. The Chair can only say that if the duty is devolved upon him he will try to recognize gentlemen representing all sides of any question which may be before the House.

Mr. SIMPSON. I rise to a parliamentary inquiry. Inasmuch as there appear to be so many sides to this question, and inasmuch as the Republicans are unable to distinguish themselves from Democrats any longer, so that the gentleman from Iowa [Mr. HENDERSON] has to make an inquiry to find "where he is at," I submit it would be only right that the People's party should have some consideration in the allotment of time——

Mr. BOUTELLE. We propose to put you on the outside! [Laughter.]

Mr. SIMPSON. We have been trying to put ourselves on the outside of the Democratic and the Republican parties; and I think we will put you outside when you give us a little more time. But, Mr. Speaker, I was about to say that I hope, in the division of time upon this question, the People's party, who claim to have twelve members here, will be allotted at least three hours, to be controlled by one of their party. I think that would be right and just. I believe we should not be left at the mercy of either Republicans or Democrats as to the time we are to occupy.

Mr. BRECKINRIDGE of Kentucky. I renew my suggestion, Mr. Speaker, that this bill be read first.

The SPEAKER. If there be no objection, the bill will be read.

Mr. HENDERSON of Iowa. One moment, Mr. Speaker. I am not yet quite satisfied with the understanding that seems to be had in regard to the division of time on this matter. I am not going now to stop for the purpose of discussing the suggestion of the gentleman from Kansas [Mr. SIMPSON] as to "where we are at." There seems to be considerable trouble on his side and, in fact, all around on that subject.

Mr. SIMPSON. Oh, no; there is no trouble with me.

Mr. HENDERSON of Iowa. But I want it to be distinctly understood that the Republicans are going to control their share of the time; and that there is not going to be two sides to this question, both of them controlled by the Democratic side of the House. For one I want that clearly understood.

Mr. BLAND. There is no disposition to prevent the gentleman, or his side of the House, from having ample time.

The SPEAKER. The Chair has no knowledge of any agreement as to the distribution of time. The Chair understands that the responsibility under the resolution is cast upon the Speaker, as it is ordinarily under the rules, and in pursuance of that responsibility it will be his duty to recognize members in the discussion.

Mr. BOWERS of California. I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BOWERS of California. As I understand this question, stripped of all its various excrescences, it comes down to two sides simply; that is to say, those who are in favor of free coinage of silver, and those who are opposed to it. Now, I object to the Republicans, who oppose the free coinage of silver, controlling my part of the time in this discussion. [Applause and laughter.] I am for free coinage.

Mr. BLAND. Mr. Speaker, I insist upon the demand for the previous question.

Mr. REED. I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. REED. If the previous question is ordered, will there be any time for debate?

The SPEAKER. The Chair supposes that there would be some time for discussion. How far the Chair would be governed in that respect by the rules——

Mr. REED. But we have no rules.

The SPEAKER. The Chair understands that. But how far the Chair would be required to observe the rules as they have heretofore existed on that subject the Chair is not prepared to state.

Mr. REED. I think the difficulty with the present proposition for the previous question is that we are undertaking to pass a very serious measure without the slightest debate. I should like to have an opportunity myself to say a few words about it. But if the previous question is ordered we are absolutely silenced.

Here is a proposition made by a committee of some sort or other, of the constitution of which and the nature of which the House knows nothing officially at least, and it is proposed to adopt the suggestion of that committee upon a matter of the gravest importance without the slightest discussion.

I recognize, of course, the importance of the situation, and had the proposition been merely one to repeal the purchase clause of the Sherman act, or to not repeal it, I could see the wisdom of the House coming to a conclusion upon it at once. But——

Mr. BLAND. Mr. Speaker, I did not yield for a speech. The gentleman asked a parliamentary question. I demand the previous question.

The SPEAKER. The Chair was indulging the gentleman from Maine in a suggestion as to time for the discussion of this order of business after the previous question was ordered.

Mr. REED. I had hoped that some arrangement might be arrived at.

Mr. BLAND. I have no objection to debate under the rules of the last House after the previous question is ordered.

The SPEAKER. The Chair will, then, submit that request to the House. The gentleman asks unanimous consent that if the previous question shall be ordered on the resolution thirty minutes' debate, fifteen on each side, shall be allowed, as under the rules of the last House.

Mr. CANNON of Illinois. I hope it will be at least an hour.

Mr. REED. It seems to me that fifteen minutes is entirely inadequate on a proposition so complicated as that presented here.

The SPEAKER. It is merely a method of procedure.

Mr. REED. I should not have the slightest objection if the question which the President has submitted could be put to the House and voted upon at once. But that is not the question now.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

Mr. CANNON of Illinois. One moment, Mr. Speaker. This is an entirely new proposition, that is not yet even in print, and of which we have had no knowledge until within the last ten minutes. Now, I do not think that the House ought to make an order for the previous question to cut off all debate and amendment, nor do I believe that so short a time as that suggested, fifteen minutes on a side, would be at all ample for the consideration of such a proposition.

A point of order does not lie to send it to the Committee on Rules, as it would if the rules had been adopted. The Speaker holds it to be in order, and I beg that either by unanimous consent we have at least an hour on a side, or that the House refuse to order the previous question. Many of us have amendments which we would like to present——

Mr. BLAND. Mr. Speaker, I decline to yield further, and demand the previous question.

The SPEAKER. The gentleman from Missouri [Mr. BLAND] demands the previous question; and the Chair holds that if there is no agreement there can be no further debate on this resolution if the previous question is ordered.

Mr. CANNON of Illinois. Mr. Speaker——

Mr. BLAND. The gentleman does not remember when we had "parliamentary law" in this House——

Mr. CANNON of Illinois. You want to gag the House now so that you can dodge under the proposed rule——

The SPEAKER. The gentleman from Illinois and the gentleman from Missouri will be in order.

Mr. BURROWS. In the confusion I do not think the statement of the Chair was understood. Do I understand the Chair to state that if the previous question is now ordered there will be no further debate on this resolution?

The SPEAKER. No further debate.

Mr. BURROWS. I hope the previous question will be voted down, then.

The question being taken on ordering the previous question, the Speaker announced that the ayes seemed to have it.

On a division, demanded by Mr. CANNON of Illinois, there were—ayes 184, noes 99.

Mr. CANNON of Illinois. I ask for the yeas and nays.

The question being taken on the demand for the yeas and nays, the Speaker announced that 32 members (not a sufficient number) had risen to second the demand, and that the yeas and nays were refused. [Applause.]

Mr. CANNON of Illinois. I demand tellers on the yeas and nays.

Tellers were ordered; and the Speaker appointed Mr. BLAND and Mr. CANNON of Illinois.

The tellers reported—ayes 53, noes 185.

The SPEAKER. The tellers report 53 gentlemen rising to second the demand for the yeas and nays, and 185 in opposition. A sufficient number having arisen, the yeas and nays are ordered. As many as favor ordering the previous question on the resolution of procedure offered by the gentleman from Missouri will, when their names are called, say "aye," those opposed will say "no," and the Clerk will call the roll.

Mr. BURROWS. Mr. Speaker, I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BURROWS. If the previous question is voted down, will this resolution be open to amendment?

The SPEAKER. Of course it will.

Mr. REED. It will be open to amendment and there will be an opportunity to discuss it.

The SPEAKER. If the previous question is refused, the House can do with it whatever it chooses.

The question was taken; and there were—yeas 219; nays 99; not voting 36; as follows:

YEAS—219.

So the previous question was ordered.

Mr. HATCH. Mr. Speaker, I am paired with the gentleman from Pennsylvania [Mr. HARMER], who is absent from the city. Were he present I should vote "aye."

The result of the vote was then announced as above recorded.

The SPEAKER. The question now is on agreeing to the resolution.

The question was taken; and the resolution was agreed to.

SILVER.

Mr. BLAND. Now, Mr. Speaker, I offer the bill that I send to the Clerk's desk.

The SPEAKER. The Clerk will report the substitute offered.

Mr. REED. Is that the bill referred to in the order which has just been passed?

The SPEAKER. The Chair so understands.

Mr. REED. I am very glad that it is to be read—after the order is passed.

The SPEAKER. The Chair understands that is the bill.

The bill was read, as follows:

A bill (H. R. 2) for the free coinage of silver, and for other purposes.

SECTION 1. *Be it enacted, etc.*, That from and after the passage of this act all holders of silver bullion to the amount of $100 or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of 412½ grains of standard silver. Said dollars to be a legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollars.

SEC. 4. So much of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of 4,500,000 ounces of silver bullion, be and the same is hereby repealed.

The SPEAKER. The gentleman from West Virginia is recognized.

Mr. WILSON of West Virginia. Mr. Speaker, I yield forty minutes to the gentleman from Maryland [Mr. RAYNER].

COMMEMORATION OF THE HUNDREDTH ANNIVERSARY OF THE LAYING OF THE CORNER STONE OF THE CAPITOL.

Mr. BYNUM. Mr. Speaker, the gentleman from Maryland yields to me for a minute to ask unanimous consent for the consideration of a resolution. I will ask to have it read.

The SPEAKER. The gentleman from Indiana, with the consent of the gentleman from Maryland, desires unanimous consent for the consideration of a joint resolution relating to the exercises commemorative of the hundredth anniversary of the laying of the corner stone of the Capitol. The Clerk will read the joint resolution, after which the Chair will ask if there be objection.

The Clerk read as follows:

A joint resolution providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States September 18, 1793.

Whereas the one hundredth anniversary of the laying of the corner stone of the United States Capitol by President George Washington, September 18, 1793, is an occasion of national interest becoming the cognizance of Congress; and

Whereas a committee of citizens of the United States, of which Lawrence Gardner, of the District of Columbia, has been elected chairman, have been appointed to make suitable and appropriate arrangements to duly commemorate the important event and for the maintenance of order and decorum in the proceedings and for guarding the Capitol and its grounds from injury: Therefore

Be it resolved by the Senate and House of Representatives, etc., That the use of the Capitol grounds for the ceremonies attending the one hundredth anniversary of the laying of the corner stone of the Capitol for and during the 18th of September, 1893, including processions, literary and musical exercises, and the suitable decoration of the grounds, the Capitol building and its approaches shall be permitted, under such regulations as may be prescribed by the President of the Senate and Speaker of the House of Representatives, to insure safety of the building and the grounds from injury.

That a joint committee of fourteen, to consist of seven Senators, to be appointed by the President of the Senate, and seven Representatives, to be appointed by the Speaker of the House of Representatives, be and is hereby constituted to take order in the matter of arranging for the ceremonies at the Capitol to act with a like committee in number to be selected by the said citizen's committee.

Mr. BYNUM. Mr. Speaker, I simply desire to say to the House that this resolution entails no expense on the part of the Government. The funds have been raised by private citizens, and they simply desire the permission and coöperation of the Government.

The SPEAKER. Is there objection to the present consideration of the resolution? [After a pause.] The Chair hears none.

The joint resolution was ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time, and passed.

SILVER.

Mr. RAYNER. Mr. Speaker, while I have been given forty minutes upon this question I shall not consume over a half of that time. I have but a few remarks that I desire to address to this House, as so much has been said upon this subject, and we have all made up our minds upon the issue.

In fact, from my own standpoint, I can add very little by way of supplement to the views contained in the President's message. I believe there is a unanimity of sentiment in this House in favor of the repeal of the purchasing clause of the Sherman act. The difference of opinion arises upon the manner in which that repeal should be effected.

Now, with great regard and due respect to the views of those who differ from me, I desire to state my own position, and my own position alone, very frankly upon this subject.

I am in favor of an unqualified repeal of the purchasing clause of the Sherman act, without any conditions or provisos whatever. I am not in favor of purchasing another ounce of silver, or of coining another dollar of it, either at the present ratio or at any other ratio that we can practically determine upon. Now, in saying this, I desire to add that I have no hostility whatever to the use of silver upon a proper basis as circulating medium; but with all the careful consideration I have been able to devote to this subject, I am convinced beyond all doubt or question that its recognition by coinage, except upon international agreement, is a financial undertaking utterly impossible of accomplishment except at the risk of ruin and disaster.

The proposition that I had had occasion to maintain in this House before, and that I again assert with all the emphasis I can, is, that in my humble judgment the present ratio is unjust and arbitrary, rendered so by conditions that did not exist at the time of the demonitization of silver, in 1873; and that it lies not within the power of this Government, strong as it is, to corner the silver product of the mines to keep up the price upon a constantly declining market, to impress upon it a fictitious value, and by legislative decree compel the people to take it at a price in utter disproportion to the figure that it bears in every commercial center of the world.

The universal experience of history, the action of every sound and solvent government, teach us that if we continue in this mad attempt to equalize that which is unequal, to appreciate a metal that is continually depreciating, to fix a standard for a coin that for over twenty years never has had a fixed value, but has fluctuated with every new acquisition from a premium in 1873 to a decline at this hour of almost one-half of its coinage value.

If this desperate system of finance, with nothing to justify it, with almost the whole intelligence of the country against it, with nothing in its track except disaster and ruin, is to prevail, then, in my opinion, until the day of a better judgment shall come, we might as well retreat from the lofty position we have occupied in the confidence of mankind, and, descending, lock hands with every bankrupt government of the earth that believes in the manufacture of wealth at government mints, in cheap money, in broken contracts, and in repudiated debts, and so believing have by reason of their faith been excommunicated as heretics from the roll of civilized communities and banished from the field of honor.

I am aware of the fact that many of my colleagues, for whose opinions I entertain the greatest respect, assert, and it has been freely charged, that the decline in the price of silver has been caused by its demonetization at the American mints and by what is constantly called a "conspiracy" to destroy it as a circulating medium among the governments of Europe. I deny this proposi-

tion, and the statistics will not sustain it. It may be true that the free coinage of silver at the mints would tend for a time to keep up the fictitious standard of the coin, but the value of the bullion would always be controlled by the market price, it would fluctuate.

Like every other commodity, it would be governed by the laws of supply and demand, and eventually, according to every principle of reason, according to every cardinal and accepted axiom of political economy, the coinage price would become the bullion price; the unit of value would be the market value; the money basis would be the basis of the cheaper metal; the dearer metal would leave the avenues of trade; inflation would give way to panic; private obligations would be nullified; public obligations would be discredited, and the honor of the nation would be impaired.

Now, it is claimed that what we require in this country is a system of bimetallism, a bimetallic standard—that is to say, the free use of both gold and silver at the Government mints. But, Mr. Speaker, we will never have this until the commercial nations of the earth agree upon a proper ratio, and just so long as the Sherman act remains upon the statute book so long is an international ratio a financial impossibility. So long as we purchase silver and part with gold, so long will monetary conferences result in failure. When we cease purchasing silver and proclaim to the world that the gold dollar is the standard and the unit of American value, then we can bring our rivals to terms, because, in my opinion, there is not a sufficient amount of gold in existence to supply the demands of commerce and the necessities of the world's circulation. [Applause.]

So long as the Treasury continues to act as a pawnbroker's shop for the benefit of the Colorado and Nevada mines, so long will Great Britain and Germany refuse to appreciate the collateral securities that we hold in our vaults; but when a silver certificate can be redeemed at par and a silver dollar is intrinsically worth the inscription that it bears, then we can proudly and defiantly meet them upon the field of finance without the slightest sacrifice of the stability of our currency or the slightest surrender of our honor as a nation. [Applause.]

Now, let us look for one moment at our experience in attempting to keep up the price of silver. What is the truth? Why, that silver, instead of rising, is lower to-day than it has ever been, and instead of the silver dollar being upon a parity with gold, the disparity between them is greater than it has ever been in the history of the world. Not only this, but the Government has lost nearly $40,000,000 in its efforts to "corner" a declining market and the Treasury to-day would not dare to risk the sale of its bullion silver.

Not this alone, but with all our persistent efforts to force silver into circulation, the people have stubbornly refused to take it, so that to-day the overwhelming proportion of it is hidden in Government vaults. I believe that if the people appreciated the actual condition of the Treasury, and that there was not enough gold in the Treasury to redeem the smallest fraction of our outstanding notes there would not be a single one of them that would be worth 60 cents upon the dollar. You ask me, then, what keeps up the parity between gold and silver? I think I can tell you. One thing and one thing alone, the misplaced confidence of the people.

When once that yields and the fuse is lighted, there will be no necessity for repealing the Sherman act; it will repeal itself immediately. Commercial ratios will take the place of legal ratios. Our equation of values will depart. The faithless union between gold and silver will be dissolved. Its spurious offspring will be excluded from the channels of legitimate circulation, and your silver certificates and Treasury notes, instead of passing by sleight of hand at par, will be exhibited as mementoes and souvenirs of the most grotesque system of finance that ever obtained among any intelligent people since the day when political economy first claimed recognition as a science, and the doctrine of fiat money was relegated to the bankrupt governments of the Orient and the revolutionary republics of Central and South America.

I know it is claimed that what we require here is an expansion of the currency; that our trouble has all been caused by contraction of the currency. Mr. Speaker, the Treasury reports will show that there is as much money outstanding now, within a fraction, as there was before the present stringency began. What, then, is the cause of our trouble? Will you permit me to tell you what I think was its origin. The trouble commenced when European capitalists refused to purchase and threw back upon the American market American securities. Why did they do this? Because they became convinced that with a continuance of the Sherman act upon the statute book, gold would be driven to a premium and bonds which were payable in gold would either not be paid at all or would be paid in silver depreciated to its bullion value. The money has not left the country—not a dollar of it. It is all here. It is simply hoarded and secreted. The Treasury reports will show it. It is lying in the calm, afraid to venture out among the breakers in the coming storm.

Mr. Speaker, this is worse than a panic in the stock market, because when good stocks go down they generally recover. The stock market has time and time again rallied from the most ruinous depression. But the trouble from which we are now suffering affects every merchant in the land, high or low, rich or poor. It affects the debtor and the creditor, the lender and the borrower, and has thrown a pall over the business interests of this country from which there is no escape, devise what schemes and adopt what expedients you may, except through the announcement to the world that the purchase of silver must stop, that the curtain must be drawn upon this juggiery, that this system of finance, built up by political tricks and maneuvers, must be stricken from the statute books, and that by the united wisdom of both parties, aside from politics and for the common weal of the land, a new system shall be formulated and adhered to which shall make every dollar of the national coin a dollar all the world over; which shall insure full faith and credit to every obligation that bears the indorsement of the Treasury; which at home shall have equal stability in every commonwealth, and abroad shall restore to us the forfeited confidence of mankind.

How often do we hear statements made about gold and silver being the money of the Constitution. Now, there is no gentleman here who can not get a copy of the Constitution, or remember, without getting it, what it says. I ask anyone where is there a line in the Constitution of the United States providing that this Government shall coin gold and silver? Point it out, gentlemen, if there is any such language in the Constitution of the United States. That is the argument which is constantly addressed to the ignorance of the country—that gold and silver are the money of the Constitution. But where is there a line in the Constitution which obligates the Government of the United States (I am not speaking about ratios) to coin gold and silver at all? There is not one such word. The interdiction is against the States, prohibiting them from making anything except gold and silver a legal tender. Besides the right to coin money, there is not a letter in the Constitution conferring upon the Government of the United States power even to coin gold and silver.

In this discussion we are constantly led astray from the main issue by the persistent clamor about the demonetization of silver in 1873. Not one word is said about the fact that there was, substantially, no silver to be demonetized in 1873, and that at that time standard silver dollars had gone out of existence, because the bullion in them was worth more than a dollar. If silver had gone to a premium not a single protest would we ever have heard against its demonetization at the American and European mints. When it commenced to decline, however, then the startling discovery was made that it was demonetized, and the clamor has increased in intensity and ferociousness in proportion to the decline in price. The lower the price the greater the noise, as if a vital issue of this character, affecting the welfare of every home in the land, could be settled by the angry abuse of demagogues and fanatics, who have nothing to lose and everything to gain by involving the country in turmoil and disorder.

When I speak of demagogues and fanatics, I do not refer to the honest advocates of a bimetallic standard, whose earnest convictions, so far differing from my own, are enlisted in the cause they represent; nor do I mean the mine owners, whose continued prosperity and exorbitant profits are threatened by the repeal of the measure that is now before us. I refer to a set of politicians who prey upon the ignorance of their victims, who veer around with every breeze, who trim with every party, who have no politics because they have no principles, and whose opinions are like the surging tide that ebbs and flows, leaving no landmarks in its track, except the froth and foam it casts upon the surface. This is the element that predominated in the conventions that have lately assembled for the purpose of discussing this subject. Men who have been identified with every crazy movement that has taken place in their generation, who believe in the doctrine that cheap money is king, that inflation means prosperity, that the creditor has no rights that are entitled to respect, that money is a curse when it is good but a blessing when it is worthless, that the man who is bankrupt must always be protected and the man who is honest ought to be sacrificed—men believing in these doctrines have controlled these conventions. Now, from their decision, from their incoherent medley, from their babble of confusion and of clattering tongues I appeal to the sound judgment fo the American people to adjudicate this mighty question.

I appeal to the people for a currency that is uniform, that is stable, that is of intrinsic value, equal to the inscription that it bears, that can be used as a medium of exchange and a standard

of value, and that will be universally recognized throughout the world as the symbol of the honor and solvency of the Government that it represents. Does silver come up to these requirements? I think not. Let us go back about forty years in the history of silver and see how far it falls short of all of these qualities, and let us look at the production of silver. In 1855 the world's production of silver amounted to about $40,000,000. To-day it amounts to about one hundred and eighty millions, and still we are told that the price ought not to have declined, and that this Government, single-handed, can, in the face of this enormously increased production, maintain the present ratio.

Now, how about the production of gold during the same period? In 1855 the world's production of gold was about 132,000,000; to-day it is about 120,000,000, and still in the face of this discrepancy we are told that ratios never change, and parity should be maintained at present prices. In 1855 silver was worth $1.33 an ounce. In 1873 pure silver in an American dollar was worth about 103; that is to say, a premium of 3 per cent. To-day it is worth about 60 cents on the dollar. In 1855 the ratio of market prices of gold and silver was about 15½ to 1; to-day it is about 28 to 1.

Now, with these undisputed figures before us I calmly and dispassionately ask the business interests of the land who want an honest currency whether they believe that the United States, with silver now virtually demonetized in every government in Europe, can alone and with only a hundred million dollars of gold in the Treasury continue to purchase fifty million dollars' worth of silver a year, substantially pay for it in gold, and, at the same time, maintain a ratio for silver almost double the amount of its market value all over the earth and wherever it is used or purchased?

There is another proposition that I desire briefly to advert to. In our effort to maintain a bimetallic standard we stand unaided and alone. We voluntarily take our place with Mexico, Japan, Chile, Peru, and cut adrift from Great Britain and every solvent government on the continent of Europe. Gold has been the standard of England since 1798. In 1816 it was made the standard by an act of Parliament. In 1871 silver was demonetized in Germany. France came to a gold standard in 1873 by her participation in the Latin Monetary Union, which limited the coinage of silver of all countries that became parties to it. Austria is making every effort to reach a gold standard, and even in India we have observed the policy that Great Britain has lately put into operation, which is equivalent to a demonetization of silver. Now, how is it possible for us, in the face of this protest against the further coinage of silver, to keep on purchasing it with gold?

Where is the gold to come from? Will these countries exchange their gold for our silver dollars (worth 60 cents) upon the coinage price? Will they not, on the contrary, exchange their silver for our gold? How long will it be before the Treasury is bankrupt and the gold reserve, which is a mere fiction now, will entirely vanish? The hour has now come for action upon this question. This is as great an opportunity as we will ever have to maintain our credit and hold our rank upon the field of finance. Do not let us surrender it, and with it the greatest boon that we possess—a sound and stable currency for the generations yet to come.

Now, let us look for a moment at the arguments that have been used upon the other side, as it is fair that we should do so. I have already said all I intend to say about the "crime," as it has been called, of demonetization of silver of 1873. I come now to the other suggestions that are made use of. First, it is claimed that the coinage of silver will make money more abundant. How will it do this? Pray, tell me, because I confess ignorance upon this subject. Who will get this money? When a Colorado mine owner sends $600 worth of silver to the mint and the mint returns him a thousand silver dollars for it, who gets a thousand silver dollars? Do the people get it? Does it increase the wages of the miner who has dug the silver from the earth? I expect not. I expect that the only persons who will profit by this iniquitous transaction will be those who sell the silver and control the product. Now, I ask the Democracy of this House whether they are willing to stimulate an enterprise of this sort that deliberately robs the people to enrich a particular class who monopolize the mines. We who have never favored class legislation, are we prepared to lock hands with a few silver States to the utter ruin of the balance of our country? If more money is needed, can we not increase our currency upon a legitimate basis? Is there no method known to the ingenuity of man besides a device of this sort to enlarge the circulating medium of the country?

But it is said if we do this and coin silver at the present ratio, the price of silver will be raised to the coinage value. What a shallow pretext that is. A schoolboy would be ridiculed if he asserted any such proposition as this in any college of the land. If the fiat of the Government can create values, what right have we to select silver and convert it from a commodity into a coin? Well, it is claimed that this should be done because the Constitution says so. Now, we all have a Constitution before us. Point me to the clause that says so. You can not do it because it is not there. Not a word about a ratio, not a word about the coinage of either gold or silver for the Government of the United States. Yes, but it is said it will raise prices. I am not in favor of raising prices, on general principles. But how will cheap money raise prices? Is not the producer a consumer when he sells? Will he not be compelled to buy?

Now, Mr. Speaker, there is only one thing that it will do, and I admit that it will accomplish that. It will allow the debtor to scale his debts. It will be a weapon in the hands of a dishonest borrower to break his contract and pay his creditor in a coin different from the one that was impliedly contracted for. To such an arrangement as this I am unalterably opposed, and I would stand here and let every species of legislation go by default before I would favor any system that would sow dishonor through the land, that would humiliate us in the eyes of mankind, and that would cover us with shame in every portion of the country where justice is respected and honor prevails.

One word more before I conclude. I can go to the Treasury to-day and contract with the Government of the United States to furnish it a better dollar than the Government is coining—a dollar with far more silver in it and better silver in it; and I can make an enormous profit out of the operation. But what would become of me if I should undertake to provide such a dollar. I should be indicted and convicted and sent to the penitentiary. This shows what sort of a system of finance this Government is conducting, when it sends a man to the penitentiary for giving the people a better dollar than the Government itself is coining.

The gentleman from Missouri [Mr. BLAND], for whose integrity of purpose and fearless honesty I have the greatest respect, knows that when he goes to the Treasury Department and in exchange for one of these silver certificates which he has had issued, receives a dollar for which the Government has not paid over 60 cents, that he is deceived and defrauded; and he denounces the iniquity of this operation as I do, and he wants the law repealed that sanctions the iniquity of this operation. The only difference between us is that he wants the law repealed with free coinage, and I want it repealed so that we can force an honest ratio upon the trading nations of the world. I want it repealed, Mr. Speaker, because it stands without an example, without a parallel in the fiscal policy of any solvent nation. I want it repealed because it protects the owners of the mines at the cost, the expense, and the sacrifice of the people.

I ask you, sir, what earthly right have they to haunt these halls demanding protection for their investment? Is the Government bound to guarantee to them a profit upon their enterprise, or upon their investments? Is it under any obligation to make their enterprise a paying one? I deny it. Is the Government in partnership with the mine owners? I deny it. Does the statute bind the Government of the United States to maintain the ratio of 16 to 1 when it ought to be 28 to 1? I deny it. There is no contract which is binding or valid which is not based on consideration and founded on mutuality.

But if there is a partnership, let it be forthwith dissolved, and in the decree of dissolution let there be a clause embodying the cardinal principle of governmental equity that we will never stamp a lie upon our coin to satisfy the greed or avarice of any section of the country or any set of men, no matter what may be their influence or how potent or powerful they may be. [Applause.]

A few months ago the Democracy, then in convention assembled, without a murmur of dissent from any quarter, in the most passionate terms denounced this measure, at the same time emphatically pledging the party to its speedy repeal. I am in favor of keeping this promise according to the strict letter of the instrument.

A MEMBER. All of them?

Mr. RAYNER. Well, every one of them so far as they can be kept. [Laughter and applause.]

A MEMBER. Why not keep all of them?

Mr. RAYNER. Yes; I know that this particular provision of the Democratic platform has been construed as diversely as the various interests of those who interpret them. But I ask the gentleman, if a man owes a debt of a hundred dollars, and he can not pay to his creditor but $50, is it not better for him to pay the $50 that he is able to pay, than to cheat his creditor out of the whole amount?

If we have made promises and can not keep them all, let us keep at least a part of them, as far as we are able to keep them. There was something said, I know, about the parity of the two metals, but you can not keep the two metals, silver and gold, on a basis of absolute parity alone and without an international con-

ference unaided. It is nonsense; it is quibbling with words to say that you can do so. You can not maintain a double standard in the Government of the United States in the face of the action of every other civilized government upon the face of the earth which has adopted the gold standard. That portion of the platform can not be carried out, but you can take a step in the direction of it, and if you can not make your promise good, do as the President has said, carry it out as far as you can.

I am in favor of keeping faith in the promises made. There is no ambiguity about the terms. Our duty is as plain as the language of man can make it; and from the binding obligation that rests upon us there is no escape or evasion except through an absolute betrayal of the confidence of the people. If, Mr. Speaker, we deceive them now it may be, and doubtless will be, a very long time before we will have another opportunity to deceive them again, because if we attempt it they will deride us with broken pledges that we have flaunted in their faces.

In conclusion, sir, I wish to state that as far as I am concerned at this critical era in the history of our country, I am not in the slightest degree disturbed or intimidated by the glittering catchwords of political conventions. I am guided by a purer and a higher faith. No matter what construction may be placed upon the platform, I believe in forever striking from the tenets of our political creed the superstitious folly that a nation grows rich in proportion to the amount of worthless money it can coin. In place of this idolatry I would plant high up on our altars, so that all mankind could read it, the inscription that we cherish our honor as much as our liberty, and that we would sooner fall and perish than dishonor any of the obligations upon which have been imprinted or emblazoned the emblem of the Republic. [Applause.]

Mr. WILSON of West Virginia. Mr. Speaker, how much time have I left?

The SPEAKER. The gentleman used twenty-five minutes, and has thirty-five remaining.

Mr. WILSON of West Virginia. I yield fifteen minutes to the gentleman from Indiana [Mr. BROWN].

Mr. BROWN. Mr. Speaker, the President's message, lately delivered to both Houses of Congress, is confined almost exclusively to the question of the propriety and necessity for the immediate repeal of the provisions of the act of Congress of July 14, 1890, commonly known as the Sherman law, authorizing the purchase of silver bullion by the Secretary of the Treasury at the rate of 4,500,000 ounces per month.

The message, with great conciseness and accuracy, gives most potent and conclusive reasons why the repeal should be had; and this it does without suggesting any condition whatever on which the repeal should be had, or any substitute for the provisions of the law proposed to be repealed. The law and its effect on the business interests of the people and the prosperity of the whole country are so well understood by all, and the general demand for its repeal is so well and generally known, that discussion or statement by me why the repeal should be had is wholly unnecessary. What I desire to do in the few minutes allowed me for debate is to speak in reference to the manner in which the repeal should be had—whether on conditions of any kind, or by reason of a substitute being put in its place, or whether the repeal should be outright and on no condition whatever.

It is a maxim in legislating, well to be followed, that the passage or defeat of one independent legislative proposition ought not to be made to depend on the passage or defeat of some other independent proposition, but that each should stand or fall according to its own merits. If this rule is to prevail here, the repeal should be without conditions.

But there are some people throughout the country, and possibly some members of this House, who claim that the President should have accompanied his recommendation for repeal with a proposition that it should be had only on condition that a substitute for the free and unlimited coinage of silver should be passed.

I am for the coinage of silver money, and will willingly and gladly vote for the coinage of silver into money. This I will do even if the provisions to be enacted for silver coinage are made a part of the repeal bill. But how the retention of the Sherman law on our statute books, which has made such sad havoc with all our business and labor interests, and so impeded the progress of all our people, can help or give aid and comfort to an effort to make provision for the coinage of silver money is a mystery to my mind past finding out. I regard the Sherman law so obnoxious to the best interests of the country, and so violative of justice and right, that I will, if opportunity is given me, vote for its repeal in any event, conditions or no conditions.

But why should the President be criticised by any one because he did not make his recommendation for the repeal of the obnoxious provisions of this law dependent on some condition, or on the happening of some event? Because of the high office he holds, and the renewed confidence in him the people have expressed, he is the acknowledged leader of the Democratic party, rightfully and justly so. It is his duty, as it is the duty of every man elevated to official station by the Democratic party, to keep the pledges made and redeem the promises given by that party to the people. This the President thus far has done by recommending the repeal of the purchasing provisions of the Sherman law in the manner he has.

On the 21st day of June, 1892, the President was nominated by the Democratic party and afterward elected by the people to the Presidency on a platform which says:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal.

Mr. FITHIAN. Will the gentleman read the other plank relating to that subject?

Mr. BROWN. I trust my friend will not play the schoolmaster with me just now.

Mr. FITHIAN. I shall not interrupt you.

Mr. BROWN. This is a single sentence of the Democratic platform, complete in all its parts and provisions, and it contains but a single proposition or declaration, and that is for the speedy repeal of the Sherman law. It does not make the repeal of the Sherman law, or any of its provisions, dependent on any condition whatever, but declares for its repeal outright, without condition. It is an independent substantive proposition or declaration of the Democratic platform, supporting itself without any aid whatever from any other part of the platform. The President, by his recent message to Congress recommending the repeal of the Sherman law in the manner he has, has redeemed the pledge he made to the people in reference to that law when he accepted the Democratic nomination for the Presidency and indorsed the Democratic platform, and it now remains to be seen whether others will redeem the pledges they made in this regard.

The declaration of the Democratic platform on the subject of coining money is in nowise connected with the declaration for the repeal of the Sherman law. Neither declaration is in any way dependent on the other. Each is a separate and independent proposition.

On the subject of coining money the Democratic national platform of last year says:

> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage.

This declaration of the Democratic platform pledged the Democratic party to the use of both gold and silver as the standard money of the country. "To the use of both gold and silver," is the language of the platform. Both metals were to be used as money. The Democratic party, by its platform, promised the people that both metals would be used as the standard money of the country if it came into power. And this promise, as well as the one made to repeal the Sherman law, should be redeemed. The platform also promised the people to coin both gold and silver into money, without discriminating against either metal or charging mintage. There is the express promise to coin both gold and silver money for the people's use, made by the Democratic party, and it must be redeemed.

But this is not all of the promise. The platform, continuing in the same sentence, says:

> But the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts.

By these last words of the platform on this subject the Democratic party not only promised to coin both gold and silver into money, but it promised that when such metals were so coined into money that their dollar unit of coinage would be of equal intrinsic and exchangeable value, or, if not, their parity would be maintained either through international agreement, or safeguards of legislation, so that at all times every dollar coined, no matter out of which metal it is coined, will have equal power at all times in the markets and in the payment of debts.

This platform is the law of the Democratic party, as well as its promises and pledges made to the people. It must coin gold and silver money for the people's use, and it must so coin it that every dollar will be either of equal intrinsic and exchangeable value, or by reason of resort to one or the other of the methods mentioned in the platform, every dollar will be of equal power at all times in the markets and in the payment of debts.

The platform also declares:

> That all paper currency shall be kept at par with and redeemable in such coin.

The Democratic party, by its platform, has expressly declared that all money shall be of equal value. When this is so, all money is good money. According to the Democratic platform,

neither cheap nor dear money is to be provided—only money of equal value—money as good in one man's hands as it is in another's.

That this kind of money only should be furnished to the country is important to people of moderate means, the small dealer and, above all, the wage-earner. The poorer a man is the more he is in need of good money. If there were different kinds of money in circulation here of different values the cheaper grade of such money would find its way into the hands of the poorer class of our people, while the better grade of such money would go to the rich, because the rich can obtain the best of everything, while the poor can not.

I shall not assume that the President is opposed to the coinage of silver money. I know of no one but himself who has the right to utter his views on this subject. I shall wait until I hear from him in some authoritative way what his opinions are on this subject before I proceed to say what he will or will not do in this regard. If I ventured an opinion at all as to what the President's views on the subject of coining money are and what he will do concerning it, it would be that he is in favor of "the coinage of both gold and silver without discriminating against either metal or charge for mintage," and that when he makes his views and recommendations known on the subject of coining money he will redeem every pledge and promise he made to the people in this regard by accepting the nomination to the Presidency on the Democratic platform, as he has done in another regard by urging Congress to repeal the Sherman law.

The Democratic party lately came into power by reason of the pledges and promises it made to the people, which are contained in its last national platform. The people will hold it to a strict accountability for the fulfillment of these promises and the redemption of these pledges. The President, by his last message to Congress, has set the example of doing so, and let all others of the Democratic party who owe duty to the people follow his example. It is a patriotic duty that every member of the Democratic party owes to the whole country to aid as best he can all honest efforts made for the redemption of the pledges and promises his party made to the people.

Mr. WILSON of West Virginia. I reserve the remainder of my time.

Mr. BLAND. Mr. Speaker, I regret to be called upon to discuss this question without previous preparation, when we have just reached an agreement to take it up. I further regret that any gentleman on our side of the House should see proper to read in this presence one part of our platform and to retreat from that part, above all others, which contributed to the vote that gave him a seat in this House. I regret that any Western man should turn his face toward the East and his back to the West.

We understood, Mr. Speaker, what that platform meant. The whole Democratic party voted against the Sherman bill, and so far as I am personally concerned, I did what little my ability permitted me to do to prevent its passage in this House; but the so-called Sherman law passed, and a better law having been repealed by its passage, it is now the only law on the statute books looking to the use of silver as money in this country.

I know, Mr. Speaker, that the gold-standard elements, the very elements that are in opposition to the free coinage of silver, secured the passage of that act. I knew they would demand its repeal the moment they saw the opportunity. A promise to repeal that act was put in the platform at Chicago, I suppose, to satisfy that element of the Democratic party that wants no law upon the statute book for the coinage of silver. But following that, and in the same paragraph, a part and parcel of it at least, was the promise made at Chicago by the Democratic party for the use of both gold and silver as money in this country, with equal privileges at the mints of our Government. And speaking for myself and for the people whom I have the honor to represent, they understood at least that the free coinage of silver, in accordance with our platform, necessarily repealed the Sherman law; and it would. [Applause.]

The two laws can not exist together. They are inconsistent, and that part of the platform that pledged us to the free coinage of silver necessarily meant the repeal of the Sherman law by a free-coinage bill.

I want, Mr. Speaker, to call attention to this phase of the situation. We have here different propositions that will be voted upon, submitted in pursuance of the Chicago platform, if you please to call it so. Gentlemen may choose their ratio. They have an opportunity at least to express their own opinions by their votes in this House and by their speeches, and to state what they mean by the free coinage of silver and the Chicago platform.

It is not my privilege nor my purpose to call in question the sincerity of any member upon this floor or to undertake to criticise his attitude; but I do want to call attention to the fact that we are proposing, as I consider it, to try in good faith to conform ourselves to the platform on which we were elected in legislating upon this question.

Why, it is said we have met here under peculiar circumstances, in the midst of a financial crisis. We are asked by the opposite side to legislate in haste. We are asked to forego a part of our duties. We are asked to legislate by piecemeal, and to take our chances in the future.

I want to say, Mr. Speaker, that the great voting masses of the people of this country may get into a panic themselves when election day comes around. The people will not regard our proceedings in the light that gentlemen wish them to view those proceedings. You may proceed in a panic, you may believe that some legislative act is necessary here to stop a panic, and you may vote for it without due consideration; but every vote cast and every word uttered will be reviewed by our constituencies, not in a panic, but in cool deliberation, and you will be held accountable for what you do, whether you deliberate or not.

It is said that history repeats itself, and it seems that the Democratic party is especially the victim of repeating history in some way. When the people intrusted our party in 1884 with the administration of the Government, when the Democratic House of Representatives was chosen, I remember full well, and I see around me gentlemen who remember it as I do, for they were here at that time, that before the inauguration of the President of the United States whom we had elected, the emissaries of Wall street swarmed the lobbies of the House and this Capitol, just as they did last winter, demanding what? Demanding the repeal of the so-called Bland act.

Precisely the same proceedings that we had here last winter. We were told that it was the wish of the Executive-elect that that act be repealed, as we were told last winter. We were told that it was his opinion and the opinion of his advisers that this country was coming then to the single silver standard if we did not repeal that law. We were threatened with a panic, with gold coming to a premium. That House was forced to a vote upon that subject before we adjourned at that time, as we were practically last winter; but it voted the proposition down by a tremendous majority. During the following summer the New York papers, as they have been this summer, were filled with predictions of gold premiums and panics.

The New York Herald, one of their leading papers, had every day in its columns "We are still coining the 70 and 75 cent dollar" as a standing advertisement of a panic.

Some time in September or October, before the meeting of Congress, these generous bankers in New York, who say that they control the finances of this country, and what they demand must be acceded, made arrangement with the then Secretary of the Treasury by which they were to withdraw $10,000,000 of subsidiary silver coin and to place in the Treasury of the United States $10,000,000 of gold, in order to secure and maintain gold payments, advertising to all the country that the bankers of New York had come to relief of the Federal Treasury with $10,000,000 of gold to maintain the public credit.

It was done, Mr. Speaker, to terrorize the people of this country and, if possible, to bring about a panic such as you have today, and they know it. And we met in something of a financial panic; not so severe as it is now, however. The whole country was stirred on the silver question. We met in Congress and the question was debated. The result of it all was the refusal to repeal the silver law by over a two-thirds vote of that House; and the panic vanished. That was the end of it. When they ascertained that the free people of this country, through their representatives, could not be driven as a herd of buffaloes on the Western plains into a panic, to trample themselves and those depending upon them, they ceased.

The howl against silver and the panic stopped. The country continued in its usual prosperity, whatever that may be. We kept on coining these 70-cent dollars, and no disturbance was made of it, practically, for four years. The Democratic party in the House maintained it against all assaults. But when, unfortunately, our friends on the other side got the power they enacted another law, repealing the law of 1878.

That law, Mr. Speaker—the Sherman law—I denounced in an article in the North American Review, about two months after it was enacted, as a "Janus-faced" statute. A law that provided for the purchase of 4,500,000 ounces of silver bullion per month, on which Treasury notes should be issued at the market rate of the purchases; that these notes should not be kept in circulation in excess of the cost price of the bullion; that the bullion was to be coined for the redemption of the notes, and that it further provided that in the discretion of the Secretary of the Treasury the notes should be redeemed in gold, in order to keep a parity between the two metals.

The face of the gold part of it was turned to the East—the gold standard; the other part, to redeem in silver, looked to the

West; and in the statute was included with the purchase of bullion and coining it into money and the redemption of the notes in the resulting coin it would in some respects, at least, be in harmony with the idea of ultimate bimetallism. But I predicted in that article, with the Administration then in power, the purchase of silver would probably go on and the law be executed until after the next Presidential election, and if an Administration hostile to silver was elected, gentlemen who gave it their support would be very sick of their bargain.

Now, Mr. Speaker, I have no defense to make of that law, further than this: We are told by the Herschel committee that investigated the subject of suspending the coinage in India that the repeal of this act, the so-called Sherman act, would cause a heavy decline in the price of that metal. I will send to the Clerk's desk and have read the portion of that report I have marked.

The Clerk read as follows:

Moreover, a strong agitation exists in the United States with respect to the law now in force providing for the purchase of silver. Fears have been and are entertained that there may come to be a premium on gold, and strong pressure has been brought to bear upon the Government of that country with a view to bring about an alteration of that law.

In December last a bill was introduced in the Senate to repeal the Sherman act, and another to suspend the purchase, under it. Whether any such measure will pass into law it is impossible to foretell, but it must be regarded as possible; and although in the light of past experience predictions on such a subject must be made with caution, it is certainly probable that the repeal of the Sherman act would be followed with a heavy fall in the price of silver.

Mr. BLAND. Mr. Speaker, there is another portion of that report that I will not have read at present, but it is to the same effect. It predicts a fall in the price of silver when we repeal the Sherman act of probably 6 pence per ounce, and it is said, sir, that it was the apprehension that the Government of the United States would suspend the coinage of silver, would repeal this law that induced the British Parliament to recommend to the Government of India the suspension of the coinage of silver at the mints of India. We understand that India, while it is said to have a government of its own, is simply governed by a council of Englishmen appointed for that purpose. I said the British Parliament, Mr. Speaker, but I made a mistake. The British Parliament had nothing to do with this measure, and they are even now beginning to criticise it. It was the British Council for India.

Now, sir, we are asked here deliberately to repeal this law, and I want to call the attention of my friends on this side of the House, who proclaim themselves to be friends of free coinage at a reasonable ratio—I want to call their attention to this point and to ask them this question: Why do you gentlemen insist that you will repeal this law and send silver down probably 15 cents an ounce before you fix the ratio? Is that an act friendly to silver? Can any gentleman here face his free-coinage constituency and defend his vote subtracting from the value of silver 15 cents an ounce before he votes to fix the ratio? I dare him to undertake it. He can not do it.

It may be convenient to follow the recommendations of the President, but the President does not elect the members of this House. We do not hold our commissions from the Executive, and I am afraid that if some of us undertake to act here upon that line, when our present commissions expire we shall have all the leisure that we want to study the silver question in peace and quietness at home. [Laughter.] For myself I feel it to be a conscientious duty to carry out my convictions on this subject, and I owe it to my constituents to represent what I believe to be their interests. Why are we rushed in here and asked to repeal the only law that sustains, for the moment, at least, the value of silver, before we fix the ratio?

There is no consistency in it; none whatever. The claim is not sincere that the President expects hereafter to recommend bimetallism, for he does not do it in his message, and that claim misrepresents his position. He recommends the reverse. The concluding paragraph of the message means, if it means anything, that after you shall have totally demonetized silver by repealing this Sherman act, you will be required to go further in the same direction; and I make a prediction here and now, and, my friends, I want you to watch the proceedings of Congress in these coming weeks of this extra session, or of the next regular session, to see whether I am right or not.

My prediction is that in order to carry out the recommendations of that message we shall be called upon to sell bonds to procure gold. For what? To redeem all our pecuniary obligations, according to the very language of that message in that money which is recognized by the principal nations of the world. Why did not the President say "gold?" [Laughter.] We know what his language means. [Laughter.] You are asked to load up the Federal Treasury with gold, to redeem every pecuniary obligation of the Government with gold, although the standard silver dollar is the identical dollar on which bond obligations were based when they were issued, because they called for coin of the standard value at the time of their issue, and that was the standard.

But now, I repeat, we shall have to redeem all this bullion, all these Sherman notes, in gold; we shall have to sell bonds to get gold to redeem all our greenbacks, all our silver certificates, and we will be compelled to carry our silver dollars as so much dead weight of bullion in the Treasury, so that we might as well dump them into the Potomac. That is what all this means. In other words, every piece of paper money issued in this country to-day, every silver certificate, every greenback, every bond, every Sherman note, is to be redeemed in gold, and we must procure the gold for their redemption.

What, then, are you to do with your silver bullion and with all your silver dollars, together about $500,000,000? They are to be demonetized as a base metal, and you know it. I am talking to intelligent gentlemen who have read that message, and there is not an intelligent gentleman here who has read it who can misunderstand it. Why should you go on, then, to try to deceive yourselves and your constituents on this subject? There is no silver in that message, and gentlemen on the other side will simply do themselves and the subject justice if, hereafter, in the course of their debate, they will leave silver out of it, because they are proposing a measure in which there is no consideration whatever for silver.

Mr. Speaker, it may be necessary, and probably is, that I go somewhat into the discussion of the silver question on its merits. I have alluded to these preliminary matters which have been thrown in, and have tried to state that no legislation which we can enact here is going to relieve the panic. This panic has been brought about for the express purpose of repealing this law; there is no question about that. We were threatened last winter with a gold premium. I stated then on this floor, and I state now, that there is no gold premium.

On the contrary, I believe the people are now paying a premium for silver and silver certificates. We were urged that we must issue more bonds, that if we did not we were to have a panic. All the newspapers of the East especially were advertising a panic if we did not issue bonds. We did not issue them. The Secretary of the Treasury was threatened with a panic if he did not comply with the demand, and he refused. Those who were interested in getting up this panic began to refuse loans, to cramp, to draw in currency. Many of the banks which had been engaged in booming real estate, or in other questionable transactions, and were consequently weak, began to fail.

Stocks called industrial stocks, that had been watered in Wall street, cordage trusts, lead trusts, whisky trusts, railroad stocks that had been watered, began to tumble down to something like reasonable rates, and you had a panic. Banks which were weak began to fail, and the people began a run on banks which were strong. The whole country became alarmed. People began to take their money out of the banks and put it into safe-deposit vaults or into their safes at home. It is said they ought to let their money remain in the banks. Well, probably they ought to do so; but what is the difference? The banks are afraid to let the money go out if they have it. Now, the panic has come; and those who conspired to bring it about have got more than they bargained for. The idea is that we can relieve this panic by the repeal of the Sherman law.

Why, Mr. Speaker, I say right here (and history will bear me out in the statement) that while there was some alarm in the country before, yet the moment the British Government demonetized silver in India, then the panic began in earnest—not before; that precipitated this panic in its present shape. We all understand that. In this way desolation was brought into many of the States of this Union, and men who had before been prosperous and happy were by the thousands sent as tramps throughout the land.

All parts of the country have felt the effects. It is this fight upon silver that has precipitated this panic; and the repeal of the Sherman law will only intensify it, not relieve it. The panic will be relieved when everything gets so low that people see they can make money by buying; when they begin to buy prices will go up; and when everybody is buying money will come from its hoarding places and you will have some relief. In no other way will relief come.

Gold is coming to us to-day. Notwithstanding we are told the people across the water are afraid to invest here for fear that we will not pay in gold, yet these people are sustaining prices to-day and sending here all the money that they can spare. There was a panic in gold-using Australia that has bankrupted that whole people and sent terror to the banks all over England. We know that gold can not be obtained there except by paying for it; yet it is coming here.

Talk about a premium on gold; here is the Treasury of the United States that is open to the plunder of every speculator in the civilized world. He can take his Sherman note or his green-

back or any other Government currency there and get gold without cost. Did you ever notice the names of these gentlemen in New York who are shipping gold abroad, or bringing it back? Every one of those names that I have seen has a foreign termination; every one of those gentlemen, so far as I am advised, is an agent or branch bank of some bank across the water.

If you go to the Bank of England to get gold for export you must pay a premium on it; if you go to the Bank of France to get gold for export you must pay a premium on it. The case is the same with every other banking house in Europe; no gold can be obtained there without paying a premium. But here is the Treasury of the United States professing to be so helpless that it can not prevent every gold speculator from robbing the Government of its gold. Our Treasury will not pay out the silver which it might pay.

The Bank of France will pay out silver, or will charge a premium on gold if it is wanted for anything but domestic use. But the Treasury of the United States, instead of paying out gold and silver in equal quantities and thus preserving its gold (if it is necessary to preserve it, though I see no necessity of preserving it, for all our money is at a premium to-day), lets everybody go there and get as much gold as he pleases. Why not pay out the silver when we have more of it than we have of gold, or pay out gold when we have more of it than of silver, and thus protect ourselves?

It is because the Administration is hostile to silver; and thus it is surrendering this country to the Shylocks of the Old World who have made war upon it. The aristocracy of western Europe has absolutely tabooed silver in those countries; driven it away from there. Here it finds its only resting place. The last fight for the white metal is to be made here in this country and in this House, my friends. Will you stand by it now, or will you let the Shylocks come and have their way? It is for you to determine.

I think, Mr. Speaker, that we can trust the people of this country on a question of as vital importance as this. The question is now before us. This is its last resort. Will you virtually demonetize the money of nearly 70,000,000 of people, with a vast empire of 3,000,000 of square miles, a people thirsting for money to open up new railroads, to establish new factories, to operate new places of business, to inaugurate new industries; 70,000,000 of people demanding money, twice what we have to day, a new people, a new country, a free people, or they ought to be free whether they are or not?

Are you to give up the fight and let this vast body of our wealth go to ruin? I do not believe it. We know well enough that if we repeal this law and give nothing for it, the people of this country will regard it as a total demonetization of silver, which it will be so far as this Congress is concerned, without any question.

Now, my friends—and I do not care whether you are Democrats or Republicans, or who you are, but I appeal to you, especially as Democrats—when in 1890 in nearly every State of this Union the Democratic party in its platforms demanded free and unlimited coinage of silver, when you embodied it in your great Chicago national platform, when the Democratic party has for years stood before the House and the country as the bulwark in defense of the white metal, in the face of all of these things are you now to desert the cause and surrender the fight? Can you afford to do it? Will you go to your people and tell them that you are not able to carry out the pledges of your platform, the promises upon which you were sent here, or any part of it, except that which resulted in the total demonetization of silver and the sacrifice of their interests?

What does free coinage of silver mean? It means that the holders of silver bullion, at some ratio to be fixed in the bill, may go to the mints of the Government and have it struck into the legal-tender money of the country and deposit the dollars so coined, if the holder so desires, and have a certificate issued to him in place of it. What is the effect of unlimited coinage of silver in this country, and I invite your attention to this particularly, because it is a question of vital importance? It means that the silver coins of the United States at whatever ratio is fixed, and I want the present ratio that we have now, 16 to 1, maintained precisely as it is, it means that the silver of the world can come here in exchange for what we have to sell.

Yes, it means that the silver of the whole world can come here. But they say that we will be flooded with the world's silver, that it will be dumped down upon us. Now, let us see about that for a moment. It means that anyone with 16 ounces of silver can come here from any part of the world, or with 1 ounce of gold, and he can buy your grain, he can buy your house and lot, he can buy your manufactured product, and buy the property and commodities of all sorts that you have to sell with either the one or the other; that is to say, he can buy just as much with his 16 ounces of silver as with his 1 ounce of gold.

With the billions upon billions of property existing in this country to-day, and being produced in this country every year, we simply offer to exchange that which we have in abundance on a basis of 1 pound of gold as the equivalent of 16 pounds of silver. We invite, then, the world to come with its silver and make the exchange. No nation now, it is true, offers in exchange for silver the gold at any fixed ratio; consequently all the silver that is coined is used in the countries where it is coined. And why? Because no great power offers to exchange commodities for one metal or the other at any fixed ratio. That is the only trouble with silver to-day.

Now, it must be remembered that France gave an example to the world in this regard, having kept its silver on a parity with gold for a period of seventy years on a ratio of 15½ to 1. It said to the nations of the world, "Come with your gold and your silver, 15½ ounces of silver or 1 of gold, and you can buy all of our salable property in France and you can pay us in silver or in gold, just as you choose, on that basis." And according to the report of the British royal commission of 1888 on that subject, France was enabled to maintain the parity of the two metals at that ratio, for the reason that she had property enough to effect exchanges on that basis. We are in the same condition.

What is it, then, that you are asked to do? It is that we, the Government of the United States, we as a people say to all the world, especially the silver-using people, all of the Asiatic nations and the Great Indies, come here with your white metal if you choose to come, and trade with us on the basis of 16 to 1 and buy your commodities from us at that ratio. When you do that, will not the silver-using people of the world come to our shores to make their purchases rather than go to the European powers, where they demand a ratio of from 22 to 25? There can be no doubt of the answer to that question.

You at once undermine and sap the prosperity of western Europe. You will divert from them all the trade of every silver-using country in the world, because you offer to sell those people property and commodities here that are better, and on better terms, than they can get anywhere else in the world. You say their silver will come here. Suppose it does. It will go back again, because here is the flood gate that is opened for gold and silver to come and to go with the tides of trade, of free exchange, in this the greatest country the world ever saw. It will come and it will go, and so it will continue; because we have opened up the mint, we have opened a sluice for the dam that now blockades the silver tide.

Do you suppose England could stand that for a moment? Certainly not. What has made the manufacturers in Manchester, England, the strongest bimetallists in the world to-day? Simply the fact that they must sell their commodities in India for the India rupee. They are thus interested in the value of that silver rupee. They want to maintain it; and if all the manufacturing products of western Europe that are sent here and sold to us are sold for silver, as they must be, or gold at our ratio, do you not see how quickly you will convert them all to bimetallism? Thus you will segregate all the industrial inhabitants of western Europe from those who live on fixed incomes, the aristocracy, the bondholders, and the coupon clippers. That is all there is about it, and we want to segregate them.

You see, then, that when we do this in this country western Europe must come to our standard or abandon commerce with all silver-using countries, and with us. Mark that. We are the best market in the world for manufactured European products. They can not live without this market, and they can not keep this market unless they recognize and take our silver at the same value that we take it; and they know it.

I know that the gold owners in that country and this, the bondholders and bankers, those who are living on fixed incomes, and who are living on interest, and whose business it is to loan money and to have that money increase in value from year to year—they fight this proposition as a matter of course; but I do not think they ought to do it, for ultimately I think they would be benefited, as would the industrial people of the world. They ought not to fight it. They know what I state is truth, that if this country gives free coinage of gold and silver at a fair ratio it settles the question for the world and drives the world to bimetallism instead of gold monometallism. They know that, and hence their eagerness and determination to prevent it.

It is a fight between the standards; and this great country must settle it, and you, my friends, must think about settling it here. It is a serious question. It is not only a serious question for the American people, but we are appealed to by the oppressed in the Old World, those who have not the voice that our people in their sovereignty have.

The oppressed of the Old World are appealing to us to settle for the world this great question, and to settle it not for men who are seeking advantages in the stock markets, not for men

who are seeking advantages in bondholding, in interest drawing, in money lending, in seeking to have money increase in value every day and every year, but for the great toiling and producing masses of the other countries as well as our own, for whom it is our proud province here to think about and to legislate. They are in a panic, my friends. I want to remind you of that, and they will remind you of it when you go home if you are not reminded of it now.

The people are watching this thing. They understand that the battle to be fought here is the battle of the standards the world over, and the man who fails now they will brand as a traitor to the cause which is intrusted to his hands.

Now, Mr. Speaker, in this line of my remaaks I wish to have read from the Clerk's desk an extract from the Parliamentary Report to which I have referred.

The Clerk read as follows:

191. The explanation commonly offered of these constant variations in the silver market is that the rise or depression of the price of silver depends upon the briskness or slackness of the demand for the purpose of remittance to silver-using countries, and that the price is largely affected by the amount of the bills sold from time to time by the secretary of state for India in council.

But these causes were, as far as can be seen, operating prior to 1873, as well as subsequent to that date, and yet the silver market did not display the sensitiveness to these influences from day to day and month to month which it now does.

192. These considerations seem to suggest the existence of some steadying influence in former periods, which has now been removed, and which has left the silver market subject to the free influence of causes, the full effect of which was previously kept in check.

The question therefore forces itself upon us: Is there any other circumstance calculated to affect the relation of silver to gold which distinguishes the later period from the earlier?

Now, undoubtedly, the date which forms the dividing line between an epoch of approximate fixity in the relative value of gold and silver and one of marked instability, is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation; and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative value of the two metals.

So long as that system was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio by law between them, namely, 15½ to 1.

When once the conclusion is arrived at that this was the case, the circumstances on which we have dwelt as characterizing the period since 1873 appear amply sufficient to account for the fall in the price of silver, tending as they all do in that direction; and the fact that on any particular day the supply of silver and of council bills may be large while the need of remittance is small, and *vice versa*, would explain the constant fluctuations in the price of silver which have manifested themselves in recent years.

193. Nor does it appear to us *a priori* unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1 fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.

The view that it could only affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of those countries, is, we think, fallacious.

The fact that the owner of silver could, in the last resort, take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal ratio and would tend to keep the market steady at about that point.

194. It has been urged that during the earlier of the two periods which we have been contrasting, the conditions which existed from time to time were favorable to the maintenance of the legal ratio; that the great influx of gold towards the middle of this century found France with a large stock of silver, and that this silver, owing to exceptional circumstances, had a ready outlet to India.

But we do not think this affords an adequate solution of the problem without taking into account the existence of the bimetallic system. It may be true that the circumstances referred to were conditions which helped to make the bimetallic system operative. But as we have observed before, circumstances and conditions of a like nature have been more or less operative both before and since 1873, and yet the effect on the relative value of the two metals has been very different.

195. It is said that the altered circumstances since 1873 would have rendered it impossible to maintain silver at the former ratio, even if the Latin Union had not abandoned the free mintage of silver, and that sooner or later the bimetallic system must have broken down and its steadying influence have ceased.

To estimate the force of causes without adequate experience of their effects in the past is a matter of extreme difficulty. But even if it were true that the Latin Union would not have been able down to the present time to preserve silver from falling below the legal ratio, this does not prove that the views which we have propounded as to the causes of the former stability of the gold price of silver and of its present unstable condition, are incorrect.

Whether silver would ultimately have fallen to its present price, and whether the Latin Union could now, by reversing its action and reopening its mints, restore silver to its former gold value, and reëstablish the former condition of stability, are questions very material to another part of the case, but the determination of which is not essential to the particular point with which we are now dealing.

Mr. CULBERSON. Mr. Speaker, as the time of the gentleman from Missouri is about to expire, I ask unanimous consent that he may be allowed to use such time as is necessary in order to chemplete his argument.

The SPEAKER *pro tempore* (Mr. OUTHWAITE in the chair). The gentleman from Texas asks unanimous consent that the gentleman from Missouri have such time as he desires in which to complete his argument. Is there objection? (After a pause.) The Chair hears none, and it is so ordered.

Mr. BLAND. Mr. Speaker, I thank the gentleman from Texas and the House for the courtesy.

If the gentlemen have given attention to the statement just read, I think they will attach all the importance to it that it deserves, especially as I say that it has been promulgated by twelve experts appointed by the British Parliament, one-half of whom were gold monometallists and among the ablest financiers of Europe, and I desire to read a brief extract when the document is returned to me.

But I want to call attention to the principle they state. They admit that France was enabled to maintain silver on a parity with gold at the ratio of 15½ to 1. They admit it, state it, and gave the reason why. It is admitted by Herschel, the gentleman who was chairman of this committee that secured the demonetization of silver in India, and it is also admitted by Goschen, both of whom are monometallists.

Now, what was the principle laid down? They say in so many words that France had fixed the ratio at 15½ to 1 and that France had told the nations of the world "you could come here with your gold and your silver and you can buy all that France has, and you can buy as much for 15½ ounces of silver as you can with 1 ounce of gold." France was able to do that because it was an important country. The report cites the Latin Union, but we all know that France is substantially the Latin Union.

It was because it was a country of sufficient power to make those exchanges by which it could keep the parity between gold and silver the world over; because the world could come there and exchange it for property at that rate; and why? Why, they say no matter where anyone had silver bullion, wherever it be in the world, the owner would not take any less at that spot for it than he could get in France, less the cost of transportation, and he could hold it for that value.

Now, we frequently hear it said that if we adopt a ratio of 16 to 1 and coin silver it will have no effect except in this country; but if it is coined at that ratio it will affect silver everywhere, because the world would know that they could take it at that rate and get that amount for it in the United States. Now, I will read from the report of that commission:

The fact that the owner of silver could in the last resort take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ silver to 1 of gold would, in our opinion, be likely to affect the price of silver in the market generally whoever the purchaser and for whatever country it was destined. It would enable the seller to stand up for a price approximating to the legal ratio and tend to keep the market steadily about that point.

Why, the gold monometallists here tell us that it will run the gold out of the country. Those monometallists whom I have read from do not say that, and it is not true. They say you will exchange commodities for it, that you will buy commodities for silver and gold at a fixed ratio; and because the holders of the silver anywhere in the world can come here with it and exchange it for commodities, silver will be used as much as gold at a fixed ratio; and it will not matter whether they pay in silver or gold. Then you will see the parity between gold and silver restored and maintained at this rate. France did it, in a territory not so large as the State represented on the floor by my distinguished friend who did me the honor to have my time extended, having 38,000,000 of people.

Now, I say, Mr. Speaker, the contention that we lose our gold, and that we have got to exchange gold for silver, does not hold good. It is put on the broad proposition of a nation which produces enough wealth; and where is the nation under the shining sun that compares with this growing country of ours in population and increasing development? I believe that I may yet live to see this country with nearly 100,000,000 inhabitants, increasing, as it does, at the rate of over a million and a half annually.

Many now born, by the time they are voters, will compose part of a nation containing perhaps 125,000,000 of people, with unsurpassed energies, with a genius nowhere equaled, and with a vast territory upon which those energies and that genius can operate. But a short time ago when you looked across the Alleghany Mountains you beheld the western wilderness roamed only by the savage and the wild beast. To-day it is teeming with its millions of civilized people, the great Mississippi Valley, and when you cross the Mississippi you just begin to enter the great domain of this country of ours, for more than two-thirds of it lies beyond the Father of Waters.

And, Mr. Speaker, it is that two-thirds of our territory, rich as it is in gold and silver, embedded together in the same deposits, in the same mountains, so that you can not extract the one without extracting the other—it is that portion of our territory that would give us the money that we need, the money of the world, good money, hard money, Democratic money [laughter

and applause]—a country that the civilized world must look to for its future monetary supply if it is to continue on what is called the hard-money basis. And yet we are to-day asked to do what? To lay the blighting hand of confiscation upon the millions of people inhabiting that country, to turn them out as tramps upon the land, merely to satisfy the greed of English gold.

Oh, my God, shall we do such a thing as that? [Applause.] Will you crush the people of your own land and send them abroad as tramps, will you kill and destroy your own industries, and especially the production of your precious metals that ought to be sent abroad everywhere—will you do this simply to satisfy the greed of Wall street, the mere agent of Lombard street in oppressing the people of Europe and of this country? It can not be done, it shall not be done! I speak for the great masses of the Mississippi Valley, and those west of it, when I say you shall not do it! [Applause.]

Any political party that undertakes to do it will, in God's name, be trampled, as it ought to be trampled, into the dust of condemnation now and in the future. [Applause.] Speaking as a Democrat, all my life battling for what I conceived to be Democracy and what I conceived to be right, I am yet an American above Democracy. [Applause.] I do not intend, we do not intend, that any party shall survive, if we can help it, that will lay the confiscating hand upon Americans in the interest of England or of Europe. Now, mark it. This may be strong language, but heed it. The people mean it, and, my friends of Eastern Democracy, we bid farewell when you do that thing. [Applause.]

Now, you can take your choice of sustaining America against England, American interests, and American laborers and producers, or you can go out of power. We have come to the parting of the ways. I do not pretend to speak for anybody but myself and my constituents, but I believe that I do speak for the great masses of the great Mississippi Valley when I say that we will not submit to the domination of any political party, however much we may love it, that lays the sacrificing hand upon silver and will demonetize it in this country.

For myself I will not support such a policy here or elsewhere, but will denounce it, and as a Democrat I will denounce it as un-Democratic and un-American, and will ask the people of this country to condemn it as they ought to have condemned the so-called Democrats engaged in it as the agents, the tools—I withdraw that word, but I will say as the representatives, unintentionally, of the money power and the moneyed interests, and not of the masses of the American people. [Applause.]

Gentlemen, you can not hold the Democratic party together on that line. You can not pledge yourselves to bimetallism in your platform and ignore it in your legislation. We pledged ourselves in the first place to tariff reform, and the people had a right to expect us to deal with that first. In my part of the country we were told to let silver alone; that we already had a law on that subject. They said to us: "Do not disturb that question, but take up the tariff; we are united on the tariff [laughter on the Republican side]; let us take up the tariff and reform and reduce it; the tariff is doing us great injury, let us attend to that first." We thought that declaration was sincere and we thought the first thing to be taken up was the repeal of the McKinley bill.

Well, now, my people of the Mississippi Valley believed that you would let silver alone, that you would not try to demonetize it, that you would let it stand where it is; they believed the tariff would be considered first. But when you come to say that you are going to demonetize silver, let me tell you that this is a bigger question than the tariff or anything else. This battle of the standards is a world-wide question. The question is whether we are to be put upon a gold standard; and that question is one which in importance is away beyond the year by year regulation of your revenue.

We voted the ticket in good faith; we expected that the platform would be carried out as was promised—that we would have tariff revision, and that when we came to the money question it would be regulated according to the Chicago platform, that we should have the free coinage of silver, which in itself would destroy this makeshift. But lo and behold, we find that we were tricked, that we were deceived. [Laughter.] And I use that language advisedly. I believe it was not intended by our Eastern Democratic friends that tariff reform should be considered first, but their main, if not their sole, object was to put their hands upon silver and demonetize it and let tariff reform take care of itself afterward. [Laughter.] And here we are, just in that situation. Reduce the tariff 25 per cent, yet make money in gold 25 per cent more valuable, the tariff remains as great a burden as ever. It takes the same quantity of wheat, corn, pork, and cotton to pay it as before.

A MEMBER. That is where we are at.

Mr. BLAND. Yes; we know where we are at now. Now, I tell you I am not going to submit to it. You may pass your bill and do these things; but if you do we are going to cut loose from you. You may go ahead, but you will never trick us again. I am speaking for my people. Do not charge me with being a radical or a fanatic or with indulging in threats. I speak the sentiment of the masses of the people I represent, and they are resolved upon the policy I have stated. I would not say so if it were not true.

Now, Mr. Speaker, as I have already stated, the silver question, as now presented, is not the question we have had presented to us in the past. It is true that in what has been called the Bland coinage act we passed in this House a free coinage bill (I mean not in this particular body, but in the House of Representatives) by a large majority—by a two-thirds vote. But when it went to the Senate there was engrafted upon it a provision requiring the purchase of at least $2,000,000 worth of silver each month and not exceeding $4,000,000 worth and its coinage into standard silver dollars. That was a bullion purchase bill.

But mark the distinction: It required every dollar of that bullion to be coined into money as fast as purchased; and it required the issue on that money of certificates redeemable in silver. To that extent the measure was in the line of bimetallism. The only difficulty was the limitation as to the amount. But the present law repealed that law. You do not propose now to put us back to where we were when you repealed that act, which was adopted as a compromise measure providing for the purchase of from two million to four million dollars worth of silver per month.

You propose to wipe out the act of repeal and to leave us where? You propose to remit us to the demonetizing act of 1873, which in all my section of country the Democratic party on every stump has denounced as the monumental fraud of the nineteenth century. Here is a Democratic House proposing to go right back to that act. When you do so you will be guilty of a greater fraud than that act itself. I speak advisedly when I say that if the Democratic party, after all the pledges it has made in regard to silver in its platforms, national and State, should take the country back to its condition under the act of 1873, you will have consummated the monumental fraud of the nineteenth century, because we never expected much from Mr. SHERMAN or his party; they never made many promises, as we have.

If we now violate in the light of day every pledge that we have made, we shall be convicted of insincerity, of betraying the people who sent us here, of bowing our necks meekly to the yoke of Wall street. If Democracy means anything, it is that those who come here from the people to represent them should carry out their pledges in good faith. It does not mean that we are to pass an act which (though some people say it will stop the panic) will put a yoke upon your constituencies for probably centuries to come.

I spoke of the British royal commission as having laid down the principles by which bimetallism was maintained in France; and I contend that this Government can maintain it upon the same principles, and at the ratio of 16 to 1. Yet the House will have the opportunity to vote on different ratios. My objection to changing the ratio is, in the first place, that the ratio of 16 to 1 is that which now exists. It is the ratio of the standard silver dollar, which is still the standard silver dollar that it always was. It is the law of the land and basis of equities between debtor and creditor.

Some gentlemen say that gold is the unit of value and the standard. What was meant by the unit of value was simply that the dollar was the unit of account from which we should reckon both down and up—down into fractions and up into multiples. It was merely the unit of account for Government accounts and private debts and everything computed in dollars and cents. That is what it meant. And that unit was to be coined in silver. That was the original act. Whether the unit of value as it appeared in the act of 1873 was intended to mean anything more than the unit of account, I do not care. If it was, then, according to that construction, the silver dollar was the unit of value until 1873.

It was the only dollar authorized and coined until 1849, when the gold dollar was authorized to be coined. But the silver dollar was the unit. Now, in the act of 1878, the title reads "An act for the coinage of the standard silver dollar and to restore its legal-tender character." The context refers to the act of 1837, and the coining of the dollar authorized there with the same superscription, which is the same standard dollar, the silver dollar, that has been identically the same in all of the history of our country. That act restored that standard as the standard dollar, and displaced the gold dollar.

There is no question about that. We do not coin the gold dollar at all to-day. It is prohibited to be done at the mints, and the only dollar that is coined is the silver dollar; and I repeat, sir, I deny that the gold dollar is the standard of value. When we resumed specie payments and came from the midst of the greenback circulation to coin payments, we emerged with a

standard silver dollar coined at the mints, and had been for nearly a year. In all of our business obligations, in all of our contracts since the resumption of specie payments, we refer to the standard silver dollar. We have been coining them, and our contracts rest on silver as well as on gold. But you want to eliminate them altogether and put everything on a gold basis.

But I repeat, sir, I deny the assumption that the gold dollar is the standard. I assert that the silver dollar is now, as it has always been, the unit of value in this country, and therefore that the unlimited coinage of silver will place bullion silver at par at the mints and in the world's markets equally with gold, according to the Chicago platform. It must necessarily do it, and we will comply with the platform and its pledges by coining our silver at a ratio of 16 to 1. For you must take notice that all of the silver in circulation in the world to-day, coined with reference to any ratio to gold, is about 15½, or below that amount. Four billions of silver money is in circulation at a coinage ratio of about 15½, while ours is 16 to 1. We have departed so far from the coinage ratio of the world as to go above 15½. But why? What reason is there for going above 16 to 1.

I say, sir, and the statistics will demonstrate the fact, that if you go back for the last twenty years and compare the production of gold with that of silver, that the ratio of production will be found to be about 15½, or between that and 16 to 1. Of course within the last four or five years the production of silver has increased, but you must take, in making comparisons of this character, long periods and not a few years. Take then for this purpose the production of silver for the last twenty years or since the price of silver has begun to fall, and the comparative production of the two metals is about 15½, or something below 16 to 1.

There is, then, no reason why we should change the existing ratio, except we admit in order to change the ratio that restoring silver to its proper and legitimate function will not restore its value.

Mr. JOHNSON of North Dakota. Will the gentleman allow me to ask him a question?

Mr. BLAND. Yes.

Mr. JOHNSON of North Dakota. Can the gentleman name any country of the world, where they have free coinage to-day, where the coin is not debased exactly to the bullion value?

Mr. BLAND. I do not understand the gentleman's question.

Mr. JOHNSON of North Dakota. I say can the gentleman name any country with free coinage where the coin and bullion are not exactly of the same value, and that the bullion value of that country is just the coin value?

Mr. BLAND. There is no country I know of to-day where gold and silver are coined at any fixed ratio free. I am not going on the hypothesis that Mexico or some weak country like that can, by any of its enactments, have any material effect upon the question.

I am speaking of a system for this country where it is proposed to coin the two metals at a fixed ratio, or of a country which, in the language of this report of the British commission, is of "sufficient importance to be considered," where it has property and products and commerce enough to make exchanges, and that country was France. I am not taking a little country like Mexico, that has no fixed relation between the metals, or even India. I speak of bimetallism, having a fixed ratio, and where the country is strong enough in its products to say we will give as much in exchange for 16 ounces of silver as for 1 ounce of gold. This can not be made to apply to single-standard countries. I am speaking of bimetallism, or where a nation of sufficient commerce fixes a ratio of exchange for the two metals with free coinage for both.

Mr. JOHNSON of North Dakota. Can you name such a nation now?

Mr. BLAND. I say that this royal commission, whose report I read awhile ago, admitted that France did it for over seventy years.

Mr. JOHNSON of North Dakota. Any country could have done it then, but no country has done it for the last twenty years.

Mr. BLAND. No country has been trying to do it for the last twenty years, and I want this country to try it. [Applause.]

Here is a country which, in the direction of its resources, is larger to-day than France, England, and Germany thrown together. I say that advisedly. I do not mean that it is larger in population, for we have not got the population. I do not mean greater in its visible wealth, for we have not that; but I do mean in our resources to be developed, in our demands for money as a new people. They are old and effete and worn out, and doomed to particular habits.

We are progressing and demanding money every day. Every new factory that is started in this country is a direct demand upon the monetary supply, and a contraction of the currency to that extent. Every railroad that is built is a demand upon your volume of money, and a contraction of the currency to that extent, as compared to everything else. Every farm that is opened is a new demand for money, and a contraction of the volume of currency; and here we are opening up vast territories, and we ought to open up more still. All these things demand money and must draw upon the present supply, and to that extent the currency is contracted, as compared to everything else.

Now, you can not do business on a contracted currency in this country. So that I say we are not to be compared with those people; and when you compare us, in the way of new demands, new developments, in population to be increased, we are greater than all of them combined; and when a gentleman admits that France and England and Germany, or two of them or all of them, could fix the ratio, they admit that this country can do more than all of them together. [Applause.] There is no question about that. You admit all the argument there is in it when you admit that much; and here is a commission composed of the most eminent experts of the Old World, a gold commission which admits that France did this thing, and practically admits that France could still do it if she wanted to.

We have been befogged upon this subject. We have been misled and misrepresented. It is difficult to get a silver argument into the subsidized press of this country, and it seems that nearly all the metropolitan papers are included in that term. They will talk about nothing but banks and bonds and gold, and they control practically the press; but the great argument is to come at last, and will come unless you settle it here. It will not stop, but it will be settled.

But if you say we are not able to fix the ratio at 16 to 1, we have offered other propositions. I have stated that I will not vote against a free-coinage bill because the House may fix a ratio that I do not like. I do believe, and I admit the proposition, that the fixing of the ratio is a fair question for discussion and debate; but I do assert that, as a constitutional question, free coinage is enjoined by the Constitution, notwithstanding the learned argument of the gentleman from Maryland [Mr. RAYNER] to the contrary. [Laughter.] The Constitution inhibits any State in this Union from making anything a legal tender except gold and silver, and it confers upon Congress the sole power to coin money and regulate its value.

Now, does that mean that a State shall make nothing a legal tender, and that Congress will refuse to make anything a legal tender? If the States have conferred a power upon Congress, the exercise of which is necessary to the life of the States, I say it is treason to the States to deny that right as a legal proposition. The States have given up the power to coin money and to make legal tender, and have conferred that power upon Congress. If Congress refuses to exercise this power which is necessary to the very existence of the State, it is, so to speak, disunion. We ought to give back, then, to the States the power to coin money and regulate its value and to make legal tender.

Now, Mr. Speaker, here we are. No State in this Union can coin money or make anything a legal tender except gold and silver. We are denying to them a privilege conferred by the Constitution of this country, which says they may make gold and silver a legal tender. Yet we will not coin it, will not conform to the Constitution and do our duty. Not only that, but "coin money" means an automatic supply. One of the arguments that you can adduce in favor of coin money in place of paper money is that coin money can not be overissued, and that is the most important distinction.

Another argument is that it is not so easily burned up. The metals are not so easily destroyed. Many other qualities pertain to it which it is not necessary to explain; but the great thought underlying all is that the supply of gold and silver is limited by nature, that contracts are based upon the stock on hand, accumulated for ages, as the world has grown up in business; that the values of contracts are fixed by the money of the world thus accumulated, and that the annual supply is so small in amount compared with the vast stock on hand—hardly 1 per cent a year—that you can not impair the equity of contracts by largely inflating the volume of money, nor very seriously disturb property values by lowering the value of the money by a large supply.

But here we want to interfere with that automatic supply. When we have free coinage and the mints open, the production of gold and silver supplies the volume in the manner I have stated; for you make all the stocks of gold and silver on hand and all that comes in the future a part of the possible monetary supply. Nature limits the supply, so that we can not overissue it if we want to. Very good; but some wise people about twenty years ago thought that this continuing supply of gold and silver was interfering with those holding bonds and drawing interest, and living on fixed incomes. They thought the production of silver was going to be largely increased, and would probably lower the value of both gold and silver as money, and hence

they undertook by legislation to prevent the automatic supply of money and to inhibit the coinage of one of the precious metals in order to protect the volume of money from that increase.

Now, we had better be on a paper system than a system like that. If we are to regulate the volume of money by prohibiting the coinage of one of the metals, why not abandon the metals altogether and go to paper at once? We are asked to believe that the contention is true that we do not need much money anyhow, because 90 per cent of the business of the world is done on credit. Why not 100 per cent, and get rid of money altogether? [Laughter and applause.]

The time has come, my friends, when credit goes very slow and a little money very much faster. There is always a day of liquidation, and you must have the money. But, as I said before, if 90 per cent is credit money, why not a 100 per cent? Let us print credit money, but let that money rest upon the credit of the Government and not upon the credit of some bankers in London or Wall street. There is about 90 per cent of the American people who do not know anything about credit. They have to do their business on a cash basis. They must have money.

The concluding part of our bill provides that the dollar coined, whatever it may be, may be deposited and a silver certificate issued on it, as now provided by law; so that if you reach a ratio of 18, 19, or 20 to 1, you still have the same right to a certificate that you have to-day.

Mr. HEARD. I rise to a point of order. There is so much confusion in the House that we can not hear the gentleman speak.

The SPEAKER. The House will be in order.

Mr. BLAND. Now, Mr. Speaker, in closing this argument—and as stated, an argument entirely without preparation, not expecting that I would speak to it at all to-day—I wish to say that the time has come when we will have to decide whether or not this country is to come to monometallism or bimetallism. I think it is the duty of this House, and especially of my associates, to settle this money question, and to settle it on the lines I have pointed out, not by piecemeal, and not by a repeal of an act that sustains the value of silver before fixing the ratio, not to demonetize silver and then undertake to restore it afterwards; but we have time now to arrange, according to the principles of bimetallism, a measure in conformity with our promise to the American people; and we ask our friends on the other side of this question—our Democratic friends on this side, who are so eager to get rid of the Sherman law, so called, and which I do not defend upon any other principle than that it is the only law which sustains silver until we can fix the ratio—I ask them to come in all fairness and enable us to carry out our pledges to restore bimetallism to this country. If you do not, yours is the responsibility, not ours. [Loud applause.]

Mr. PENCE Mr. Speaker, were it not for the extraordinary interest of the people who have sent me here, in the solution of this question and in the termination of this discussion, I certainly should not presume, a new member, and here upon the first day of the discussion, to take advantage of the opportunity given me by grace of the Speaker of the House. But there is not a district, saving and excepting only the district of my colleague from Colorado, whose people, old and young, all of them, will watch with as much concern the developments of the next fourteen days.

I was sorry, Mr. Speaker, to note the tone and words of the gentleman from Maryland [Mr. RAYNER] who opened this discussion; sorry to see him carry here what we have seen carried now so long through the columns of the metropolitan press, a disposition to treat those of us in Western districts who happen to live in the rugged hills where silver is digged, as if we were foreigners or aliens. I do not exactly gather the reason why the gentleman from Maryland should speak of the Treasury Department acting the part of a pawnbroker to the silver miners of Colorado and Nevada. Mayhap the gentleman knows more of pawnbroking than I do; I know but little. Maybe it was because as I thought then, the sign that is hung out is a golden sign, and the strife within is to deliberately, constantly, always, Jew down the men who bring the silver to them.

That that has been the policy of the present Department is now beyond doubt. It seems to me, Mr. Speaker, that the gentleman might have passed by any such allusion as he made to those who have builded up the empires of Colorado and Nevada. It is true that the people of Colorado mine silver, and, under the law since 1873, are compelled to sell it and can not coin it. It is true that they must come with it as a commodity, and not as a coin metal, and it is because the people of that section have come to understand that the platform promises were what the gentleman from Maryland called them, "glittering ketch words"—I suppose "catch words" was intended—that within the last twelve months there has been there, not only within the cañons among our hills, but upon all the broad acres of our prairies, an assertion in line with the feeling of political independence which has wiped old party lines and distinctions absolutely out of existence, and not a man there but stands ready to give some reason for his action and for the faith that dwells in him.

Mr. Speaker, some of us in Colorado had been Democrats until, from the gallery of this House, a year ago last March we witnessed a scene in the Fifty-second Congress, a Congress with an overwhelming Democratic majority pledged to the remonetization of silver according to the "glittering catch words" of its platform—until, I say, we saw that House of Representatives assembled in this Hall and saw that it required the vote of the gentleman who was then and is now Speaker to make a tie, to prevent the untimely death of the Stewart silver bill which had passed the Senate.

That was what put to more serious thought those of us who had been Democrats all our lives and had never learned how to scratch a ticket. That, followed by the acts which came later in the year, was what drove us out of the Democratic party. And I am here to bring to the serious attention of the members of this House the reasons of the political uprising which occurred there, and to trace it, if I may in the short time allotted to me, directly and distinctly to this issue. It was not due to the issues that have been mentioned in the Democratic or the Republican press, not to the tariff issue, and above all, not to the issue spoken of by the New York Sun, which claims that the Democratic party came into power because Mr. Reed of Maine had been a Czar! [Laughter.]

Mr. Speaker, in 1884, when the silver issue was first formally presented before the people, the Democratic party declared its position in unequivocal terms, and at that time every Democrat in the land, East and West, accepted its declaration as standing for the remonetization of silver. The scene here to-day is strange enough to attract the attention of every thoughtful voter. Is it possible that the gentleman from Maryland [Mr. RAYNER], uttering the sentiments he does, and the gentleman from Missouri [Mr. BLAND], uttering the sentiments he does, were both elected last fall upon the same identical platform? [Laughter and applause.]

Yes; since 1884 and the departure that was inaugurated between November, 1884, and March, 1885, just such incongruous possibilities have sprung up within the lines of the good old Democracy. When the Democratic party in 1884 met in convention it declared itself in this language:

> We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

That meant the remonetization of silver at its old ratio, and it was so accepted by the producers of this country, and the party that had lost its power and its prestige in 1860 was reinstated at the other end of this avenue; but, before the inauguration of March, 1885, that platform had been deliberately slapped in the face and spat upon. What followed during the four years of the first Cleveland administration? Not one sincere effort, so far as the Administration was concerned, to remonetize silver.

When in 1888 the party convention met, we found that the Democratic party, not being brave enough, not having temerity enough, to go before the American people and again present Mr. Cleveland upon a silver platform, was absolutely silent upon that question, and the Republican party, which it seems to me has been for many years "working" one side of the street, while the other fellows worked the other—the Republican party declared:

> We have always recommended the best money known to the civilized world, and we urge that an effort be made to unite all commercial nations in the establishment of an international standard which shall fix for all the relative value of gold and silver coinage.

No, Mr. Speaker, I mistake. I have read the language of the Republican platform of 1884; but in 1888 the Democratic platform having been, as I have said, silent on the silver question, the Republicans declared their position in this language:

> The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

[Laughter and applause.]

Mr. Speaker, it is not my purpose here or now to go one step farther in allusion to political parties or to take part in a partisan discussion. Anything like that would be farthest from my purpose to-day. Elected last fall by a people as brave, as buoyant, as hopeful as any constituency which ever in any day has honored any member of this House, I know that now their industries lie prostrate, pinned to the earth by the course of the present Administration; by the course of the past Administration; by the surrender, past and present, of those who had been elected upon silver platforms and silver pledges.

I certainly would be guilty of a violation of my duty to them if I should at this time go into any partisan discussion which might be calculated to alienate from the silver forces one single positive or negative man, one single positive or negative vote. And inasmuch as the Democracy dominates in this House—inas-

much as, according to all reports which we have been able to obtain, the bulk of the vote in favor of silver must come from that side—I desire to recall to them the words of one or two of their own statesmen. Inasmuch as the doubt which exists, exists as to how votes shall be cast by members of the majority of this House who were elected last fall upon the platform adopted at Chicago, I want to remind them of some words of their own people.

May I be permitted to read, without sending to the Secretay, the words of that statesman who, when unfettered and free, standing the manly representative of an independent constituency, uttreed the words of wisdom with which he has always been gifted and which, until lately, have been accompanied by a courage equal to their wisdom and patriotism. Mr. Carlisle upon this floor, in 1878, used the words which I am about to read. And how came he to use them? Let me recite one or two explanatory circumstances. Senator Stanley Matthews had introduced at the other end of the Capitol the resolution known as "the Matthews resolution," which recited the nature of the legislation that governed the issue of various bonds, and concluded with this language:

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditor.

At that same time this House had under consideration important matters in this same line. The gentleman who so long and bravely has borne the silver standard—the gentleman who preceded me in this discussion—"Silver Dick" BLAND, as we love to call him in our country—was at that time chairman of the coinage committee which had in preparation a free-coinage bill. The Matthews resolution, which had passed the Senate within a few hours after its introduction by a vote of 43 to 22, came to this House, and three days afterward it was passed by this House without debate by a vote of 189 to 79. Mr. Carlisle voted for the resolution, and when a few days afterward, on the 21st of February, 1878, the Bland coinage bill was under consideration in this House, he, then untrammeled and free, a leader and not a follower, a sender of messages, not a bearer, used these words:

I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

At that time the Democratic side of the House applauded these words. Do they stand ready to applaud these words now? Do they believe that Mr. Carlisle uttered a truth, or do they propose, under the use of what one of the gentlemen from the State of New York, in a recent article in the North American Review, spoke of as the "use of all the means in the hands of the Administration"—do they propose, under such pressure now, to follow in the surrender that the Secretary of the Treasury himself has made?

I do not believe, Mr. Speaker, that all the trust that has been placed by the people in the promises of the two great parties has been entirely misplaced. I do not—and shall not until the last moment and under compulsion—accept the declaration now made, that the President having construed the platform of 1892, all those who were aligned with him last fall must accept his construction. It is true that his message was not an entire surprise to the people of the West. We had here and there for some time been noting the signs of the times—trying to determine what the indications were and what must inevitably be the result of this discussion and of the action of the Administration.

While Mr. Harrison was President Mr. Carnegie contributed to the columns of the North American Review his famous article upon the "A B C of money," and seemed to speak for many when he said that, though a life-long Republican and a life-long protectionist, if in the next campaign (that was the campaign of 1892) there should be upon one side a candidate who was a single gold-standard man and a free-trader, and upon the other a high protectionist in favor of the double standard, he, Andrew Carnegie, the owner of fortunes which we had supposed were chiefly gained through protection, should support the free-trade gold-standard man.

Is it any wonder that we were put to thought, to serious thought? But last fall the Chicago platform in our section, as in all of the wheat, cotton, and corn States of this Union, had received that construction which has been placed upon it by the gentleman from Missouri [Mr. BLAND] here to-day, and not the construction placed upon it by the gentleman from Maryland [Mr. RAYNER], and we still believed that it was possible that the promise was to be kept. Many hesitated and doubted, and those who had been for life allied with the Republican party turned to the Minneapolis straddle of last year and claimed that it must be accepted as meaning the coinage of silver. If that be true, where are the members of this (the Republican) side of the House who used to maintain that construction? What proportion of them are to be found maintaining by their vote to-day the position maintained by their representatives in the corn and wheat States in last October and November?

A little time passed by, Mr. Speaker, and we first took serious alarm this summer. We still had hoped against hope, and even now hope, perhaps, against hope. But last June when from the pen of the gentleman [Mr. COCKRAN] who now leads, as I understand it, the New York Democracy in this assault against silver in this country—when he in the North American Review in his article on the financial outlook said to the world and to us that—

The recent utterances of the President and of the Secretary of the Treasury, however, appear to settle the question that the present Administration is determined to use all the means at its command to maintain a gold standard—

and when further he said—

The question of free coinage of silver by the United States may be excluded from consideration, as nobody deems the passage of such a law within the limits of possibility during the present Administration—

well indeed might those who had hoped as against hope have become terrorized with fear and apprehension. And since that utterance of last June, followed by this construction which Mr. Preston, Acting Director of the Mint, placed upon the Sherman law of 1890, an encouragement thereby was given to the English creditors, who in the nature of things desired a gold standard in this country, little by little the hopes of our people have been cast down, and not, Mr. Speaker, until within the last forty-eight hours have the hopes of any of us been revived. And why?

Because we have found upon consultation with members of this House, upon both sides of it, that they appreciate and realize the fact that the people who sent them here sent them with the expectation that under no conditions and under no circumstances would a surrender on this vital principle be made to such a message as that which has been sent to us by Mr. Cleveland; and that the people—I do not mean the bankers who meet every night and flood us with petitions, nor the committees of boards of trade, but I mean what George Wilson, of Missouri, calls "the fellows who follow the mule in the corn rows under the hot July and August suns"—I mean that these people still believe that this House of Representatives, equal in dignity with the body that sits in the other end of this Capitol, equal in power, closer to the people, fresher from their midst, will not sooner hang out the white flag of surrender than will the gentlemen of the higher body at the other end of the building. And within two weeks the people will have come to know whether that conclusion is well founded or otherwise.

I say, then, Mr. Speaker, that we have renewed our hopes because the members of this House can not fail to recall, when once reminded of it, that nowhere, at no time, at no State convention within the limits of the United States, except once in the State of Massachusetts two years ago, has the Democratic party ever presumed to declare for the single gold standard now urged by the President. No member of the House in the majority, and but few in the minority, and none in the smaller minority to which I belong, came here with any other expectation upon the part of the people who sent them than that silver would be raised, not stricken down; elevated, not made prostrate; and that the standard dollar which has been the Republican dollar, which has been the Democratic dollar, which has been the dollar of all the people, should receive, not the cold shoulder, but the bright and warming and beaming smile of the members on all sides of this question.

Is there any member here from a wheat or cotton State who feels that he can go home and explain to his people that he did a patriot's duty and well fulfilled the commission with which he was intrusted when he suddenly, without notice to his constituents, surrendered to the call of the gold-standard men? It may be that there are those who can. I mention this, not as a threat, but as a simple reminder to the members of this House that the same voters who sent us here last fall by their suffrages certainly have not all of them become forgetful of the conditions upon which we were sent. They have not all of them failed to regard the understanding upon which we were honored and trusted.

Upon what theory, I ask, can a Republican minority, by a pre-

ponderance of its votes or by any considerable number of its votes, find justification before the people of this country in carrying out the behest and command of a Democratic Administration? Upon what line or theory are they to explain when they go home next time that their duty was patriotically performed and that their pledges were fulfilled? It is strange—and we have regarded it as strange since this discussion originally began—that to-day, not perhaps amongst the members of this House, and I will not say so, but in the columns of the metropolitan press, Democratic and Republican, we find the same men who, upon the tariff question, have for years and years besought the American people to stand out against England, and England's pauper conditions, and to maintain here under our own bright Stars and Stripes an American policy, now most active in trying to prevail upon the members of this House, by their editorial utterances, to surrender absolutely any idea of America having any policy of her own upon the money question.

We find this true in the press of both of the great parties, and why does it happen? How does it happen that those who were so jealous of the American plan and the American policy, who have so roundly denounced the attempt of the Democracy to surrender to the Cobden Club and to the free traders of England and to bring our poor laboring men into competition with the pauper labor of Europe, how does it happen that now and here upon this question of greater importance you protest that we must wait upon England, that we must not remonetize until England consents, and that when we remonetize we must do so at a ratio which meets with the approval of England?

What! Wait upon England to fix the ratio for us? With one twenty-fifth of the population of the earth, producing two-fifths of the silver, shall we yield the entire vantage that comes thereby to them? Just as well say to them that by arbitrary law, final and irrevocable, we would go into international commission with England and Germany to determine what should be the price of the wheat, the corn, and the cotton; for, as they need the one they need the other, and like as they must have the one they must have the other.

But we find this condition of affairs: We find, according to the claims that are made, a considerable proportion of the Republican minority standing ready to do that which they never would do for a President of their own selection—ready to surrender.

Let me say to the gentlemen from the West and South that in the East we find no difference. When this vote comes, two weeks from now, unless the political denomination of each member is designated, when you go down the call of the "ayes" who support the message of the President, how are you to tell the Eastern Democrat from the Eastern Republican?

According to prophecies made, you will find them standing together; and I maintain, now and here, to the members from the West and South, that there should be that same degree of vigor and energetic organization for the protection of our people that you find down here, east of the Allegheny Mountains. Regardless of party, Democrats and Republicans alike, you should find a determination and a purpose to redeem now, in Washington, the promises that were made out in Illinois and Tennessee and Iowa last September and October. Unless that is done, the reckoning that must finally come—mentioned now in no sense as a threat—must be one that will call upon the members of those sections for a plain and candid explanation of the reasons for the surrender now contemplated by the bill introduced by the gentleman from West Virginia [Mr. WILSON].

I say, why is it, Mr. Speaker, that, regardless of party, we find the Eastern and Northeastern members of this House united? Because, according to the course of the financial legislation ever since the war, every benefit has been diverted to them and every burden has been shifted upon our Western people. And when I speak of our Western people I allude now only to those who dwell in the mining States. Those who dwell in mining States went into the vastnesses of those hills, into that wilderness upon the very frontier of what you gentlemen in your old-time geographies marked as the Great American Desert, and by their energy and pluck they have there builded up an empire of wealth. They went there under what protection of the Federal law? They went there under the protection of a law that had been upon our books since the days of Washington, Hamilton, and Jefferson. Never once had that policy been interfered with. Never once had any of the people asked that it be revoked. Never once under any circumstances had there been any body, commercial or otherwise, asking for the repeal of that law.

Now, the transaction done in this House in 1873, according to all the testimony from members of both political parties then here represented, was done covertly and secretly by fraud; and the people who had settled that section, who had developed the mines of that country, who had produced the silver necessary for the money uses of this land, had no notice in the world that the doors of the mints at Philadelphia, New Orleans, and Carson were to be suddenly, without notice, without demand from anywhere, closed against their product. It is not necessary now and here, or at this day, to review any of the testimony as to the manner of the demonetization of silver.

We all know to-day that there lives but one man, and he the senior Senator from Ohio, who pretends that the demonetization act was demanded by anybody, or that anybody except himself understood it to be a demonetization act. And from that time, as soon as the people understood that silver had been stricken down or assaulted, an effort has been made by the people of this country to secure from one or the other of the great political parties a promise that has been made in each successive campaign for its remonetization.

Mr. Speaker, I do not know—of course, no man can tell now—how many there will be to follow the course of the eminent gentlemen who but a few years ago stood upon this floor and advocated the remonetization of silver and who to-day are members of the President's official family and seem to be committed against that policy. It is hard and difficult, at this stage of the proceedings to reach any determination; but I have said, and say again, that the people in whose behalf I speak upon this floor still are gathered together to-day in their homes and idly around the furnaces where the fires have been compelled to expire.

In that Commonwealth which possessed but six months ago a degree of wealth equal to any State in this Union, they are bracing each other up to-day with the expression of hope that in this body there will be found enough and more than enough to stand against the message of the President, and to stand for the fulfillment of the promises that have been made, to stand courageously and valiantly in behalf, not of the creditor class but of the debtor class of this land, and here finally to say by their votes that the time has not yet come when one branch of this Government can be compelled by another, or driven by another, or persuaded or cajoled by another into an act which will add to the amount of the indebtedness of every debtor and add to the credit of every creditor, whether on this or upon the other side of the Atlantic Ocean.

Let me ask of the gentlemen from the New England States, while it is to your plain advantage to increase the value of the dollar, while it is to your advantage to make it so that it will take more of wheat and more of corn and more of the products of every kind of the broad acres of the West with which to buy it, whether that product is purchased or taken in the payment of a debt: Can you afford as Americans, can you afford as the fathers of the boys and girls who went into our country and there raised the flag and extended the wealth and the territory over which it waves—can you, because of the pitiful percentage of advantage you will get, vote for a policy which gives the bulk and the majority of the increase of credit to those who have no citizenship or interest in this land?

It is true, as we look upon it in the West, that Boston will get its share of the benefit of sustaining the law which the President seeks. It is true that New York will also; but after all, London, England, will have four-fifths of it. Can you, Representatives from the New England States, afford as patriots, as Americans, for the pitiful share of advantage you will secure, join in the demand of England for the legislation that is here proposed?

Why do I suggest this? Mr. Speaker, only a year or two ago we in the West heard, as you did in the South and East, the proclamation of the "Plumed Knight," who was then upon his visit in France, I believe, and we remember that the cable carried to us and to you the account of the vast increase of the wealth of this land, and we joined and shared in the pride and satisfaction that came to us when that eminent leader of his party pointed out that we not twice more, but five times more than any other nation upon the face of the globe, had increased our wealth from 1880 to 1890; and so we had.

We found an aggregate wealth of sixty billions to sixty millions of people; and a simple arithmetical calculation gave us the average for every man, woman, and child in arms in the country at $1,000. I do not know what the facts were in Massachusetts. The average there may have been all right, but in Iowa, Colorado, and some other States, the average was not found to turn out exactly right. The aggregate was all right, but a further study was had and the same census upon which our pride in the West had been founded, the same sworn returns, reports, and statistics which had filled us with satisfaction and joy, pointed out to us that within that decade the increase in wealth of Massachusetts alone had been $569,000,000.

Five hundred and sixty-nine millions! If that were true, what must be the increase of wealth in the broad, rich acres of Illinois and of Indiana? Well, the same statistics brought us to a realization of the fact that Nebraska, and Iowa, and Illinois, and Indiana, and Louisiana, and Mississippi, and Alabama, and Geor-

gia, and North Carolina, nine empires of rich acres, teeming with industrious men and women, containing fifty-eight times as many acres as Massachusetts, fourteen times as many people to start with in 1880, and twice as much assessed value, the census, I say, brought us to a realization of the fact that the whole nine of these great empire States had gained in wealth in the same period but $559,000,000. Massachusetts alone had gained ten millions more than the entire nine!

These are the facts and figures, gentlemen of the House of Representatives, which have been studied in the humble cottages and homes of the western plains and hills. These are the conditions which the people there will no longer hesitate to rebuke. It is no wonder that Mr. Carnegie, standing not only for a protected class but for the creditor class, for the class that holds the evidences of indebtedness over all the productive sections of this country, the class that holds the State and county and town and city and township bonds of every agricultural State and levies the first tribute as an interest charge that is levied upon the people's toil—it is no wonder that he should say that if he were compelled to relinquish either the dimes which came to him through protection or the dollars which came to him through infamous and imbecile financial legislation, he would hold on to the dollars and say good-bye to the dimes. It is no wonder that he should say that in 1892, if put to a selection between a free-trade gold-standard candidate and a high-protection double-standard candidate, he would support the free trader.

Mr. Speaker, the gentleman from Maryland [Mr. RAYNER] spoke of the Sherman law as one that had brought crisis and disaster upon this country by its enforcement. The trouble has been that at no time since its enactment has either the letter or the spirit of that law been enforced.

It seemed very strange to us that any bill which purported to provide for either the purchase or the coinage of more silver should be called by the name of the "Sherman act." It seemed anomalous to us that a bill sometimes called a silver bill should at other times be called the Sherman bill, and it took some time and some research to discover why the Senator from Ohio, whose position on this subject has always been understood, should in 1890 have voted for and supported a measure which provided for the use or the purchase of more silver than was provided for under the Bland-Allison act. It of course was found to be the proviso in that bill, which permitted the Secretary of the Treasury, after a fixed date, in the exercise of his discretion, to practically terminate and cut off all coinage of silver.

It was not because the law provided for the purchase of four and one-half million ounces of silver per month as against $2,000,000 worth under the Bland law that the Senator from Ohio gave it his support. It was because after a fixed time—the 1st of July, 1891—the Secretary of the Treasury, in the exercise of his discretion, was given authority to cut off entirely the future coinage of silver, and that was done. It was that proviso in the bill that secured the support of the Senator from Ohio. Mr. Speaker, it is not, and it has not been at any time, the extent of the use of silver, but the kind of the use of silver, to which our people have objected.

When Mr. Harrison last fall spoke of an enlarged use of silver, in line with his policy of purchasing it at the lowest possible price and as a commodity, the objection upon our part was not to the extent of the use, but to the kind of use. Upon the floor of the Senate in 1850 and odd, when there was a discussion upon the repeal of the Missouri compromise act, Mr. Benjamin, of Louisiana, spoke in feeling terms against an arbitrary law that would prevent him from carrying into the State of Missouri the beloved family servant that had dwelt with him for years; and the Senator from Ohio, Mr. Wade, in answering him, said:

> The law and we do not protest against the Senator carrying with him his colored servant into the State of Missouri. What we protest against is his selling her after he gets her there.

[Laughter.]

Mr. Speaker, as I have said, it is the kind and not the extent of the use of silver that we complain of; and we believe, as sincerely as any class of citizens ever believed in a political tenet, that the rehabilitation of silver will be as directly and positively to the advantage of all the producers on all the acres in the West and South and to the laborers in the East as it will be to the advantage of the silver miners in the mountain States.

As to figures and statistics touching this matter, I shall trust to my colleague and others who may follow me in this discussion to advise the House. Without detaining the House further, I thank it for its attention. [Applause.]

The SPEAKER. The Chair desires to call attention to a portion of the language of the order adopted this morning. That order provides that the daily sessions of the House shall continue from 11 a. m until 5 p. m., and that "night sessions may be held for debate only, at the request of either side." Unless some provision be made for a night session, the Chair, at the hour of 5 o'clock, will declare the House adjourned until to-morrow morning at 11 o'clock. The Chair does not know the disposition of the House as to a night session; that matter the House will determine for itself.

Mr. WHEELER of Alabama addressed the House, but had not concluded; when

The SPEAKER. The gentleman from Alabama will please suspend. The Chair will lay before the House some personal requests of members.

[Mr. WHEELER of Alabama withholds his remarks for revision. See Appendix.]

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. SICKLES, for two weeks, on account of sickness.

To Mr. RYAN, until Monday, on account of important business.

To Mr. HAUGEN, for five days.

The SPEAKER. The hour of 5 o'clock having arrived, in accordance with the order heretofore made, the House stands adjourned until to-morrow at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *August 12, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read.

CORRECTION.

Mr. HAGER. Mr. Speaker, I desire to make a correction. I was present and voted "no" on the demand for the previous question made by the gentleman from Missouri [Mr. BLAND] yesterday, and I do not find my vote recorded. (See p. 244.)

The SPEAKER. The correction will be made.

The Journal as amended was approved.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. TAYLOR of Tennessee, for ten days, on account of a death in his family.

To Mr. WALKER, for ten days, on account of important business.

PRINTING AND DISTRIBUTION OF THE PRESIDENT'S MESSAGE.

Mr. RICHARDSON offered the following resolution; which was unanimously agreed to:

Resolved, That there be printed 20,000 copies of the President's message for the use of the House of Representatives; the same to be bound in paper and delivered to the Doorkeeper for distribution to Members and Delegates.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

[Mr. WHEELER of Alabama withholds his remarks for revision. See Appendix.]

Mr. MORSE. Mr. Speaker, there comes down to us from mythological times a story that Hercules on his journey once came to a point where there were two roads. He did not know which to take. From one there emerged a maiden in gaudy attire, beckoning him her way. Hercules said to her, "What is thy name?" She replied, "My name is Pleasure, but my enemies call me Vice." And from the other road there emerged another maiden in modest attire, beckoning him her way; and Hercules asked of her, "What is thy name?" She replied, "My name is Virtue. The road to which I invite you is difficult, but the end is joy and peace." Mr. Speaker, we have come to two roads. Sound finance beckons us on to prosperity and national honor; "free silver" and a debased currency beckon us on to financial ruin, dishonor, and disgrace.

Mr. Speaker, I begin my remarks by saying that I am most heartily in favor of the repeal of the purchasing clause of the so-called Sherman silver bill, but the remainder of that act which declares that the Government shall maintain the metals at a parity is wise statesmanship and should stand.

So much of the President's message as relates to gold, silver, and the currency has my most hearty and unqualified approval. So much of his message is good sound Republican doctrine, and I believe is wise and far-reaching statesmanship, and meets the unqualified approval of a large majority of the people of this country, without regard to party affiliations.

One of the misfortunes of the present situation is that the so-called silver States have a representation in the other end of

this building entirely disproportionate to their wealth, population, or commercial importance.

The great States of New York, Pennsylvania, Massachusetts, Illinois, Ohio, and Indiana have an aggregate population of nearly twenty millions; and these great empire States have not as much voice in the Senate of the United States as the little silver States, with an aggregate population of about two millions, and who have sixteen votes in the Senate, and whose Representatives appear to see everything from the mouth of the silver mine.

Mr. SIMPSON. Will the gentleman permit me to ask a question?

Mr. MORSE. I must decline to be interrupted.

The SPEAKER. The gentleman from Massachusetts declines to yield.

Mr. SIMPSON. I would like to ask——

Mr. MORSE. I have but twenty minutes, and with my time so limited I am sorry to be unable to yield for the question of the gentleman from Kansas.

Why the State of Nevada, with a population less than one-quarter of the population of my district, has two Senators and one Representative to vote to Mexicanize our currency and put us on a silver basis.

So far as I have been able to gather from the speeches that have been made here, all the propositions before us upon which we are to vote, all the speakers, are monometallists and lead to a single standard, with the difference that the gentleman from Missouri, Mr. BLAND, and his followers, advocate a policy that would most assuredly place the country upon a silver basis, make gold merchandise, and drive the six or seven hundred millions of gold now in the country out of circulation as a basis of currency or as money.

I regard the proposition made upon this floor that this country unaided and alone can fix the value of silver and its ratio to gold, and compel other nations to adopt that ratio, as the veriest folly.

If this proposition is correct and that by an act of the United States Congress we can fix the ratio of the world, why load down the people with a silver dollar so large as 16 to 1? Why not make it one-half or one-quarter that size?

This proposition is so absurd that it answers itself. Some of the speeches that I have listened to on this floor on this subject make me think of the boy whose father was a clergyman, who was asked by another boy if his father ever preached any of his old sermons? "Oh, yes," he said, "but he does not holler in the same place."

The arguments during this debate are the same old arguments which have often been refuted by abler tongues than mine. The only difference is that the Speaker does not "holler" in the same place.

Suppose that these gentlemen can succeed in passing a free-coinage measure, and suppose that the result which I have predicted should come to pass, *i. e.*, that the country should be put on a silver basis; why, what then? Talk about the tariff increasing the price of foreign goods; why, the tariff would be nowhere; tea, sugar, coffee, silk, and ten thousand things, necessities as well as luxuries, which we do not and can not produce in this country, would have to be paid for in gold or its equivalent in our depreciated currency, and would immediately increase in American money 30 or 40 per cent.

The rich would not be the only or principal sufferers. No class of our people will suffer so much from the depreciated currency as the poor and working people, the purchasing power of whose money would be immediately largely reduced.

And not only that, but the workingman's little savings, the trust funds of widows and orphans invested in a railroad security, a bond, or a mortgage, or deposited in a savings bank, would be reduced by one fell swoop the difference between a 57-cent dollar of silver, if the ratio is fixed at 16 to 1 at present value of silver, and a 100-cent gold dollar.

Whenever the great nations of the world, England, France, Germany, Austria, and Russia, agree upon a ratio for gold and silver, then free coinage of silver will be wise and safe, and our currency, either gold or silver, will be the money of the great civilized nations of the world.

It was believed by the advocates of the purchasing clause of the Sherman act that it would have the effect to greatly enhance the price of silver, and place it perhaps on a parity with gold.

How signally and mournfully this prediction has failed is patent to the humblest citizen. The act had the effect to stimulate silver mining, new appliances have been invented like the steam drill, new and more powerful explosives have been used, and the direct effect has been to greatly cheapen instead of enhancing the price of silver, and it is now proposed to jump out of the frying pan into the fire, and pass a free silver bill, by which we give notice to the world to bring all their old silver junk, pots, kettles, and spoons, as well as bullion, to the United States mints and put 57 cents' worth into a patent slot machine and have it come out stamped a dollar of 100 cents.

The wisest man that ever lived forbid this operation, when he said, under divine inspiration, "A false balance is an abomination to the Lord, but a just weight is his delight."

I look upon this proposition to debase and degrade the currency as an effort very largely on the part of the debtor class to repudiate a portion of the debt under the cover and sanction of the Government of the United States.

Existing loans and indebtedness were created in the currency of the world, which the President describes in his message as gold worth 100 cents on the dollar.

And to pay them in a depreciated currency, worth 50 or 60 cents on the dollar, was forbidden on Mount Sinai, when the Almighty said, amidst thundering and lightnings, and commanded Moses to write on the table of stone, "Thou shalt not steal."

There is another important factor in the matter of this silver problem that must not be lost sight of, and that is, the cost of alluminum is being greatly cheapened, it is manufactured from clay, and it is believed by those qualified to judge that it may before long be produced for 10 cents per pound. The peak of the Washington Monument, whose lofty summit pierces the sky, is capped with this beautiful metal.

It is a beautiful white metal, susceptible of a very high polish, and I believe is destined to take the place of silver in the arts, in tableware, and in the thousand uses to which silver is now employed, and if this is so it can not fail to further greatly depreciate the price of silver in the near future, and exaggerate the evils of silver currency.

Mr. Speaker, while I most heartily agree with the financial utterances of the President in his recent message to this House, I can not agree with him that the present appalling business situation is entirely due to the purchasing clause of the Sherman act. It is believed that the personal property in this country has shrunk one and one-half billion dollars since his election last November.

It is idle and preposterous to attribute this shrinkage, solely and entirely, to the purchase of four and one-half million ounces of silver per month.

The Sherman act was passed July 14, 1890, and had been in operation when the result of the election was known last November two and one-half years without apparent injury to business, and the Government purchases of silver amounting in round numbers to about one hundred and ten million dollars' worth since the act took effect.

And had the Government lost the entire amount, instead of the depreciation, it could in no way explain the terrible shrinkage in values to which I have referred, or the slow panic that is now upon the country.

This has been produced by an entirely different cause. The country has discounted the threats of the Democratic platform, which declares all protection as unconstitutional, and proposes to place the country on a free-trade basis, or a tariff for revenue only. And the country has been getting ready for lower prices promised by Democratic speakers in the last campaign. There is no evidence of overproduction, the merchant has bought from hand to mouth, the manufacturer declines to make goods in the face of a falling market, and the uncertainty hanging over values and the tariff has had the effect that every wise business man foresaw when the result of the election was known last November, *i. e.*, to paralyze business and to throw thousands of workingmen out of work, to destroy our home market and principal market for agricultural products, by driving thousands of men, who were formerly consumers, into the business of last resort—agriculture.

Mr. Speaker, it does not take a statesman to see that if the promises of the Democratic platform are to be performed, and if we are going to buy our goods in England or in other European markets, and if all protection is to be wiped out, then we can not at the same time manufacture goods in this country and give employment to American workingmen.

Under similar conditions in 1847, when we had a tariff for revenue and bought all our goods in England, and had no business in this country but agriculture, in the face of an abundant harvest one inhabitant in thirteen and one-half in New York State was a pauper, and soup houses were opened in every ward in New York City to feed the starving poor; and, unless all signs fail, that thing will be repeated in all large cities in the Union next winter.

God only knows how far the hand on the dial of progress was turned backward at the election last November. The country was at that time prosperous and enjoying unbounded prosperity under the wise and far-reaching statesmanship of the McKinley tariff act.

Never in the history of the world would an average day's pay of a workingman buy as much of the necessities and luxuries. Money was abundant for all purposes. All this is now changed. Instead of expansion we have contraction and hoarding of money; instead of confidence we have distrust; instead of progress in business we have stagnation; our factories are closing, and thousands of workingmen are being turned into the streets.

The home market for agricultural products is destroyed by the very threat of a tariff for revenue only, and I call the attention of the gentleman from Kansas [Mr. SIMPSON] to this fact.

Confident I am, if the election were to be held to-morrow, in the light of our present experience the Republican party would sweep every Northern State.

There is no school like the school of experience, and if the people of this generation will learn in no other, they must learn what past generations have learned, that a tariff for revenue or free trade means paralysis and death to every material interest of the country.

Mr. Speaker, in 1847, the period I have mentioned, Horace Greeley wrote in the New York Tribune as follows: "Why is it that the skilled laboring men, willing to work, are going to the soup houses to get enough to sustain themselves and family, when we are paying ninety millions in gold to buy the goods that we could produce with our own labor?"

And, Mr Speaker, when the free trade promises of the Democratic platform are performed, that will mean three hundred millions of gold sent to Europe to buy goods we could and should make ourselves.

Mr. Speaker, a great Virginia statesman, Patrick Henry, in his immortal argument in favor of independence, in the Virginia House of the Assembly, in 1775, exclaimed, "Why stand we here idle? The clash of resounding arms is already heard on the plains of Boston." The Virginia patriot was moved with pity for his distressed and oppressed countrymen in the then far distant Massachusetts colony. A national calamity is upon us, the cry of distress goes up from an afflicted country. Why this delay by this Democratic Congress? "Why stand we here idle?"

The situation of the country is appalling; the eyes of the country and the world are upon us as never before.

The President has wisely pointed out a financial danger which threatens us, and the majority of this House should proceed at once to define and declare its economic and financial and tariff policy, especially its tariff policy, that the uncertainty be removed, and that the great business interests of the country may know the worse, and the conditions which will confront them as regards finances and the tariff.

In the words of Patrick Henry "Why stand we here idle?"

Now, one word in regard to the relations of the two parties to this financial question. The preposterous claim is made in Massachusetts by the Boston Herald and other Democratic papers and speakers that the Democratic party is in favor of the gold standard and the Republican party is the party of free coinage of silver. And, say they, "Did not we send a stripling from Massachusetts to the Fifty-second Congress to fight this Goliah?" Any man who would make such a claim on this floor would be laughed to scorn.

One of the Democratic speakers on yesterday called attention to the fact that the Democratic conventions in every State in the Union, save Massachusetts, who had made any expression had declared for free coinage of silver. And I shall be happily disappointed if, when the votes are counted, it is found that the President can command the vote of 20 per cent of his party to repeal the purchasing clause of the Sherman act.

But, did not the Republicans pass the Sherman act? Yes. And did not the Democrats vote against it? Yes; but for an entirely different reason than the Democrats in my section would have the country believe.

The Sherman act was a compromise to prevent the passage of a free-coinage measure by the nearly solid vote of the Democratic party aided by a few Republicans from the silver States. I say the Sherman act was denounced on this floor and in my hearing, in the Fifty-first Congress, by the gentleman from Missouri [Mr. BLAND] and others, as a gold-bug measure, hostile to silver.

Could the Republican conferees have gotten into the bill the provision making the purchasing clause inoperative after two or three years, which we were prevented from doing by the solid opposition of the Democratic party, all would have been well.

Why, Mr. Speaker, the moment you say "honest money," "board of trade," "chamber of commerce," "national bank" on this floor that moment the Democratic party on this floor cries out "Shylock," "gold-bug," "Wall street"—as though the great business of this country could be done without these institutions.

All honor to the President, who has simply taken Republican ground on the subject of finance, and all honor to those Democratic members on this floor, like the gentleman from Maryland [Mr. RAYNER], who break from their party and vote with the Republicans to sustain the President in his defense of our national financial honor.

The last Democratic campaign in Massachusetts was run on the poor man's dinner pail. In the next campaign the Democratic speakers will please tell him how to get something to put in his dinner pail under the policy of free trade.

The Democratic rallying cry last November was "Retrenchment and reform." In the light of present experience I submit that these words will be a stench in the nostrils of the American people before this Administration closes. Its imbecility is seen not only in the management of the Treasury Department, but in the State Department as well—witness its imbecility with reference to the Sandwich Islands matter, endangering and threatening foreign complications. Witness the same with reference to the Chinese-exclusion act—a hoodlum Democratic measure sprung on the last House of Representatives on suspension day.

The Supreme Court has declared the act constitutional. Why does not the Administration enforce the act? No, the American people are learning in the dear school of experience that the Democratic party is incompetent to run this Government. Until the country shall show, by town, city, State, and Congressional elections, that the country repudiates that party, there can be little relief from the awful Democratic nightmare that now sits upon the vitals of this fair country of ours.

Does the House or the country want proof of the effect of the principles and policy of the Democratic party upon the welfare and prosperity of the country? Read "A deadly parallel," one an extract from President Harrison's message near the close of his administration, and the other an extract from President Cleveland's message six months after his administration began:

A DEADLY PARALLEL.

Opening of President Harrison's message to Congress, December, 1892:

"In submitting my annual message to Congress I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people."

Opening of President Cleveland's message to Congress, eight months later, August, 1893:

"The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged present evils may be mitigated and dangers threatening the future may be averted."

Aaron said to Moses, "Their rock is not as our rock, our enemies themselves being judges." The laboring people are coming to see that they were lied to and deceived in the last campaign and that the prosperity of the manufacturer is their prosperity, his misfortune their loss and misfortune.

Mr. Speaker, I have two minutes of my time remaining. In that time I desire to send to the Clerk's desk the following resolutions of the Boston Chamber of Commerce; I assure you a body of very great respectability and entirely a nonpartisan body.

The Clerk read as follows:

The following preamble and resolutions were unanimously adopted at a meeting of the Chamber of Commerce held on July 12, 1893:

Whereas since the passage on July 14, 1890, of the so-called Sherman act, this country has fairly tried the policy of purchasing silver bullion, and as a result finds its Treasury depleted by the withdrawal of gold, and filled with silver which it can neither circulate nor sell, and which is rapidly depreciating in value, the confidence of the nation and of all who deal with it greatly shaken, and business everywhere checked; and

Whereas while this policy continues no man feels safe in making contracts, investing capital, or undertaking new enterprises, and unless confidence can be restored the gravest disasters, depriving capitalists of their property and laborers of their livelihood, are likely to ensue; and

Whereas it is the merest folly for this country with its enormous natural resources, its unexampled credit, its annual income of thousands of millions, its magnificent crops which other nations must buy to live, its great and thoroughly organized industries, and everything that can make it rich and prosperous, to allow its whole business life to be paralyzed by suicidal laws: Therefore

Resolved, That the Boston Chamber of Commerce in public meeting assembled hereby calls earnestly upon Congress, which is soon to convene, for the immediate and unconditional repeal of the silver-purchasing clauses of said act.

Resolved, That a committee of three members, of which the president shall be one, be appointed by the chair to coöperate with other commercial bodies representing similar interests, at Washington, with power to use all legitimate means for the prompt repeal of the purchasing clauses of the Sherman silver act.

A true copy.

EDWARD KEMBLE, *President.*

Attest:

ELWYN G. PRESTON, *Secretary.*

BOSTON, *July 20, 1893.*

Mr. HARTER. Mr. Speaker, in common with the other members of this House I came here from my home fully aware of the serious condition in which the whole business of the country finds itself. With banks failing daily, with thousands of men discharged from employment every twenty-four hours, with busi-

ness paralyzed, with the largest and strongest banks in the United States in a condition of semisuspension—I came here, I repeat, with the rest of you, cognizant of the agony which the country is undergoing, familiar with the dangers ahead of it, knowing that the people are silent in their anxiety to hear from this House, a silence which to-day is so eloquent that you can easily interpret it.

Under the circumstances there ought to be but very little difference of opinion as to the cause of the difficulty. I felt, Mr. Speaker, that the members of this House would be found a unit in applying a remedy. But I find, unfortunately, there is a wide diversity of opinion as to the remedy and a difference of opinion on the question as to what has caused the present lamentable condition of our country.

I came here, Mr. Speaker, anxious and ready for immediate action. I came here desirous of voting on this question without delay. I would have been glad, for my part, considering the condition of the country and the deep concern of the people of the land, to have sat here day and night to force a prompt decision on a question of such vital importance. I am not one of those who felt it necessary to occupy valuable time in the discussion of the matter. It seemed to me that the House would be able to act at once in the direction of relief; and I am not on my feet now, nor shall I be at any time in the course of the fourteen days it is to be before us, for the purpose of awakening partisan feeling upon it.

I have no wish to secure any personal distinction as a supporter of the measures which will relieve distress in our country. I have no personal nor have I any party interest in the matter. If there is to be party gain by saving the country from its present ruinous condition I for one am willing that the Republican party may have all of it, if as a consequence we can lift the country out of the deep pit into which it has fallen. I am not here to criminate or to recriminate. I am able, I think, to diagnose this case, however, and tell from whence comes the present crisis. I am sure I could say where the responsibility rests for our present condition, but I do not feel that on an occasion like this it is proper to call up, establish responsibility, or to dwell upon a matter of this kind.

The nature of our national disease, acute, painful, and dangerous, we ought easily to agree upon, and it ought to be easy also to unite upon a cure, but it seems from the speeches made here that this is not the case.

Had I in coming to the Capitol this morning found a man in the last stages of inebriety, a man disabled by alcoholism, lying in the gutter, I know that if he had been taken to the hospital that competent surgeons would have had no difficulty whatever in diagnosing his case or in applying a remedy or in fixing the treatment to which he should be subjected. But, sir, in looking over this House it strikes me that had that poor drunken man in the midst of his delirium been set down in this House, and the members here had to apply the remedy, there would have been a wide difference of opinion.

I am quite sure that my friend the doctor from Maryland [Mr. RAYNER] would have diagnosed his case somewhat after this fashion: "Here is a poor fellow suffering from alcoholism. He has too much of it in his system—too great a quantity in his circulation. If you would save his life let alcohol, rum, and strong drink be kept from him. He needs a careful course of medication, good nursing, and great care." In other words, he would probably say that the inebriate needed the gold cure. [Laughter.] But, on the other hand, my friend the doctor from Missouri [Mr. BLAND] would diagnose the case quite differently and look at it from another standpoint and in a totally different light. He would say, "This poor fellow needs more whisky in his system. [Laughter.] Rent a brewery, or buy a distillery for him, and if proof spirits are not strong enough put him on an exclusive alcohol diet."

Here we have, to-day, Mr. Speaker, Uncle Sam in a condition in which he never appeared before among the nations of the world. At a time when he should be erect, at a time when he should control the commerce of the world, favored by good crops while Providence has denied this blessing to other countries, at a time when we should be at the flood tide of prosperity and when all men should have profitable employment, we find a vastly different condition. Instead of this we find Uncle Sam prostrate and almost in a comatose state; we find him in such a condition that he will have to go—and at once, too—into the national hospital for treatment——

Mr. GROSVENOR. Will it interrupt my colleague to ask him a question?

Mr. HARTER. I will not consider it an interruption, but hope it will not be taken out of my time.

Mr. GROSVENOR. In the case supposed by my colleague, of a victim of alcoholism, what opinion would he entertain of that physician who simply suggested the stoppage of the cause of the difficulty, and made no prescription as to the treatment of the victim? [Laughter.] I say, what would he think of that physician?

Mr HARTER. I am, sir, somewhat of a homeopathist, a believer in mild remedies, and I think that a mild remedy will sometimes cure where a radical one will kill.

A MEMBER. You ought not give him more liquor.

Mr. HARTER. I certainly would not give him any more liquor. But we bring Uncle Samuel into this hospital of ours here, we gather the doctors around him, and we discover that the trouble with Uncle Samuel is that, instead of whisky in his circulation, he has too much silver; and yet there are gentlemen on the floor of this House with national and international reputations who say that the remedy for this thing is to fill him up with more silver!

It is, indeed, very singular that men can not understand the situation in which the country now is. They hold to a kind of an antediluvian view of this question. I can imagine these gentlemen alongside of Noah, when Noah was in the ark, when the waters covered the earth and, mounting higher, covered the trees, and reached far up the mountain sides. When Noah said to them, "I think you had better come in, you will get wet," they, in the presence of the water, which was coming up closer and closer, nearer and nearer to their lives and the lives of those dear to them—I can imagine these gentlemen saying, "There is no danger from water, Mr. Noah; what we are afraid of is drought."

I at least expected that the gentlemen who have advocated the kind of measures which have injected into the money circulation of the country more silver than we can digest would, from their places in this House, offer us some remedy. I felt certain they would deal in their speeches with the principles which underlie and which must settle this question; but as I listen to these gentlemen, for all of whom I have great respect and for some of whom I have considerable admiration also, I find that this is not the course which they have pursued. Their addresses on this subject, so far as I have heard them, have not touched principles at all.

It is true they have used denunciation with skill. They have used persuasive eloquence in dealing with the question, but it seems to me, with all due deference to them and to this House, that these speeches have up to this point consisted purely of sentiment, of prophecy, of denunciation, and of threats. It has been said to those who stand upon this floor and who believe the financial salvation of the country depends upon stopping the purchase of pig silver—it has been said to us, "If you pass this measure your places in this House will be vacant."

Well, Mr. Speaker, stop this purchase of silver, give us a standard of value which will be both permanent and honest, which will equally benefit the farmer at the plow, the workman at the forge, the banker in his parlor, and the manufacturer at his desk—give the country such a standard as this, and I say to the gentleman from Missouri [Mr. BLAND] that my place in this House is at his service, and I am willing to go home and shake the dust of Washington from my feet and never enter this House again as a member of it. There is no threat which can move a man when his conscience is engaged in a cause like this.

Mr. BOATNER. Will the gentleman allow an interruption right there?

Mr. HARTER. Yes.

Mr. BOATNER. Did, the gentleman run, and was he elected upon the Chicago platform?

Mr. HARTER. No, sir; I was elected upon a platform which I myself wrote, and which pledged us to a sound money, which would drive neither gold or silver out of general circulation; and I stand upon that platform to-day.

Mr. BOATNER. I would like to ask the gentleman another question. Does he know anything on the silver question now that he did not know ten months ago?

Mr. HARTER. I reply to my friend from Louisiana that I know a little more on the silver question than I did ten months ago, a little more than I did ten weeks ago, a little more than I did ten days ago, a little more than I did ten hours ago, and I expect to know a little more on all other questions than I do now, the longer I live.

Mr. SMITH of Arizona. If the gentleman is improving in his knowledge on this subject as he says he is, he will be ready to vote right by to-morrow.

Mr. HARTER. I am ready to vote aright to-day.

Mr. HENDERSON of Iowa. Has the gentleman gained some ideas from the gentleman from Louisiana [Mr. BOATNER]?

Mr. HARTER. I believe I shall always be able to learn something from the gentleman from Louisiana [Mr. BOATNER].

In relation to questions of this character there is altogether too much superstition: too much climbing into the air and into the clouds, instead of recollecting that upon all great questions it is

an easy matter to find the truth. The greater the question the more important it is to mankind; the easier it is to get into the right track.

Examine any great political question involving the welfare of a whole people, and you will find the truth does not lie as deep as does the silver of the silver miner. On the contrary, the truth is easily discovered if you take the trouble to look for it. The difficulty about all such questions lies in the fact that men deal with them as if they were complex and treat them as if it were impossible to get accurate and conclusive information about them.

Let us look upon this question as we look at all the ordinary questions of life. What is money? What is it for? How did it come into use? Away back in the ages men bartered. When a man who owned cattle killed one he took the skin to the shoemaker and traded it for a pair of shoes. The man who grew flax in the field took it to the woman who spun cloth and obtained the goods she made in exchange; but after a little while this was too primitive for an advancing, progressive race. Men wanted to be able to buy from everybody the things they had at a fair value. It suggested itself to them in their peculiar civilization that these things had a commercial value that men should recognize everywhere.

Thus they came to use shells, wampum, tobacco, cocoanuts, and all that kind of media. Mankind advanced to the use of iron, copper, and silver, as the years progressed; and, finally, the most intelligent and enlightened people, whose business transactions involve large sums, desiring that their finances should be based on a safer and a more stable unit of exchange, came to use gold as their standard of value; and yet now, in the year 1893, in the greatest commercial nation upon the face of the globe, we find some of the representatives of an intelligent people, men sent here to vote for the workman, the farmer, the planter, the scholar, the professional man, ranging themselves upon this question alongside of silver. Whom do they stand with? Where, we ask, are their associates upon this issue?

Mr. BOATNER. The Democratic party of the United States.

Mr. HARTER. The Democratic party of the United States has not yet reached a condition where it makes itself a bedfellow with Dahomey and Patagonia on this question. But, whom do they represent? With whom do they stand? Not with India, because even the Hindoos have shown within the last few weeks that the unlimited silver standard is not good enough for them, much less for this intelligent people. But they have China and Japan on their side; they have Dahomey with them, Nicaragua, Bolivia, Peru, and Patagonia, also. What we ask them to do is to support a fair and honest standard of value, such as we advocate, one that neither robs the rich nor poor, but protects all alike, and which will conduct with safety all the business of this country, whether it be great or small.

Where do we stand? What nations are our companions? We stand abreast of all the great and intelligent nations of the world. England, Germany, France, Austria, Scandinavia, and the whole Latin Union, as well as the Peninsular countries of Portugal and Spain, are our associates. We are alongside of and in harmony with all the foremost commercial nations, and in full fellowship with the highest commercial intelligence in the world; while our friends, the advocates of free silver, are proposing to make their beds with the children of Dahomey and the inhabitants of Patagonia on this great question.

But after all I apprehend it is the real wish of men here on both sides, of everybody in fact, to provide a suitable and abundant currency. Our sentiments upon this point at least are parallel. We are equally patriotic so far. This being true, let us spend a little time together and see whether we can not discover where the truth lies, and when we have found it let us pursue it and settle this issue in its light and for the common good.

If in this effort we go down to the primer, or even to the alphabet of the currency question, perhaps we can all learn a little that will prove of value to us. Now, what is necessary in a money? What do you conceive to be necessary in order to make a money desirable? A desirable money must have two qualities. The first quality is volume. It serves as a circulating medium, it facilitates exchange, it helps to move the cotton bale from the plantation to the market, it brings the bushel of wheat from Dakota to New York. But that is not a very important element now or generally. It involves the volume of your currency, but there are so many substitutes for this quality that it is of less importance than the other, which is its use as a measure of value.

Money is so little used now as an instrument of exchange, compared with its former use, that it is comparatively of little importance how much of it you have. Let us reason this out. In the first place, take our own country. I shall not plead the "baby act" for the American people. I hold to the idea that an American can do business with as little money or with less money than any other human being on the face of the globe, and do it better; not to the idea that he needs more than anybody and everybody else. Now, how is it in America? Take one hundred business transactions, in how many of them do you use money as a currency? In just about eight cases out of the hundred. Volume of currency, then, in our country is not of much importance. The relative importance of volume compared with its quality as a standard of value is about as one to ten, or even less than that.

Gentlemen talk a good deal about our circulation per capita. I have very little faith in this per capita claptrap. Let us talk a little about our per capita circulation. They tell us that we have got $24 of circulation per capita, but under our banking methods what have we got? First, the national banks have $27 per capita, as represented by deposits; the savings banks hold $27 per capita; for the trust companies and the private banks $18 is a very small estimate. Add these figures together and you will find what amount of circulation your banking methods give you. They give you $72 per capita. In other words, through this machinery of banking we have increased the currency of the country three times over. But that is not all. Look at the clearing-house returns. They show that for the year ending with the 30th of June last, we had exchanges amounting to $1,000 per capita throughout this country.

Mr. STOCKDALE. Will the gentleman permit a question?

Mr. HARTER. I shall be delighted to answer questions, but I hope that the time so occupied will not be taken out of my allowance.

Mr. STOCKDALE. I want to ask the gentleman how much money there is in the United States?

Mr. HARTER. I trust the House will not deduct this from my time, and I shall endeavor to answer the gentleman's question.

Mr. STOCKDALE. I ask the question merely for information.

Several MEMBERS (to Mr. HARTER). We will give you more time.

Mr. HARTER. All right. I will try to answer the gentleman's question. There is about $1,600,000,000. Now, by way of parenthesis, I wish to say right here, lest I should overlook it later, that if we had never had the Bland-Allison act, nor the act of 1890, sometimes called the Sherman act, the circulating medium of this country would to-day be over $2,000,000,000, and a very large part of it would be in gold coin, or in credits payable in gold. So we have not even gained in volume circulation by this scheme which has brought our country down to her marrowbones, down upon her knees, in the dust and in the mud before every enlightened nation in the world. The very object held in view by our silver legislation since 1878 has been defeated, and it has brought upon us great evil instead.

Now, Mr. Speaker, I want to say a few words more about volume. I repeat that volume is of no consequence in a country where you keep the standard of the currency sound. You never can lack volume of circulation in a country where this is done. No nation which has maintained a gold standard has ever found itself for any length of time with either too much or too little money; and let me tell you, gentlemen, that it is a difficult question to determine which is worse, to have too much money on the one hand or to have too little on the other.

If my view of this matter is not sound what must be the case? If I am not correct—and a man must test his position by conclusions and results—what must be true? Why, that those countries which have the greatest per capita circulation would be the most prosperous. No man can deny the soundness of this proposition. The country that had the largest circulation would be the most prosperous. Now, I undertake to say to-day that that is not true, that it never has been true, and that from the earliest times of which we have record the nations that have been most prosperous have been those that have had the best quality of circulation, not the largest amount.

How is it to-day with the nations of the world? The nation that has the largest circulation is the Argentine Republic. Will any man say that the Argentine Republic is a model of prosperity, an example of increasing wealth and present rapid growth? Quite the contrary.

Apply to the United States to-day this theory in regard to the abundance of money; apply it to your present condition, if you like. You have been manufacturing money galore since 1878—you have swelled the volume of the circulating medium by every illegitimate means that Congress could devise. And now, at the very culmination of this policy, when you ought to be in the greatest prosperity, if your theory was correct—now, when you ought to be rolling in wealth, when every Lazarus should have become a millionaire and every Dives a plutocrat ten times over, what is your condition?

Your boasted millionaires, your owners of banks, your men who employ thousands of operatives in their manufactories, are begging at the doors of the banks for accommodations as small as

$100 and $200. And here at the capital of this great nation, with everything, according to the theory of the silver men, to make prosperity, if you go with a New York draft to a bank, a good bank—for there are none but good banks in Washington and not very many of any other kind in the United States—if you go to of any those banks with a draft on New York for $40, $50, or $100, you can scarcely get it cashed.

Here, then, is the culmination of your scheme of inflation; here is the fruition of all your doctrine. I hurl this in your face as an everlasting condemnation of every argument that will be brought in favor of a currency which is not fixed in value, and therefore not a proper measure for the business transactions of our people. The fact can not be otherwise. Which are the most prosperous countries on the globe? They are to-day England and Germany. Will any man tell me that the natural advantages of these countries are greater than ours? Do you say that their political situation compares favorably with ours? Are there any conditions of prosperity existing in these countries that rival the blessings which have been showered thick upon us in this land? No; and yet England——

Mr. HOPKINS of Illinois. Will the gentleman allow me an interruption?

Mr. HARTER. I will do so conditionally. I am laboring under the disadvantage of speaking without having had the time to arrange properly my remarks, so that the time I may ask at the hands of the House may be greater than I would want if I had an opportunity to arrange them in a more systematic manner. Assuming that the House will grant me the time I may wish, I will answer the gentleman's question if I can.

Mr. HOPKINS of Illinois. I understood you to say that the condition of England under its financial arrangements and of the English people is better to-day than that of any other country on the globe.

Mr. HARTER. I did say so.

Mr. HOPKINS of Illinois. Does the gentleman mean to say that the condition of the laboring classes of England is better than that of the laboring classes of America?

Mr. HARTER. I say that the laboring man's condition in England to-day, compared with the laboring man's condition in the State of Ohio, from which I come, is as much better (owing to the ruin wrought by this same silver question, however) as a berth in Heaven is superior to a cot in purgatory. [Laughter and applause.]

Mr. HOPKINS of Illinois. Then, if I understand the gentleman, this condition has come about since the election of Grover Cleveland?

Mr. HARTER. I said in the beginning that I was able to trace the source of this legislation to the original sinner. I declared that I did not intend to do so, but since my good friend from Illinois has raised the partisan issue, it obliges me to say in reply, briefly and in the best of spirit, regretting that his question makes necessary such a reply, that the particular law from which we are suffering was passed by a Republican House and a Republican Senate and signed by a Republican President. [Applause on the Democratic side.]

Mr. HOPKINS of Illinois. Until the Democratic party came into power there was no trouble about the condition of the country; the trouble has all come since the Democratic party has been placed in power.

Mr. HARTER. I ask pardon. I decline to pursue the matter further. It was not my intention at any time in the course of my remarks to raise any issue of partisanship, directly or remotely. The situation is too serious and this question is too great a one for men in their right minds, for the patriotic representatives of a great country, to permit the issue of partisanship to be interjected into a debate which is to decide whether a multitude of people, as deserving as any of us here, shall have food this winter to satisfy their hunger or money to buy clothing or shelter to protect them from the elements.

Under such circumstances I decline to permit the introduction of partisan politics here at this time. [Applause.]

Mr. HENDERSON of Iowa. I am in strict accord with my friend from Ohio in his suggestion that this is no time for partisanship. It is time for action, for saying things that will be for the country's good. But since my friend has departed from that rule far enough to say——

Mr. HARTER. Only in reply to an interruption.

Mr. HENDERSON of Iowa. Very well; but when the gentleman has gone out of his way to tell the attitude of the Democratic party as a party on the silver question——

Mr. HARTER. Yes, in response to an interruption.

Mr. HENDERSON of Iowa. Will the gentleman not go a little further and tell us what was the attitude of the Secretary of the Treasury, how he stood and voted on that question?

Mr. HARTER. Mr. Speaker, I trust to the good temper of the House——

Mr. HENDERSON of Iowa. Let us keep a good temper, but let us be honest. [Applause on the Republican side.]

Mr. HARTER. I mean the good temper of the House in this sense, that I may be allowed to complete my remarks.

The SPEAKER. The Chair will take the liberty of interrupting the gentleman from Ohio to suggest that gentlemen on the floor who desire to ask a question of a speaker should first address themselves to the Chair and ask permission to interrupt. This will be conducive to good order during the discussion, and the Chair hopes the rule will be observed.

Mr. HARTER. In referring, Mr. Speaker, to the good temper of the House I did not mean to use the words "good temper" in their ordinary sense. I meant to say that I thought the good temper of the House under the circumstances would be shown by permitting me (because of these interruptions) in case I should overstep my time to go on to the close of the thread of my remarks.

Mr. GEAR. Mr. Speaker, will the gentleman from Ohio permit me to ask him a question?

Mr. HARTER. I will yield to you after I have answered the question of your colleague.

Now, the question is asked me as to the position of the Democratic party in 1890 on this question. A little review here of the so-called Sherman bill will not be out of place, and if it justifies a man whose name has been held up to common obloquy by reason of his connection with it, all the better.

This was the situation in 1890. In 1888 a great political party, which had never up to that time allied itself with bad money or advocated a doubtful currency, charged the opposing party (the Democratic party), as a heinous offense, with favoring the demonetization of silver. What happened? It elected a President on that issue. What then? Indiana was in flames, bonfires on all sides, the State from whence this President came; and wherever the Republican party (in convention) met in the President's State it delivered itself of a declaration in favor of the free coinage of silver; and the late President of the United States at that time was the last man in this country before whom it was safe to lay for his signature a free-coinage law.

What happened, however? Now, I am not speaking for any other man. I can not tell whether Senator SHERMAN would say what I have just said or not. The so-called Sherman law was not a good one, but I think that, under all the circumstances, Senator SHERMAN, instead of being abused from one end of the country to the other because of his connection with this law, ought to have the grateful thanks of the people of the country because he got the very best there was for the country out of a bad situation, and that situation was due to the national platform of his own party in 1888 and to the circumstance of his party having elected a President in that year. Had we been successful at the ballot box in 1888, every man knows that with Cleveland in the White House a free-coinage silver measure could have been no more sure of his signature than would the death warrant of the Speaker of the House of Representatives.

Mr. GROSVENOR, Mr. HENDERSON of Iowa, and Mr. GEAR rose to ask a question of Mr. HARTER.

The SPEAKER. To whom does the gentleman from Ohio yield?

Mr. HARTER. Mr. Speaker, I am not unwilling to undertake to answer any question, but the difficulty about it is that I feel that the House will become tired of my enforced talking and will feel like declining to allow me to finish my remarks on a question vital to the whole country. I do not mean my remarks are vital, but the question to which they refer is of vital and instant importance to every soul on our soil.

Mr. HENDERSON of Iowa. If my friend will allow me——

The SPEAKER. To whom does the gentleman from Ohio yield?

Mr. HARTER. I yield to the gentleman from Iowa [Mr. HENDERSON].

Mr. HENDERSON of Iowa. My friend from Ohio [Mr. HARTER] is a gentleman whom I have always credited with courage and sincerity. I asked a simple question which was capable of a brief answer, but instead of answering it, the gentleman has attempted to discuss the position of President Harrison, and what would have been the position of President Cleveland. My question was a simple one. When the Sherman act, so called, was passed, what was the attitude of the Democratic party on the silver question?

Mr. SNODGRASS. Free coinage; and that had been its attitude ever since its birth.

Mr. GROSVENOR. Free coinage in Congress.

Mr. HENDERSON of Iowa. The gentleman from Tennessee [Mr. SNODGRASS] says "free coinage." There is an honest answer from the Democratic side. Will the gentleman from Ohio [Mr. HARTER] be equally fair?

Mr. HOOKER of Mississippi. The attitude of the Democratic

party was in opposition to the Sherman law. Not a Democrat voted for it.

Mr. HARTER. In answering the gentleman's question I do it purely as a matter of courtesy, and I do it knowing full well that it will interrupt the thread of my argument, for it may be impossible for me to come right back to the point from which I was diverted. Nevertheless, as the gentleman has credited me with fairness in these matters—and when I lack fairness I hope I shall no more thereafter appear upon the floor of this House—I will answer his question.

The national platform of the Democratic party in 1888 was not favorable to the free coinage of silver, nor did it charge the Republicans of the United States, as a crime, with being favorable to the demonetization of silver. To that extent, so far as platforms are concerned, one being placed by the side of the other, the Democratic attitude upon this question was inestimably more patriotic and more in line with your present position than was yours. Now, when we come to the matter of nominations, we nominated a man known all over the country to be irrevocably opposed to circulating any coin whatever, either gold or silver, with the stamp of the United States upon it as 100 cents, which was worth less than that sum. You know the kind of man you nominated, and I have no wish to proceed further in that direction. And I am certain no further answer is necessary.

Mr. GEAR. I would like to ask the gentleman a question.

Mr. HARTER. This matter which is before us and before the country is, I think, too serious, and involves the welfare and happiness of too many helpless and innocent people, for us to divert it into anything which will partake of partisan rancor.

Mr. GEAR. I do not wish to interrupt the gentleman——

Mr. HARTER. Therefore, with the consent of the House, and reminding these gentlemen that at no time when I have been addressing this House have I declined to be interrupted or to answer reasonable questions, I may, I think, with perfect propriety, now announce that I will not on this occasion answer any more questions which involve simply partisan politics; but any question involving the great issue of a standard of value or affecting the welfare of the people in connection with the subject upon which I am talking, I will endeavor to answer; but hereafter when we have voted upon and settled this question, if gentlemen upon the Republican side of the House, who seem inclined to give the discussion a direction which I do not think it ought to take at this time, and wish to interrogate me, all they have to do is to hire a hall and I will discuss this question with them until Christmas. [Laughter.] Yes, I will give them a day of grace, and I will discuss it with them until New Year's, but this is not the place nor hour for partisan discussion.

Mr. GEAR. I want to ask the gentleman from Ohio [Mr. HARTER] a question or two relating to a statement of fact.

The SPEAKER. Does the gentleman yield?

Mr. HARTER. I think the good judgment of this House and the patriotism of its members will sustain me in my refusal to be drawn farther into partisan politics to-day.

The SPEAKER. The gentleman from Ohio [Mr. HARTER] declines to yield.

Mr. GEAR. If the gentleman from Ohio [Mr. HARTER] chooses to make statements on this question which are incorrect, let him go on.

The SPEAKER. The gentleman from Iowa [Mr. GEAR] is out of order. The gentleman from Ohio [Mr. HARTER] is entitled to the floor and can not be interrupted without his own consent.

Mr. HARTER. Mr. Speaker, unless I have greatly overestimated the fairness and patriotism of the Republican side of this House, and I do not think I have, that side of the House will sustain me almost unanimously in my refusal to be drawn into further party wrangling now.

Mr. GEAR. I did not desire to draw the gentleman into a partisan discussion.

The SPEAKER. The gentleman from Ohio declines to be interrupted.

Mr. HARTER. I again decline to be drawn into a partisan discussion.

Mr. PICKLER. It is a partisan resolution to begin with.

Mr. HARTER. I remark again, if there is any question germane to this subject of coinage or affecting the currency question that any gentleman desires to put to me I will try to make answer.

Speaking of volume, I remark that if the question of volume should control, then England would be anything but a prosperous nation; Germany, too, which has $17 currency per capita, would be anything but a prosperous nation, and yet these to-day are the two most prosperous nations in the world; and we, swimming, yea drowning, in a redundant currency in this country, are at the last gasp, financially, and in a commercial way.

And then there is another phase of the principle I lay down, and I challenge any man upon the floor of this House to successfully take it up and turn it upon us: If the idea that large volume is necessary to prosperity be true, it would also be true that we should have had the greatest amount of prosperity when we had the largest amount of currency. That notoriously is not true. In 1780 we had any quantity of currency. Continental money had been so increased that it came to be worth less than silver to-day. It fell to 2 cents on the dollar; and yet that certainly was not a period of prosperity. In 1837 we had a redundant circulation. Will any man stand up here and say that 1837 was a time of brightness with the American people, an epoch of prosperity? Again, in 1857 we had a great volume of currency; is there any gentleman who can ransack the chambers of his brain and discover a single ray of prosperity in 1857? In 1873 we had the culmination of inflation, and yet nearly all the great industries of this country went down under it. Unless you can prove these periods to have been not only prosperous, but superlatively so, you must surrender the idea that a great volume of currency is necessary to prosperity.

I am one of those who would now provide for more money safely, because in thus giving way to people who believe we can not have enough money unless you make some provision of the law of the land for its increase you enable them to rest easily and to sleep soundly. But look at Great Britain. Since the bank act of 1844 there has not been a statute or an act passed providing for an increase of the circulating medium of Great Britain; and yet through all this time it has been the only country that has at all times had an abundance of money—gold, silver, and paper. You talk about the country needing money. Now, let me make a comparison, to illustrate the truth of what I have been saying in regard to volume. You have between twenty-four and twenty-five dollars per capita; and what is the rate of interest in this country? Is there any man on this floor who could borrow to-day $10,000 from a bank, even with Government bonds as collateral; and if you can, will anyone tell me what rate of interest you would have to pay?

Mr. GROSVENOR. There is no such man here.

Mr. HARTER. There is no such man on the floor of this House. Here then is the triumph and fulfillment of the final result of your inflation. Nobody on the floor of this House could borrow $10,000 on such collateral; and I say further that there are some men who are actual millionaires who are not able to go to a bank to-day and borrow $1,000 at any rate of interest.

Why is this? But, you say, there has been a panic in the country. Well, there was no panic when you had a smaller amount of money in circulation, and when no man could question the value of your money. We have had a panic, but what kind of a panic? Why, some thirty-eight or forty million dollars of bank capital has gone down—most of it temporarily. Now, what has happened to England? She has only three-fourths as much money per capita as we have, and she does a larger business per capita, and what has happened to her?

A few months ago $500,000,000 of her bank capital and deposits in Australia went to the wall. What effect did that have in England? Was any merchant there unable to borrow money? Were the banks unable to pay gold, or silver, or paper? Not at all. Did the rate of interest go up to 75 per cent? No. The rate of interest in England during the entire Australian trouble never, according to my recollection, reached 8 per cent; and to-day, when you can not in this country, oversupplied with currency such as it is, borrow at all, you can go in Great Britain with her smaller per capita circulation, with her $18 per capita of circulation, and at any bank borrow money for three months on any good merchant or manufacturer's note, at less than 5 per cent per annum.

Mr. GOODNIGHT. Mr. Speaker, I would like an item of information from the gentleman at this point.

Mr. HARTER. I will give it if I can.

Mr. GOODNIGHT. The gentleman has said recent inflation has brought disaster. I wish he would state for the information of the House how many of the certificates that have been issued for silver bullion coin notes remain unredeemed under the Sherman act, and how many of those redeemed have been reissued?

Mr. HARTER. I am unable to answer the question without looking up the facts.

Mr. GOODNIGHT. My question amounts to this: How much has the currency been increased under the operation of the Sherman act?

Mr. HARTER. I personally think, as I said before, that while the intention was to increase the circulation of the country the result was quite different. The result was to actually reduce the circulation below what it would have been but for your action and at the same time to render it far worse in quality——

Mr. GOODNIGHT. Then, does not the argument based on inflation fail you?

Mr. McRAE. But, according to his logic, is not that what ought to be done—that reduction?

Mr. GOODNIGHT. The gentleman from Ohio was arguing that the currency has been inflated. Now, I ask him how much?

Mr. HARTER. I argued that all the machinery of inflation had been used, but that it had proved a boomerang, but nevertheless that the present volume of $25 per capita was, in the eyes of you gentlemen, and of all the world, inflation as compared with the per capita circulation of Great Britain.

Mr. GOODNIGHT. I know that the gentleman desires to be perfectly frank. Now, how can that be, when France's circulation is almost double our own?

I understood the gentleman based his argument upon the ground that the circulating medium had been inflated. Now, I want to ask him if all the certificates issued for silver bullion, with the exception of a little over $2,000,000, have not been redeemed in gold, and how many have been reissued?

Mr. BYNUM. If the gentleman will investigate the last Treasury statement I think he will find that about $140,000,000 of them are in circulation, and only about $2,000,000 in the Treasury, so that they are practically all in circulation.

Mr. HARTER. The answer made by my friend from Indiana covers the question of the gentleman from Kentucky.

Now, I want to speak a little further about volume. England, I say, at no time since 1844 has had any provision for the increase of her currency; and I go further and I say that as long as we keep our currency sound we never can have too little or too much currency. Go out with me, if you please, to the Potomac. Take one of these fans and shovel up the water and make a hole there How long—I ask any gentleman who is in favor of the free coinage of silver—how long will that hole remain? Everybody knows that the water will flow in and fill it up instantly.

So it is with a lack of currency. In a country which keeps its money just exactly what it purports to be, in a country which so acts that it has the confidence of the commercial world, there never can be for any length of time a lack of money. When our money is actually what it purports to be, let the news go by cable to Europe that New York needs money and that the people of this great country are willing to pay a round rate of interest, and you will not have to wait for the slow, or even for the swift, pace of the ocean racer, but the lightning flash of the cable will bring it to you, and it will continue to flow in until the rate of interest is reduced to about the normal level of the world. And you, gentlemen, who live out on the prairies of the West, and on the plantations of the South, ought to remember that when the rate of interest is low in the great city of New York it means lower rates of interest for every borrower in every State in the Union.

The sovereign recipe for having abundant money lies in this nutshell: *Keep your money what it purports to be.* Make every American dollar worth 100 cents all the year round and under all circumstances. Remove from the people of other nations the apprehension which they now have, that you are about to play them a Yankee trick and pay your debts at the rate of 50 or 60 cents to the dollar, and you can all go to your homes and inside of two months there will be plenty of money for you to borrow on good notes in the ordinary avenues of business at the ordinary rates of interest.

Mr. WILLIAMS of Mississippi. May I ask the gentleman a question?

Mr. HARTER. Yes, sir.

Mr. WILLIAMS of Mississippi. In connection with the gentleman's remarks about the volume of currency, I understood him to say that, so far from nations being prosperous in proportion to the volume of their currency, the contrary was nearer the truth.

Mr. HARTER. I said that.

Mr. WILLIAMS of Mississippi. And the gentleman illustrated that by reference to England, Germany, and France.

Mr. HARTER. Yes, sir.

Mr. WILLIAMS of Mississippi. Now, I will ask the gentleman whether what I am about to read does not correctly state the per capita circulation of the countries named, and whether these countries are not monetarily prosperous in almost the same order in which they stand in the list:

France, $40.56; Belgium, $28.53; Netherlands, $28.88 (this is the country where the fewest number of people of any country in the world suffer for want of food or clothing); Australia, $26.75; United States of America, $25.15; Great Britain, $18 and some cents.

Now, I will ask the gentleman whether these figures are not correct—whether the country which has the smallest amount of currency is not China, with $1.75 per capita?

Mr. HARTER. China is on a silver basis, such as you propose for the United States.

Mr. WILLIAMS of Mississippi. I do not care about the basis. Then the country with the next smallest amount of circulation is India, with $3.64; the next smallest Japan, with $4.60; the next smallest Mexico, with $4.91.

Mr. HARTER. Before answering the gentleman's question I will say that I am proceeding on the theory that my time will be extended so that I can finish my remarks.

Mr. GROSVENOR. Inasmuch as my colleague has nearly exhausted his hour, I ask unanimous consent that his time may be extended indefinitely to allow him to finish his remarks.

The SPEAKER. The gentleman from Ohio [Mr. GROSVENOR] asks unanimous consent that the time of his colleague be extended till he finishes his remarks. Is there objection? The Chair hears none.

Mr. HARTER. Mr. Speaker, I believe it very profitable that such reasonable and proper questions as those which my friend from Mississippi has asked should be answered, and in the same courteous and manly spirit in which they have been presented. If I am unable to answer these questions to the satisfaction of the House, or rather, if an abler man than myself is unable to do so (for I may be unable), then I must abandon that portion of my argument upon which I have just been dwelling. Let me now proceed to answer the question of the gentleman. I say that the nation which takes the lead in the list to which he has referred, France, is not the most prosperous country of the world; and I will show this briefly in two ways.

In the first place, I say that the wages of her people, who work ten and twelve hours a day, are not as large as the wages paid in a number of other countries on the list having a smaller per capita circulation. Therefore the income of her people is decreased rather than increased by reason of the amount of circulation. On the other hand, the expenses of living in France—the cost of the articles necessary for the laborer's support—are higher in France than in some of the other countries named by him. There is a conclusive answer to the gentleman's first question—that wages are lower in France, while living expenses are higher than in countries with a smaller per capita circulation.

I take the next country in the list—Belgium. She suffers under the same difficulties as France, except that the living expenses in Belgium, because of a wiser system of tariff taxation, are somewhat lower than in France.

I next take Holland. In that country wages are not nearly so high as in Germany, though the general prosperity is greater—why? I do not seek to introduce the tariff question improperly, but I can not allow this matter to pass without remarking that the prosperous condition which has prevailed for many years past in the Netherlands is largely due to a tariff system which is, to my mind, more intelligent, more abreast with scientific and practical economics than that of Germany.

What is the next country? Our own land. I say at this time when the American flag might properly be draped in mourning—when crape might fittingly be drawn over the door lintels of the laboring people of this country—in this condition of present ruin (but thank God, prosperity will come in the early future) I can not find it in my heart to say that this hour and this day is one of prosperity in the United States of America. I would like to see the man on this floor who will venture to say so.

I now come to Great Britain. Talk about metallic money. Why, sir, Great Britain, with 20 shillings of metallic money does as much business as the United States does with 58 shillings, as much as France does with 85 shillings, as much as Portugal and Spain do with 100 shillings, as much as Italy does with 40 shillings. And she pays higher wages to her working people, and they have lower expenses, proportioned to income, than any other nation on the globe except solely and alone the United States of America, Canada, and Australia. Now what next?

Mr. WILLIAMS of Mississippi. There is another point——

Mr. HARTER. Is not that enough? [Laughter.]

Mr. WILLIAMS of Mississippi. In connection with what you have said, let me say that these figures show that the coin circulation of Great Britain is $13.47 gold, and $2.63 in silver per capita, which makes $16 and over, while the United States has but $18 and something over. So that this great discrepancy to which the gentleman refers does not exist.

Mr. HARTER. I agree with what the gentleman has suggested. What I have referred to was the silver in circulation.

Mr. WILLIAMS of Mississippi. I understood you to say coin.

Mr. HARTER. I did say coin, and I accept the correction with thanks, for I should have regretted my statement to have gone into print in that shape. I meant to have said silver coin. Is there anything else?

Mr. WILLIAMS of Mississippi. You might dwell on India and China.

Mr. SMITH of Arizona. And Mexico.

Mr. HARTER. Yes, Mexico; and China particularly, as one of these "silver blessed countries." China has what our friends demand in the way of coinage for this great country of ours. It

has free coinage of silver; and the lucky Chinese mechanic may be able, if skilled, to make as much as 4 cents a day, payable in debased money.

Mr. SMITH of Arizona. What as to Mexico?

Mr. HARTER. In regard to Mexico——

Mr. SMITH of Arizona. Let me ask what would be the effect, in the judgment of the gentleman, on the Mexican Republic to-morrow, on her alleged depreciated silver currency, if she should demonetize it? What would be the effect on labor?

Mr. HARTER. Fortunately I am able to answer that question absolutely and literally, for we had a forcible example of it within the last four or five weeks. India was just in that position. She had silver in circulation under the same circumstances. She demonetized silver, and what happened? Government securities all advanced, commercial credits advanced, business improved, just as it will do here when you strike down the monstrous theory that we are to be compelled to pay the mine owner one dollar and twenty-nine cents for what is or was worth sixty-two cents only a few days ago.

Mr. SMITH of Arizona. Did labor go up in India?

Mr. HARTER. Oh, it is too early for that. [Laughter.] As the gentleman knows, if he has studied the subject at all, labor is one of the last things to secure advantages of any kind which may arise from improvement in the condition of governmental affairs, and one of the very first to reap the disadvantages. Those most injured by your purchase of silver under the operation of the so-called Sherman law in this country have been mainly the laboring element, over 500,000 honest men being out of employment in this country at the present time. They are the sufferers first, last, and all the time from unwise fiscal legislation.

Mr. BOATNER. Mr. Speaker—

Mr. SIBLEY. Let me ask the gentleman from Ohio a question.

The SPEAKER. Does the gentleman yield for a question?

Mr. HARTER. Mr. Speaker, I would like to make a statement just here. I remarked to the House a short time ago that I spoke under some disadvantages, without having been able to reduce to writing what I desired to say on this question. Under these circumstances in my desire, earnest as it is because the question is vital to everybody—in my earnest desire to make a logical continuous argument on this subject, I find that the interruptions arising from the interjection of questions interfere greatly with my purpose. And yet, sir, I feel I can not refuse to answer a question that is germane to the subject.

Mr. SIBLEY. I wish to ask a question that is germane.

Mr. HARTER. Very well; I will try to answer it.

Mr. SIBLEY. The gentleman has suggested that the demonetization of silver in India has caused government securities to advance. If that be the case, why is there a bill pending now in the English Parliament for the relief of the holders of these commercial securities, in the sum of £200,000,000, because of the depreciation that has been brought about?

Mr. HARTER. I am glad the gentleman asks that question, because it gives me an opportunity to answer it to his satisfaction. My remark was that government securities, railroad securities, and commercial credit had all risen in value or improved. The securities(?) to which my friend from Pennsylvania [Mr. SIBLEY] alludes are the holdings of silver bullion controlled by the banks, who were not expecting the demonetization of silver; and these, finding their goods on hand depreciating, have found some men in Parliament willing to offer a bill for their relief. [Laughter.]

Mr. MORSE. Will the gentleman from Ohio [Mr. HARTER] allow me to ask him a question?

Mr. HARTER. I would rather not. I repeat again, that if I thought this House would be willing to listen to my answers to these questions until night, I should be very glad to allow interruptions without limit; but I think that the patience of the House will, after a while, expire.

Mr. MORSE. I see the gentleman inclines to allow me to ask him the question. My question is this: I entirely agree with the gentleman about the purchasing clause of the Sherman act, so called, but I want to ask him if he does not think that if the country were assured that there would be no tariff legislation, this present incubus and business prostration would at once lift, notwithstanding the Sherman law?

Mr. HARTER. My friend from Mississippi [Mr. WILLIAMS] suggests to me an answer to that question by saying that it is in the nature of a motion for a new trial in a case where I think the people of the country, composing the jury, were almost unanimous. [Applause.]

Mr. MORSE. Do you think that if the question were submitted to-day they would be unanimous?

Mr. HARTER. I think that question is scarcely germane to the present discussion. I believe I have demonstrated to the satisfaction of those people who are at all reasonable that the volume of the currency has very little to do with the prosperity of a country, and that the volume of the currency will take care of itself. I think I have also satisfied you that periods of great currency expansion were not periods of great prosperity. I think I have proven that the countries which keep their standard of value secure can get along admirably with a smaller circulation.

Now, I want to go further and say that it is very wasteful to have a large circulation. Suppose I was conducting a farm, and had four teams when one team was enough to do the business. Would you not say I was an extravagant and reckless farmer? You would. Suppose I was carrying on a dry-goods store and selling $100,000 worth of goods a year, and a stock of $10,000 was sufficient for my neighbor across the street to do an equally large amount of business; but suppose I insisted upon having $30,000 worth of stock? As you walked along you would say: "Mr. Harter must be a very poor man of business; he requires three times as large a capital to do a given amount of business as the other man requires to do the same amount."

I would also necessarily pay three times as much for clerk hire, three times as much for general expenses, three times as much for taxes, and all that sort of thing. The same principle applies to money. There is no law for money that does not apply under the same circumstances to other things. Suppose you have a great volume of metallic currency which you do not need. It is costly and expensive. Look at this silver piled up in the Treasury of the United States. Think of it. Five hundred millions of dollars at 4 per cent interest; why you are losing $20,000,000 a year on it in the shape of interest alone. Besides that, it is going down in value every day, creating more debt for the people of the country to pay. Who is it that says that such financiering on the part of the nation is wise? I say that if you will only keep your money good, whenever we need either gold or silver, we will have it and have it in abundance.

Now we come to the subject of silver legislation. What has been our legislation upon this subject? Since 1878 we have gone on buying silver which we did not need, which we did not want, and have been indirectly paying for it with gold which we did want. What would be the result with any business man who could not tax others to maintain himself? He would be bankrupt in a little while. This nation of ours, but for its ability to tax everybody, would be bankrupt now.

What has it cost? I took the trouble to send to the Treasury Department to see what this system which is depreciating your currency, which has brought panic upon you, and which has crippled every industry, has cost directly. I sent to the Treasury to see what this has cost you, and I discovered that the difference, Saturday, two weeks ago, between the market value of the silver which you have been piling up in the Treasury, and the price you paid for it, was, how much do you think? By this experiment you have wasted since 1878, $141,810,980 of the people's money.

Why, gentlemen, this sum alone would be sufficient to complete the Nicaragua Canal, and would pay the debt of one of the Pacific railroads to the United States; and yet, not satisfied with such a result as this, you are asked to dip deeper and deeper into the commercial vitals of your country. Is it not time to stop, put on the brakes to reverse the engine?

Mr. RAWLINS. May I be permitted to ask the gentleman a question?

Mr. HARTER. Remembering that I have to look to the indulgence of the House to enable me to complete my remarks, I hesitate to yield.

A MEMBER. You have unlimited time.

Mr. RAWLINS. Will the gentleman kindly tell us what is the difference between what was paid for the silver now in the Treasury and the par value at which it now circulates throughout the country and the silver certificates in the country?

Mr. HARTER. Owing to the great credit of the United States the silver dollar and the silver certificate circulate at par, but the gentleman ought to know that there are less than 70,000,000 of these silver dollars in circulation. The very people who furnished this pig silver to the Treasury at a price higher by $140,000,000 than it is worth, refuse to take these dollars, and the result is practically that the silver certificate, printed on paper, circulates more freely than the silver coin, and I say that these certificates would circulate equally well if they had no silver bullion behind them.

The whole world, indeed, would have a higher esteem for the credit of this country if you issued the certificates without buying any silver to put behind them. We are a hissing and by-word for the whole commercial world; and they look upon us and say, "The hand of the American people lost its cunning when they entered on the folly of silver buying;" and, moreover,

here we are in the midst of a panic as the result of these purchases.

Nothing can be said in favor of this thing—absolutely nothing. And to-day they come to us and propose that we should have the free coinage of silver at a ratio far below the market ratio, a proposition intrinsically dishonest. Not that the men who urge such a measure are dishonest—I have too high an opinion of the integrity of the members of this House to think so—but I do say that the proposition is nakedly dishonest, and that in the whole history of coinage in the world there never has been a nation, Christian, heathen, or barbarian, that has ever offered to coin silver or any other metal at such a ratio valuation as it is now proposed to put upon silver.

Every nation except this great nation of ours, in making a coinage ratio, has proposed to make it the market ratio, and in 1792 and 1834 we adopted the market ratio, not an artificial and lower ratio. But there is no ratio which can be fixed which ever did, or which ever can, make the two metals circulate alongside of each other as gold and silver have in this country since 1873.

I think I heard it said on the floor of this House yesterday by the gentleman from Missouri [Mr. BLAND] that France was a bimetallic country. The gentleman is mistaken, France is a monometallic gold-standard country; and it is only since it has been that she has had gold and silver circulating freely at the same time. It is almost beyond belief that members of this House, in 1893, should believe in the theory that the two metals can be kept in joint circulation, both a legal tender, and both purporting to be equally a standard of value. Lycurgus, the lawgiver of Sparta, 900 years before the coming of our Lord, knew too much to believe that this was possible.

Mr. BOATNER. Do you regard it as impossible to so regulate by law the coinage of gold and silver that they can be made of the same intrinsic value and safely utilized in the regulation of our currency?

Mr. HARTER. It is not necessary for me to answer that question. All history, from the opening pages of its record, answers that question, invariably in the same way—in the negative.

Mr. BOATNER. Then you differ with the President in his letter of acceptance.

Mr. HARTER. I am not able to say whether I differ with the President on that subject or not, but I do say that all history differs with any man who says any one country can make two or more metals legal-tender money and hold them at a parity with each other, or keep them in general circulation. It is said that no rule is without an exception, but the rule that you can not establish and maintain two standards of value has absolutely no exception in human history. I have spoken of Lycurgus. He concluded that the people of Sparta were too much given to luxury, too anxious to become rich, and had too much of the commercial spirit, and he resolved that he would kill it, if possible; and he did it by making a new standard of value. For that, some hundreds of years gold and silver has been introduced and used in the commerce of the East.

At all events, Sparta and Athens and Phœnicia were then using gold and silver; but Lycurgus concluded that he would break down commerce by making iron a legal tender and at a rate far above the commercial value, and he succeeded admirably, because when a man had to take an ox-team to carry iron enough across the street to buy a cow, commerce was practically blocked, just as you gentlemen will block commerce here by putting a 54-cent dollar into the breach to do the business of a 100-cent dollar. If Lycurgus were alive now and desired to cripple the commercial spirit of our people, to reduce the volume of trading and commerce, he would probably join with our friends, the silver men, and support the free coinage of silver. [Laughter.]

The Romans, six hundred years before Christ, at the time of the Punic wars, understood this principle far better than some members of the Fifty-third Congress of the United States. They refused coinage to gold. They coined silver freely during the Punic wars, but refused coinage to gold. Why? Because those old heathen—and remember they were not distinguished representatives from sovereign States—they were plain, uneducated heathen, but at the same time they knew enough not to imagine for an instant that it was possible to keep two coins in circulation, both having full legal-tender functions.

Gentlemen talk about England. England suffered, as all other countries have suffered, until 1816 from the effort to maintain two or three standards of value at one time; but the late Lord Liverpool, in 1805, proposed what is called a composite currency, that is, such a currency as we would have if we should now stop the purchase of silver, such a currency as France has now, such a currency as Germany has, such a currency as the Latin Union has, such a currency, in other words, as all intelligent nations have to-day. In 1816 England adopted it, and now you who, like myself, earnestly desire to have both gold and silver in general circulation and common use—you, gentlemen, who want to have both gold and silver in circulation, not gold alone, not silver alone—mark the experience of Great Britain from 1816 down to the present hour. Down to that time when Germany, the United States, France, and other progressive nations followed her example, Great Britain alone among the nations of the world had both gold and silver in abundance at all times.

How about France? My friends here who are in favor of free coinage speak lovingly and eagerly of France as a bimetallic country, or as having been one. They have told us that France, when a bimetallic country, maintained gold and silver side by side. Nothing could be further from the truth. France has always been a monometallic country in practice until 1873 or 1874. In theory, I grant you, she was bimetallic. But legal bimetallism invariably produces practical monometallism. France always had either gold alone or silver alone until she demonetized silver. Why, sir, in the course of two centuries, in her efforts to keep gold and silver alongside of each other, she changed her ratio twenty-two times, and after the twenty-second attempt she was no nearer bimetallism than she was before.

But I come back to our own country. Gentlemen talk much about the bimetallism of the Constitution. There is no such thing in the Constitution; there never was, and as long as the people keep their senses there never will be. But gentlemen also talk about bimetallism—about "the dollar of our daddies." I do not know why they should talk about "the dollar of our daddies" any more than about the knee breeches of our daddies, or the frilled shirt of our daddies, or the continental money of our daddies. One has just as much connection with this question as the other.

What is the history of this country in reference to bimetallism? It is true that for a certain period we were legally a bimetallic country. But how did we begin? Did we start out in 1792 with an attempt to give to 50 or 60 cents worth of silver the value of 100 cents? Not at all. We began with an effort to give to the silver dollar its true commercial value. That was an honest effort toward bimetallism, not a dishonest scheme such as we are now proposing to work in 1893, now when we are at the very zenith of the prosperity of the country, when we have a plenitude of resources, when we are rich in everything that makes a nation great, except honesty and economic knowledge.

Now, what was proposed in 1792? Hamilton decided upon a ratio of 15 to 1. That was practically the commercial ratio. Jefferson agreed with him. They said, "If we can maintain the two metals in general circulation at all, we can do it at that ratio." To-day the commercial ratio would be 27.30 to 1. But what was the result of the effort to carry out the bimetallic policy of 1792? The two metals parted company. They were not permanently united; they did not go down the aisles of the century together. Gold and silver did not sleep in the same bed; they were divorced almost as soon as the act of Congress was passed; and for forty-two years—I challenge the advocates of the free coinage of silver to controvert this—for forty-two years we had a silver currency alone. After that, in 1834, a Democratic Congress changed the ratio to 16 to 1.

Again, the effort was to secure to the country an honest ratio, not a dishonest one. As an honest ratio they adopted that of 16 to 1. What was the result? Were both metals kept in circulation? Quite the reverse was the case. From 1834 down to 1873 silver was out of circulation; gold took its place. Why, sir, a gentleman whose business life extended through the whole period from 1834 to 1873 told me recently that during his whole business career he had never seen a full-weight United States silver dollar. You know how it was yourselves. You saw small change; but after awhile a trifling premium on the small change drove that out of circulation. If you went into a store to make a purchase the currency used in the transaction was either a rubbed-off English shilling, or a clipped Mexican or Spanish shilling, or a worn or clipped piece of American money; or else you had to use omnibus tickets, merchants' checks, or postage stamps. You did not have even petty silver for change under your so-called bimetallic system. Silver was at that time undervalued in the coinage of the United States.

Then Congress took action again on the subject and overvalued silver; they gave us about 95 or 96 cents worth of silver in four silver quarters or two silver half-dollars and limited its coinage, just as England had done, just as France has done, just as every country must do in order to keep both metals in circulation. After that, up to the beginning of the war, you had both gold and silver in circulation under that law. Then the law of which I have been speaking, the Gresham law, asserted itself still again. You extended the legal-tender quality to paper. Thus you had three legal tenders—gold, silver, and paper. What was the result? Why the cheapest, the nastiest, the most worthless currency drove out both the others. Both gold and silver were undervalued, while paper retained a legal-tender value above its

market or commercial value—coinage of silver to-day at 27 to 1 would drive gold out of circulation simply because it would undervalue it.

I say to my friend from Louisiana, without a miracle we can not keep both gold and silver coin in circulation at any fixed ratio. It is as much the law of God as if it were written between the covers of the Bible. You can not do it without a miracle, and miracles must originate on high, not on this floor. Your legislative enactments can not accomplish it. I say to-day it would be no more easy for Congress to secure bimetallism under free coinage—that is, keep both metals in general circulation at a fixed ratio, no matter how high or how low the ratio—than to discover perpetual motion.

We could just as easily mix oil and water. We could go out to the Soldiers' Home Cemetery over there and clothe the dried bones of the dead with flesh, put seeing eyes into their sightless sockets, and erect from their remains living, breathing men, as readily as we could keep the two metals in general circulation under free coinage at any ratio whatever. And how, then, can we do it, as proposed here, at 16 to 1? Why, this morning, if the ratio of 16 to 1 were fixed as the basis of your coinage, a dollar of silver would be worth 58 cents.

Is there a man here on this floor, do you know of a man anywhere, who would be willing to exchange 100 cents this morning for 58 cents? Until you can find a people willing to do so you can not maintain any such ratio as that. But you are going to vote on different ratios, and here is the great danger that underlies this question. You may not weigh the effect of the ratio. If you can not adopt 16 to 1 you are going to try to vote for 17 to 1, which will be no better. Eighteen to 1 would not help you. Nineteen to 1 would be of no earthly benefit, and finally you come to a ratio of 20 to 1. Now, suppose you adopt that, what would it be? At the present price of silver a silver dollar at the ratio of 20 to 1 on the day before yesterday would have been worth less than 75 cents.

Mr. COX. Will the gentleman from Ohio yield for an interruption?

Mr. HARTER. I yield with pleasure to my friend from Tennessee.

Mr. COX. I have listened with a great deal of pleasure to the gentleman's argument. He has stated that the silver dollar is worth to-day 54 cents.

Mr. HARTER. Fifty-eight cents.

Mr. COX. Well, 58 cents. Now, the question is, do you know of any man in the United States who has silver dollars that he will sell at that price, 58 cents?

Mr. HARTER. Certainly not, under present conditions. But I know every man who has a silver dollar——

Mr. COX. One moment, please. Does not the 58-cent silver dollar buy just as much of the products of this country as any other dollar?

Mr. HARTER. To that I answer, yes. But that is not the point. That is the present condition under limited coinage, but you are proposing to change it. In further answer to my friend from Tennessee, whom I regard as an authority on his side of this subject, I say to him that while that is true to-day, the very morning that you have by your law established free coinage in this country, then it ceases to be true, and that every dollar in existence which is now held up to its full nominal value by our present law will sink to 58 cents, the bullion value, as soon as your law becomes operative.

Mr. COX. That is merely a prophecy.

Mr. HARTER. I beg the gentleman's pardon, it is not. I do not deal in prophecies. I speak of facts. I invite you to step across the border with me into Mexico and I will show you the fact. I found fault with your side of the question for dealing in prophecies, therefore I can not employ them. I am neither a prophet nor the son of a prophet. I again invite you to go across the border into free-coinage Mexico with me, where the dollar is worth what the United States dollar would be in the event of the adoption of this law which you propose—that is, the exact bullion price of the silver and no more. Suppose you go up to the highest point suggested, which is 20 to 1. It would not even tend to keep one dollar of your silver in circulation on a parity with gold. It will have no more effect than would a ratio of 1 to 10. One to 10 would do just as well as 1 to 20. What would 1 to 20 mean?

Day before yesterday the sixteen-to-one dollar was worth almost 60 cents. Suppose you make the ratio 20 to 1, which is the extreme limit proposed by these gentlemen. Your silver dollar would then be worth 75 cents. Do you mean to say, gentlemen, that any man, woman, or child in this country would be willing to pay out an honest dollar worth 100 cents for a freely coined dollar worth 75 cents?

If you are to keep gold in circulation, you must find people who will exchange a dollar in gold for 75 cents. You would decline to make such a trade, and it is an uncomplimentary thing for you to think that the balance of the people of your district and of the United States are fools. Unless everybody but you are fools, free coinage of silver at 20 to 1 would drive every gold dollar out of circulation.

But, gentlemen, free coinage would bring ruin. You people talk about there not being enough money. A gentleman asked me here how much money there was in circulation in the United States, and I said about sixteen hundred millions of dollars. Call it eighteen hundred millions of dollars. About one-third of it is gold, and you gentlemen say we have not enough money. I think we have, but perhaps I am wrong. But suppose you are right. What kind of a remedy are you proposing?

If this is not enough money, what is your plan for increasing the supply? Your plan is the free coinage of silver at 20 to 1, which would drive every dollar of gold out of circulation. It means that if you have eighteen hundred millions of money to-day to do the business of the country, which you say is not enough, that if you should have free coinage then you would have only twelve hundred millions. That is inflation with a vengeance, isn't it?

Your plan, then, for inflating the currency is to reduce its volume from $1,800,000,000 to $1,200,000,000. If you had three men employed to-day, on to-morrow morning you could then only employ two, and the competition between the three would reduce the price for the two men you could employ to starvation wages. Now, look at the laboring man's side of the free-coinage question. You reduce his wages by cutting off the demand for his labor, and then, after reducing his wages, you pay him in a 75-cent dollar. But you also say your plan will increase the price of everything he consumes.

Why, I have heard in Holy Writ of a son asking his father for bread, and it says "Will he give him stone?" You free-coinage men, when the working men ask for bread, would give them a stone; yes, you give them worse than that; you give them dynamite to try their teeth on. [Laughter.] Again, it is written, "If he ask for a fish, will he give him a serpent?" You would give the workingman not a serpent alone, you would give him a parcel of them, a regular trinity, a boa constrictor, a rattlesnake, and a copperhead, financially, all crowded in one, for the destruction of the man and his family.

What inconsistency! You declare you are the advocates of inflation and yet insist upon a measure which will reduce the present volume and at the same time cripple, if not destroy, its usefulness to the country as a standard of value. If we, on our side, have nothing to propose that is intelligent, wise and meritorious, prompt and efficient, then cast us aside. But see what we propose will accomplish for the country. We advocate the unconditional stoppage of the purchase of silver. Now, what would result from the adoption of this policy? If you pass the law we propose, you would see the morning sun looking down on the country, and would find it in a vastly improved condition. Some gentlemen have been, I am afraid, unfair in trying to give the impression out in this House that stopping the purchase of silver would drive silver out of circulation. Not at all. If you stop the purchase of pig silver every dollar of silver now in circulation will remain in circulation; not 10 cents worth of it would be driven out. Every dollar of paper money would also remain in circulation; all the gold now in the country would also continue in our service. But what else would happen? Its blessed beneficences are far beyond the power of my faltering tongue to present, to describe, or picture to you. I wish I had the power of the artist and the tongue of the orator; I could then properly put before the members of this House and before the country the magnificent prosperity that would come to our country through the unconditional repeal of the purchasing clause of the silver bill.

It would not only, as I have said, keep every dollar in circulation that you have now, but, in addition to that, it would invite from Europe the great stores of capital, seeking more profitable employment, and you men from Texas and the South, who now find yourselves unable to get money enough to move your cotton bales, who have been and are now unable to borrow money at 12 or even at 25 per cent, would then find no difficulty whatever in borrowing all the money you could legitimately use at the legal rate of interest in your respective States.

Why? The passage of this measure would declare to all the countries in the world that you mean to keep our standard of values permanent, safe, and solid. We now offer the best security for money obtainable in any country on earth. Men living in France, Germany, and Great Britain will again invest their money freely in our securities as soon as they feel that they will not be cheated out of a large part of it. Here we are at peace, with the greatest resources of any nation on the globe, without danger from within or without, and our security the most absolute that can be given for capital. Money would flow

here on the wings of the wind for investment; and money would loan within ten days after the repeal at the rate of 2 per cent on call in the city of New York.

Mr. JOHNSON of Indiana. Will the gentleman tell me what would be the effect on time contracts under a law establishing a single standard? Would it appreciate the value of the money on time contracts or not?

Mr. COX. It would depreciate the value of all property.

Mr. HARTER. I will answer that question shortly, for it is a fair and an important question. I have been endeavoring to draw the picture of the prosperity which will follow the stoppage of silver purchases, and have fallen far short of describing the widespread blessings which would come in its wake. The gentleman from Indiana could do it better.

Mr. JOHNSON of Indiana. Oh, no, you flatter me; I wanted to hear your reply to my question.

Mr. HARTER. I have in my eye the president of one of the large financial institutions of the country, and I will ask him to correct me if I err in saying that for the past two or three years Europe has been withdrawing her capital from this country. Why? Simply because she believed that we could not go on buying silver and continue to maintain our dollar at 100 cents, and she had good reason to think so, for we find that a large and intelligent fraction of the members of Congress propose unblushingly to have free coinage at a ratio which would have given us, at the highest, a 75-cent dollar.

Europe, I say, had good reason to suppose that the money which she had invested here, which was bringing an abundant return, and which up to that time she had regarded as more safely invested than it could be at home, was in danger, and to withdraw her capital. If you asked the European capitalist, "Are you not satisfied with the interest?" he would answer you, "More than satisfied." "Are you not contented with the security?" the reply would be, "The security is absolute." "Why, then, do you desire the return of your money?" "Because to-day for every dollar that we have invested in the United States we can now get 100 cents, but if we delay in collecting it we fear that we shall not be able to get more than fifty."

Gentlemen, here is the secret, here is the real cause of the panic from which we are suffering to-day. You need go no further to seek it. If, however, you say and show to the world that the dollar of the United States is and shall be eternally worth 100 cents, you will reverse present conditions and never from that moment will we lack money or credit as a people.

But there are one or two other things that we ought to do after we have stopped the buying of silver. Permit me to state what they are. I think it is the sense of the people of this country, and the consensus of opinion in this Chamber, and in the Chamber at the other end of this Capitol, that we ought to extend to the national banks this privilege of issuing circulating notes up to 100 per cent of their bonds deposited as security for their notes.

This would give the readiest and quickest relief our people could have. Why? Because the money so added to the circulation of the country, amounting to eighteen or twenty millions, would be immediately and thoroughly distributed all over the country. Bring in twenty millions of gold to the port of New York, and it will take some weeks, or even months, to get it out among the people; but the proposed increase of the circulating notes of the national banks would be distributed immediately, and distributed just where it is needed, among the planters, the farmers, the manufacturers, the business men of the country.

The next thing to be done is this: I believe that, as prudent business men, we ought to authorize the Secretary of the Treasury of the United States, with the concurrence of the President, at any time, in any amount, and at any price, to sell "3-30" year 3 per cent bonds of the United States for two purposes: First, to maintain the parity of all the paper and coined money of the United States, and, second, to meet the debts of the United States as rapidly as they mature. This measure would forever maintain the credit of the United States, and yet I doubt whether, under its provisions, there would be in the next twenty years $200 of United States bonds offered for sale by any Secretary.

After this there are two other things that we ought to do, and then, in my humble opinion, we ought to go to our homes and let the country have a rest until December. We ought next to pass a resolution that when, say, six countries in Europe, including Great Britain, Germany, and France, open their mints to the free and unlimited coinage of silver as well as gold, the President of the United States shall be authorized to open by proclamation the mints of the United States to the free coinage of silver at the same ratio. If you are ever going to get free and unlimited coinage that will bring it; but if you undertake to introduce it here in this country without concurrent or antecedent action in Europe you will never have it in the world, and you will but put your country on the basis of Mexico, Dahomey, and China.

Mr. JOHNSON of Indiana. But, according to your argument, as I understand it, a bimetallic ratio throughout the world can not be maintained even by international agreement.

Mr. HARTER. That is my individual opinion.

Mr. JOHNSON of Indiana. Let me state my question. Could we maintain bimetallism by international agreement? You have argued that it could not be done in this country alone. Now, could it be done by international agreement?

Mr. HARTER. I say in the first instance that no man standing in human shoes can answer that question absolutely either one way or the other. But I did not finish what I was saying about the ratio business, and I am afraid, owing to so large a number of interruptions, my remarks may appear in the RECORD in so disordered and unconnected a manner as almost to require an interpreter for the ordinary reader. Even if we were to adopt as the present ratio 27.30 to 1, which would be putting into the silver dollar a dollar's worth of silver, I say unhesitatingly we could not maintain the double standard of silver and gold in this country. While 27.30 to 1 may be, and indeed is, the commercial ratio to-day, the commercial ratio changes constantly.

Why, sir, during the last thirty days we have seen the ratio away up to 30. If we were to attempt to maintain a fixed ratio as that, all the gold would go out of circulation at one time and we would be tramping down the aisles of commerce on silver legs. [Laughter.] Then when the market value of silver changed and it proved to be undervalued silver would be expelled, and you would be traveling on six hundred millions of gold as a basis, instead of doing business with $1,800,000,000 of mixed currency. You could not deceive a child upon such a proposition, provided he understood the rules of addition, subtraction, multiplication, and a very infinitesimal amount in the line of vulgar fractions. Why, then, should you expect to be able to deceive the intelligent people of this country and the world?

However, I will say to my friend from Indiana, that if we are ever to have bimetallic free coinage, it must be by the union of a great many nations. I have sought to speak in a conservative spirit and with absolute frankness, and I say to my friend from Indiana, that with the present methods of doing business throughout the world—when in forty minutes we can send a telegram around the globe, whereas formerly it took fifty days for a letter to go to Berlin and as many days more to get a reply—with these modern methods of doing business I do not believe (this is my personal opinion only, for no man can speak dogmatically upon the question), that we can ever maintain international free coinage at any ratio whatever. But I will be very glad to see the experiment tried. But when you propose to have me adopt a proposition here which would bring ruin to every American hearthstone through an experiment which has failed everywhere else throughout the world, then I cry a halt in the name of the helpless people and of those who are not on this floor to speak for themselves.

Mr. JOHNSON of Indiana. Then I understand the gentleman's position to be that bimetallism, even by means of an international agreement, is, in his opinion, an impossibility.

Mr. HARTER. In my opinion it is an impossibility; but I have said I shall be glad to join hands with the gentleman from Indiana, the gentleman from Texas, the gentleman from Mississippi, and with gentlemen from every other portion of the Union in making the experiment so soon as we can get other prominent commercial nations to take a share of the risk. But I am not willing that my country, under the circumstances, shall take the sole risk of a most dangerous experiment, which, so far as human eyes can see, judging by the experience of nations, must result in ruin and disaster.

Mr. JOHNSON of Indiana. Then the gentleman believes that the prospect of bimetallism by means of an international agreement, as now held out by the advocates of free coinage, is a delusion and a snare.

Mr. HARTER. I know the gentleman will excuse me from answering that question, as I have, within the last few minutes, answered it twice.

Mr. JOHNSON of Indiana. I simply wanted to emphasize the gentleman's position.

Mr. SNODGRASS. I would like to ask the gentleman a question. Does he not think that before we retire from these halls and go home we ought to repeal the fraudulent and unconstitutional tariff laws, giving the people relief from unjust taxation and the payment of improper tribute to the manufacturers?

Mr. HARTER. Introductory to my answer to your question I propose to state a little matter of history personal to myself.

For thirty-one years I have been called a free-trader. I have never believed that any tax should be laid upon a citizen of the United States beyond what was absolutely required by the Government for governmental purposes; in other words, nothing beyond what was just and equitable to the citizen.

Mr. SNODGRASS. But do you not think that in the consideration of the great financial questions which involve the welfare

of the country at this time the most important factor is the tariff?

Mr. HARTER. I will answer the gentleman's question as I proceed if he will bear with me.

I say that I have been a consistent advocate of that kind of taxation for over thirty years. Ever since I have been a boy it has been with me a conviction that the Government should not impose any tax which would have the effect of taking the property of any citizen, not for the use of the Government, but under the name of protection, to be turned over into the coffers of any other man or set of men. But for many years a large number of my Democratic friends thought that Mr. HARTER was a little too far advanced in his views, and they were not particularly anxious to have him help construct platforms or make speeches at conventions or other public places. I am not surprised at that. I am not much of an adept in the art of speaking.

My language is not so pleasant as that of many others, my voice perhaps not so harmonious. I am not keyed up to the flights of oratory which distinguish the utterances of many gentlemen (whom I envy, by the way,) on the floor of this House, and I never was or will be. Therefore, I was not surprised that my Democratic friends were not particularly anxious, were not tumbling over each other, so to speak, in an eager desire to have me make speeches. [Laughter.] But the reason assigned was that Mr HARTER was such a crank on the subject of free trade that he would probably succeed in driving away the mechanics, and that he would certainly discourage the farmers. [Laughter.] Since that time, however, I have discovered that many of these gentlemen who hung back then have got up with me on the tariff question, and some have gone even beyond. [Laughter and applause.] I find some of these gentlemen now members of the House and unwilling to delay even for the coming of the regular session of Congress the consideration of this question. [Laughter and applause.]

I wish to say distinctly, in reply to the question of the gentleman from Tennessee, that I for my part would rather attend to the immediate business which we have before us; attend to it and do it thoroughly, stop the purchase of silver; authorize the national banks to issue up to the par value of their bonds; authorize the Secretary of the Treasury and the President of the United States to issue bonds if necessary; authorize the President to throw the mints open to coinage when the other great nations of the world shall do the same, and then, after a dilatory Senate follows our wise and patriotic course, go home and let the country grow up to the marvelous prosperity that we would see before the assembling of the regular session on the first Monday of December. [Applause.]

I fear the Senate, less sensible than we to the misery of the people, more callous than we to the agony of the nation, will delay and procrastinate. If so, when we have done our whole duty as patriots in this hour of disaster, in this day of dread, let us adjourn for three days at a time and allow the entire attention of an intelligent press and an outraged people to be focused on the men who, some say, are prepared to sit idly at the other end of the Capitol cracking jokes while the entire nation is on the verge of ruin and the majority of American homes in danger of starvation during the coming winter.

If the Senate, then, continues to sit as Nero once sat, fiddling while Rome burned, it must bear the sole responsibility for all the sufferings of the people. I have too much faith in the men who compose the Senate of the United States to believe that body will long withhold the relief which the stoppage of silver purchases will afford.

Reassembling in regular session in December, in the midst of the plenty and prosperity of the people, who to-day sit in their humble homes all over the land in enforced idleness, begging and praying that the next whisper of intelligence they receive from here may be such as will bring to them comfort, the hope of early employment, and the certainty of subsistence for their helpless families—we can come back here in December loaded down with the blessings of all the people of this land, and then we can add to and increase their prosperity by cutting down all unnecessary and unjust taxation upon the people. This is my desire. [Applause.]

Mr. RICHARDSON of Tennessee. Why would the national banks issue 100 per cent of the value of the bonds, when they would not issue 90 per cent, as the law now authorizes them?

Mr. HARTER. They would, and that would immediately bring an addition of eighteen or twenty millions of circulating medium of the very best kind, and would distribute it, which is still more important, exactly where it is most needed.

Mr. RICHARDSON of Tennessee. But what would induce the national banks to issue up to 100 per cent, when they will not issue 90 per cent, which they are entitled to issue now under the law?

Mr. HARTER. What was it that induced Shylock to lend money to Antonio? [Laughter.] I am not calling the bankers Shylocks, because I consider the business of banking as honorable as the business of the farmer, the merchant, or the lawyer, and more so perhaps than the occupation of a Congressman: at all events, more profitable than ours. But they already have the bonds, and it would be profitable to them to reach out and gather the advantages to be derived from additional circulation. Do you understand me?

Mr. RICHARDSON of Tennessee. But the point is that they have not been taking out 90 per cent of the circulation to which they are entitled under the law, and I can not see, and therefore ask the gentleman to explain, why they should take out 100 per cent unless you could get the price of the bonds reduced. They will not buy the bonds at the present prices.

Mr. HARTER. A word will clear it up. I am predicating my remarks upon the bonds already purchased, owned, and deposited for circulation by the banks. They have them on deposit now. They would not need to invest another dollar, for, if this permission was given, they could enlarge the circulation from eighteen to twenty million dollars without any cost whatever to themselves.

But there is also a negative advantage, and it is this, and I am glad the gentleman asked the question for it brings out this point. It would make circulation profitable to the banks and there would be many millions more bonds deposited at Washington and fresh additional circulation issued upon them.

Mr. JOHNSON of Indiana. Is it not because the appreciation of gold under a single standard would make a scarcity and a contraction, and therefore make it necessary and proper for the banks to make the larger issue to relieve the stringency by an additional circulation?

Mr. HARTER. Here are a few fallacies that lie at the bottom of the entire currency question, and they are fallacies which have deceived and misled very many of the best men in this country.

The first fallacy is that gold and silver have not varied much in actual ratio value for thousands of years. I have heard men on the floor of this House say that gold and silver have gone along for three thousand years with scarcely any variation at all. Now, men believe this. They are honest in this belief, too. They do not intend to deceive anybody. They say gold and silver have not varied in their relative value more than a few cents for three thousand years. Well, even that amount of variation would be more than enough to throw out of circulation the undervalued metal. But, on the contrary, they have varied in three thousand years from a ratio of 1 to 7 to a ratio of 1 to 30.

Mr. MOSES. Who said they had not varied?

Mr. HARTER. You say it in the public prints, and I have heard it said right here on the floor of this House a dozen times within two years, that in three thousand years they have not varied more than a trifle.

Mr. MOSES. We admit that they have varied.

Mr. HARTER. This, then, being your present admission, I will not waste time on it. This admission just made by you is sufficient to give your whole case away as advocates of free coinage at any ratio whatever.

Now, here is another fallacy, that silver was depressed artificially. They say that coincident with the depression of silver, and as a result, other articles have become depressed. They say that wheat is cheaper. They say that cotton is cheaper. They say other things are cheaper.

I observe that these gentlmen, when they are talking on this subject, forget to speak about pork, and overlook beef, and many other things, which are dearer. Why not apply their yardstick fairly? But they tie silver, wheat, and cotton together. Now, why is it that wheat has decreased in price, and why has cotton decreased in price? Why have other things decreased in price? Why has silver decreased in price? It does not require a very wise man to answer, and I am certain I can answer it. It is because the conditions of production have changed. When you used to raise wheat in Iowa without a railroad, you could not get that wheat to the seaboard. When India raised wheat away up in the mountains of Hindoostan, it could not be carried down to the ships, because the freight was too high. But now they have railroads there, and it does not cost a tenth as much to market wheat as it did. This puts vastly more wheat into the world's markets and reduces the price of it. Then, again, you have mowers and reapers and binders. You have improved thrashing machines. You do business now by steam where you used to do it with horses. You now have the whole world in competition with you, and these are all reasons why wheat is cheaper. Apply the same reasoning to almost everything else which has declined in price. Apply it to corn and apply it to silver, and you have the reason for present low prices. You need not go down into the bowels of the earth for some alchemy on the part of Ernest Seyd, whoever he was.

I do not know who that poor man was, except that in this life he was a Hebrew banker, but I hope, in the name of humanity, that you will allow him to rest in peace for the balance of the century, and that you will not continue to shake his dry bones ignorantly before the American people. It is getting to be very monotonous. You need not look for any extraordinary reason for the decline in silver. It has declined for the reason that there is an oversupply of it, and nobody wants it at former prices. This is the trouble. I have a friend who lived in Leadville during the flush times there, and they piled up mountains of débris that they could not use and could not afford to reduce to bullion.

My friend was out there a short time ago, and he found they had made such improvements in the methods of reduction that they are now taking these piles of waste and getting the silver out of them. Silver used to cost perhaps $1.20 per ounce to produce it, and now it costs in some places not over 15 cents an ounce, and in most well located and properly constructed and managed mines it does not cost over 50 cents an ounce. You have here ample reasons for the decline in silver. It can not be because we have not used the silver. The Government has been buying millions of ounces of silver every month for fifteen years past. There has been a greater American market for silver since 1878 than the nation made in all its history before, so silver certainly has not gone down on account of any lack of a fair chance.

The constantly repeated declaration that the act of 1873 was a trick is another fallacy. If it was a trick; who played it on you? It was the gentleman who represents the densely populated and very important State of Nevada in the Senate (Hon. WILLIAM M. STEWART) who did it, by voting for it. And now he comes before the country and pleads the "baby act" in order to cover his own vote. But there was no trick. The measure was discussed in five sessions of Congress. Talk about it not being known. Here is my friend, Mr. BAILEY of Texas, has been here three sessions. Do you believe any man would dare intimate to the people, in his hearing, that such a measure could go through even three sessions of Congress and that Mr. BAILEY did not know anything about it. I would not like to be near his big fist and long arm were I to make such an assertion.

I say there was no trick, the bill was printed thirteen times, a great may reports were made on it, and the reports were under double heads, declaring that you should demonetize the dollar and giving the reasons why. Gentlemen, it was fortunate that the act of 1873 did pass? We resumed specie payment in 1879. Suppose you had not demonetized silver, you never would have had gold and silver as you have had ever since resumption in 1879. But for demonetization you would have gone down to the condition of Mexico and other nations of that character.

Gentlemen should never forget that the act of 1873 saved the country from the evils of a silver standard. Then it is said we have not gold enough. This is another fallacy. Gold is increasing three and one-third times faster in the world than population. The American supply of it is increasing two and a half times faster than the demand for it. A Democratic House, a Democratic Senate, with a Democratic President, afraid to stick to a gold basis, when the world is producing thirteen times as much gold as it did in 1834, when we adopted practically the gold standard!

Then as to the appeal of Colorado and the Western States which produce silver. They say that we should pay $1.29 for silver when it is worth only 76 cents. We grow more wheat in Ohio than the silver miners of Colorado produce in the shape of silver, and it is no more reasonable for the miners of Colorado to ask that the Government through free coinage pay $1.29 for their stuff, which is worth 75 or 76 cents, than to ask the people of the United States to pay a tax so that my constituents might be paid $2.50 a bushel for their wheat.

And now as there is no other gentleman who desires to ask further questions, I thank the House for its long and very kind attention to what I have had to say, and will take my seat. [Applause.]

Mr. HAINER. Will the gentleman allow me to ask him a question before he takes his seat?

Mr. DINSMORE. If the honorable gentleman will yield, I should like to ask him a question.

The SPEAKER *pro tempore* (Mr. MCMILLIN in the chair). Does the gentleman from Ohio yield?

Mr. HARTER. I do. I am through with all the time I desire to use through the indulgence of the House, but will try to answer any question that may be asked me. I now yield to the gentleman who first asked me.

Mr. HAINER. What use would the gentleman from Ohio make of the silver in our monetary system, and on what basis?

Mr. HARTER. The same large use that we now make of it, the same use that every gold-standard nation of the world makes of it.

Mr. DINSMORE. I understand the honorable gentleman to say that the increase in gold production is much larger than the increase in the business of the world.

Mr. HARTER. I did say so.

Mr. DINSMORE. I also understood him to say that he favored an increase in the bank circulation to the amount of their bonds.

Mr. HARTER. I did say so.

Mr. DINSMORE. And that he favored the increase of the currency. If that be true, as he stated, that the available supply of gold has increased more rapidly than the business of the country, what would be the necessity of increasing the circulation at all?

Mr. HARTER. In the interest of other gentlemen who desire to occupy the floor, I will say that this is the last question I will undertake to answer.

Mr. DINSMORE. I was asking the gentleman for information.

Mr. HARTER. I desire to answer the gentleman's question, but I do not want to occupy any more time than I can help. Here is my answer: I said that I believed that there was no real necessity for an increase of currency, but that I would yield to the sentiments of many gentlemen on this subject to the full extent that we could do so with safety. I am willing to yield that far. I do not plant myself on my position and demand that every man must come to me. I only ask that they come up to my views as far as the safety of the country compels; beyond that I am willing to surrender my own opinion and go with the other gentlemen to the extreme limits of absolute safety in such legislation.

Mr. DINSMORE. Does the gentleman himself believe that there is any necessity for an increase of the currency?

Mr. HARTER. But for the immediate emergency which has been caused by unscientific, unwise, and clumsy mamagement of this silver question—but for the emergency so caused, I would not be in favor of it.

Mr. JOHNSON of Indiana. I had a claim on the gentleman's attention, because I asked him a question which he promised to answer, but failed to answer.

Mr. HARTER. Mr. Speaker, at any other time in the progress of this fourteen days debate I shall be glad to endeavor to answer the gentleman's question; but I know that there is a gentleman upon this floor who desires to speak now, who will speak with great force and clearness, and I do not wish to occupy one second more of his time.

Mr. JOHNSON of Indiana. I simply wished to remind the gentleman that I had asked him a question and that he had failed to answer it.

Mr. HENDRIX. Mr. Speaker, I am exceedingly grateful to the gentlemen of this House, who have given me an opportunity as a new member to say something upon this question at this stage of the debate. I am the first, I believe, to speak from the great city and State of New York. I have come into this Hall as a banker. I am here as the president of a national bank. I have been called a gold bug, but I beg to assure my friends that the only piece of gold that I possess in all this world is a $5 piece that was paid to me the other day for attending a directors' meeting, and that all the money that I have hoarded up is what I have hoarded up in my left pocket, and this was handed me the other day by the Sergeant-at-Arms, in the form of a certificate calling for one hundred silver dollars. So that I trust I am at least free from some of the imputations which are often so ungraciously put upon gentlemen coming from the great center of finance of this country.

Moreover, I have some reason to claim to be a *persona grata* to some of my friends of the West and the South. I was born in the great State of Missouri, from which comes the gentleman [Mr. BLAND] who has offered the pending amendment. I grew up among those people, and I know them and I love them. I have roamed through the land of the persimmon, the pecan, and the pawpaw; I have tasted the water of the Missouri River, and the legend runs that he who tastes of it once thirsts for it ever afterward. [Laughter.]

But I have come by way of the East and I land here in this Hall representing an Eastern constituency. I want to say, to begin with, to this body of gentlemen, for whom I have already gained large respect and some affection, that the opportunity presented to this Congress at this hour to do a great and lasting benefit to this country has never been before equaled under such a combination of circumstances in the history of our legislation. Repeal the Sherman silver law, gentlemen; adjourn and go home; and let the country take care of the rest. That is the programme that is coming up to you from every center of trade. It is not the "gold bugs" of Wall street or the "money sharks" there, or the chambers of commerce throughout the land to whom I would ask you to listen. I ask you to listen to the men and the women and the children who have their money locked up in the savings banks of the country.

I ask you to listen to the employés of hundreds and hundreds of workshops and factories that are idle. I ask you to listen to the expressed fears of the dread penury that will come on with the blasts of winter. I ask you to listen to the spoken fear that proceeds from the minds of men that we are entering upon a period black with sorrow and with woe. The condition of the country about us you well know. It is not necessary for me to tell you of the banks that are tottering, that are falling, that have already suspended. It is not necessary for me to tell you that currency is at a premium in the city of New York to-day, and that it sold there yesterday at from one to four dollars premium. It is not necessary for me to tell this intelligent House that gold is being bought to-day in London and shipped to this country, as pork is bought on this side of the ocean and shipped abroad.

It is not necessary for me to tell you that the clearing house of the city of New York has issued nearly $40,000,000 of clearing-house certificates; that all the banks there have pooled their choicest assets and securities; that this great congeries of banks is holding up the financial system of this country by the neck, and that if you do not take the burden and strain off from them they may fall, and when they fall the whole country will fall. I do not propose to take up any time in the discussion of financial theories; I am for practical, decisive action.

We are confronted by a condition. It is no time to weave a web of theory about it. We have a law upon our statute books which is an irritation to our people in their business and is repellant to foreign confidence. It is a law that has cost like a destructive war. It is a wicked law of vicious parentage, and it has grown up to plague us, rob us, and to threaten our very financial life. We are called here to expel it from the body of our laws. Such is the clean-cut, unquestioned demand of the people. They have all become convinced that the law is a mistake.

If designed to increase the circulation, it has served to contract it. It has put into the channels of business in payment for silver bullion $140,661,694 of Treasury notes, but it has pushed out $141,017,158 in gold. If designed to raise the price of silver, it has served to depress it by threatening the market with the visible supply of bullion which is stored up under it in the Treasury vaults. It is a rank failure, causing us to be ridiculous in the eyes of the world when it was adopted and creating greater surprise because we have maintained it alive so long. It has nested a brood of vipers, and now we are here to kill them off.

Under this law, Mr. Speaker, we have been buying 4,500,000 ounces of silver bullion a month, which the Government never needed and can not sell, and we have been paying for it in gold, taking in 7 tons of silver for every working day and yielding up our gold for it. Was ever a nation caught in such a trap before? In the two fiscal years ending June 30, 1892, although the balance of trade was in our favor by over $240,000,000, our net export of gold was $67,000,000. We have been paid for exports in our debts and have had to pay out $67,000,000 more in gold to cancel other debts declared to be due because of the distrust of our ability to pay in as good money as we got. Now no one comes here to defend this law, but there is a variation of its vicious principle under discussion in the shape of a free-coinage measure.

Why, sir, the way primary principles of finance are brought upon this floor, thrashed over and over and twisted one way and another, seems extraordinary to one who comes from the markets of the world. The experience of the world is all in one direction. The slow-moving finger of time has not changed its motion for a single second since 1798, when England made the change in her policy by subordinating silver to gold.

Right along through the ages this process of monetary evolution has gone on. It is going on to-day, and we in this House can not stop it; we can not control it; it controls us. It is no new thing, sir, in the history of monetary evolution for the more desirable currency to dominate. When the Australian used stone slabs as the medium of exchange; when the Fiji Islander used red feathers for his currency; when the Roman used his oxen; when in the early ante-Roman days in Ireland female slaves were a medium of exchange—in the use of eggs, in the use of iron, in the use of tin, in the use of zinc, the process of evolution worked out the inferior and worked in the superior article. One by one have these mediums of exchange been discarded and a higher level reached.

The world has advanced step by step; and the preference of the world to-day, from barbaric Africa to highly civilized England or America, is, as between silver and gold, for the more precious of the two metals. When you gentlemen begin to quarrel, you must quarrel with the forces of evolution; do not quarrel with fifty unknown men, whose names are not in any directory, who can not be identified, but who are named *en masse* as being the men who are bringing about all this panic. Let us be perfectly fair with each other on this question. I do not assert here that the Sherman purchase law is the cause of all the woe from which this country is suffering at this moment. No intelligent man talking to intelligent men would undertake to make an assertion of that kind. The Sherman silver law was not responsible for the failure of the federal bank in Australia in January, 1893, nor for the tumble there of fourteen great banks, nor for the rebounding force of the distress which has gone round the world since that time like a bowlder bouncing down a mountain side.

No; a wave of distress has encircled the globe. The Anglo-Saxon race has overdone the business. It has gone on conquering, populating, and over-booming the far distant isles. In one way only can we fix the responsibility for the primal moving causes of this distress upon this country; that is, we have been guilty of such legislation here as has turned from our shores the golden tide of foreign capital and forced it to go seeking a lodgment in bankrupt, insolvent, irresponsible, and unprosperous countries. In 1878 we began the series of errors, and we would have to-day the same condition under similar circumstances under the Bland-Allison act alone as we have under the Bland-Allison act with the Sherman act superimposed upon it. It is because we have been trying to set ourselves against the tide which is running around the world, the tide that makes toward one single stable standard—a tide which it is as useless for us to try to turn back as it was for old King Canute to attempt to turn back the ocean breakers from the foot of his throne when seated on the beach he ordered the waves to stop.

It is extremely interesting to follow the financial movements that have taken place ever since the effects of the Bland-Allison act began to be felt in this country.

I propose, gentlemen, in dealing with this question, to bring to you facts. We may "monkey," as the phrase goes, with silver; we can not "monkey" with facts. We have the resulting balances of trade to guide us; and when they are made up they form a subject of study for every financier the world round. Let us take up this question and see what the result has been since we started upon this silver course. Our coinage of silver began in 1878; so that on January 1, 1879, when we resumed gold payments, there were only $22,495,550 coined, and of this amount only $6,204,081, counting both the dollars and the certificates, were actually afloat.

Now, at that time we established gold payments; we resumed specie payments; we notified all the world that the United States of America was ready to pay its debts in the money of the world. What was the consequence? Why, the money of the world began to set our way. I have been astonished at the statements made here which would indicate that the money of the world is controlled by a few people. The investment capital that seeks our market from abroad is in the first instance the money of the middle and poorer classes in England, in France, in Switzerland, in Holland, and in Germany. It is not the money of the plutocrats that comes in big blocks. It is the aggregation of small savings.

The rich men use their capital in banking, in looking out for the profit that comes in taking toll as this great amount of money goes through the channels of trade. The money comes from the *hoi polloi*—the proletariat—from the people who have amassed it through hard labor and by the sweat of their brow.

Now, this money in 1879 started our way. We had new supplies of money given to us. There were national-bank notes, which on June 30, 1878, amounted to $319,604,560, increased, so as to reach on June 30, 1882, a total of $360,982,713. Gold began to come in rapidly, more or less each year, until the largest total was in the fiscal year ending June 30, 1881, when it reached a total of $97,466,127. There was great prosperity as you all remember.

The net aggregate for six years ending June 30, 1883, that came into this country to build your railroads, to build water works, to improve your highways, to give the tools of trade to that brave and great people that are developing the resources of the West, was $187,671,027. That, Mr. Speaker, was the high-water mark. The flag of our prosperity was at its highest point then. What happened? The turn of the tide followed. Mark it in your history; put it on your tablets; let it go on record in the archives of this Congress why it was that tide turned then and never came back. It turned away then from us because the silver in circulation, which had been kept at a small figure for the first three of the six years mentioned, on June 30, 1883, when the reports were published, was found to have assumed large and threatening proportions. The aggregate outstanding on that date reached the sum of $123,958,711, and on June 30, 1884, the aggregate had risen to $169,605,000, and on June 30, 1885, to $178,000,000 in round numbers.

Now, what were the results? When the English capitalists saw this rising tide of silver money, when they saw the disposition of the United States towards it, they began to pull out; and

they have been pulling out ever since, and it was only in the last three weeks, when under a state of panic values were broken down as never before in the history of this country, these Englishmen saw their opportunity in the wreckage, and concluded to take some risk. They started in to buy our securities and buy our wheat, corn, and other raw materials—at bargain-counter prices.

If you trace the process right through you will see that as silver money increased foreign capital here decreased. First, the Englishman drew his capital out wherever it was invested on time, giving notice to borrowers that he wanted it back. He wanted it when he could be paid back in gold. The foreign corporations went on drawing out the more permanent form of invested capital—that which goes on mortgages through the Scotch and British investment companies. They pulled in everything they could get at under the circumstances. Then they started in to make some investments in Argentina, and in the panic following that, the other securities remaining in their strong boxes were thrown on our markets. We almost broke our backs here trying to take care of them.

But I want you to keep your eyes on the date, July 1, 1883—the date of the turn of the tide. The next year there was no gold imported. Hard times began. There was a panic in May, 1884. We lost $18,250,640 gold. Nevertheless, the net exports of merchandise were $72,815,916. In the next three years we lost $22,245,678 gold, although our exports netted $281,567,036. You see how, just as soon as silver became troublesome, gold flew away. Ever since 1885 we have had a net export of gold in every year but two, despite a trade situation in our favor.

In 1892 the trade balance was enormous. Nevertheless, in every quarter of that calendar year we exported more gold than we received. Thus from the beginning of the pressure from the silver issued under the Bland law, right along down gold fled before silver, foreign capital smelled danger and withdrew, and when the Sherman law got to work the movement partook of a new energy and it continued vigorously up to the time values began to give way in the present panic.

It has been argued that we were paying our debts, and for that reason gold was leaving us. This is true. We paid not only for all we bought, not only for all that our favorable balances would liquidate, but we had to pay back money which would have remained here to the utmost satisfaction of its owner, had no silver plague come upon us. And recently how ruinous has been our experience! With what are we paying for the fresh supply of gold? Why, Mr. Speaker, and you gentlemen representing farmers here—think of it—we are paying with wheat at the lowest price it has ever touched. The world's wheat crop is short this year. Europe needs our stock. She would have paid for it gladly at living prices. We are throwing it at her, like a spendthrift.

Now, as a further result of this silver foolishness our values have so shrunken and our need for cash is so great that to-day we are happy to find any buyer and to sell back to the Englishmen the very securities that we bought back from them in 1890, and at a rate of interest that will allow them from 13 to 30 per cent.

Mr. Speaker, the whole history of the world tells but one story wherever a nation undertakes to follow the course we have been following; but wherever it follows the procession of the nations and the teachings of sound finances it renders itself financially stable, gives confidence to its people, and keeps money in its ordinary and rightful channels.

Now, what would happen if we should repeal the Sherman silver law outright and put this extraordinary set of amendments not only on the table, but under the table, and down in the cellar? The very next morning after the bill had completed its course through the legislative and executive machinery of the nation the millions of dollars that are now aggregated in the capitals of Europe would start again, as they did in 1879, toward these shores. They would fill all the veins of commerce. They would congest all the channels of circulation. Money would be so cheap in the city of New York that you could borrow it on good collateral for less than 2 per cent per annum, and it would flow all over this broad land, and where a man had good credit or good property on which he desired to borrow money he would find that he would be able to get it.

Why, you remember that in the good days following resumption of specie payments, when we had this gold unit of value in such relation to our currency that the world believed us, money was extremely cheap. Up to the time that silver became troublesome we were importing gold largely. Times were good; money was abundant. As soon as silver and silver certificates got into free circulation the movement stopped. Ever since that time there has been difficulty in getting money for the farmer and the planter. What is the consequence to-day? Your banks which have rediscounts in the city of New York are obliged to pay 12 per cent for them. Can they afford to loan your neighbors and your friends money with which to move their crops under such conditions as these? Will they not use the money which is needed at home to discharge their indebtedness elsewhere? They must do this if they are good bankers.

Gentlemen here say that there is not gold enough in the world. How do you know? There has always been enough and to spare in this country when the world believed in us. This is also true of every other country. It comes in abundance when conditions favor its secure investment and its certain return in kind. It advances with our good faith in finance. It slips away in the night at the first sign of danger. Its presence is the reward of financial virtue. Its absence is the unerring sign of financial vice. Under the conditions which protect it, it is abundant, but on fair warning, it runs to cover like a frightened hare. No one can trace it to its hiding place. No one can explain where it all comes from when it ventures into the open channels of business. It is easily hoarded. Misers love to finger it in secret when the business world hungers for it.

A man died not long ago in this country who had, in fear of your silver legislation, hoarded more than three-quarters of a million of it. The instinct of the squirrel, the bee, the ant, and the natural instinct to hide that which will sustain life in adversity, leads to the hoarding of the most prized money metal when any financial storm threatens. It drops out of trade into old stockings, into the jewel boxes among the keepsakes, is put aside for the baby's birthday pin, or reserved for some other vagary of human fancy. Bank tellers keep what comes in and pay out silver or paper.

The use of gold certificates, which I hope to see abolished under a Democratic administration of our finances, has greatly facilitated the hoarding, for the secreted certificate secretes the gold for which the United States Government provides free warehousing. A savings-bank board will say that there is doubtful legislation afoot or under trial, and decide to hoard gold, and as they have no stockholders in the East, they can retire money from work to idleness without interference. When the yellow tide recedes, the very earth seems to open and swallow it.

The Secretary of the Treasury, who, prior to last March, went ostentatiously into the New York market to borrow gold for the Government in exchange for greenbacks, set every gold-hoarding influence in the land at work, and in a month's time the floating stock of gold was dry docked in vaults, stockings, and strong boxes. Under the sunshine of confidence it all comes out. One yellow piece attracts another, and it all in time returns to the surface, and flows through the circulation like rich, red corpuscles in the veins of a healthy man.

The estimate of the world's stock of gold so often given is pure guesswork. No one has the data. From the dawn of history mankind has held it as precious, and has secreted it to use as money or as ornaments. It is found in nearly every country, and no one can tell either where it all is or how much there is of it. Rest assured that any figures are guesswork. We do know that the production of gold responds to human demand for it, and that it is now increasing. Until a year ago this country was the leading gold producer, but now Australasia is in the lead. Russia, Africa, India, South America, are all yielding gold.

Last year $130,816,627 worth came to the surface. The gold fields are not exhausted. The western slope of South and Central America is yet to be mined. California's output can be doubled if hydraulic mining is permitted. The Chinaman is finding gold in the white man's deserted camp. The unworked gravel of the old river beds, the experts say, is rich in gold, while the foothills along the Yuba and Sacramento rivers are believed yet to contain rich deposits. As the demand for gold increases, the work of men to meet that demand will increase.

Alaska's production last year amounted to $1,080,446, and the largest stamp mill in the world is in operation in that Territory. In South Africa gold mining is booming, and it is predicted that this year's product there will lead the world. There is ample gold enough to ballast the money systems of the great industrial nations, and especially of our own land. We need it only as a standard of value and an ultimate redeemer. If we stop buying silver we will soon see that there is enough for us and to spare.

My friends, I have said that this is, in my judgment, a golden opportunity for this country. You may legislate here as you please, but you might as well legislate against the heat of this August sun; you might as well legislate against the stars by night or the sunshine by day, as to legislate against the preference that is imbedded in the human mind, in human reason, and in human imagination. The world prefers gold. The instinct of every human being is toward it. It is the only metal that contains so much value in such a small body. It is the most portable of metals. While it shares with silver a great many of its features, and while in its onward and upward movement among the nations of the earth it has always had silver as a contestant,

and they have traveled side by side, yet various processes have come into operation which have made them part company. Now gold is in command; silver is its lieutenant.

How have those processes been brought about? Most naturally. In a policy which was entered upon the English statute books in 1816, and which therefore more frequently bears that date, although initiated in fact in 1798, gold was adopted as the single standard of value. Now look at the process as it has gone on from 1816 in England. What was the next step? For a great many years the Latin Union states and Germany and ourselves, silver-using India and the South American republics and Mexico, continued to use silver. For a great many years there was no considerable disturbance. There was steadiness between the two metals. Strong nations were acting in unison. There was no special pressure of fresh silver supply.

Silver mining was not exploited to the high point of perfection that it is at to-day, and the world's supply of silver was not so great as to cause unusual fluctuations. But when Bismarck thought that he could inflict a greater blow on his old enemy, France, than by the mere paying of the indemnity which he compelled her to pay to Germany for the Franco-Prussian war, he decided to make her pay it in gold and to use that opportunity to put Germany upon a gold basis and bring together the various discordant and inharmonious systems of currency which the minor states had, and to put all squarely upon the gold basis. The consequence was that the old German thaler, which originated in that valley down in Bavaria which gives the name to our own dollar, came upon the markets of the world through the melting pot, and they began to feel this extra and unexpected supply.

The next consequence was that silver showed weakness in the markets of the world, and in 1872, Germany having discarded silver in 1871, Norway, Sweden, Denmark, France, and Italy had to give in at once and close their mints to the free coinage of silver. Now, what was the next step? Holland stood out until 1875, when she gave in. Russia stopped in 1876, except the coinage of some silver dollars for the Chinese trade. Belgium, Switzerland, and Greece stopped in 1878. Austria-Hungary stopped in 1879. Roumania stopped in 1890, and now the last tolling note of the funeral bell is ringing over the doom of silver as a money metal as India, the great sink for silver, shuts its mints to free coinage.

And here this great and proud nation of people, who love their citizenship and their sovereignty as a people; this magnificent Christain nation, with its men and its women, beyond any comparison in domestic spirit, in civic spirit, in social life, with any people on the face of the earth; this great nation, where over a greater area of territory than is known on the face of the earth elsewhere one language is spoken, where there is one set of laws and one system of political thought—in this great arena of civilization and liberty we are asked, alone among all the nations of the earth, to go down upon our knees worshipping, like a gibbering idiot, the idol that has been rejected by every other civilized country in God's world.

I protest in the name of education among our people against such a proposition. Was anything ever more absurd in all the history of financial legislation than the proposition submitted to this House yesterday indicating that we are so far at sea upon this question that we can not quite make up our minds which one of the five ratios we are to adopt if we go into the free coinage of silver. Why, in 1834, that great man from my State (and I wish some man from the Mississippi Valley would rise up and make himself great for the next twenty years on the model of his policy), Thomas H. Benton—"Old Bullion"—stood in the halls of Congress facing his own party on the question of whether 15½ or 16 should be the ratio—15½ being the market value at that time, and in a market more stable than it is to-day, yet here we have one of five ratios. The statesmen of that day knew that they must be controlled by the market value at least. They chose to go a little over it for the sake of safety. To-day we are talking about ratios 8 and 10 points below the market.

Here it was 27.33 yesterday, 28 on Monday last, 33 a few weeks ago, and who can tell what it will be to-day, next week, or next month. The market rate changes every few days; but if we were to put any ratio upon our statute books and link it with gold in our laws it would take Congress years and years to undo the work that is now proposed. This is opera bouffe, not statesmanship.

What would be the result if you have your way? Why, my friends, you can not do the impossible. It is as absolutely impossible for us to undertake bimetallism alone in this country as it is to have a stable system of finances under our bullion-purchasing law. Now, if it is coming to a choice between going right along as we are now, buying silver at its market value in gold and storing it up—a vicious and wicked system of finance—or any of these five propositions, I beg of you all to adjourn and go away and leave us in the condition we are now in, for if we change, as you propose, we would be going from bad to worse.

Now, I am an international bimetallist. I believe it would take all the power of all the nations of the earth to keep these two metals working together for any long period of time. I agree with my friend from Ohio [Mr. HARTER] that there is grave doubt about the ultimate success of such a proposition as that; but I am willing to try it because whatever evils will follow will not fall on this generation and would probably be postponed for thirty or forty years.

Now I come to what those bimetallists who have grown old in the consideration of this question have to say. I quote the words of Mr. Henri Cernuschi. Who was he? A great authority in bimetallism. He was an Italian by birth, and Italians always have, next to the Jew, had the keenest financial instinct of any people on the face of the earth. He was driven out of his country through the political events of 1848, and became a banker in Paris. In 1870 he retired from business. He is a recognized authority, and more quoted in the speeches of the people who appear at monetary conferences than any other man. He came to this country, and he testified before the United States Monetary Commission. He was asked by Mr. Boutwell:

In case the United States should resolve to adopt the bimetallic standard at any proportion, say 15½ to 1, and other countries should maintain their present position with reference to the issue of gold and silver respectively, what, in your opinion, would be the effect upon the business of the country? Mr. Cernuschi said: "My desire is that a general agreement shall be adopted by the different nations. In my opinion, no country can coin silver alone; any country that coins only silver will remain alone, and will not have the money for paying abroad."

Mr. BRYAN. May I ask the gentleman a question?

Mr. HENDRIX. Well, now, I am a pretty green member on this floor, and I do not know that I ought to yield for an interruption.

Now, in connection with what Mr. Cernuschi has said, if there was any hope that the basis offered by my friend from Missouri [Mr. BLAND] should become the basis of the civilized nations of the earth I would be willing to spend any amount of time in discussing the various ratios with him, but you can not afford to commit the great interests of a people to an absurdity such as a ratio less than the market, and it would be foolish for any nation to try it single-handed. The ratio to be established must be the market ratio between the two metals. You would be laughed out of a conference of the nations of the earth if you went into it with a proposition for less than that. It is the market value between the two metals that must fix the ratio if international bimetallism ever succeeds. What is the market value of silver? I have shown you that it runs now from 28 to 33. You propose to put in law a ratio of 16 to 1. Why, you would not do that. You would not bring disaster to the firesides of your own people that that would cause. You would not be willing to drive out of this country every dollar of gold that could go out of it.

It would be the height of midsummer madness to enact any such legislation as that. But, then you step up a little and say, "If you do not like 16 to 1, how will 17 to 1 suit you?" Oh, gentleman, you would not do that; that is only one little point better; that would not help the situation; that would not start the mills; that would not allow the savings banks to take the embargo off the $373,000,000 belonging to the working people in the cities of New York and Brooklyn; that would not help the farmers to move their crops; that would not restore confidence throughout this country. It would mean that confidence would be shaken again, and that every sterling loan made in this country would be called. "Well, then," you say, "let us try 18 to 1."

Why, my friends, what do you gain by that? Do you want all the silver of all the earth poured into your mints and turned into dollars for the people of other countries to turn around and pay them over to you for your products and take those products away? Why, sir, Germany has not yet got rid of all the silver that she desired to sell when she demonetized it and brought her currency to a gold basis. "Well, then," you say, "let it be 19 to 1." That is no better. How about 20 to 1? That has been the favorite dream of bimetallists through all the past twenty years, that some day or other silver would be at the ratio of 20 to 1, and that it could be kept there. But look at the fluctuations of the market: one day 33 to 1, then back to 29 to 1, then down to 24 to 1, and the next back to a higher figure.

Under such a condition where is your stable basis of value? Why, sir, it would take the whole power of all the nations of the world to establish even the market ratio. Yet you say 16 to 1. You might as well try to take the sunbeams and coin them into legal tender as to take silver at any ratio named in this bill and make a stable basis of values in this country. Every financial center would stagger under the blow. This country would suspend business to-morrow in all its financial machinery from Maine to California, from the Gulf to the Lakes, if the

people believed that it was possible for this Government to enact such a law as that in this time of peril. There is not a ratio named in this substitute bill which would not make us the laughing-stock of every financial center in the world. Every dollar that ought to belong here, every dollar that would come here through the natural laws of gravitation, would be withheld.

Every dollar that belongs to us and that would naturally come to us by reason of our solvency, by reason of our integrity as a people that has never yet defaulted or dishonored an obligation, by reason of the elements of prosperity running in the Anglo-Saxon blood as the race shapes itself under free government, would stay away, and every dollar that is here now for such reasons and under such conditions would begin to take wings and fly abroad. The gold that is being brought here at great expense to-day by our financial institutions to prepare for the hard times which they anticipate; that gold which is bought in London, as I have said, like so many pounds of pig lead, and delivered here at a premium of 1 or 2 per cent—that money would not stay here; it would have to go abroad again in the settlement of balances. Such legislation would mean shipwreck; it would mean ruin; and you do not intend either of those things or anything like them.

Mr. Speaker, I believe that within the next twenty years—and many gentlemen here will live to see that time—we shall see this whole free-silver craze laid out in the same graveyard along with repudiation, along with fiat money, along with every false thing in finance. The evolutionary processes of the world are against you, gentlemen. You may legislate "until the cows come home," but in the morning these evolutionary processes will have gained one night's work, and you will be called back here again and again, as you are called here now, to undo your work. You can not stop it. Gold is bound to be the ultimate redeemer of all the financial systems of first-class nations in this world, and no legislation short of the community of all the nations can stop it. Anybody who stands in the market places and sees the stream of prices as they go by must be forced to this conclusion. And you, gentlemen, are doing your constituents a great wrong, a wrong for which they ought never to forgive you, by continually embarrassing the financial system of this country by weak, lame, halting, sickly propositions, such as have been kicked out of the forum of civilized nations the world over.

My friend from Alabama [Mr. WHEELER] made a most singular statement for an intelligent man—that fifty men in the city of New York, fifty millionaires, were locking up money and keeping it out of the channels of trade. What infernal rot! What complete nonsense! My friend from Missouri makes the extraordinary statement—I took it down from his lips and I expected to find it in the RECORD to-day; you will find it there when his speech appears, if it has not been taken out—"this panic has been brought about for the express purpose of repealing this law; no doubt about that." Why, God Almighty himself could alone bring about such a condition as involves the whole globe to-day. "This panic has been brought about for the express purpose of repealing this law." Can men go about among their suffering constituents talking this way?

Where men of intelligence meet we all know that the present conditions, which no one nation can control, which no one legislature can control, have come upon this world from a number of causes, forming a sort of financial epidemic that is running its course, and that has found us with our body of circulation so weakened by a supersaturation of silver that we are not able to throw it off or turn it back, as we have financial troubles in the past; we succumb to it, fall beneath it, like a man falling beneath a sunstroke. My friends, you may rail against the cyclones that sweep over your Western country; you may accuse them of being the result of a "conspiracy;" you may rail against famine, and accuse it of being the work of Wall street "sharks" and "gold bugs;" you may split your lungs in such senseless talk as this; but the evolutionary process that God has put into the world goes right along night and day, and will go right along after you and the rest of us are laid away under the green sod.

The moving finger of Time down from the days when gold started in the race for first place to this moment has pointed to a single unit of value. It is our destiny. It will triumph in this Hall—perhaps not in this Congress nor in your day; but it is going to become the financial policy of this country just as sure as to-morrow morning's sun will rise. And I will tell you, gentlemen, one thing for your comfort. I believe that nothing disturbs the "Old Lady of Threadneedle Street" to-day so much as the fear that this country is going to be done with this silver foolishness. Three times we have gone to the nations of the earth—this strong and manly people has gone to them and said, "Won't you please come and confer with us about the monetary condition, and let us see if we can not do something to harness the two metals together so that they will travel side by side in harmony?" We have sent our able men; we have sent our most conservative men; we have sent our most diplomatic men; and what has been the result? Three times England has folded her arms and said, "We will have nothing to do with you." She recognized that she was mistress of the seas; she recognized that she was the creditor nation, and that along the avenues which she has created for commerce, radiating from her in every direction like the spokes of a wheel, she could send her goods and the products of the world's labor must come, and that she could demand a settlement for the balances in gold. She occupies this position, and among all the nations of the world that have competed with her up to this time she has had no fear of any rival except the United States of America, and she will fear this country more when it adopts a policy of sanity in its finances.

Let us try the experiment just once and see whether we can not bring this proud old lady down from her perch. I predict to you that inside of three months—before this Congress meets again—if you repeal this Sherman law and adjourn, England will make proposals to this country to come into a monetary conference and see what can be done for the sake of her ward, India. The proposition is already said to have come through financial magnates. Their names are not given, and therefore I distrust the information, because when men are mentioned I like to know where I can find them.

Mr. BLAND. Will the gentleman allow me a question right there?

Mr. HENDRIX. Yes, sir.

Mr. BLAND. I understood the gentleman to say a moment ago that we were evoluting toward a gold standard.

Mr. HENDRIX. Yes, sir.

Mr. BLAND. And now you claim that England is evoluting toward silver. [Laughter.]

Mr. HENDRIX. Oh, no; you will find out how this evolution works, Mr. BLAND, before the evening of your life is ended. You have seen it going on steadily, and it must have made you on your old Missouri farm think the world was sadly out of joint as one nation after another failed to agree with you.

But I say to you the only gleam of hope for international bimetallism is that this country, with its magnificent resources, with its almost unlimited credit, with its grand position among the nations of the earth, shall so draw upon England's gold stock through all her arteries of commerce and trade as to make her seriously doubt whether she can afford to hold aloof longer.

My friends, there is only one view to take of this question. This is a financial war between the nations of the earth. Now, we have no business to have a civil war on our side while a fight of that character is going on. There is on the throne of Germany a mediæval war lord who is maintaining an army at great price; and across the border there is a semibarbarian on the throne of Russia who is piling up idle in his war chest the gold that he has been getting together.

All of the nations throughout Europe are sleeping on their arms, on pillows made of the war chests of gold which they have drawn from other countries.

What are we going to fight that battle with? Our coasts are exposed. We have no financial navy. We have a very small financial army, as I look about among gentlemen here to-day who favor hard-money doctrine. We are in an exposed position, and we propose to fight this war with an old weapon, a wooden "Quaker gun" that has been discarded, left out, thrown aside, made into a football throughout the world.

I say it is insanity, rank, staring, stark idiocy for us to continue in this attitude in the face of a war like this. It is our business to throw our hat in the ring and say to the nations of the earth that we have some credit, that we have some resources, that we have some power in the premises, and that we propose to maintain it. All we have got to do is a very little thing, that is simply to repeal the purchasing provision of the Sherman silver law, adjourn, go home, and let the natural laws of commerce take care of the rest.

A gentleman with whom I am well acquainted, now in the European market studying the situation there, writes home these words:

Many British critics of approved judgment do not think that the approaching called session of Congress can do much, if any, good, but, on the contrary, possibly, and probably, much more harm.

If this body approves any of these proposed ratios there will be an emphasis under that sentence.

I do not think myself that the Congress as at present constituted, and upon the lines it usually works, is just at this juncture a special and beneficent providence for us.

It will not be if it is going to repeal the Sherman law and substitute a proposition containing one of this sliding scale of ratios.

Nor do I think, as many at home seem to, that it is Fate raised to the 8th power, so to speak. They are an aggregation of blundering mortals, and

with far less experience and judgment than many who ought to be there in this emergency. They will discuss causes of which they know very little, and apply remedies of which they know less. These Britons know very well most of the individual parts of that Congress, and are well advised as to their capacity and governing motives, and when they read what many of these people all over the country have been saying with the voice of Stentor and the impudence of Thersites, it is no wonder they unload all American stuff before the Congress meets. They have hastened to do it anyhow. I think this session is going to be a disappointment for many—

I disagree with him in that, for I think it is going to do a great deal and work relief for the people of this country—

and, unlike the life of Achilles, it will be neither short nor glorious.

I think it will be both short and glorious.

The British opinion of the financial acumen of America is not high nor flattering at present. They think, in effect, that the wealth we have so rapidly acquired is destroying the virtues by which we obtained it. I am only giving you the sense of their opinions as I get them without regard to their value. What they fear more than all, and what is really the foundation of all their fear about us, is "Demos," that great unterrified democracy (unterrified because inexperienced and irresponsible) that rises up like an exhalation in the night so to speak, and without sense or reason, or regard to the rights of others, and ignoring and despising all precedents and experience, wants its own headlong way in everything; and from all parts of the country delegates to Congress and other high places its most approved cranks, where, with the brute force of numbers, it overawes, overwhelms, and outvotes the "saving remnant," the minority of brains, judgment, and experience.

All this is no new thing under the sun, and has repeated itself so many times in history that those who are not warned by it must be very ill-informed indeed. It would really seem as if the facts and the present condition of things in our country warrant very much of all these criticisms and opinions. Anyhow, the British, Dutch, and others are living up to those opinions just now, and it does not tend to improve our financial situation at home.

Nor will it if we do not stop seriously discussing the ratios here.

Now, just one word more.

Mr. HUTCHESON. Will the gentleman allow me to ask him just one question?

Mr. HENDRIX. I prefer not to.

The SPEAKER. The gentleman declines to yield.

Mr. HENDRIX. Now, if we do not like any one of those four ratios, there is a sort of omnibus attached to this proposition where you can all get in and ride. Now, gentlemen, what is that? That is the Bland-Allison law. Now, we are called to come here to-day to repeal the Sherman law. How much longer would it be before we are called back to repeal the Bland-Allison law? And if it comes to a choice between the Bland-Allison law or any of these four different ratios or the Sherman silver law, give me the Sherman silver law and let us stop.

Several MEMBERS. That is right.

Mr. HENDRIX. Let us stop where we are. Do not let us monkey and fool any longer. We are buying silver on a gold basis and piling it up here as a useless asset, and making ourselves ridiculous, creating a sublime act for some writer of opera bouffe in the future. But let us stop and not go any further, for by the Bland-Allison law, for which you provide in this bill, you are going to coin, at the present ratio and at the present market price, $3,653,000 a month, while under the Sherman law at the present price we are only issuing $3,375,000 of money. You are going to add practically $300,000 more money a month at the present price of silver under the Bland act than you are now giving out under the Sherman law.

This whole country is begging of you for God's sake to repeal, and to repeal quickly. Now, these are the propositions that come before this House. In this hour of dire distress, when as good men as ever trod the earth's surface are throwing up their hands in despair and going down under the wave of disaster; when solvent banks that have stood up in pride against all of the winter storms and the summer heat of finance have gone down and their presidents, perhaps, or their cashiers in extreme mortification take their own lives; when humiliation has come upon honorable business men who never disregarded an obligation and never had a dishonest dollar; when all the whole United States is on its knees praying to Congress for God's sake to repeal the Sherman silver law and let us alone, you come here and propose one of five ratios, 16 or 17, 18, 19 or 20 to 1, and you want this Congress, if it does not like that, to take a law which is going to inflate the currency with more silver than the Sherman silver law.

What mockery! What idiocy in finance! What a shame upon a free country! My friends, this country is looking to this Congress for relief. Let us here, as Representatives close to the people, do our duty and do our duty faithfully, and if there is at the other end of the Hall any set of vested interests represented there that would stand in the pathway of progress and of relief to the people, let the pitiless peltings of public opinion rain down there and not here. Let us discharge our duty and go home feeling that we have done what the country expected of us. [Applause.]

Mr. BOWERS of California. Mr. Speaker, I do not intend to detain the House long if I may have attention for a short time. "We have been called together in extraordinary session by reason of the alarming and extraordinary business situation, involving the welfare and prosperity of the people of this country." So reads the message which convenes us. Banks are failing on every side. Manufacturers are closing their doors, hundreds of thousands of people are out of employment. General distress everywhere, ruin stalking in every place, from the farm to the mill, and it would seem that that glorious picture of peace, plenty, and prosperity that was held up before us as the reward of "retrenchment and reform," has been turned to the wall. [Laughter.]

People are looking forward to Congress for some measure of relief, hoping it may come in some way, no one knows just how, although many are certain that their way will bring it. So far as the discussion has gone, it has largely been devoted to the platforms of the two parties, which is unprofitable, because neither means anything or was intended to mean anything. Both were cast in the same mold, although there might have been a little more sand—perhaps, more properly speaking, a little more mud—put into the platform of one than the other. They are both as clear as mud; but no man can tell which is one or which is the other.

The President of the United States, in his message, has shown he will have none of the platform, and he incontinently turns it down. He says "at this stage gold and silver must part company and the Government must fail in its established policy of maintaining the two metals on a parity with each other."

The Democratic national platform of last year says:

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage.

I intend to talk about the matter in hand, but I presume, like many of you, I shall be betrayed occasionally into a political digression, and as the opportunity offers now, I will proceed to digress now. [Laughter.]

The gentleman from Missouri [Mr. BLAND] in his very able speech yesterday allowed himself to be betrayed into a political digression. Referring to the desire of the people and the hope that this Congress and its Representatives would act wisely upon this financial question, and referring to the Republican party, he said:

Of course we never expected anything from that party in that line.

Well now, Mr. Speaker, if I was so unfortunate as to be a Democrat, which I am not, I would sing very small and very low about the financial record of that party. What is it? After many years of profound peace in this country and undisputed rule of it, when it surrendered this Government to the Republican party what was the condition? An empty Treasury, no gold nor silver in it or in the country; the bonds of the United States, bearing a rate of 10 and 12 per cent interest, sold at a discount of 15 per cent, and this in time of profound peace.

The Republican party took charge of the administration of the Government with its empty Treasury and tottering credit—in this condition confronted by a gigantic war, the greatest war of any time. The Republican party carried the war for the preservation of the Union to a successful conclusion; had issued over two billions of promises to pay, and then started the country on an era of prosperity never equaled in its own history or the history of any nation on earth. We had money to do business with then. What was the condition of affairs between 1840 and 1860 under Democratic rule? You gray-haired gentlemen will remember what it was. What did you have? Neither silver nor gold, but a lot of ragged State bank money, good for nothing in an adjoining State, and good for nothing anywhere after it was thirty days old. [Laughter.]

After nearly a quarter of a century of Republican rule we surrendered the Government to a Democratic President, with hundreds of millions in its treasury; a prosperous country; its bonds, bearing only 4 per cent interest, sold at 12 to 24 per cent premium, a condition of things not before known in any nation on earth. Our bonds to-day sell for more than the bonds of any nation; and yet a day or two ago we received a message from the Democratic President [Mr. Cleveland] to this House which was a twin brother to the last message of the Democratic President [Mr. Buchanan] who preceded him, couched in the same terms, referring to the illimitable resources of this country, which ought to be prosperous, yet told of the disastrous condition; and we have the same disastrous condition here with all these possibilities and resources and wealth which the gentlemen on the other side have talked about; which shows very frankly the incompetency of the management of that party.

It was the Republican party which gave this country honest money in place of worthless State bank rags, and despite all the talk of depreciated money, to-day, when a man is paid a dollar—whether of gold, silver, or paper makes no difference, each is interchangeable, one will purchase as much as the other—

he don't care what bank issued the bill, don't care if the bank is broke or gone out of existence, his bill is just as good to-day, to-morrow, or next year—a condition never known in this country while under Democratic rule, and indeed impossible under Democratic business methods.

I tried to get a gold piece to illustrate this lecture. [Laughter.] I could not get one in the room of the Sergeant-at-Arms, as he had none. I suppose I could have got one in the Treasury. A curious circumstance happened to me yesterday. One of my constituents from California came to me with a $50 check on a New York national bank, drawn in Rhode Island, a few hours from here, and could not get it cashed at the banks in Washington. To day, my friend, Col. COCKRAN, many of you know him, came to me with a check for a hundred dollars, drawn on a New York bank, and he could not get it cashed in Washington. I sent it off for collection. Yet you people of the East, who know little about this country outside your own State, have never been over it, and know nothing about its capabilities, talk about "boom towns and mushroom banks of the States in the wild and woolly west."

Let me tell you, Mr. Speaker, that when this plague came upon this country, and a run commenced on the First National Bank in Los Angeles, Cal., it had demand liabilities of $1,000,000 out. It paid $600,000, or 60 per cent of all its liabilities in money of the United States in three days, and I undertake to say that there is not a bank in New York that can do so. They are paying by the issue of certificates on pieces of paper that have no intrinsic value.

The Bank of Commerce, in my town, a State bank with demand liabilities of $80,000, paid $40,000 before it closed its doors, and they were reopened in thirty-six hours. Gentlemen, the banks in the "boom and mushroom towns" of the "wild, woolly West" pay money while your New York banks pay paper. California favors silver money; Nevada is a silver State. If you go into those States, you will find that the people know what gold is and make use of it, but you people who are shouting for gold do not use it for money.

One speaker said yesterday that the people did not want silver, and would not have it. Ah! Yesterday in New York City, under the very shadow of Wall street, the despised American dollar brought 3 per cent premium. They won't have it, eh! [Laughter.] I had a little experience of my own yesterday. I wanted a glass of soda. It cost only 5 cents, but the man could not change a $1 bill; he had no silver, so I got that free. [Laughter.] I went to buy some newspapers, 23 cents worth, and the man could not change a $1 bill; he had no silver. I got trusted for the papers, but I went around and paid for them afterwards. [Laughter.] I went into a drug store to make a 15-cent purchase; the store couldn't change a $1 bill; had no silver—none of the drug.

I went to the Treasury last year to see if I could get some gold. The clerk opened a little drawer and took out a ten-dollar piece. I asked him how much money of that kind he paid out a day. "Not any," said he; "we do not use it here." Within handy reach was a box containing about a bushel of silver coin, and I asked him, "How much silver do you pay out a day?" "Well," said he, "from three to five thousand dollars." Yet gentlemen say the people do not want silver. I tell you that many of the banks that to-day have their doors closed would be very glad of the despised American dollar of our daddies if they had it, and would have been open and doing business to-day had they been friendly to silver.

Don't want silver! Don't he know that in every civilized and half civilized nation on the globe there is to-day one hundred dollars in silver coin in actual circulation—every day use—as money to one dollar in gold. And in the District of Columbia, the capital of the United States, there is to-day one thousand dollars of silver coin in actual circulation to one dollar of gold coin, and yet we are asked to legislate this money out of existence.

My friend Senator Langford, of California, a wealthy man, a large farmer, went up to San Francisco recently to get some money to move his wheat and to pay his men. The banks could not let him have it. He could not get the money from them although he had fifty dollars real wealth for every dollar that he asked for. That is the condition of things. The railroad company would have taken silver certificates, the same as I have taken them for my salary ever since I have been here. The rest of you gentlemen have done the same thing, and did anybody ever refuse to accept them from you? I guess not. Senator Langford's hired men would have been glad to take the silver dollars and so would the merchants with whom he had to deal; and yet gentlemen tell us that the people do not want silver.

Mr. STOCKDALE. The "58-cent dollar."

Mr. BOWERS of California. Yes, the "58-cent dollar." I will come to that in a minute. I am afraid I have digressed again, but I will come back now to the regular programme. The President thinks that the purchasing clause of the Sherman act is the cause of the present financial distress in this country. I presume to differ with the President. Did the Sherman act precipitate the ruin of the Australian banks, where this plague started? Not at all.

I will tell you what started it, and what has held it in the condition it is in. It was the fear that, at the demand of the President, this Congress would destroy half the money of the country—the silver money—and then would go farther and enact laws compelling the wage-workers of this country, whether in the factory or in the field, to come, in the matter of parity of wages and parity of living, to the standard of the underpaid pauper workmen of Europe. That is what is the matter with the country to-day. [Applause on the Republican side.] This done, the conspiracy is complete, the world subdued; gold is king, and the United States takes its place in the captive train, chained to the chariot of Great Britain. [Laughter.]

Now, that is my opinion about the matter. Theories are very beautiful, but they do not always result as their inventors intend. I remember the story of a man who desired to grow a beard, and who used many recipes without result, but finally a learned man gave him an English prescription, which was to shave twice a day with the best English razors for three months. He followed the prescription, but at the end of the three months he did not have any more beard than when he started; so he quit. This country appears to me to be in the situation of the man who wanted to raise a beard. The nation wants more money, at least more than can be got at at present, and the head physician sends us an English prescription telling us that the remedy for scarcity of money is to destroy half of that we have. [Laughter.] The less we have the more we will have! That is as clear as mud.

It is a favorite charge of the opponents of the free coinage of silver that it is intended for the sole benefit of the silver miners of Colorado, Nevada, and other silver States.

Well, admit for a moment that it is so. There are not (speaking away within bounds) less than a hundred thousand miners at work in the mines and mills and hauling the ore. [Addressing Mr. PENCE.] Am I overstating the number?

Mr. PENCE. Certainly not.

Mr. BOWERS of California. Then another hundred thousand are working in the fields, growing the meat and the bread to support these miners. Now, then, are not these two hundred thousand toilers in the mines and in the fields—men who are producing the gold and silver that you are quareling over and who are raising the sustenance for those miners—have they not the right, as American citizens, to ask this Congress that their interests shall be as fairly considered in national legislation as are the interests of the men of Wall street, the gold and bond traders, and the toll-takers, who never added a dollar to the wealth of the world, except that dollar was first taken out of the palm of the laborer's hand who earned it.

You have often heard of the Secretary of the Treasury taking a trip to New York to consult with the bankers and business men in regard to the financial condition of the country, have you not? I do not think we have ever had a Secretary of the Treasury who has not made such visits many a time, in plain English, for the purpose of consulting Wall street. Have any of you ever heard of a Secretary of the Treasury going to California to inform himself in regard to the interests of those men there who this year have grown 20,000,000 bushels of wheat and barley? You never did.

Did you ever hear of a Secretary of the Treasury going down to the Southern States and consulting your cotton-planters as to their interests in the business affairs of this country? You never did. Did you ever hear of a Secretary of the Treasury going through the country consulting the wool-growers as to the interest they had in the financial legislation of this country? You never did. It is the nonproducers who have demanded, and I am sorry to say have received, the attention and consideration of the Congress of the United States to the exclusion almost wholly of the toilers. When you are making your political platforms and stump speeches you talk about the people in very pretty terms, but when you come to legislate you do not know them.

You did not know them in this House at the last session when I asked that an appropriation of only $5,000 might be made by Congress in order to enable the Attorney-General to defend the titles of men to whom you had sold land and from whom you had taken their money; to whom you had given United States patents, which now, through the exertions of a railroad company, have been overturned by the courts and twelve hundred of the settlers on those lands are to lose their homes. You keep their money and refuse to defend their titles. You talk a great deal about the people. If you would act a little more in their interest and talk less you would appear to a great deal better advantage.

I believe it is time that the legislative department of this Government should consult the wealth producers as well as the nonproducers.

The common people, the wage-earners, the farmers, may not be able to meet any of you gentlemen here and argue this question with you upon theories, but there is one thing that they all understand; they understand a condition when they meet it; they understand a fact when it is forced upon them. And facts are now being forced upon them pretty severely.

The gentleman who last spoke made a remark which I wish to answer now before I forget it. He said, "Why are the farmers throwing away their wheat at a ruinous price?" I will tell him why they are doing it. It is because bankers like him and his associates, because financial operators have "cornered" the money so that the farmers can not get it; and they are forced to let their wheat go into the hands of the speculators who have formed their combinations and can hold this wheat until they, instead of the farmers, realize the profits on it.

That, sir, is the answer. If there was any money which the farmer could get with which to pay the interest on his mortgage without selling his products at ruinous prices, he could be saved this sacrifice. But they must sell their wheat to the great combines at ruinous prices to pay you your interest; thus you get their wheat and realize the profit upon it. That is the condition of this country, and every man knows it. There is no denying it.

Let me tell you another thing. As I have said, these men may not be able to understand theories; they can not argue abstract questions with you; but when the farmer and the miner and the wool-grower and the cotton-raiser see year by year that they must take less for their products; when they see in the progress of the great conspiracy to break down silver, that the prices of their wheat, cotton, and wool keep even pace with silver and have since the conspiracy began, all going down with silver and staying down with it, as if bound to it by an adamantine bond; when the farmer sees his wheat which was worth $1.30 in 1873 when silver was $1.30, now sees both at 60 cents; the planter sees his cotton which was worth 18 to 19 cents, when silver was $1.30, now at 7 to 8 cents, and the price of his wool gone with the cotton and the wheat, he feels that there is something wrong, something wicked in this assault on silver. When the wage-worker sees that the price of his product, his labor, is coming down, down, down all the while, that he is growing poorer while his mortgage grows bigger—when he sees the nonproducer, the man sitting at the gates taking toll on the products of labor, piling up millions upon millions so that sixty or seventy millions are owned by one person—so the per capita of a million people is owned by one person—I tell you the laboring man feels and knows that something is wrong. He knows that he is working hard and working honestly; but he realizes that the conditions somehow are wrong. It is not altogether a question of brains; there is a question of patriotism in the matter; and I tell you these men are going to inquire into this question just as surely as you live.

The gentleman who last spoke said "all the people of the United States were down on their knees begging this Congress to repeal the Sherman act unconditionally."

Now, I want to tell you—and I speak for my constituency, as I suppose every Representative will speak for his own district—that in my district, which has about 170,000 souls, there is neither a man, woman, or child on his or her knees asking any such thing. They ask you to do what is right, to give the country money enough for the transaction of its business. That is all. And they are not on their knees, either. The gold conspirator will be more apt to find them swinging a club.

I want to answer my friend [Mr. HARTER] before I forget it, for I am likely to forget some of these things as I go on. Speaking of these certificates, he says they have only 58 cents behind them. I reply to-day that they come nearer having $1.03 behind them. I ask my friend from Ohio how much gold is behind your promises to pay gold? You have fifteen hundred millions of debt, and a hundred million dollars of gold. You have seven cents on the dollar behind your promise to pay in gold, and seventy-five cents value behind the silver certificate, even by your own showing, and you have this even after the combined assault of Wall street and London to break silver down, ten times as much as there is behind your gold circulation. Answer that if you can, you who say that you do not want silver and talk about "ratios" and about intrinsic values and all that sort of thing.

Now, I do not want to be impertinent at all, but I have my own ideas on this subject, and one of them is that the man who talks of intrinsic value in the articles that we put the stamp of the Government on and use as money does not know anything about the functions of money whatever. [Laughter.] He does not know anything about it. Here is an American dollar I hold in one hand, and here is a Mexican dollar that I hold in my other hand. They are exactly of the same weight, and there are 9 grains more of pure, fine silver in the Mexican dollar than in the American dollar. I bought that Mexican dollar. I traded one of these for it, and I got that (the Mexican dollar), got an American quarter, a 10-cent piece, and a nickel.

In other words, I got the Mexican dollar and 40 cents in American money for an American dollar. Now, gentlemen, if the value of these coins depended upon the intrinsic value of the silver contained in them, such a condition of things would be impossible. It is the fiat of the authority that declares them money by the stamp of the king's signet put upon them, and which declares their value in the king's realms.

There never was a cent of money in the world that was not fiat money, I do not care whether it was gold, silver, paper, or what not. Take away the coinage value of gold, and what is it? It has very little intrinsic value. One pound of fine steel is of more intrinsic value than any 100 pounds of gold ever dug out of the earth. Take all the silver and gold that has ever been dug and throw it into the deepest sea, and who would suffer? Only the rich, and they say the rich never suffer. What would be lost? Nothing. But, on the other hand, take your iron and sink it in the sea, and what happens? In twenty-four hours the world would have gone back into barbarism. There is but one standard of value, but one on earth, and that is the capacity, the measure of anything, gold, silver, earth, water, anything that can be mentioned to contribute to the happiness, the life, the health, the well-being of mankind, and there is no other standard possible.

Mr. RAYNER says in his remarks:

Nor do I mean these mine owners whose continued prosperity and exorbitant profits are threatened by the repeal of the measure that is now before me.

That remark shows he does not know anything about the facts. I speak it with the utmost respect. If he knew anything of the facts he would know that the mines are closed and the miners are asking for work in the streets of Denver and everywhere in the silver States. He talks of market value. What is that? He says the market value changes from day to day. What makes the change? Not intrinsic values. No, but because Jim, Tom, and Jack, who have the gold and the money that is locked up now, combined, and they fix the market price where they see fit; put it down, or put it up, as they can make the greatest profit.

A little while ago I read in a dispatch in the Associated Press which has never been denied, and I suppose, therefore, that it is correct, that the Treasury had one day failed to buy silver—it was on Friday or Saturday—giving as a reason therefor that "the officers of the Treasury believed the London price of silver would be less on the next Monday." Do you not suppose that that telegram was cabled to England in five minutes after it was uttered?

Was it not a substantial request on the part of the Government officials of this country to the bankers of London and to the Rothschilds to fix the price of an American product lower next Monday? That is the way it looks to me. I will tell you what we want, and I am speaking now only for my own constituents. We want men to administer the affairs of this Government who are, first of all, American citizens, proud of their country. [Applause.] We want men who have faith in the ability of our own people to steer the ship of state themselves, without asking Germany or Great Britain which way they shall steer, or what port they shall make. That is my idea. That is what the people ask them to do. They do not ask the Treasury of the United States to practice any economy which destroys any American industry, whether it is raising wheat or corn, or digging in the mines.

What the country wants is a few less partisan Democrats, as few less partisan Republicans, and a great many more American Democrats and American Republicans. That is what we want—[applause]—Americans first and Republicans or Democrats afterward. As for the man who has not faith in the resources or the ability of this country to manage its own affairs, if I was that man I would emigrate to some place that I had faith in. [Laughter.]

Now, there has been the impression manufactured—and I am speaking deliberately—the impression has been manufactured that there has been an enormous yield of silver which has glutted the market, that it lies around everywhere, that we have so much silver in money that we do not know what to do with it, although the banks have not got it and are paying 3 per cent premium for it. Let us look at the report of the Director of the Mint for 1892. For the twenty years beginning with 1873, including 1892, according to the Director of the Mint, the total production of gold and silver in the world is as follows: Of gold, $2,157,000,000. Of silver, $2,246,000,000. This is reckoned at 16 to 1. Therefore, in twenty years there have been but $89,000,000 more of silver than of gold produced in the whole world, or only $4,500,000 per

year. And this in the next ten or twenty years may be changed to an excess in the production of gold.

Mr. SIMPSON. How late is that report?

Mr. BOWERS of California. It is the report for 1892, the last one issued.

In my country they have very large flocks of sheep. Some men own fifteen or twenty thousand head. In shearing time they hire a large force of men, and they pay each shearer by the fleece. When a man shears a sheep he takes the fleece and carries it to the shed, and he receives a little tag for it. That tag shows that he has sheared a sheep. Each man that presents a fleece gets a tag. Many of these sheep-owners have had brass tags made with their names or initials stamped upon them. Some of these tags are of brass, some of zinc, and some of leather, each having the individual mark of the sheep-owner. Whether a tag is of wood, or leather, or brass, or zinc, it represents that a sheep has been sheared and that the man is entitled to his pay, and that is money.

Why, what is the intrinsic value of that piece of paper [holding up a five-dollar bill]? What is the market price of that kind of paper? Nothing ever made this money but the stamp. [Holding up a Mexican silver dollar.] The Mexican Government is behind that piece, and [holding up a United States silver dollar] the American Government is behind that piece. I can take five of these American silver dollars and get just as much for them to-day as for this paper dollar or a gold dollar anywhere. Why should not this condition of things continue? I will tell you why. It is because certain people want bonds issued—and I call your attention to this: I have never seen a newspaper or heard of an advocate of the gold standard yet that did not wind up the argument by saying, "Issue some gold bonds and sell them to foreigners and get in the gold." That is, give a second mortgage for the interest that you owe these people. I do not believe in it. It is not necessary.

Talking about the amount per capita of money, no authority puts the amount as above eight billions of gold and silver coinage in the whole world, which is between seven and eight dollars per capita. That includes everything. As a matter of fact, there are not two dollars per capita in circulation to-day. If there were money would not be so tight. There would be some silver around. You will find by turning to the report of the Director of the Mint and the report of the Treasurer that two years ago England coined sixty-five millions of silver money at the rate of 15½ to 1. Do not forget that—the ratio.

England and all her dependencies produced eleven millions of silver. She bought fifty-four millions of silver of other nations at a price which she herself fixed in London, averaging about 75 cents. She bought millions of that silver from the United States, coined it at $1.29, and with it bought her supplies of wheat and cotton from India, because the Government of the United States did not know how to attend to its business in a businesslike manner, selling this silver at 75 cents, to be coined by a foreign nation, which made from 50 to 60 per cent by the operation.

Now they tell us we must have "the money of the world." The cry has been all along, and you will hear it from every man who speaks on the other side of the question, that the United States can not have silver except by the gracious permission of England, Germany, and France. Oh, we are a weak sister, a very weak sister, in the opinion of some financiers! It is said that there is nothing so cowardly on the earth, above the earth, or under the earth as $1,000,000—except it be two million.

Now, sir, the people of this country can make their own money for themselves, and if England wants to put up the bars and close the doors on us, swear she will not trade with us any more, all right. Which country can stand such nonintercourse the longest? This great nation, that can produce every necessary, every luxury needed for its people, and at the same time raise on its own soil enough to feed half the world beside; or can England, that depends on other nations for its daily bread, and must sell its wares for something to eat, must trade to live? For what single thing must the United States be dependent on any other nation? In such a contest which will be forced to surrender first? I would like to see a little more sand and a little more patriotism, a little more Americanism, put into the legislation, the laws, and the administration of the public affairs of this country.

Gentlemen say there is plenty of money, but there is a want of confidence. A want of confidence is a very general and uncertain term. What produced this want of confidence? I asked a man who was working for me, and who, as soon as he learned of the run on the banks, rushed down to get his money, why he did it. He did not want the money. He replied, "I don't know how it looks to you, Bowers, but to me it looks like corky times ahead. I am afraid of Congress, if it knocks out silver, stops coining it, they have got money cornered sure." And that is what has happened. And when you, gentlemen, ask why you can not get money to do business, it is because it is cornered. That is the plain English of it. It was only necessary to send a few millions out of the country, lock up a few millions in bank vaults, the proper notices in the press, and the stocking could be depended on to complete the corner.

Now, the working people, the toilers, ask you to enact such legislation as will furnish a supply of money sufficient to prevent the speculators from cornering it and defrauding the laboring man out of his just dues—his earned profits.

I do not believe that the free coinage of silver would at once restore this country and give it relief, but it will partly do it. But instantly on the unconditional repeal of the purchasing clause of the Sherman act the distress is multiplied. There are two things I would do to give relief. The first is, I would set the thousands of idle hands at work.

How would you do it? In the last session of this Congress it was understood that the Committee on Public Buildings and Grounds had agreed to report a bill for the erection of a public building for each State, and to make appropriations therefor amounting to something like forty-four buildings; but under a misdirected and disastrous idea of economy, not a single bill was reported and no appropriation was made.

I would start those public buildings and I would double their number; I would commence internal improvements all along the line, and I will guarantee that the American laborer, the American merchant will take the United States promise to pay in legal money of the United States for all the material and all the labor that will be required. Then we shall have some money to relieve the situation, and what we owe we shall owe to our own people and not to foreigners.

It is proposed to sell gold bonds, to borrow of the foreigners, and put ourselves in their power. Instead of that, let us pay our money to our own people, and they will be glad to get it. That is my idea. I would totally disregard the stupid ignorance of small politicians and all this talk of "economy" and set the people at work. Do gentlemen remember the period after the war when we had two billions of paper money out with nothing behind it but the faith of the Government? And with that money we entered on the great era of prosperity.

The gentleman from Ohio [Mr. HARTER] said that it would be better if there was not any silver behind the certificates. Well, I think it is better to have 75 cents behind a certificate than to have 7 cents, even if back of both is the faith of the Government. When we issued bonds during the war period, the men who had bought them cheap came to the Government and said, "We want you to say that you will resume specie payment." The Government said, "But we can not resume; we have not got the money." "Oh," said the bondholders, "just say that you will resume; that is all we want. We do not want to return the bonds to you; we want to hold them; they are good security; we only want you to say you will resume, and our fortune is made." So, I say: Let us employ the people of this country instead of leaving our own workers idle and spending our money employing the cheap labor of Europe. It is not the debt we owe ourselves, but the debt we owe foreigners that distresses us. Let us stop borrowing of foreigners.

Now, I want to say a word to my Republican friends who have done me the honor to listen to me to-day. I am quite deaf, but my one ear has not failed to catch certain remarks that have been made in relation to the company that I am keeping in this matter. [Laughter.] As to that, I simply wish to say that I am the judge of my own Republicanism. I was born into the party; my first vote was cast for John C. Frémont in 1856, and I always expect to be a Republican, but the only way for the Republican party and the Democratic party to continue to meet here and confront each other as in the past, and not to be supplanted by other parties, is to do right, and deal with all the people of this country fairly.

I am a pretty good Republican, but this is not a party question. Ill-advised men have tried to make it so, but it is a business question that ought to be dealt with practically, and I exercise my own judgment in dealing with it.

I know, or I have reason to believe, that the majority of my party here are on the other side. They may be as right as I am, and fairly represent their constituencies, I know, however, that I represent not only the Republicans of my district in my attitude on this question, but also the Democrats and the Populists, and they will all tell you so, and I have no hesitancy in saying that on this question I am perfectly willing to train with those Democrats who are first Americans and then Democrats, and I want to say that it ill becomes any Republican or any member of my party, who at this juncture has joined the gold squad led by Grover Cleveland in this fight and are now marching under his banner, to criticise my attitude. [Laughter.] I am representing my people here. I represent their views. They ask this House to do

right, to regard the interests of the people who produce all this wealth which toll-gatherers get rich upon. [Applause.]

The SPEAKER. The Chair is ready to recognize any gentleman who desires to address the House in favor of the pending proposition. [A pause.] No gentleman expressing a desire to speak in the affirmative, the Chair will recognize the gentleman from Utah [Mr. RAWLINS] for thirty minutes.

Mr. RAWLINS. Mr. Speaker, The gentleman from Massachusetts [Mr. MORSE] who spoke this morning complained that the people from the mining States had an undue representation and an improper number of votes in the Congress of the United States. I speak as the representative of more people, I take it, than are contained in the district from which the gentleman himself comes. My constituency is composed of about 240,000 people. I have no vote upon the floor of this House; neither have my constituents any vote at the other end of the Capitol.

All that I can do here is to speak in behalf of their interests; and I desire to say that while we have a number of people in that Territory engaged in the industry known as silver mining—or rather they were engaged in it, for they can not be said to be engaged in it now—yet I do not speak for the protection of any industry in the Territory I represent. I am not a protectionist. I speak only for those people as their interests are linked with the common welfare of the country. This Congress has been called together to provide a remedy for a great financial disturbance.

In order to intelligently provide something which will operate as a cure for the ills which afflict us, it is first important to inquire what is the cause, and, in seeking for the cause, intelligent men will find it only in something which has sufficient potency to create the widespread effects which constitute the phenomena of distress not only in this, but the other nations of the world. The gentleman from Ohio [Mr. HARTER] who spoke this morning ascribed all these evils to a little act of the American Congress known as the Sherman act, but the gentleman from New York [Mr. HENDRIX] conceded that that was not an adequate cause. He said that the Sherman act could not have caused the general financial wreckage which began in Australia in the early part of this year.

He might have said that it could not have produced the disasters which ensued in England upon the Baring failure. He might have said that it did not cause that continuous and everlasting decline in prices, in the value of all productive industries, which has been going on from the year 1873 down to the present hour.

The Sherman act! Has any gentleman pointed out what there is in any provision of that statute which could have had such a baleful influence upon business in this or any other country—a measure involving only the expenditure of the value of 4,500,000 ounces of silver every month. If such an expenditure were made for the construction of a man-of-war, to lie idly upon the sea at the threshold of New York Harbor, would gentlemen from that city come here and say that expenditure was going to work the ruin of this country?

Silver is not paid for in gold. The terms of the statute, the contract obligation of the Government of the United States, did not provide that silver should be paid for in gold. By the terms of the contract under which every Treasury note is issued, both parties are bound to understand that the option is reserved to the Government to pay either in gold or silver. From no ethical and from no legal standpoint could any gentleman stand on this floor or elsewhere and claim that this Government has broken its obligation or violated its plighted faith in exercising the option which is thus retained.

Every man who originally takes the note is bound to understand the terms of the contract. Every man to whom it is transferred knows the terms. Any Englishman, any American knows that there is a trust in behalf of the people of the United States that the Secretary shall exercise his discretion in the payment either in gold or silver.

Well, when the silver is purchased and the note is issued, it is put in circulation; and why should not our Government have exercised the option which has been not only in theory but in practice exercised by the French Government for about ninety years—which has been exercised a hundred times within the last twenty years by the Bank of France. That institution always exercises the option to pay either in gold or silver. In that country, possessing $700,000,000 of silver and about $900,000,000 of gold, whenever there is an undue demand upon the gold, the Bank of France always exercises the option of tendering silver. France has nineteen or twenty dollars in silver per capita for 38,000,000 of people. When that option is exercised, does it drive gold to a premium?

But it is said that this country, with nearly 70,000,000 of people, with but $7 in silver per capita, either in coin or bullion, in the Treasury, can not, in accordance with the terms of a contract which everybody was bound to understand, offer payment in silver when gold is unduly demanded. It is claimed that this would drive gold in this country to a premium. Yet the gentleman who so declare depict in glowing terms the greatness in commercial power and strength of this young and all-powerful nation—a nation which was described by a distinguished economist, Jevons, as destined in respect to finance and commerce to grow in the future beyond even the possibility of the dream of its citizens. Why, then, can not this nation do what any other nation can do under similar conditions?

The Sherman act is not, then, the cause of the depression and widespread ruin in this and other countries. It is, indeed, difficult to conceive how any rational being can ascribe to it such potency for evil—a little harmless four-million piece of legislation—a very Nemesis of destruction. No rational man does believe any such thing. An ulterior end has been in view of enhancing the value of fixed charges and long loans amounting to more than fifty billions concentrated into the hands of a few. But these few are all-powerful for manipulation and deception. They have caused a false cry to be raised by which to deceive and mislead unwary Congressmen.

It reminds one of the old days of ignorance and superstition. When some calamity had happened, in looking about for the cause a harmless hag was likely to be discovered. Immediately all the misfortunes of the people would be ascribed to her witchcraft, and she would be dragged forth, with manifestations of fiendish delight, to be publicly burned. So with the Sherman act.

The gentleman from New York who last spoke saw fit to cause to be read a message which had been sent from Lombard street across the Atlantic, setting forth the thought and the sneer of bankers over there, as if he expected that we were to legislate in this country with respect to the sneer of Englishmen in Lombard street.

Gentlemen say they are in favor of "a sound currency and an honest dollar." I wish to say to gentlemen who represent that side of this issue, that they can not gain any victory by attempting to beg the question. It is all-important in discussing any question, and especially the question which is now under consideration, that we should speak with accuracy and with clearness. What do gentlemen mean by "an honest dollar"? A dollar is a cold, spiritless thing; it possesses no moral attribute of honesty or dishonesty. It is true that in the hands of him who uses it, it may be an instrument of great evil or of great good.

But it has no moral agency. Why do gentlemen speak of "an honest dollar and a sound currency"? Do they expect to drive men who view this question from the standpoint of research and economy, which are world-wide, and which are based upon the solid foundations of truth, from their position by the sneering intimation that they are seeking to promote their theories by dishonesty? I say that language like that is but demagogic; it does not tend to elucidate the question; it can only tend to deceive the unwary or frighten the timid. No member of this House will be moved from his position by any such consideration or epithet.

Gentlemen say, "We do not want a dollar worth only 50 cents." Well, they have not any such dollar, and if we should have free coinage at any ratio which is mentioned here they will not have any such dollar. What do they mean by "a dollar worth only 50 cents?" The expression is an absurdity upon its face. We might as well say that the Almighty could create a 3-year-old bull in a minute. [Laughter.] In the Constitution of the United States express power is given to the Congress of the United States to coin money and regulate its value.

What is meant by the language, "regulating its value"? Can not the Congress of the United States say that 410 or any other number of grains of silver shall be stamped and designated by any name, a dollar if you please? Of course every nation exercises the control of its own currency and designates it as it pleases. Everybody who accepts that dollar knows just what it means. There is nothing counterfeit about it. It is genuine. Any citizen passing it in payment for any commodity, or in liquidation of any debt, understands exactly the currency he is using.

Why, sir, all debts, all commercial transactions, imply a full understanding on the part of the parties as to the nature and characteristics of the transaction. There is no element of false pretense or fraud in relation to the silver dollar. It is not a dishonest dollar. It is just what it purports to be; it passes for just what it is. Why, sir, suppose this question were brought into a court of justice? There are many men here who understand the rules of evidence, which are supposed to be founded upon the rules of logic and common sense. Suppose the question were, "What is this which we call a silver dollar worth?" A gentleman would not be permitted to answer. Why, if you go into the London market you can buy bullion, and if the Gov-

ernment of the United States would permit you to do so you could coin it in a dollar and make a profit on your transaction, because you could purchase the bullion for 50 cents. But what is its market value? What is it worth in exchange for any other commodity in the country? That is the standard by which you must gauge its value. Any other evidence would be excluded as incompetent. Gauged by that, it is to-day in New York at a premium. It sells at 3 per cent above par.

This shows the extent to which the Government can, by giving to a metal a new function and an increased demand, enhance its value. A coin clothed with the function of money is worth 50 per cent more than the metal which it contains as a mere commodity.

The gentleman from Ohio [Mr. HARTER] has a theory. It is that it is dangerous to have too much money. I have heard this classification made, not by the gentleman who spoke on this floor, but to which school of philosophy he seems to belong. It divides property into productive wealth, into consumable wealth and coin—that is, it means that coin is not wealth at all.

The gentleman spoke as though he had traveled all of the road and knew all that had taken place on this subject since the days of Lycurgus down to our time. But I venture to say that in all of his travels, through all the centuries, he did not find an economist or a publicist, who devoted any attention to the question, who did not declare that money is wealth of the very highest power. Why, as with a stroke of magic, it can be transformed into anything which will minister to the comfort or convenience of man or the development of the human race.

They say that every unnecessary dollar is dead capital and an utter waste to the country. Now, if you have money, what can you do with it? You can use it for the purchase of commodities. You can keep it for prospective purchases that you may want to make. You can lend it to be returned with or without interest, or you can give it away. These are all useful purposes. Or, you can destroy it. The last is the use to which the monometallists would devote it. Demonetization is destruction.

Every unnecessary dollar is to be destroyed, especially if it be a silver dollar. Why, Mr. Speaker, according to that logic, if the gentleman had a coat which he had put by, and by which he expected to keep warm in the colder weather, he ought to take it out and burn it. Every unoccupied house ought to be consumed with fire. Every unemployed workman ought to be electrocuted. Indeed the Malthusian is the philosophy of the goldite, "whom he could not use he would destroy." Their battle cry to-day is similar to that of the old Romans in respect to Carthage, *Argentum Delendum est.* Silver must be destroyed.

Up to 1873 four billions of the world's wealth—its metallic money—consisted of silver, an equal amount consisted of gold. That had come down as a bimetallic system from the past ages. All the peoples of the earth, you may call it wealth or what you please, for three thousand years had planted their credit and business on this rock.

In 1873, while our superstructure of productive industry was based on this foundation, a cataclysm occurred which shattered the foundation, and the wealth of the world has been sinking in value ever since.

The index numbers of the Economist show that, during the past twenty years in the London market, the gold value of twenty-two leading articles has declined in the same ratio as silver.

In Hamburg Dr. Soetbeer, the noted statistician and economist, shows that articles there have declined in the same manner. Seven great standard commodities in this country have been affected by the same causes, and the same operation has applied to them. Such has been the effect upon the general range of prices. As gold has appreciated, by reason of the increased work put upon it by curtailment of the use of silver, all other things in their gold prices have suffered a corresponding decline. All forms of wealth and property, except gold credits and fixed charges, have been nibbled away by the ever-increasing demands of the money claims.

A commission was appointed by the English Government a few years ago "upon the depression of trade." You, gentlemen, who are so fond of quoting the English as being *ex cathedra* on all questions relating to finance, when you take up the findings of this impartial commission, which extended its investigation not only into that but into all countries where the matters under consideration could be illustrated by experience, will find strong language upon the subject.

These were the conclusions:

First, that the depression dated from the year 1873 or thereabouts.

Second, that it extended to nearly every branch of industry, including agriculture, manufactures, and mining, and that it was not confined to any one, but had been experienced to a greater or less extent in all the industrial countries of the world.

Third, that it appeared to be closely connected with the serious fall in general prices which, even then, was most observable, though it has been since more strongly remarked, resulting in the diminution, in some cases even to the total loss, of profit and consequent irregularity of employment to the wage-earners.

Fourth, that the duration of the depression has been most unusual and abnormal. No adequate cause for this state of things was discoverable, unless it could be found in the same general dislocation of values caused by currency changes, and which would be capable of affecting an area equal to that which the depression of trade had covered.

Ernst Seyd, a distinguished economist, in 1873, at the time of the proposed demonetization of silver by Germany and other countries, predicted this continuous depression, as the cause for it would be the curtailment of the money, the basic means of value, represented by four billion dollars' worth of silver; that as that was cut down and demonetized values, would be depressed, and you would have all the evils which have since ensued.

How prophetic was his vision!

But they say gold has not advanced in value. It is in the gold prices of things that all things have declined in value. With reference to all those things gold has advanced in value.

Gentlemen, I want to call your attention to the words of Senator JOHN SHERMAN, a distinguished statesman, to whom all the evils growing out of this unfortunate legislation in 1873 have been attributed. I say that he knows to-day, and that he has declared, that by reason of that act gold has advanced, to the detriment of all industrial enterprises, and to the advancement of the wealth of those whose wealth consisted of credits and fixed charges. I will ask the Clerk to read a letter addressed by Senator SHERMAN to Mr. Groesbeck, of Cincinnati, Ohio, July 15, 1878.

The Clerk read as follows:

TREASURY DEPARTMENT, *July 15, 1878.*

DEAR SIR: To that part of your letter of the 12th instant, in which you ask my view of the matters confided in the monetary commission, I have some delicacy in replying very fully.

During the Monetary Conference in Paris, when silver in our country was excluded from circulation by being undervalued. I was strongly in favor of the single standard of gold, and wrote a letter, which you will find in the proceedings of that conference, stating briefly my view. At that time the wisest among us did not anticipate the sudden fall of silver or the rise of gold that has occurred.

This uncertainty of the relation between the two metals is one of the chief arguments in favor of a monometallic system, but other arguments, showing the dangerous effect upon industry by dropping one of the precious metals from the standard of value, outweigh, in my mind, all theoretical objections to the bimetallic system. * * *

JOHN SHERMAN, *Secretary.*

Mr. RAWLINS. He attributes it to the same cause. Now, there was not a delegate to the conference in 1878 who did not appreciate that the demonetization of silver was the cause. There was not a delegate in the conference of 1881 who did not recognize the same fact. There was not a delegate in the conference of 1892 at Brussels who did not declare the same thing; and we have another prediction here, gentlemen, to which I earnestly call your attention, because in this declaration you find the cause of the distress with which we are afflicted to-day predicted in unerring language. Mr. Rothschild, who is not supposed in any degree to be biased in favor of silver, who is not supposed to be a silver lunatic, used this language in November, 1892. Listen to it, gentlemen:

I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions. And if this conference were to break up without arriving at any definite result, there would be a depreciation in the value of that commodity which it would be frightful to contemplate, and out of which a monetary panic would ensue, the far-spreading effect of which it would be impossible to foretell."

Mr. BLAND. They have got the panic now.

Mr. RAWLINS. That conference broke up without arriving at any definite result. Then came that great decline of silver. Then ensued the financial wreckage and crash in Australia. And let me stop here to call attention to another prediction, one of many made at this conference. It was said there that unless the nations did agree that the next step would be the closing of the mints in India, and what would happen then? Why that would precipitate and cause a decline, an absolute destruction of billions of dollars, represented by silver in its value and all values having relation to it, and that a depression would accordingly ensue.

That has happened. That prediction has been verified by a fall in silver and all other things in one week of 20 per cent. Just think of it! All the wealth in one month has sustained a loss of 20 per cent; and all the accumulation of all the ages of all people to that extent swept away by the fiat of a council of ten men decreeing the closure of the mints in India. But what next was to complete the misfortunes of the human race? Sir Rivers Wilson in that conference said:

What are the results to which this double action of the part of the great purchasers of silver might lead? Certain high authorities believe that the sudden cessation of the purchase of silver in the United States and the closing of the Indian mints, should these events actually occur, would lead to a heavy fall in silver and a disastrous disturbance of commerce.

When I looked into this question, I did so conscientiously for the purpose of arriving at the truth, and as I saw to declare it. I see the destruction of silver bringing disaster. The most distinguished economists throughout the world have declared the

results which would ensue from such action of this Government unfavorable to silver. The mind is driven to the conclusion that those men presaged the truth.

The President has sent a message to this Congress, and in that message he has depicted and portrayed the evil effect of hoarding money. I do not wish to underestimate it. During the time money is hoarded it is, so far as active use is concerned, as if it were demonetized or sunk in the depths of the ocean; because the "quantity," which some gentlemen call immaterial and unimportant, has been diminished. What is demonetization but a more destructive and a more permanent form of hoarding. The hoarder will keep it up until he has sense enough to restore it to the channels of trade.

[Here the hammer fell.]

The SPEAKER. The time of the gentleman has expired.

Mr. BLAND. I ask unanimous consent that the gentleman have time to conclude his remarks.

There was no objection.

Mr. RAWLINS. I thank the gentlemen. I shall endeavor not to weary them by an unnecessary waste of time. I say the money so demonetized is lost until the power which can restore it recovers sufficient knowledge to put it back, or reclothe it with the functions by which it may become useful in the channels of trade. You can have no efficiency, which is the desirable thing, without quantity, can you? And as you increase the quantity you strengthen the efficiency; as you diminish the quantity you weaken the efficiency. If there were in the bank vaults to-day throughout this country 10 per cent more of quantity, there would be a stronger basis on which to restore the confidence of the country.

While the President deprecates hoarding, he recommends the adoption of a policy for its encouragement.

Monetary contraction always leads to a decline in values. As demonetization goes on the purchasing power of the remaining money grows. Hoarding is thus made profitable. Investments can not be safely made without a certainty of loss so long as the decline in values continue. If loans are made upon a good margin to-day, in a short time the security becomes inadequate.

So, ever increasing in value, without risk of loss, the money will be safely stored away and held.

Take the Bank of England. In 1881 it had a reserve of £42,000,000; but with the demonetization of silver and the increased demand for gold resulting therefrom, such an encroachment has been made upon it that the reserve in ten years decreased until now it has about £22,000,000 as a reserve. Sir Samuel Montague, in a recent article published in Littel's Living Age, a man of long experience in Lombard street, portrayed more vividly than the gentlemen who take the opposite side of this question that her financial system was like a pyramid standing on its apex; a great superstructure of credit, which, if people lose their confidence, would be toppled over on account of the insufficiency of the base of gold on which it rests, and he says that such would have happened, and the English bank would have gone to pieces as the result of the Barings failure had it not been able to obtain a gold loan of $15,000,000 from the Bank of France.

Now, the necessity for gold is indicated by its demand for coinage. I can demonstrate, I think, to the satisfaction of any gentleman upon this floor that the gold supply of the world is inadequate. I take the figures for 1889. In that year there was produced $120,000,000 of gold throughout the world. Dr. Soetbeer estimated that there was consumed in the arts in 1886 $60,000,000, and that the amount used for such purposes was gradually increasing.

In the Report upon the Mineral Industries of this country it appears that the amount consumed in the arts in 1880 in this country alone was $10,000,000, and in 1890, according to the estimate of the Director of the Mint, it had risen to $16,000,000. Therefore, it would be a reasonable estimate to say that the amount of gold consumed in the arts throughout the world in 1889 was $70,000,000. Taking that estimate, there remained $50,000,000 for coinage.

Now, what was the amount coined? One hundred and sixty-eight million dollars. After deducting for use in the arts, you find $118,000,000 more gold demanded for coinage than was produced that year. That meant, of course, a recoinage by one nation of the coins of another, so that what one gained another lost. This demand for gold was so insatiate that it overcame the *vim inertia*, the cost of transportation, the expense of a double or triple mintage, and of the premium (which has been spoken of here as being as high as 1 and 2 per cent) which one country charges as a penalty upon the exportation of its gold to another.

Now, shut down the silver mines, from which from one-third to one-half of all the gold produced comes; take one-third from $120,000,000 and you have $80,000,000 remaining, and in but a few years, if not already, the demand for gold for use in the industrial arts will encroach upon your original stock. Then think of the millions, according to the estimate of Jevons, by which the gold stock annually shrinks from wear and loss of coins. And yet men dream of universal gold monometallism.

No wonder that we look with trepidation upon the passing to and fro between countries of a few million dollars of gold. Austria-Hungary sought to get upon a gold specie basis and passed a law to that effect converting her taxable silver bonds into gold bonds. She put them upon the market, though bearing 4 per cent interest, at 90 or 92, and endeavored to get the gold, but she could not get it anywhere in the wide world until she came over to America to filch it from the Treasury of the United States.

That was the reason why last year $87,000,000 of gold left this country. But, notwithstanding the sacrifice which Austria-Hungary was willing to make to get upon a gold basis she could not do it, and only a month ago the news was flashed across the ocean that the time at which such specie payments were to be resumed was to be deferred till 1896. Then there ceased to be such a demand for gold and it was permitted to flow back as it has been doing lately.

Now, it is supposed to take, to get upon a specie basis, enough gold to cover the aggregate of the premium upon gold over the inconvertible paper money. Remember that Austria failed and that the result of her attempt was to create disaster to the business interests of the world, causing a financial crash in England itself, and then suppose that Russia and India, and other countries throughout the civilized and uncivilized world should make the same effort, what would happen?

In 1816, when England adopted the gold standard, such was the increased demand for gold that there immediately resulted a fall in the prices of other things. That led to a general financial disturbance which was depicted by Mr. Clay, most eloquently in 1820, pointing out the dire disasters which had come upon our country.

Why, sir, the idea of universal gold monometallism has been justly described as Utopian. It is an effort to cover the financial bed with a golden blanket which is not big enough. You pull it to one side and the other suffers from the exposure. It is indecent even to attempt it. What is the remedy? We have found the cause. The dream of the monometallist is idle. It is an iridescent dream of fatuity and folly, resulting from ignorance. [Applause.] Why, sir, the remedy is to restore to silver the functions of money which it has possessed in all ages—so universally recognized for three thousand years as to be regarded as almost, if not quite, an arrangement of nature itself.

The real cause of the widespread depression is found in the fact that, during the past twenty years the quantity or supply of primary money has not kept pace with the increase of population, of business production, and the growth of commerce. The use of money has been demanded in new and extensive fields, not only in America, but in Asia and Africa. Moreover, the supply of primary metallic money has been curtailed by the demonetization and inhibited coinage of silver, while the demand for gold for use in the industrial arts has constantly increased and its production has as uniformly diminished. The tremendous loss in silver has in no degree been compensated by any increased supply of gold.

As the value or price of all other things varies directly as the quantity or supply of primary money constituting the standard of its measurement, it follows that as such money contracts prices must fall; or if the supply of money remains the same, but has a wider distribution, is made to do duty in a wider field and in new channels, a proportionate fall in values must ensue. The same result takes place when the articles or objects which money measures are increased or multiplied.

The correlation of these propositions is, that the money and as fixed charges and liabilities, solvable alone in that medium all gauged by other things, undergo appreciation.

Talk about "evolution." That term is only properly applicable in a scientific sense to the animate, not to the inanimate world. You can not make a vicious theory respectable by bestowing upon it a scientific appellation. Evolution—the survival of the fittest—can only be applied to this question upon the assumption that it means the predominance of might over right. Mr. SHERMAN wrote his letter to the conference in 1867 recommending gold. Was that "evolution?" He afterward, in his letter of 1878, said he had made a mistake, that he did not act upon sufficient information. How is "evolution" going on in England? Why, sir, Barclay, Goshen, and many others, all great statesmen over in that country, are falling rapidly into the theories of the bimetallist. The "evolution" is all the other way.

Now, I want to say a word about the single standard. Why, sir, gold and silver have constituted in all the ages of the world a mode of measuring the value of all articles of utility. We may have a measure composed of two metals—a measure of value as well as of distance—and the best measure of distance is that

which is composed of two metals, expanding under the influence of heat or cold both ways, so that the general dimension always remains the same. If you will take the aggregate of gold and silver and put them together, you will find that they have been more stable in this form than when taken separately.

We want a system which shall operate like the compensatory pendulum, so that the radius of oscillation will ever remain the same. That is the bimetallic system. As to the unit, you may call it a dollar, or a shilling, or a rupee, or anything else; the name is immaterial. The unit of account is unimportant; it is the general measure, that which is indicated by the stock of gold and silver and the natural increase growing out of the development of mining industries—growing out of the discovery and production of the metals as God has placed them in the hills.

When men know that their money is based upon this, in making a long-time contract they can measure the stock on hand, and they can estimate the probabilities of production, and they can determine what compensation in the form of interest they should reserve in order that they may not suffer loss. But if the system of the gentleman from Ohio [Mr. HARTER] is adopted, what will be the result? I think the gentleman used somewhat extravagant language; that he spoke somewhat recklessly, though with good will and good nature, and with an eloquence which I highly appreciated. His theory would result in this: when we leave the metallic basis of money, which all the monometallists say is the ulterior end, we shall issue gold bonds which we will place upon the market at a discount, realizing, perhaps, 90 per cent.

Our own bankers will buy these bonds and then issue notes upon them at their par value, thus giving to the bankers of the country the profits arising from a monopoly of making money for the people. Under such a system every contract would have to be made with reference to the caprice of the banks, always controlled by their interest or greed.

Why, sir, gentlemen talk about the bounty or tribute which is to be paid to silver miners of the West. They are not opposed to tribute, but they want its direction to be toward the East, not the West. Where are the votes to come from that will defeat the proposition of justice and right involved in the simple restoration of silver?

Will the votes come from those who are opposed to exactions in the form of bounties, to make profitable unprofitable industries? Will the votes against this proposition come from the West or the South? Or will they come from Pennsylvania, the home of the people who exact tribute; from New York, from Massachusetts, from the people east of the Alleghenies who have built up colossal fortunes upon the accumulations of tribute by means of which the burdens of debt have been multiplied and increased in quantity throughout all this land?

I do not speak in favor of "protecting" mining industries. I want to tell you here one fact in respect to mining in our Territory. The average life of a mine there is about ten years. When a mine is exhausted it is worthless. Within this time the investor must get back, not merely his interest, but his principal. The people in that Territory have invested $100,000,000 in that industry. As the matter now stands, that wealth is confiscated. At 20 to 1, scarcely more than expenses of operating the mines can be realized. In the mining States 12,000 miles of railroad are dependent for support upon the tonnage derived from mineral productions. That is the basis upon which are secured some three hundred or four hundred million dollars of bonds. More than a billion dollars is involved.

Our people who went to that country relying upon the continuance of a system older than history is able to record, which they supposed was built upon the "rock of ages," have risked their all for the redemption of one-third of this continent, under unparalleled difficulties, by the sacrifice of much blood, much turmoil and suffering. Yet, gentlemen from New York laugh and sneer and say that in order to get the monopoly of issuing a little currency to the extent of a small percentage upon the bonded indebtedness of the United States they are willing to confiscate all this wealth and drive those people to misery and financial death. [Applause.]

It may be a beautiful picture for those gentlemen to contemplate—the picture of that country remitted to desolation and famine. It may be that they are willing to see that country, now teeming with wealth, activity, enterprise, intelligence, and patriotism, brought to ruin and desolation; but I invoke the good sense and the common honesty of representatives of the American people to thwart this nefarious object. The work of our hands may generally go to decay, but beautiful structures of stone "more enduring than brass" will stand as the mute and mighty monument of a nation's folly and a people's despair.

Such must be the result if the policy recommended is adopted, and yet it stalks forth, a very demon of destruction, before which any fiend or devil might bow with reverence.

They say we can not do it alone; that we must let Russia start, let England start, let France start, let some other nation start. But, Mr. Speaker, in the name of God, who is more interested in starting than we? We have more than a billion directly or indirectly involved. We produce 28 per cent of the gold and 41 per cent of the world's product of silver. A great industry is involved, as well as the values of all wealth, productive and consumable.

We are the most powerful and capable of all nations and the most interested in starting. We can, as France did for seventy years, by the free and untrammelled coinage of gold and silver, linking the metals together, preserve their parity, standing as we do with two-thirds of the inhabitants of the earth on the silver basis on one side and on the other side only one-fifth on the gold basis.

England had a gold standard for seventy years, and Germany and the rest of Europe were on a silver basis. France during all of these years, by her bimetallic system, preserved the parity of the two metals. Gentlemen may deny it. I assert it to be a fact that the metals during that period did not fluctuate except as the rates of exchange between London and Paris varied. That was conclusively demonstrated in the Brussels Conference, and a table has been attached to the report of its proceedings which illustrates its truth. It shows the extreme variation of the value of silver in the London market did not exceed 5 per cent, and that such fluctuation was wholly due to the rates of exchange between London and Paris and to mint charges in France.

Since that time as silver has been demonetized it has fallen in value, as every man must concede, on account of the unfavorable legislation towards silver, and because of the restriction in its use as money.

Now, gentlemen say you can not remonetize silver or restore it by legislation because it has been depreciated. That is designated by Mr. Goschen as a "vicious circle." Restore it to the condition on which gold is based, with all the privileges of gold, and the two metals will stand together side by side to do the monetary work of the world, as they have done for thousands of years.

But, Mr. Speaker, gentlemen tell us that the test, the crucial test of the silver dollar, is to melt it down in a crucible, and then see what will be its worth after the process. I say to you, first restore to it the privileges that gold has, and then melt it down, and the process will show how it will stand the test. But suppose you apply the fire test to your paper money; put it into the crucible, melt it down, and see what it will be worth after the process.

Now, gentlemen, I have done, and I thank you for your attention. I have no vote in this House in behalf of the people I represent; but I do beseech you that you will so act as to bring heart to the business not only of the people in my own, but in the entire country and throughout the civilized world. The moment we set out in the right direction we shall be followed. We will not go it alone.

A little more than a century ago absolutism and tyranny in government had been evolved, and, as representing the survival of the fittest, dominated the world. Our forefathers did not wait for others to start, but went it alone, and gave evolution a new departure in the direction of individualism and liberty. Let us imitate their example. [Applause.]

Mr. BOATNER. Mr. Speaker——

The SPEAKER. The gentleman from Louisiana——

Mr. BLAND. Mr. Speaker, inasmuch as the hour of adjournment has nearly arrived, I move that the House do now adjourn.

The SPEAKER. Does the gentleman from Louisiana [Mr. BOATNER] yield for that purpose?

Mr. BOATNER. With the understanding that I hold the floor.

Mr. BLAND. Of course.

The motion of Mr. BLAND was agreed to.

Accordingly (at 4 o'clock and 51 minutes p. m.) the House adjourned until Monday, August 14, 1893, at 11 o'clock a. m.

SENATE.

MONDAY, *August 14, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

JOHN W. DANIEL, a Senator from the State of Virginia, and WILLIAM P. FRYE, a Senator from the State of Maine, appeared in their seats to-day.

The Journal of the proceedings of Thursday last was read and approved.

ANNIVERSARY OF LAYING THE CAPITOL CORNER STONE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a joint resolution (H. Res. 2) providing for the appropriate commemoration of the one-hundreth anniversary of the laying of

the corner stone of the Capitol of the United States, September 18, 1793, in which it requested the concurrence of the Senate.

Mr. VOORHEES. I venture to ask that the Senate consider the joint resolution, and that it be put upon its passage now. For that purpose let it be read. I will merely state that it has been carefully considered and unanimously passed by the other House.

By unanimous consent, the joint resolution (H. Res. 2) providing for the appropriate commemoration of the one-hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793, was read twice, and considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

COURT OF CLAIMS REPORT.

The VICE-PRESIDENT laid before the Senate a report from the Court of Claims, transmitting a certified copy of the findings of that court in the case of Isaac Davenport, jr., and other claimants *vs.* The United States; which, with the accompanying papers, was referred to the Committee on Claims, and ordered to be printed.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the Legislative Assembly of the Territory of Arizona, praying that an appropriation be made for sinking artesian wells in that Territory; which was referred to the Committee on Irrigation and Reclamation of Arid Lands.

He also presented a petition of citizens of Elizabeth, N. J., praying for an investigation of the charges upon which certain American citizens are alleged to be confined in English prisons; which was referred to the Committee on Foreign Relations.

He also presented a petition of the General Synod of the Evangelical Lutheran Church of York, Pa., praying that the Chinese people be treated in the spirit which Christians should show to their neighbors; which was referred to the Committee on Foreign Relations.

He also presented a petition of the Missionary Society of the Methodist Episcopal Church of New York, praying for the repeal of what is known as the Geary Chinese law; which was referred to the Committee on Foreign Relations.

He also presented a petition of the Presbyterian Theological Seminary of Allegheny, Pa., praying for the suppression of the liquor traffic between the United States and the New Hebrides Islands; which was referred to the Committee on Foreign Relations.

He also presented two petitions of citizens of Shawnee, Ohio; petitions of citizens of Boston, Mass., and a petition of The Legal Protective Association of Cigar Manufacturers of New York City, praying for the immediate repeal of the purchasing clause of the so-called Sherman silver law; which were referred to the Committee on Finance.

He also presented the petition of Amos Cross, of New York, late first lieutenant, United States Army, praying for the passage of certain legislation for his relief; which was referred to the Committee on Military Affairs.

Mr. PLATT presented a petition of citizens of New Haven, Conn., praying for the repeal of the purchasing clause of the act of July 14, 1890, and the appointment of a committee to devise a scientific plan of currency; which was referred to the Committee on Finance.

Mr. BUTLER presented the petition of R. S. Lipscomb and 29 other citizens of Gaffney, S. C., praying for the repeal of the silver-purchasing clause of the so-called Sherman law without substitute legislation, except the appointment of a commission to consider and recommend an adequate plan of currency; which was referred to the Committee on Finance.

He also presented memorials of the Farmers' Alliance of Orangeburg County, S. C., and of the Barnwell County Alliance, No. 607, of Barnwell County, S. C., signed by W. S. Bamberg, M. J. Pate, and J. C. Miller, remonstrating against the repeal of the so-called Sherman silver law unless accompanied by free coinage of silver; which were referred to the Committee on Finance.

He also presented a petition of the Farmers' Alliance of Spartanburg County, S. C., praying for the free coinage of silver; which was referred to the Committee on Finance.

He also presented a petition of the Columbia (S. C.) Board of Trade, praying that an appropriation be made for the opening up of the Congaree River for navigation from Granby to the foot of Ginais street, Columbia, S. C.; which was referred to the Committee on Commerce.

Mr. CULLOM presented a petition of a large number of business men, merchants, and property owners of Chicago, Ill., praying that the purchasing clause of the so-called Sherman silver law be repealed, that no substitutes of any kind whatever be enacted at the present session of Congress, and that an expert commission be appointed to consider and recommend a scientific plan of currency, based on the experience of other countries and adequate to the requirements of a great commercial nation; which was referred to the Committee on Finance.

He also presented the petition of Charles A. Deere and other prominent citizens of Moline, Ill., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented a petition of the Carpenters and Joiners' Union, No. 300, of Galesburg, Ill., praying for the free and unlimited coinage of silver at the ratio of 16 to 1; which was referred to the Committee on Finance.

Mr. HARRIS. I present the petition of Orgill Brothers & Co., hardware merchants of Memphis, Tenn., and quite a number of other business men from different cities in Tennessee, praying for the repeal of the purchasing clause of the so-called Sherman act. I move that the petition be referred to the Committee on Finance.

The motion was agreed to.

Mr. MILLS presented a petition of citizens of Denton County, Tex., praying for the repeal of the Sherman silver law; which was referred to the Committee on Finance.

Mr. HOAR presented a memorial of the Woman's Christian Temperance Union of Massachusetts, remonstrating against the sale of liquors at the World's Columbian Exposition; which was referred to the Committee on the Quadro-Centennial (Select).

Mr. MARTIN presented a memorial of Topeka Lodge, No. 24, International Association of Machinists, and other citizens of Topeka, Kans., remonstrating against the repeal of the Sherman silver law unless a substitute is provided for the freer and more extended use of silver as money; which was referred to the Committee on Finance.

Mr. KYLE presented two memorials of citizens of Lake County, and a memorial of Local Assembly, No. 564, Knights of Labor, of Custer City, in the State of South Dakota, remonstrating against the repeal of the so-called Sherman silver law; which were referred to the Committee on Finance.

Mr. LODGE presented petitions of the Board of Trade of New Bedford, of the Chamber of Commerce of Boston, of the Paint and Oil Club of Boston, of the Earthenware Association of Boston, of the New England Shoe and Leather Association, and of citizens of Fitchburg, in the State of Massachusetts, praying for the repeal of the so-called Sherman silver law; which were referred to the Committee on Finance.

He also presented a petition of the Methodist, Baptist, and Congregational churches of Hyde Park, Mass., praying for the passage of legislation to prevent crimes in the New Hebrides Islands; which was referred to the Committee on Foreign Relations.

He also presented a petition of the Legislature of Massachusetts, praying for the annexation of the Hawaiian Islands; which was referred to the Committee on Foreign Relations.

Mr. VEST presented a memorial of citizens of Polk, Hickory, and Cedar Counties, all in the State of Missouri, remonstrating against the repeal of the Sherman silver law until it be replaced by an act for the free coinage of silver at a ratio of 16 to 1; which was referred to the Committee on Finance.

He also presented a petition of the Merchants' Exchange of St. Louis, Mo., praying for the repeal of the silver-purchasing clause of the Sherman law, and the passage of legislation giving national banks the power to issue notes to the par value of the bonds deposited by them; which was referred to the Committee on Finance.

Mr. GALLINGER presented a petition of the Southern New Hampshire Bar Association of New Hampshire, praying for settling before trial all jurisdictional questions between the State and Federal courts arising on the ground of diverse residence, and subject-matter upon the merits and final judgment in the Federal courts, with draft of proposed bill; which was referred to the Committee on the Judiciary.

He also presented the petition of Fred Dietz and 33 other citizens of the District of Columbia, praying for the suppression of a garbage nuisance at the foot of South Capitol street; which was referred to the Committee on the District of Columbia.

Mr. ALLEN presented petitions of the Board of Trade and Commercial Club of Omaha, and of the Commercial Club of Hastings, in the State of Nebraska, praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were referred to the Committee on Finance.

He also presented a petition of Assembly No. 1808, Knights of Labor, of Lincoln, Nebr., praying that the treaty between Russia and the United States be abrogated at the earliest moment; which was referred to the Committee on Foreign Relations.

Mr. STOCKBRIDGE presented petitions of the boards of

trade and sundry citizens of Grand Rapids and Detroit, Mich., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which were referred to the Committee on Finance.

Mr. HAWLEY presented a petition of the Norwich (Conn.) Board of Trade, favoring the immediate and unconditional repeal of all acts authorizing Government purchases of silver; which was referred to the Committee on Finance.

Mr. PERKINS presented a petition of the Chamber of Commerce of San Francisco, Cal., praying for the enactment of a substitute for the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

He also presented a petition of the Chamber of Commerce of San Francisco, Cal., praying for the annexation of the Hawaiian Islands; which was referred to the Committee on Foreign Relations.

He also presented a petition of bankers and citizens of San Jose, Cal., praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented a petition of the Chamber of Commerce of San Francisco, Cal., praying for the construction of the Nicaragua Canal; which was referred to the Committee on Foreign Relations.

He also presented a petition of the Knights of Labor of Los Angeles, Cal., praying for the enforcement of what is known as the Geary Chinese law; which was referred to the Committee on Foreign Relations.

Mr. CALL presented petitions of the Florida Bankers' Association of Jacksonville; of citizens of Gainesville; and of citizens of Fernandina, in the State of Florida, praying for the repeal of the purchasing clause of the so-called Sherman silver law; which were referred to the Committee on Finance.

PAYMENT OF SESSION EMPLOYÉS.

Mr. COCKRELL. I am directed by the Committee on Appropriations, to whom was referred the joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress, to report it back favorably, without amendment, and to ask for its immediate consideration. Under a decision of the Treasury Department the regular appropriations can not be availed of at the present session.

By unanimous consent, the joint resolution was considered as in Committee of the Whole.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS INTRODUCED.

Mr. HAWLEY introduced a bill (S. 260) to amend an act entitled "An act to authorize the construction of a bridge across the Missouri River at the most accessible point between the city of Kansas and the town of Sibley, in the county of Jackson and State of Missouri," approved March 3, 1887; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 261) to authorize the construction of an addition to the public building at Hartford, Conn.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 262) for the relief of the legal representatives of Orsemus B. Boyd; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 263) authorizing the President to place upon the retired list of the Army sergeants Francis Long and Maurice Connell, late of the Signal Corps, United States Army, survivors of the Lady Franklin Bay expedition; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. BUTLER introduced a bill (S. 264) for relief of the Citadel Academy, of Charleston, S. C.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 265) to provide for a May term of the district court of the United States for the eastern district of South Carolina; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 266) providing for the erection of an equestrian statue of Gen. Francis Marion; which was read twice by its title, and referred to the Committee on the Library.

He also introduced a bill (S. 267) to amend section 19 of an act entitled "An act to regulate commerce," approved February 4, 1887; which was read twice by its title, and referred to the Committee on Interstate Commerce.

He also introduced a bill (S. 268) for the relief of Henry E. Young, administrator of Thomas Ashton Coffin, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 269) for the relief of Jacob I. Cohen and J. Randolph Mordecai, administrators of M. C. Mordecai; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 270) to provide for the purchase of lands adjoining the United States naval station, Port Royal, S. C.; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 271) for the relief of the heir of Hamilton Slawson, jr.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 272) for the relief of the Mount Zion Society, of Winnsboro, S. C.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 273) for the relief of M. B. Ryan, administrator *de bonis non*, son and only heir at law of John S. Ryan, deceased, late of Charleston, S. C.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 274) making appropriation for the establishment of a national park near Florence, S. C.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 275) for the relief of the legal representatives of John Boyle, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 276) to increase the efficiency of the Engineer Corps of the Navy; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 277) for the relief of certain officers of the Navy; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 278) to empower Robert Adger and others to bring suit in the Court of Claims for rent alleged to be due them; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 279) for the relief of the legal representatives of John Boyle, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 280) to repeal section 3412 of the Revised Statutes of the United States, the same being section 122 of the national bank act; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 281) to provide for the construction of a public building at Spartanburg, South Carolina; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 282) to amend an act entitled "An act to credit and pay to the several States and Territories, and the District of Columbia, all moneys collected under the direct tax levied by the act of Congress, approved August 5, 1861," approved March 2, 1891; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 283) for the relief of Mary R. Wilcox, administratrix; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Military Affairs.

He also introduced a bill (S. 284) to reimburse George C. Tanner, late consul, etc., the sum of $200, paid by him for rent of rooms; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. HOAR introduced a bill (S. 285) to establish a uniform system of bankruptcy throughout the United States; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 286) for the relief of the owners and the crew of the Hawaiian bark Arctic; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 287) for the erection of a public building at Brockton, Mass.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 288) for the relief of Clara A. Graves, Lewis Smith Lee, Florence P. Lee, Mary S. Sheldon, and Elizabeth Smith, heirs of Lewis Smith, deceased; which was read twice by its title, and referred to the Committee on Claims.

Mr. HUNTON (by request) introduced a bill (S. 289) to secure depositors in national banks; which was read twice by its title, and referred to the Committee on Finance.

He also introduced a bill (S. 290) for the relief of Isaac Davenport and others, citizens of Virginia; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 291) to authorize the Washington, Alexandria and Mount Vernon Electric Railway Company to construct a bridge across the Potomac River opposite Observatory Hill; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 292) granting the right of way through the Arlington Reservation for electric railway purposes; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 293) to authorize the Washington, Alexandria and Mount Vernon Electric Railway Company to construct a railroad through certain streets and reservations in the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. VOORHEES introduced a bill (S. 294) to provide for the issue of circulating notes to national banks; which was read the first time by its title.

Mr. VOORHEES. I ask that the bill be read at length.

The bill was read the second time at length, as follows:

Be it enacted by the Senate and House of Representatives, etc., That upon any deposit already or hereafter made of any United States bonds bearing interest in the manner required by law, any national banking association which has made or shall make such deposit shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered and countersigned as provided by law, not exceeding in the whole amount, including circulating notes previously issued, the par value of the bonds deposited: *Provided*, That at no time shall the amount of such notes issued to any association exceed the amount at such time actually paid in of its capital stock.

Mr. VOORHEES. I ask that the accompanying letter of the Secretary of the Treasury be read.

The VICE-PRESIDENT. The letter will be read.

The Secretary read as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 11, 1893.

MY DEAR SIR: Your favor of the 10th instant, inclosing form of a bill "to provide for the issue of circulating notes to national banks," and asking the views of the Secretary of the Treasury as to the advisability of its passage, is received.

The enactment of such a law as proposed would enable the national banks to issue and put into circulation at once, on bonds already deposited with the Treasurer of the United States, about $19,000,000 in currency in addition to the amount now authorized, and this, in my opinion, would afford a very considerable measure of relief to the country under existing circumstances. I therefore recommend the passage of the bill.

Respectfully yours,

J. G. CARLISLE, *Secretary.*

Hon. D. W. VOORHEES,
Chairman Committee on Finance, United States Senate.

Mr. VOORHEES. I ask that the bill and accompanying letter be referred to the Committee on Finance.

The VICE-PRESIDENT. That reference will be made.

Mr. WHITE of Louisiana introduced a bill (S. 295) for the relief of Mrs. Mattie S. Holland; which was read twice by its title, and referred to the Committee on Claims.

Mr. MCPHERSON (by request) introduced a bill (S. 296) to authorize the construction of bridges over the North or Hudson River, between the States of New York and New Jersey; which was read twice by its title, and referred to the Committee on Commerce.

He also (by request) introduced a bill (S. 297) to refer the claim of Eli Ayres to the Court of Claims and quiet the title to certain lands in the State of Mississippi; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. VILAS introduced a bill (S. 298) for the relief of Anne C. Livingston; which was read twice by its title, and referred to the Committee on Claims.

Mr. GALLINGER introduced a bill (S. 299) making an appropriation toward the construction of a dock at the Portsmouth navy-yard; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 300) to provide for the free exchange through the mails between the several States of the United States of America, and between said States and foreign nations, of public printed reports and documents of the several States of the United States; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 301) relating to jurisdictional questions between the State and Federal courts; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 302) for the relief of the administrators of Isaac P. Tice, deceased, and others; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

He also introduced a bill (S. 303) to allow appeals in cases arising under the pension laws of the United States; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 304) to increase pensions for loss of the sight of both eyes; which was read twice by its title, and referred to the Committee on Pensions.

Mr. GALLINGER. I introduce sundry pension bills, all of which passed the Senate at the last session of Congress.

The following bills were severally read twice by their titles, and referred to the Committee on Pensions:

A bill (S. 305) granting a pension to Annie M. Greene;

A bill (S. 306) granting a pension to Helen A. Patterson;

A bill (S. 307) granting a pension to Earnest C. Emerson;

A bill (S. 308) granting a pension to Mary A. Wise; and

A bill (S. 309) granting an increase of pension to Harrison De F. Young.

Mr. COKE introduced a bill (S. 310) reconveying to the original grantors the title to certain lands in the State of Louisiana conveyed by them to the United States; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 311) authorizing the Rockport and Harbor Island Suburban Railroad to construct a bridge across the Corpus Christi Channel, known as the Morris and Cummings Ship Channel, near its entrance into Aransas Bay, in Aransas County, Tex.; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 312) authorizing the Aransas Harbor Terminal Railway Company to construct a bridge over and across the Corpus Christi Channel, known as the Morris and Cummings Ship Channel, in Aransas County, Tex.; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 313) appropriating funds for investigations and tests of American timber; which was read twice by its title, and referred to the Committee on Agriculture and Forestry.

He also introduced a bill (S. 314) to provide for an inspector of mines in the Indian Territory, and for other purposes; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 315) for the relief of William S. McKnight and James W. Richardson; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 316) for the relief of A. M. Shannon & Co.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 317) for the erection of a public building at Laredo, Tex.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. DAVIS introduced a bill (S. 318) for the relief of the estate of Ramsay Crooks; which was read twice by its title, and referred to the Committee on Indian Affairs.

He also introduced a bill (S. 319) for the relief of the estate of Ramsay Crooks; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. MARTIN introduced a bill (S. 320) granting to the Purcell Bridge and Transfer Company the consent of the United States to construct and maintain a bridge over the South Canadian River at or within one mile of the town of Lexington, county of Cleveland, Territory of Oklahoma; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 321) authorizing and directing the Secretary of the Interior to sell the Clements Townsite Company, of Pottawatomie County, Territory of Oklahoma, certain lands in the Territory of Oklahoma, Pottawatomie County; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. PROCTOR introduced a bill (S. 322) to place Dunbar R. Ransom on the retired list of the Army; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 323) providing that appointments in staff corps be made from the line of the Army; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 324) to increase the pay of certain noncommissioned officers of the Army; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. PEFFER introduced a bill (S. 325) to increase the circulating medium by issuing Treasury notes payable in lawful money of the United States; which was read twice by its title.

Mr. PEFFER. Mr. President, I desire to call the attention of the Committee on Finance to this particular bill and ask that it may be considered in connection with the bill introduced a little while ago by the Senator from Indiana [Mr. VOORHEES]. I think he will find some suggestions in it which will perhaps be helpful.

The VICE-PRESIDENT. The bill will be referred to the Committee on Finance.

Mr. HARRIS introduced a bill (S. 326) for the relief of C. B. Bryan & Co.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

He also introduced a bill (S. 327) for the relief of Payne, James & Co.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 328) granting a pension to Mrs. Martha Custis Carter, widow of the late Rear-Admiral S. P.

Carter; which was read twice by its title, and referred to the Committee on Pensions.

He also (by request) introduced a bill (S. 329) for the relief of the estate of William B. Todd, deceased; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also (by request) introduced a bill (S. 330) for the relief of D. W. and Minna H. Glassie and Joseph C. Nash; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. PLATT introduced a bill (S. 331) for the erection of a public building at Meriden, Conn.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 332) for the erection of a public building at Waterbury, Conn.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. VANCE introduced a bill (S. 333) for the relief of Margaret Kennedy; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. SHOUP introduced a bill (S. 334) to provide for the purchase of a site, and the erection of a public building thereon, at Boise City, in the State of Idaho; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. POWER introduced a bill (S. 335) to provide for the disposal of the abandoned Fort Maginnis military reservation in Montana, under the homestead and mining laws, for educational and other purposes; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 336) to provide for the erection of a public building in the city of Helena, Mont.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 337) to provide for the construction of a public building in the city of Butte, Mont.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 338) creating two additional land districts in the State of Montana; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Public Lands.

Mr. BATE introduced a bill (S. 339) to authorize the Chattanooga Western Railway Company to construct a bridge across the Tennessee River near Chattanooga; which was read twice by its title, and referred to the Committee on Commerce.

Mr. CULLOM introduced a bill (S. 340) to remove the charge of desertion from the military record of Frederick A. Noeller; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. TELLER introduced a bill (S. 341) to submit to the Court of Private Land Claims, established by an act of Congress approved March 3, 1891, the title of William McGarrahan to the Rancho Panoche Grande, in the State of California, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 342) for the relief of Mrs. Julia A. Humphries; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 343) for the relief of the legal representatives of Royal M. Hubbard; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 344) for the relief of William M. Keightley; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 345) for the relief of Horace A. W. Tabor; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. LODGE introduced a bill (S. 346) to remove the bar of the statute of limitation and give the right of appeal in certain cases; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. STOCKBRIDGE introduced a bill (S. 347) for the relief of James and William Crooks, of Canada; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 348) for the relief of John H. Russell; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 349) for the relief of Thomas Chambers; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. FAULKNER introduced a bill (S. 350) relative to recognizance, stipulations, bonds, and undertakings, and to allow certain corporations to be accepted as surety thereon; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 351) authorizing the construction of a building for the accommodation of the United States Patent Office; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 352) to provide for the purchase of a site and the erection of a public building thereon at Huntington, in the State of West Virginia; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 353) to punish the carrying or selling of deadly or dangerous weapons within the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 354) relating to acknowledgments of instruments affecting real estate within the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 355) to prevent fraudulent divorces in the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 356) to amend "An act to prevent the manufacture and sale of adulterated food or drugs in the District of Columbia," and transfer the execution thereof to the Department of Agriculture; which was read twice by its title, and referred to the Committee on Agriculture and Forestry.

He also introduced a bill (S. 357) to pension Mary Cunningham; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 358) granting a pension to Thomas Dean; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 359) granting a pension to Catharine A. Sharp; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 360) granting a pension to Mrs. Susan E. Fogg; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 361) for the relief of C. M. Shaffer; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 362) for the relief of William F. Wilson; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 363) for the relief of George W. Craig; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 364) to carry out the findings of the Court of Claims in the case of Henry T. Woody; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 365) for the relief of the administrator of Andrew D. Coplin, deceased, of Harrison County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 366) for the relief of the county court of Berkeley County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 367) for the relief of Julia Barnet; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 368) for the relief of Asa Kelly; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 369) for the relief of James M. Stout; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 370) to refund to the State of West Virginia the money paid to officers of the One hundred and thirty-third Regiment West Virginia Militia, for services rendered during the rebellion; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 371) for the relief of the legal representatives of Lewis W. Washington, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 372) for the relief of the estate of A. H. Herr, deceased, late of the District of Columbia; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 373) for the relief of Nimrod D. Kenecaster; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 374) for the relief of William M. Morrison; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 375) providing for the payment of the amounts due the employés in, and the contractors who

furnished castings to the United States Armory at Harpers Ferry, W. Va., from January 1, 1861, to April 19, 1861, inclusive; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 376) for the relief of the trustees of the Methodist Episcopal Church at Harpers Ferry, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 377) for the relief of Robert C. Murphy; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 378) for the relief of Levi Teets; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 379) for the relief of the trustees of the Presbyterian Church of Springfield, Hampshire County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 380) for the relief of E. C. Trimble; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 381) for the relief of the trustees of Trinity Episcopal Church; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 382) for the relief of Edward Tearney, administrator of William McSherry, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 383) for the relief of the trustees of the Methodist Episcopal Church of Flat Woods, Braxton County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 384) for the relief of M. C. Davis; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 385) for the relief of the trustees of the German Evangelical Church of Martinsburg, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 386) for the relief of Nathan Reed, of Barbour County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 387) for the relief of the trustees of the Methodist Episcopal Church of Martinsburg, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 388) for the relief of the administrator of Andrew D. Coplin, deceased, of Harrison County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 389) for the relief of the trustees of the Methodist Protestant Church of Middleway, Jefferson County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 390) for the relief of Moses Grathouse, of Harrison County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 391) for the relief of the trustees of St. Joseph's Catholic church at Martinsburg, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 392) for the relief of the administrator of Jacob Coplin, of Harrison County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 393) for the relief of Lewis Karrickhoff, of Barbour County, W. Va.; which was read twice by its title, and referred the Committee on Claims.

He also introduced a bill (S. 394) for the relief of Elizabeth Mulvehill; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 395) for the relief of John Pickens, of Barbour County, W. Va.; which was read twice by its title, and referred to the Committee on Claims.

Mr. CHANDLER introduced a bill (S. 396) establishing additional regulations concerning immigration to the United States; which was read twice by its title, and referred to the Committee on Immigration.

He also introduced a bill (S. 397) for the relief of Lieut. Jerome E. Morse, United States Navy; which was read twice by its title, and referred to the Committee on Naval Affairs.

Mr. PALMER introduced a bill (S. 398) to provide for the erection of a Government building in Chicago, Ill.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 399) for the relief of Bvt. Lieut. Col. J. Martin Cutts; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. PASCO introduced a bill (S. 400) to define divisions of the northern district of Florida, and to provide for holding the district and circuit courts therein, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 401) to provide for the punishment of officers and others who shall select persons to serve as jurors in the courts of the United States with reference to their political affiliations, and who shall conspire to draw or summons such jurrors with a view to their religious, political, or partisan opinions, and for other purposes; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 402) for the relief of Salvador Costa; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 403) for the relief of the estate of Sally Sterrett Tate, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 404) granting a pension to Aaron Daniel, of Suwannee County, Fla.; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 405) for the erection of a public building at Tampa, Fla.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 406) providing for the completion of the public building in the city of Pensacola, Fla., as originally designed; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

He also introduced a bill (S. 407) making an appropriation for the improvement of the road to the national cemetery near Pensacola, Fla.; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 408) for the relief of William H. Atkins, formerly commissary sergeant United States Army; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. QUAY introduced a bill (S. 409) for the relief of Olivia and Ida Walter, heirs and children of Thomas U. Walter, deceased; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. WALTHALL introduced a bill (S. 410) for the relief of Stephen Duncan Marshall and George M. Miller, executors of the will of Levin R. Marshall, deceased; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 411) for the relief of Samuel Collins; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. HILL introduced a bill (S. 412) to repeal Title XXVI of the Revised Statutes of the United States, known as the Federal election laws; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 413) to refund duties paid by the State of New York on arms imported in 1863; which was read twice by its title, and referred to the Committee on Finance.

Mr. VEST. I desire to introduce a bill which has been sent to me by a very eminent financier of New York, to the second section of which I do not agree. I ask that it be read and referred to the Committee on Finance. It is very brief.

The bill (S. 414) to direct the coining of silver bullion for the redemption of silver certificates, and to authorize the issue of circulating notes to national banks at par of their deposited bonds, was read the first time by its title, and the second time at length, and referred to the Committee on Finance, as follows:

Be it enacted, etc., That, after setting aside in coin and bullion, as a reserve, such amount of the silver bullion purchased, from time to time, by direction of the act approved July 14, 1890, as shall equal, at the coining value, the aggregate sum of the Treasury notes authorized by the said act, all remainder of the said bullion shall be deemed available for the issue of silver certificates now authorized by law; and the said remainder or surplus bullion shall be coined into standard silver dollars, and the said dollars shall be used for the redemption of silver certificates as now required by law: *Provided*, That this act shall not be deemed to alter or amend any provision of the said act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

SEC. 2. That hereafter national banking associations shall be entitled to receive from the Comptroller of the Currency, upon compliance with all other terms and requirements of law therefor, circulating notes of different denominations in blank, registered and countersigned as required by law, to the value at par of the United States bonds on deposit with the Treasurer in trust for the association: *Provided*, That the aggregate sum of such notes for which any association shall be liable at any time shall not exceed the amount of its capital stock at the time actually paid in.

SEC. 3. All acts and parts of acts in conflict with this act are hereby repealed.

Mr. KYLE introduced a bill (S. 415) for the erection of a public building at Aberdeen, S. Dak.; which was read twice by its title, and referred to the Committee on Public Buildings and Grounds.

Mr. COCKRELL introduced a bill (S. 416) for the relief of J.

C. Irwin & Co. and Charles A. Perry & Co.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 417) to perfect the title of the United States to the tract of land lying on the west side of Lake Pepin and the Mississippi River, in the State of Minnesota, which belonged to the half-breeds or mixed bloods of the Dacotah or Sioux Nation of Indians; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Public Lands.

Mr. COCKRELL. To accompany the bill last introduced, I present the petition of Charles D. Mousso and an accompanying letter from the Assistant Secretary of the Interior. As it is important to have the letter for use and the petition contains only eight or ten lines, I ask that the papers be printed as a miscellaneous document, and that they be referred, with the bill, to the Committee on Public Lands.

The VICE-PRESIDENT. That order will be made in the absence of objection.

Mr. JONES of Arkansas introduced a bill (S. 418) referring to the Court of Claims the claim of William E. Woodbridge for compensation for the use by the United States of his invention relating to projectiles, for which letters patent were ordered to issue to him March 25, 1852; which was read twice by its title, and referred to the Committee on Patents.

Mr. HUNTON introduced a bill (S. 419) for the relief of the Seaboard and Roanoke Railroad Company; which was read twice by its title, and referred to the Committee on Claims.

Mr. GALLINGER introduced a joint resolution (S. R. 7) providing for the appointment of a commission to select a site for the establishment of a national sanitarium for the treatment of pulmonary diseases; which was read twice by its title, and referred to the Committee on Epidemic Diseases.

Mr. MARTIN introduced a joint resolution (S. R. 8) authorizing the Secretary of the Interior to cause the settlement of the account of Special Agents Moore and Woodson under the treaty of 1854 with the Delaware Indians, etc.; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. HUNTON introduced a joint resolution (S. R. 9) for the relief of the Continental Fire Insurance Company, and others; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. FAULKNER introduced a joint resolution (S. R. 10) to direct the Secretary of the Treasury to pay to the governor of the State of West Virginia the sum appropriated by the act of Congress entitled "An act to credit and pay to the several States and Territories and the District of Columbia all moneys collected under the direct tax levied by the act of Congress approved August 5, 1861;" which was read twice by its title, and referred to the Committee on Claims.

Mr. BUTLER introduced a joint resolution (S. R. 11) providing for the disposition of arrears of pay and bounty due the estates of deceased colored soldiers; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a joint resolution (S. R. 12) for the restoration of the books of the Beaufort Library Society, of Beaufort, S. C.; which was read twice by its title, and referred to the Committee on the Library.

PARITY OF GOLD AND SILVER.

Mr. MITCHELL of Oregon. I submit a proposed amendment, which I ask be read and lie on the table. At the proper time I shall offer it as an amendment to Senate joint resolution No. 4.

The proposed amendment was read, and ordered to lie on the table, as follows:

Amendment intended to be proposed by Mr. MITCHELL of Oregon to the joint resolution (S. R. 4) to maintain the parity of gold and silver.

Amend by adding the following words:

"And whereas the American policy of protection to American industries and American labor, under the fostering influence of which the United States has rapidly advanced from the poorest and weakest to the richest and most powerful among civilized nations, should, from tradition and interest, be at all times maintained under a protected system such as exists at present; and

"Whereas the mere probability of a change of our customs revenue laws in accordance with the declaration of the late Democratic platform, that it is 'a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties except for the purpose of revenue only,' has operated as a controlling factor in plunging the country into its present unfortunate industrial and financial condition, resulting in closing factories, stopping the wheels of industrial enterprise, ruining credit, creating financial distrust and panic, and throwing hundreds of thousands of laborers out of employment: Therefore,

Be it further resolved, That the American people from tradition and interest favor the American doctrine of protection to American industry and American labor, and believing the existing customs revenue laws on that subject are in accordance with such doctrine and in the nation's best interests, and should in any event be permitted a fair trial, it is the sense of the Senate and House of Representatives in Congress assembled that no change be made in such laws during the Fifty-third Congress.

THE FINANCIAL POLICY.

Mr. GORDON submitted the following resolutions; which were read:

Whereas in this Government of the people the popular will is sovereign in its character, and when clearly expressed should be authoritative with Congress; and

Whereas certain financial reforms are demanded by the people, as shown at the polls, in the formal methods provided by the Constitution and laws for expressing the popular will; and

Whereas bimetallism, as a means for increasing the volume of sound and stable currency is demanded by all political parties in all recent national platforms, and has thus been unmistakably indorsed by a substantially unanimous vote of the whole people: Therefore,

Resolved, That it is the right of the people to expect, and the duty of Congress to enact, suitable legislation for restoring the metals of the Constitution to their coördinate place in the monetary system of the Government, and upon a ratio or plan that will secure their parity or exchangeability with each other.

Resolved, second, That pledges made to the people in order to secure power should be religiously redeemed in good faith and in justice to the people, who, relying upon those pledges, conferred that power.

Resolved, third, That in compliance with these promises made to the people, in recognition of the demand made by the people, and in order to establish confidence among the people, and to bring urgently needed relief to the business of the country, the Committee on Finance be, and is hereby, instructed to report at the earliest day practicable a bill or bills repealing the purchasing clause of the statutes called the Sherman law; and providing for "the use of both gold and silver as the standard money of the country," and for "the coinage of both gold and silver without discriminating against either metal," and for making "the dollar unit of coinage of both metals" * * * "of equal intrinsic or exchangeable value."

Resolved, fourth, That under proper guards and restrictions, so as to secure uniformity, the power of chartering and establishing banks of issue may be safely and wisely restored to the States; that to deny this is to deny the capacity of the States for self-government; and that the said Committee on Finance be, and is hereby, instructed to report also a bill repealing "the prohibitory 10 per cent tax on State bank issues.

Mr. GORDON. I ask that the resolutions lie on the table and be printed, and when it is the pleasure of the Senate I shall call them up in order to submit some remarks.

The VICE-PRESIDENT. The resolutions will lie on the table for the present. The order to print will be made.

PRINTING OF ACT OF FEBRUARY 28, 1878.

Mr. COCKRELL. I submit a resolution and ask that it may be adopted. It is very short, and simply calls for a reprint of what is known as the Bland-Allison act. The files of the Senate document room have been exhausted and additional copies are frequently called for. The resolution simply proposes that additional copies shall be printed for the use of the document room.

The resolution was considered by unanimous consent and agreed to, as follows:

Resolved, That there be printed for the files of the Senate document room 500 copies of the act of February 28, 1878, entitled "An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character."

PRINTING OF THE PRESIDENT'S MESSAGE.

Mr. COCKRELL submitted the following resolution; which was considered by unanimous consent, and agreed to:

Resolved, That there be printed for the files of the Senate document room 500 copies of the message of the President of the United States, communicated to the two Houses of Congress at the beginning of the first session of the Fifty-third Congress.

SENATE ELECTION CASES.

Mr. HOAR. I submit a concurrent resolution, to print 4,000 copies of Senate Election Cases; which I ask be referred to the Committee on Printing.

The concurrent resolution was read, as follows:

Resolved by the Senate (the House of Representatives concurring), That there be printed 4,000 copies, in cloth, of the first volume of the new edition of the Senate Election Cases; 1,500 copies to be for the use of members of the Senate and 2,500 copies for the use of the members of the House of Representatives, the same to be printed on the back as follows:

Senate Privileges and Elections.
Volume I.
Election Cases.
Taft.

Mr. COCKRELL. Before the resolution is referred, I desire to ask the Senator from Massachusetts if the two volumes that are proposed to be printed will be marked as volume 1 and volume 2. I have already gotten the first, the Election Cases, and have sent the volume to the Printer to be bound. I did not put on the back of it volume 1, because there was nothing on the face of the document to indicate that there was to be a volume 2, and I ascertained only this morning, on inquiry at the Senate document room, that another volume is to be printed.

Mr. HOAR. The plan is to have two volumes. One will be the volume with which Senators are quite familiar, known as Senate Election Cases, which was prepared by Mr. Taft some eight or ten years ago, and is now brought down to the present time, with a new and very much improved index. That will be volume 1. The other volume, which it is proposed to entitle "Volume 2, Privileges," will contain a great deal of miscellaneous matter. As the Senator from Missouri knows very well, there is a great deal we have to refer to very often about the privileges of the Senate, and those matters will be found in volume 2. That

will be a separate volume, but either is a complete treatise in itself, and can be bound in any way the Senator prefers.

Mr. COCKRELL. I had supposed that probably it would be better to have each bound as an individual volume instead of marking them volume 1 and volume 2.

Mr. HOAR. This is merely sent to the Committee on Printing for their judgment. There are a few copies of the Senate Election Cases in sheets, which are now accessible. They came in day before yesterday.

Mr. COCKRELL. Volume 1, that is, the Election Cases, has already been received in the document room in unbound form.

Mr. HOAR. That is merely the first copy, which came from the Printer under the order of the Senate to print the document.

Mr. COCKRELL. I understand. It is the usual number that goes there.

The VICE-PRESIDENT. The concurrent resolution will be referred to the Committee on Printing.

MARY IMOGENE SANFORD.

Mr. HAWLEY submitted the following resolution; which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Secretary of the Senate be, and is hereby, authorized and directed to pay out of the "miscellaneous items" of the contingent fund of the Senate, to Mary Imogene Sanford, widow of Oliver S. Sanford, deceased, late acting assistant doorkeeper of the Senate, the sum of $900, being an amount equal to six months' salary at the rate allowed by law to such acting assistant doorkeeper aforesaid.

BUSINESS OF THE SESSION.

Mr. HILL. I submit a resolution, and ask that it may lie on the table for the present.

The resolution was read and ordered to lie on the table, as follows:

Resolved, That it is the sense of the Senate that no legislation, other than legislation pertaining to the finances, should be considered at the present extraordinary session of Congress.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives; in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled joint resolutions; and they were thereupon signed by the Vice-President:

A joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress; and

A joint resolution (H. Res. 2) providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793.

THE PRESIDENT'S MESSAGE.

The VICE-PRESIDENT. Are there further resolutions, concurrent or other?

Mr. HOAR. Is the morning business concluded?

The VICE-PRESIDENT. The morning hour does not expire until 2 o'clock, the Chair is advised.

Mr. STEWART. As there has recently been some discussion of the President's message relating to the silver question, I desire to have read an article from the Recorder upon the subject. It shows that light is dawning in the East and that the Recorder has received that light. If it will not interrupt the Senate too long, I ask for the reading of the editorial, I send to the desk.

Mr. HOAR. I should like to inquire what is the regular order.

Mr. STEWART. I rose with regard to the President's message to ask unanimous consent to have an article read. If the Senator objects I will not do it.

Mr. HOAR. I do not rise to object, except I should like to give notice that I think it is due to the whole country and due to the regular order of business that contested claims to seats in this body should generally have the precedence of all other business. I do not mean by that to imply that the ordinary good nature of the Senate should be departed from, and I do not wish to depart from it; but after the routine morning business is over, without objecting now to the Senator's desire, I shall call up the Lee Mantle case and ask the Senate proceed with it. If what is to be read provokes any debate or adverse criticism I shall interpose to prevent it.

Mr. STEWART. I do not think it will provoke any debate. I have no remarks to make.

The VICE-PRESIDENT. Does the Chair understand that there is objection to the request of the Senator from Nevada?

Mr. HOAR. I make no objection.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary proceeded to read the article, and was interrupted by—

Mr. HOAR. I ask that the rest of the article may be printed.

Mr. STEWART. I have no objection, but I should like to have it printed in the RECORD in full.

Mr. HOAR. I call for the regular order. Let it be laid before the Senate now.

Mr. COCKRELL. Let the article which the Senator from Nevada requested to have read be printed as a separate document.

Mr. HAWLEY. Let it be printed in pamphlet form. It is from a very able and a very patriotic newspaper of my own political persuasion, so that I shall not object to it on that account; but I shall strictly object hereafter to the reading of any articles simply because they are thought to be able. We would soon have literature enough to found a national library if all such articles should be printed in the RECORD.

Mr. HOAR. I call for the regular order.

Mr. STEWART. Allow me one word. This is the first of the great papers in the city of New York which has said one word against the annihilation and destruction of half the world's money by contraction to the gold standard. I think public sentiment in New York must be changing, or else that this is a very brave paper. I think, perhaps, it has made sacrifices to come out for the truth, and I appreciate it so highly that I asked to have the unusual course adopted of having the article read, but I shall not trespass again.

Mr. HOAR. I call for the regular order.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Nevada that the communication be printed in the CONGRESSIONAL RECORD? The Chair desires to understand.

Mr. HAWLEY. I object to that.

Mr. STEWART. Then let it be printed as a pamphlet.

The VICE-PRESIDENT. Is there objection to printing the article as a document? The Chair hears none, and that order will be made.

SENATOR FROM MONTANA.

Mr. HOAR. I desire to have the Montana case laid before the Senate. I understand that under the rules of the Senate the body is required to proceed with the question with regard to the title of a Senator to his seat on his credentials, to the exclusion of all other business. Strictly, the routine morning business does not take precedence of it; but I have not undertaken to interpose, supposing that the Senate desired to transact the routine morning business, and do not do so now; but I desire to have the resolution laid before the Senate, if such business is concluded.

The VICE-PRESIDENT. The Chair lays before the Senate the resolution referred to by the Senator from Massachusetts; which will be read.

The Secretary read the resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. HOAR. I ask if we can not have the vote on the resolution at this time?

Mr. VANCE. There are at least two or three Senators on this side of the Chamber who desire to be heard upon the question, but owing to the fact that we have no calendar of business to give any one notice when this question would come up, and the newness and confusion of things attending the beginning of a session, those Senators are not ready to proceed, and I hope the resolution will be permitted to go over at least to-day. The Senator from Florida [Mr. PASCO], who desires to be heard upon the resolution, is prepared to go on, but he is a little unwell to-day, and two others will be prepared in a day or two. Therefore I shall be glad if the Senator from Massachusetts and the Senate will consent that the resolution may go over.

Mr. HOAR. I should like to inquire if we can not have an understanding—I do not mean by that one of those strict understandings which bind all mankind without any possibility of escape—that this matter shall go over until Wednesday, and that it shall be then taken up and disposed of in the ordinary course.

Mr. VANCE. That will suit me.

Mr. HOAR. That will be agreeable to me, if there be no objection.

Mr. BUTLER. I suggest to the Senator from Massachusetts that if the Senator from Florida shall be ready to go on to-morrow, why not allow him then to make his speech? We might in that way make some progress with the matter.

Mr. HOAR. I have no objection.

Mr. VANCE. I shall be very glad to accept the proposition of the Senator from Massachusetts.

Mr. HOAR. I do not know whether the Senator from Florida may not prefer to speak on Wednesday, as I understand he has some trouble with his throat.

Mr. PASCO. So far as I am concerned, it will meet my convenience very well to take the matter up on Wednesday. I should rather not proceed to-day or to-morrow.

Mr. HUNTON. I had proposed to submit some remarks upon the contested seat from Montana, and I should prefer to submit such remarks as I have to make to-morrow, for the day after I shall have to leave the city.

Mr. HOAR. Very well. Then I give notice that I shall call this matter up to-morrow at the conclusion of the routine morning business, and then, when the Senator from Virginia has concluded his remarks, if no other Senator wishes to speak upon the case, it may go over until the next day. Then I shall urge the Senate, so far as I properly may, to proceed with the question until it is disposed of, to the exclusion of all other business.

The VICE-PRESIDENT. The resolution will go over.

BUSINESS OF THE SESSION.

Mr. GALLINGER. I submit an amendment intended to be proposed to Miscellaneous Document No. 10, being a resolution offered by the Senator from Massachusetts [Mr. LODGE] on the 8th instant. I ask that the proposed amendment be read, printed, and ordered to lie on the table.

The proposed amendment was read, as follows:

Add to the resolution of Mr. LODGE the following:

"And that said committee be also directed to report to the Senate that in its opinion it is inexpedient and unwise for Congress to attempt to radically change the existing tariff laws of the United States prior to March 4, 1897."

The VICE-PRESIDENT. The proposed amendment will be printed and laid on the table.

PARITY OF GOLD AND SILVER.

Mr. VEST. I ask that the joint resolution I offered a few days since on the subject of bimetallism be laid before the Senate.

The VICE-PRESIDENT. The Chair lays before the Senate a joint resolution; which will be read.

The Secretary read the joint resolution (S. R. 4) to maintain the parity of gold and silver, as follows:

Resolved, etc., That the American people from tradition and interest favor bimetallism, and the free and unlimited coinage of both gold and silver, without discriminating against either metal; that it is also the established policy of the United States to maintain the parity of the two metals, so that the debt-paying and purchasing power of every dollar shall be at all times equal; that it is the duty of Congress to speedily enact such laws as will effectuate and maintain these objects.

Mr. HOAR. I should like to have an opportunity to submit a few remarks upon that joint resolution, and I should like, if it be agreeable to the Senator from Missouri, to submit them to-morrow after the Senator from Virginia [Mr. HUNTON] has concluded his remarks on the election case.

Mr. VEST. Certainly.

Mr. HOAR. I shall take the floor at that time for the purpose.

Mr. VEST. Mr. President, before proceeding, I ask the Secretary to read what I send to the desk.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

To quote from the Republican platform adopted at Minneapolis, June, 1892: "The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government, shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world."

The Democratic convention at Chicago, June, 1892: "We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency."

Mr. VEST. Mr. President, I assume that after reading the platforms of the two great political organizations of the country, no one can intimate that there is anything partisan in the joint resolution which I have offered. To vote against this resolution, whether that vote come from one side of the Chamber or the other, is to declare to the people of the United States what is believed already by many of them, that the platforms of political parties are mere traps to catch votes, without sincerity and without honesty. It is time that the people should know whether politics is a juggle and fraud, or whether, when the great political parties which seek to control the destinies of a free people meet in council and make solemn declaration of policy and principle, they are worthy of confidence.

We are told that the repeal of the so-called Sherman act, or the purchasing clause of it, is all that is necessary at the present conjuncture, and that the clouds will be immediately lifted from the business and financial horizon, and the sun of prosperity again beam upon every portion of our land.

I was never the friend of the so-called Sherman act. I voted against it, spoke against it, denounced it as a makeshift, and declared it to be the worst measure for silver and for bimetallism that could be invented and placed upon the statute book. I am in no sense responsible for its enactment. To-day its malign and distorted features look out upon a land staggering and reeling upon the verge of bankruptcy. Its putative fathers have bastardized it, and are falling over each other now in a vigorous attempt to prove that they never favored it, and are not responsible for its existence.

In the report of the Herschell committee, appointed by the British House of Commons to investigate the question of mintage in India, the principal reason given for stopping the coinage of silver by private persons in the Indian mints is that the Sherman act might at any time precipitate upon the world a mass of silver that would probably cause a decline of its value to such an extent as to make free coinage in India absolutely ruinous. So this measure, introduced here ostensibly in the interest of silver, has come home to roost like a young chicken as a curse to silver. That act to-day is like a houseless and homeless legislative dog. There is no one to give it even a bone, and it can not find a kennel in which to hide its dishonored head.

THE PRESENT ISSUE.

Mr. President, if the issue presented now to the Congress of the United States and the American people was simply the repeal of the Sherman act, I take it there would be very little debate and singular unanimity in our action; but the issue has gone beyond the repeal of the Sherman act. It is no longer a question of eliminating that statute, but it has grown into a question so grave and momentous that the Congress of the United States must of necessity earnestly consider it before going any further in the direction which has been indicated to us.

The question now before Congress and the American people is one of bimetallism. Every intelligent man knows it. There is no citizen of the United States to-day, who has given any attention to public affairs, who has read the message of the President of the United States; who has seen the utterances of those who enjoy his especial confidence, who does not know that we stand now face to face with the great question of bimetallism or a single gold standard.

The time for makeshifts and evasions and subterfuges has passed. No man in this country is so ignorant that he does not know that under the circumstances and with the declarations made by its advocates, the unconditional repeal of the Sherman act stamps forever upon our financial policy the single gold standard. Not one silver dollar will ever be coined in this country again if we permit the purchasing clause of the Sherman act to be repealed without a guarantee as solemn as the great necessities of the people, that silver shall continue to exist in the United States as a money metal.

I have been known as a steadfast and unflinching friend of the President. I defended him when assailed in the canvass for nomination; I defended him in the campaign, and in every speech I made to the people of Missouri I declared that Mr. Cleveland, like myself, was a bimetallist, and that we only differed in regard to the ratio at which the coinage of silver should be had. I had the right to make that statement, because he had accepted the nomination upon a platform that pledged the Democratic party to bimetallism. It was as well known that the Democratic party stood upon the doctrine of bimetallism as that it met in Chicago and nominated Grover Cleveland for President of the United States.

SIGNIFICANCE OF THE PRESIDENT'S MESSAGE.

I do not undertake to say now that the President is opposed to bimetallism. I do not undertake to say that he would not give his Executive sanction to a measure that coined silver at the commercial ratio with gold, but I do undertake to say that his message is most significant from what it fails to say. I undertake to say now, with the greatest respect for him and with not the slightest doubt as to the honesty of his intentions, when he fails in this great state paper at such a contingency to say one word in regard to bimetallism, it certainly means that he considers the free coinage of silver at any ratio so impracticable that it does not need Executive notice. If a bimetallist at all, it would be an insult to the intelligence of the President to believe that under the circumstances he would have deliberately sent this paper to us and to the world without having indicated in some way that he

was willing to bring about and maintain bimetallism on some terms in the United States.

When during the last Congress it was proposed to pass a free-coinage bill at the ratio of 16 to 1, although I had repeatedly voted for such a bill, although I had introduced a bill which passed the Senate and went to the House of Representatives identical in its provisions with that which was offered here, I moved to postpone the consideration of that measure until after the November election because our party had met and declared its platform and nominated its candidate, and I believed that in simple justice and in the spirit of fair play, Mr. Cleveland should be permitted to go before the American people upon our platform and that the silver question, as it had been disposed of in that platform, should become an issue and be submitted to the American people; but I did not mean to indicate for an instant that in voting for the postponement of the question at that time I gave up the great doctrine of bimetallism as established by the traditions and policies of our people and enshrined in their hearts to-day. In that session of Congress I took occasion in discussing the financial question to make this declaration, by which I stand now:

> I have supported the free coinage of silver principally upon the ground that I oppose all class legislation. I have never been (perhaps it has been my obtuseness) able to see the justice of permitting a man who owns a gold mine to go to the mints, the common property of the people, and coin his gold without expense, and deny the same privilege to the owner of a silver mine, who is an equal owner in the mints of this country, and who possesses a product which under the Constitution is a money metal. If it is proposed now, and we are rapidly nearing that issue, to strike down silver as a money metal in this country, I distinctly state that I shall be found in favor of bimetallism as established by the Constitution of the United States and by the traditions of the American people.

Mr. President, I am anxious to avoid the slightest misstatement or to make any unjust criticism upon the present administration of my own party, but I do not feel myself at liberty, in view of the responsibilities imposed upon me, to refrain from stating emphatically my conviction that we must determine now the question of bimetallism or the gold standard.

In addition to what I have said in regard to his message, what intelligent man believes that, without the knowledge that the sentiments expressed therein were in consonance with the opinions of the Chief Executive, the head of the great banking department of this Government would have come out in a magazine article, which I have before me, declaring for the single gold standard and announcing to the American people that silver was doomed and must cease to be a money metal in the United States?

I have the right as a public man and as a private citizen to assume that when an officer of this Government, in control of its banks, near to the Secretary of the Treasury and in daily intercourse with him, appointed by the President of the United States and confirmed by the Senate when the President himself knew that there was a difference of opinion in regard to that appointment, and that the Democratic party by a large majority and many Republicans deferred to his opinion in voting for that confirmation—I say that I have a right to assume that with these relations the Comptroller of the Currency does not antagonize the opinion of the President upon this great issue.

THE MONEY POWER OPPOSED TO SILVER.

Mr. President, I do not conceal from myself the desperate character of the contest which has come upon us. I recognize the fact that the money power of the civilized world through its authorized exponents is against silver to-day as a standard metal. I do not attempt to delude myself into the opinion or impression that we are not entering upon a doubtful conflict. It has been the history of finance in all ages of the world that centralization and consolidation managed in one way or another to impress itself upon the destinies of all peoples. It is known as well as the names of the different countries upon the map of the globe that a few men, not exceeding perhaps one dozen, can to-day influence the finances of the whole world and can make and unmake even kings and emperors, obliterate frontiers, and change the destinies of the human race.

England in 1815 overthrew Napoleon I, and to do this the younger Pitt plunged the English people into a vortex, as was supposed then by intelligent men, of absolute bankruptcy. Scarcely had the battle smoke cleared from the field of Waterloo and the shattered columns of the Old Guard been broken in flight, when England, in 1816, went to the gold standard. An enormous debt had been created. To-day the consols of Great Britain govern the Empire; all investment, all trust money, all the financial interests of the country are represented by the consols, and the blood of the body politic ebbs and flows with the rise and fall of its consolidated debt.

England went to the gold basis because deeply indebted to the Rothschilds and others for money which had been employed against the great Emperor. In order to float that debt, in order to consolidate it, in order to keep in hand the finances of that country, a great commercial people, dependent not upon agriculture, but upon trade and commerce and finance, it became absolutely necessary that they should go to the gold standard in order to please the money-changers of the world.

CENTRALIZATION GREAT BRITAIN'S POLICY.

The policy of the English Empire, aggressive and distinct in all its features, can be easily understood by the ordinary student of history, not to say of finance. It is the policy of Great Britain to centralize. Her vast colonial system consists of tributaries that pour their wealth into the great lake of England. The home country is first to be considered, and the colonies held by British arms are made tributary to the commercial and financial interests of the English people proper at home.

Some years ago the Senator from Pennsylvania [Mr. CAMERON] and myself happened to be on a return trip from Alaska at Victoria, the capital of Vancouver, in British Columbia. It happened that we landed there upon the two hundredth anniversary of the Hudson Bay Company, and the superintendent of that company very politely requested us to go through the immense warehouse and inspect the peltries which had been stored there by the hunters and trappers of that company.

My friend from Pennsylvania saw some beautiful peltries that he desired to purchase and bring back to his home, and he said to the superintendent, "I should like to pay you any price for these peltries in order to carry them back as a present." The Englishman expressed the greatest regret, and said there could be no limit but absolute necessity in his courtesy toward so distinguished a visitor; but he said, "Mr. Senator, if I should sell or give you a single coon or mink skin in this warehouse it would forfeit the charter of our company." Since the Hudson Bay Company was organized two hundred years ago, all our peltries must go back to England to be dressed, and they can neither be given away nor sold nor put into any process of manufacture except in Great Britain.

This is an illustration of the policy of the English Government. All its colonies are simply provinces, and the great salient and objective point of all its legislation and policy is to concentrate wealth and power in the home government and with the home people. Is it any wonder, then, that England is to-day and has been since 1816 for the gold standard? It enables her to command the commerce of the world because gold is the money of commerce. Mr. Jefferson declared as the result of his wonderful researches that the money of the American people should be gold and silver. Gold, he said, is the money of commerce, foreign commerce, intercourse between nations, and bankers.

The fact that a large value can be put in a small compass, the facility of transportation, the ease of storage, all give to gold attributes which no other metal can possibly have; but is it to be said that silver has not its uses? Silver has always been the money of the people, not of the bankers and capitalists and usurers, but of the common, plain people, as Lincoln termed them, who, in their domestic barter and everyday business at home, do not need this red despot of gold, but silver, with which they and their fathers have always been familiar.

OVERPRODUCTION.

We are told, Mr. President, that overproduction is the cause of the fall of silver in price, that it has not been legislation, but that natural causes, the law of supply and demand have brought silver to its present value in the markets of the world.

Let me ask my friends, the monometallists, one question. Was there an overproduction of silver in 1873, when it was demonetized in this country by striking the silver dollar from the coinage of the United States? Had there been overcoinage of silver so as to glut the markets and bring down its price under natural rules? We have the authority of the distinguished Senator from Ohio [Mr. SHERMAN], of the Secretary of the Treasury to-day, Mr. Carlisle, and of the reports of the Treasury Department that but eight million of standard dollars had been coined in the United States from 1792 to 1873; we put but $8,000,000 in circulation, and not so many, because the reports of the Director of the Mint from year to year show that the coin of the country goes into industrial pursuits and is used by the jewelers and artificers in precious metals, and a portion of that $8,000,000 must have been so used. Yet with this inconsiderable amount coined by this Government from 1792 to 1873, it was deemed necessary in the latter year to strike out the silver dollar from the coinage of the United States.

Mr. President, we have had many explanations of that legislation. If in the heat of discussion I shall use one word to-day either partisan or personal, I withdraw it now in advance. I am not here to indulge in recrimination or to make charges which I do not know to be true. I am here to discuss the greatest question which has come before this country since the States divided in regard to their construction of the Constitution. A

great Scotchman said, "Let me write the songs of a people, and I care not who makes their laws." Give me the money of the people, and I care not who makes their songs. No power can be vested in any tribunal so great as that of controlling money. Therefore I come to the discussion of this question with no idea of indulging in personality. It makes no difference who demonetized silver in 1873. We have had many explanations. The most plausible was that the standard dollar as it then existed was inconvenient. No other reason which has ever been given, in my opinion, afforded one shadow of excuse for that action.

LEGISLATION THE CAUSE OF DEPRECIATION.

My point made here now to be answered is, if overproduction and overcoinage of silver has caused its present depreciated value, how did the coinage of 8,000,000 standard dollars in 1873 justify or cause the action of Congress at that time?

I have here—and will ask to insert it in the RECORD, as from its nature it is impossible to read it—a most authentic statement of the gold production of the world, from the discovery of America down to 1892. Down to the year 1885 this table comes from Dr. Soetbeer, the most eminent statistician known to history. After 1885 it comes from the reports of the Directors of the Mint of the United States. It must be received, then, as absolutely accurate, if the words "absolutely accurate" can be applied to statistics at all. I invite my friends, the monometallists, to examine this table and to prove their assertion that the overproduction of silver has caused its fall, as we hear so often from all the organs of that opinion in the United States.

Statement of the production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from table of averages for certain periods compiled by Dr. Adolph Soetbeer. For the years 1886-1892 the production is the annual estimate of the Bureau of the Mint.]

	Gold.				Silver.				Percentage of production.			
	Annual average of period.		Total for the period.		Annual average of period.		Total for the period.		By weight.		By value.	
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value.	Gold.	Silver.	Gold.	Silver.
1493-1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$1,954,000	42,309,400	$54,703,000	11.0	89.0	66.4	33.6

This table shows that the two precious metals have fluctuated, as they necessarily must, in all ages of the world; first silver being produced in excess of gold and then gold in excess of silver. How is it possible that it could be otherwise? What intelligent man for a moment could advance the idea that two metals, dependent upon the quantity discovered in the bowels of the earth, should be mathematically or logically equal at all times in quantity or ratio?

After Cortez had conquered Mexico and had sent back to Spain the gold which he had taken from Montezuma and his successors and from the provinces of Mexico, even robbing their temple in order to satisfy Spanish greed, all this treasure which we are accustomed to look upon as fabulous, but which in reality amounted to about $30,000,000 a year, failed to affect the markets of the precious metals in the Old World. It was not until a peasant who was herding a flock of llamas at Potosi, in upper Peru, happened to discover a silver mine of fabulous richness that the price of the two metals was seriously disturbed in the markets of Europe. For many years, as shown by this table, gold was produced in the most insignificant amounts, while silver was produced twenty, thirty, and thirty-two times in excess annually of the production of gold; yet the price of silver was not affected and it maintained its place as a money metal.

In order to show that my statement is absolutely correct, I have taken the trouble to make a calculation, based upon the Soetbeer table. From 1833 to 1840 there was produced thirty-two times as much silver as gold in the world; from 1841 to 1850, fifteen times as much; from 1851 to 1855, five times as much; from 1855 to 1860, four times as much; from 1861 to 1865, six times as much; from 1866 to 1871, three times as much; from 1871 to 1875, twelve times as much; from 1876 to 1880, sixteen times as much; from 1881 to 1885, twenty times as much; and from 1886 to 1892, from eighteen to twenty-five times as much.

Now, I assert that these tables show, if they are worth the paper upon which they are printed, that the relative proportion of silver to gold has never been as great as it was in the eras I have named here, from 1833 to 1844 and from 1844 to 1850.

We hear upon every side the assertion that the production of silver which amounted to $74,000,000, according to the report of the Director of the Mint, in 1892 in the United States has caused its decline. There were $33,000,000 of gold produced in this country for 1892, the production of silver being about 2 to 1, and it is said that this accounts for the attack upon silver as a money metal and the attempt now to destroy it throughout the world. From 1832 to 1840, thirty-two times as much of silver was produced as of gold. If it be a logical proposition that the over-production now has destroyed silver, why was it then not blotted out from the face of the earth as a medium of exchange and of standard value?

Mr. STEWART. Will the Senator allow me?

The PRESIDING OFFICER (Mr. FAULKNER in the chair). Does the Senator from Missouri yield to the Senator from Nevada?

Mr. VEST. Certainly.

Mr. STEWART. Von Humboldt records that from the discovery of America to 1803 there were 44 ounces of silver produced to 1 ounce of gold.

OVERPRODUCTION NOT TO BLAME.

Mr. VEST. I call the attention of the Senate to the price of silver, which it is said is affected by overproduction. From 1833

to 1840, when there was thirty-two times as much silver as gold produced in the world, silver was worth in this country $1.29 and $1.32 an ounce. From 1841 to 1850, when there was fifteen times as much silver as gold produced, silver was still worth $1.29 to $1.31 an ounce. I quote from the report of the Director of the Mint. From 1851 to 1855, when there were five times as much silver produced as gold, silver sold in the United States from $1.32 to $1.35 an ounce, being an increase of from 3 to 5 cents on the ounce. From 1855 to 1860, when there were four times as much produced, it sold from $1.34 to $1.36 an ounce.

The decrease in the production of silver, as it would appear from this table, in 1850-'51, was not really a decrease in the mining production, but there was a vast increase from 1850 to 1855 in the production of gold on account of its discovery in California and Australia and the reworking of the mines in Siberia. It is absolutely impossible under the rules of logic, if our friends be correct that overproduction is the cause of the present condition of silver, that this enormous overproduction should have existed in the eras I have named and yet not have brought about the same result.

I have said, Mr. President, that it was impossible that these metals should remain logically and mathematically at the same ratio. Many circumstances and facts affect this ratio. Who will undertake to say now, unless he has the gift of prophecy, when the gold mines will cease to produce? There have been times in history—and we have them upon such proof that no doubt can exist—when the production of gold absolutely ceased, at other times when the production of silver absolutely ceased. Is it wise statesmanship for the representatives of the people to put themselves absolutely in the power of any one metal uncertain and precarious in the supply? Suppose to-morrow the gold production of this country should fall off one-half and of the world one-third, what would be the result? The United States, if it had eliminated silver, would be found absolutely at the commercial mercy of the vast hoards of gold which for war purposes have been piled up in the treasuries of continental nations and of England. Should we not rather rely upon both metals in whose production nature preserves an equilibrium?

Mr. STEWART. One-third of the gold comes from the silver mines, according to the best estimates.

Mr. VEST. My friend says that one-third of the gold comes from silver mines, and it is true, because in the alchemy of nature we always find these precious metals associated together. But I can produce, I think, authority much higher than mine in regard to the precarious nature of these metals. The present Secretary of the Treasury said in 1878, when discussing the question upon which I have the honor now to address the Senate:

I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so.

Mr. COCKRELL. Is that Secretary Carlisle?

Mr. VEST. Yes. He continued:

Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

Why, Mr. President, for sane men in a country that stands upon the bed rock of independence to put themselves in the hands of the monarchies of Europe, in the hands of the gold manipulators, who at any time can fix the price of the property of the world if they see proper to do so, is not only a crime, as the Secretary of the Treasury has declared it, but a crime so monstrous that no punishment could be adequately inflicted for its commission. Thomas Jefferson dreamed of an ideal republic, and what was it? He said:

"Let us found a government where there shall be no extremely rich men and no abjectly poor ones. Let us found a government upon the intelligence of the people and the equitable distribution of property. Let us make laws where there shall be no governmental partnership with favored classes. Let us protect all in life, liberty and property, and then say to every American citizen, with the gifts that God has given you, your brain and brawn and energy, work out your own fortunes under a just government and equal laws."

THE NATION DOMINATED BY A DOZEN MEN.

If Jefferson could to-day revisit the earth, or if the dead can take notice of the affairs of the living, what would he think of this country which he helped to establish and whose independence he put in letters of living fire upon the pages of history, if he should find sixty-seven million of freemen, with a continent for an inheritance, with the rain and sunshine and dew, the mountains and rivers, with almost illimitable resources, in the hands financially of a dozen men in New York, who make and unmake, and who can in an hour so hoard the currency of the whole country as to produce a money famine, and then exact from the people their own terms?

Mr. President, I desire to enter into no philosophical nor sentimental essay. I am an American, and I trust practical in the consideration of every question; but the genius of our institutions and of our people, the fundamental doctrines upon which we exist as a nation, the instinctive feeling of every true American, no matter of what political belief he may be, must be naturally against the policy that centralizes and consolidates the fearful power of money in the hands of the few against the many. For myself, I would give up every doctrine of my life and every feeling of my nature if I did not stand now to the last against legislation that would further extend this centralization.

But we are told that silver must be demonetized because it fluctuates in value; that gold is stable and silver is the changing child of caprice and circumstance. I have in my hand a pamphlet sent to me by a friend.

Mr. PLATT. We can not hear on this side.

Mr. VEST. I say I hold in my hand a pamphlet sent me by a friend. It is the second edition of an essay on gold and silver money by an Englishman, in which, before the closing of the Indian mints, he pleaded with the people of Great Britain to leave the gold standard and accept bimetallism as the only safe and sure foundation for financial existence. The question of the stability of the two metals is discussed at great length in this pamphlet. I shall not undertake to read it to the Senate, although every word of it is worthy of our consideration at this time.

Mr. GRAY. Who is the author?

Mr. VEST. John Monteath Douglas, a business man in the city of London, who has unquestionably studied this question. I will not weary the Senate by reading all of it, but he says:

Silver has really fluctuated much less than gold. Till December, 1888, and on to end of 1891, it continued to rise in value as compared with the average of commodities, just as gold did, but much less, and keeping a much closer and more uniform relation to the prices of commodities than gold did. See list of prices next page. The gold price of silver was "lower" in 1888 and 1889 than it had been at any time within memory, but the gold prices of commodities were on the average lower still, as explained below in detail, so that silver had maintained its price, or rather risen in comparison with the average of commodities.

A DELUSION OF THE MONOMETALLISTS.

I can not resist saying parenthetically that the fallacy and the delusion of the argument made by the monometallists in regard to the fall of silver is based upon the idea, not of its purchase of commodities, but the value of silver in gold. All the statisticians and financiers of the world whose declarations are worth anything put the criterion as to the value of the precious metals upon their ability to purchase the necessaries of life. Any other criterion is false. When you can take so much silver and buy so much meat and so much bread, although gold may go up and silver still continues to buy the same quantity of meat and bread, it has not fallen. Silver, as this writer says, has not fluctuated under this great criterion of its power to purchase the necessaries of life, and the tables of the most eminent statisticians show it.

The tables of average prices compiled by various authorities and referred to by all parties may or may not continue henceforth to show exactly the same relation between silver and commodities.

Mr. Sauerbeck opportunely had a letter in The Times' money column of October 14, giving an abstract of his results as to prices of forty-five leading commodities, averaged yearly and monthly, taking the average of 1867–1877 as 100, except that for silver 100 represents its old ratio of 15½ to 1, or about 2*s.*—a rupee. All these prices are in his valuable essay, "Prices of Commodities and the Precious Metals" (reprinted from Statistical Society's Journal. Edward Stanford, London, 1886), and his continuation of the tables. These seem to me to show, (1), by the height of commodities in 1873, the effect of the previous twenty-four years' abundance of gold above described; (2), by the fall since, the effect of the subsequent scarcity of gold (artificial and otherwise), and of the German forced sales of silver. Silver averaged above 99½ for years 1867–1872.

Then follows a table showing a comparison between commodities and silver, as follows:

Year.	Commodities.	Silver.	Year.	Commodities.	Silver.
1873	111	97.4	1889	72	70.2
1880	88	85.9	1890	72	78.4
1885	72	79.9	1891	72	74.1
1886	69	74.6	1892 (September)	66.8	62.7
1887	68	73.3	1892 (October)	67.4	64.5
1888	70	70.4			

For convenient reference I will add at the end of my remarks a table prepared by Sauerbeck, showing the average gold prices

of commodities and of silver from 1846 to 1892. [See Appendix A.]

As a matter of course, it was absolutely impossible that these commodities and silver should be mathematically equal. That would be unnatural and impossible, but I make the statement here now and invite my friends the monometallists to disprove it, that the purchasing quality of silver has remained more stable than that of gold. Gold has fluctuated. Gold has gone up and gold has gone down, but silver has remained more nearly equal in its purchasing power from age to age, notwithstanding all the mutations of mining and of commerce, than has the gold metal.

Mr. GRAY. Will it interrupt the Senator from Missouri to ask him a question?

Mr. VEST. Not at all.

Mr. GRAY. Does Mr. Douglas, the writer of the pamphlet from which the Senator is making his most interesting quotation, anywhere attempt to show that those articles of prime necessity, which he compares to the price of both silver and gold, have not themselves fluctuated, or if they have fluctuated, to what extent, owing to causes that have affected the facility of their production, the quantity of their production, and the varying demand at different stages in the world's history for necessities of that kind?

If the Senator will pardon me, in the exceedingly interesting discussion or comparison of silver and gold with articles of prime necessity the difficulty must always be apparent that when you are comparing these three sources of fluctuation, gold and silver and commodities of prime necessity, you have got to take into account the causes which may affect the decline or appreciation of value of the commodities that depend upon supply and demand. The increased facilities, for instance, of the production of food products all over the world may have had, and undoubtedly has had, a most important and enormous effect upon the price of commodities, and they could not very well be compared with either silver or gold.

THE FLUCTUATIONS OF GOLD.

Mr. VEST. As a matter of course, the articles of necessity have fluctuated. It goes without saying that the failure of a crop and other vicissitudes, the law of supply and demand, which is invoked so often, will cause fluctuations in these articles. It would be just as absurd to say that they always remain the same at any standard as to say that gold and silver could always remain exactly equal. But the fact still remains that in the eras which are used by these statisticians the fluctuations in silver have not been so sudden or violent as the fluctuations in gold. Let me illustrate by a statement in regard to France. I saw in the New York Evening Post upon yesterday, I believe, a statement by Mr. Horace White, one of the leading monometallists of the country, to the effect that my colleague in the other House [Mr. BLAND] had made a gross and false misstatement when he said that France had been able to maintain bimetallism from 1803 to 1873, and he quoted from Chevalier on Gold, which I have here on my table, to show that my colleague's statement was incorrect

Mr. President, it is true that in the long period from 1803 to 1873 both silver and gold fluctuated in value, and it is true that during that period gold went to a premium of 1¼ per cent in France, and virtually went out of circulation, as is always the case; but it is also true, as shown by Chevalier, that with the exception of this era, which lasted but a few years, and not for twenty-five or thirty years, as stated by Mr. White, silver was the ruling metal in France. Silver was the standard of value really, although gold was also used. When the great Australian and Californian discoveries were made, gold poured into France and into Europe at such a rate that this whole book, Chevalier on Gold, is devoted to the discussion of the question how to make gold keep its parity with silver. The dread in Europe then was that gold would cease to be a money metal and that all the continental people would be relegated to the use of silver alone for all the purposes of exchange and as a standard.

Mr. STEWART. Will the Senator from Missouri allow me to reply a little more fully to the question suggested by the Senator from Delaware?

Mr. VEST. Certainly.

Mr. STEWART. Necessarily there will be fluctuations in the price of commodities, owing to a great many circumstances, supply and demand, etc., but what we maintain is that a continual average decline of prices means a shrinkage of the volume of money, or a continual general rise means an increase in the volume of money. That is demonstrated by the fall in prices from 1810 to 1850. The prices, not particular but general prices, were about 50 per cent.

From 1850 to 1875 there was a rise in general prices of about 33⅓ per cent. From 1875 until the present time there has been a fall in general prices of about 40 per cent. It is fully 50 per cent now. In other words, there has been an appreciation of money as compared with commodities of about 50 per cent in twenty years. The general prices depend upon the volume of money. The prices of commodities go up and down, but they always point to this volume. If the volume grows smaller they point to it on a lower level. So the demonetization of silver had precisely the same effect, the effect of reducing prices, that the Spanish-American wars did in cutting off the supply of the precious metals in the beginning of the present century. That is the way it operates upon general prices; but silver has kept pace with commodities, and has pointed to them almost exactly, going down as the value of gold went up, when measured in gold.

Mr. GRAY. I do not want by any means to inject a discussion into the speech of the Senator from Missouri, but if he will allow me to say what I meant by my suggestion a moment ago, it was to ask whether the pamphleteer from whom he was quoting had recognized or taken into account in discussing the relation of the price of gold and silver to certain prime necessities of life the fluctuations of those commodities themselves. For instance, we believe here on the eastern seaboard that the price of wheat has been permanently affected by the cultivation of the great fertile areas in the Northwest and the steam-plowed fields of the Dakotas, which has given a permanent lower plane of value to that important product that is not to be referred at all to the rise or fall of gold or silver.

Mr. STEWART. The same causes have been at work from 1810 until the present time to cheapen production.

Mr. VEST. If the Senator will pardon my remark, I intended of course to discuss the question of the effect of the supply of either metal or of both upon the prices of the world, for that is one of the salient points of this whole issue, but I am almost constrained by the remarks of the Senator from Delaware to read what I consider an exact statement of the effect of the rise or fall in the precious metals, always granted that other causes may affect the price of commodities, for it would be absolutely absurd to deny that fact. We can not control nature, but we can certainly control our own legislation.

EFFECT OF INCREASE ON PRICES.

Let me say to my friend from Delaware, that even if the monometallists could reach their elysium financially of a gold standard there would still be fluctuation in prices of commodities in this and every other country, and, as a matter of course, as gold increased in value, or, to speak more properly, as gold became scarcer prices would go down. Any discussion is imperfect, incorrect, and unsatisfactory that does not admit upon both sides what is known to the whole world, and must be always known to every intelligent human being, that if you increase the volume of money you put up prices, and if you decrease the volume of money you put them down.

I have seen the day in the vicissitudes of my life, when $20 in paper would not buy a loaf of bread, and a five-dollar gold piece would buy a house and lot. It is not necessary for me to say where that was the case, as I do not want to revive war issues. But I want to read now, although I did not intend to do it at this time, the statement of the rule, which is inflexible, as to the precious metals. I read from Chevalier, who is quoted approvingly as a great authority by Mr. Horace White:

> The effects of a rise or fall in the precious metals are displayed in a manner peculiar to themselves, owing to the attribute of money with which they are invested. When it is said that a commodity falls in value, it means that we must give a larger proportion of it than previously to procure in exchange the same quantity of any other article of commerce. The price of that article, whether it be iron, lead, corn, wine, or any other product, excepting the metal or metals of which money is made, falls accordingly; for the price of a thing is its value specially compared with those metals, or, to express differently the same idea, it is the number of monetary units which it is necessary to give in exchange for a certain weight or volume of another commodity. A diminution in the value of the metal from which money is essentially coined is shown differently in this respect, that its price remains the same; but then the price of all other commodities, without exception, rises if its value compared with itself has fallen, and falls if it has risen.
>
> I say that its price as measured by itself remains the same, since for this metal, specially and exclusively, the price is its value compared with itself. If, for example, the value of silver falls one-half as the monetary unit, the franc consists in France of four grams and a half of silver, a kilogram in weight of fine metal will still be worth 222 francs 22 cents, because one kilogram contains four grams and a half, 222 times and a small fraction; but in this case the price of lead, iron, wheat, wine, and all other commodities will be doubled, because, to obtain the same quantity of these articles, it is necessary to give double the quantity of silver.

DEMONETIZATION OF SILVER DOUBLES ALL DEBTS.

There is the inflexible monetary rule. There is no sort of rhetoric or declamation that can do away with it. We had just as well confront this proposition now, and there is no escape from it. If for any cause (and I will leave the causes now to inject this remark) we strike down one-half the metallic basis of value in the world we double the burdens that are resting upon all who owe money; and we beyond computation almost, for no man can foresee the future, put down the price of commodities.

Mr. Horace White says in an article which I have before me that he hopes the day will come, and he wants to see it, when everything will be cheapened because it is to the interest of everybody that everything should be cheap. He disagrees with some of his own party, for it has been but a few years ago, in 1890, I believe, when we were told that the words "cheap" and "nasty" went together, and that cheap clothes made a cheap man. Now we are told by Mr. White that he wants to see the era come when commodities will be reduced in price, when the wheat-growers of the West instead of getting for their wheat delivered at a country depot 35 and 40 cents a bushel will receive 15 and 20 cents, when the mortgaged indebtedness of this country will be doubled, and the man who can to-day pay off his mortgage with a thousand bushels of wheat must add the labor, and the privation, and the mental anxiety necessary to raise 2,000 bushels in order to discharge the same indebtedness.

I resume the reading from which I was diverted when interrupted:

This great and gradually progressive fall of commodities in general as compared with gold does not and can not come from increased production of them, but from the rise of gold, by which shifting standard they are valued. Gold has appreciated or risen in value or buying power; silver has not really fallen or depreciated. Fall of silver is only an ordinary way of mentioning the divergence of price between rising gold and stationary silvery silver. Prospects of divergence continuing and widening, and of its effects.

The appreciation of gold is most fully and admirably proved and illustrated by Mr. R. Giffen, of the Board of Trade, in his long and elaborate essay on "Recent Changes in Prices," etc., dated December, 1888, and published in the Journal of the Royal Statistical Society for that month, pages 713-815.

Unfortunately that precious essay is not included by him in his recent volume, "The Case Against Bimetallism," a reprint of his other and much less valuable papers bearing on this subject. That omitted essay affords one of the best answers to all the others on one of the great leading points of the currency question—the supposed steadiness of gold as a standard of value. I therefore must offer some extracts from this part of its contents, because comparatively few have access to the journals of the learned societies, and ordinary people are repelled by these being too often dry as well as learned.

After mentioning his paper in the same society's journal of March, 1879, on "The Fall of Prices since 1873," in which he suggested that appreciatfon of gold had begun, or soon would do so, and his reiteration of this suggestion in an essay in 1885, he notices the fulfillment of his forecast by the admitted general fall of prices, amountiug to an appreciation or rise in the purchasing power of gold. This conclusion he establishes (pp. 720-722) by detailed references to the tables and index numbers or averages of The Economist, Mr. Sauerbeck, Mr. Soetbeer, the Board of Trade, and the American averages. His conclusions from these as to appreciation of gold are doubtless incontrovertible.

As to silver, he says (p. 740): "If we avoid extreme years, the average fall in commodities measured by gold rather exceeds the average fall in silver measured by gold. In other words, instead of speaking of the depreciation of silver," as compared with gold, "we should be quite justified in speaking of the appreciation of silver when we measure it by the average of commodities," which is the way in which he and all competent persons now and in former times have measured the values of both gold and silver. After stating many interesting facts and arguments he remarks (p. 750):

"We can say positively that the recent change from a high to a low level of prices is due to a change in money, of the nature or in the direction of absolute contraction." And then he shows how the excess of imports of gold into England over exports of it, in the fourteen years 1858-1871, reach sixty-seven and three-quarter millions sterling of net import, or an average of about five millions annually, while in the following sixteen years, 1872-1887, the net import was under three-quarters of a million yearly, or eleven and one-half millions in all; whereas, if it had continued on the same scale as before, it should have approached eighty millions.

Thereupon he proceeds (p. 753): "It is clearly impossible to contend there has been no change in the movement of gold, comparing the one period with the other. If we look at coinage or other details, the result would be the same. The stock of gold in England available for money has not been added to of late years as it was in the period just before. The stock with the additions has had to do more work, and it has only been able to do so because prices have fallen, and incomes have not risen, whereas from 1850 to 1873, when gold was going so largely into England, not only did prices rise a little but incomes a great deal." He adds that he believes the comparison would be still more striking if we could compare the excess of gold imports from 1850 downward.

Now let me read another extract from this paper, and I shall not further weary the Senate. In regard to the effect of the increase in the value of gold upon prices, this gentleman (Mr. Giffen), who is now an extreme monometallist, makes the following statement, as given in the essay from which I am reading:

He then deals with the effects of this appreciation of gold on the distribution of wealth, and says (p. 759): "It is obvious beyond all question that these effects may be important. The debtors pay more than they would otherwise pay, and the creditors receive more. The matter is thus not unimportant to the two large classes of people who make up the community. Appreciation is a most serious matter to those who have debts to pay. It prevents them gaining by the development of industry as they would otherwise gain."

As to the landowners, he shows (p. 760) how appreciation of gold and consequent fall of prices has swept away the surplus value of many estates, especially of land, and also estates of other sorts, and made them insufficient even to pay the mortgages on them; also, he illustrates the same kind of effect on stocks of various sorts.

But, Mr. President, I suppose it is not necessary to read authorities to show that the increase in the value of gold which would follow from the elimination of silver as a money metal would increase the burdens of indebtedness immensely all over the world, and would put down the price of products, thereby taking away from the debtor the ability to pay with the same amount of property a debt which he had contracted upon a different ratio and under a different standard. Even the Herschell committee, in justifying the closing of the mints in India to the private coinage of silver, makes a statement to this effect, to which I ask the attention of our monometallic friends. In giving their reasons and the recommendations they made to the British Parliament, the committee says:

We pass to the objections founded upon the effects on rupee prices, on taxation, and on other fixed burdens. These effects would be such as result from an appreciating currency, namely: first, to make prices lower than they would otherwise have been; then, though more slowly, to lower money wages, and to increase the burden of debts and of all fixed payments. It has been urged in answer to this, that whatever these evils may be, they are not greater than those which have in recent years been experienced from a depreciating currency, namely: prices higher than they would have been but for such depreciation, and debts and other just burdens lightened, to the benefit of the persons who pay, and to the injury of those who receive, including the Government.

It has also been urged that, if future appreciation were due to the act of the Government, past depreciation has also been due to the adoption by the Government of an unstable and depreciating standard. But, even assuming that these answers are true in point of fact, it is no less true that, since the adoption of the silver standard in 1835, the depreciation of the silver currency has arisen from causes over which the Government have exercised no control, whereas any appreciation resulting from the raising of the rupee would be due to the direct action of the Government.

I find no fault with this declaration, coming from this source. If I were a citizen of a Government like Great Britain, with its autonomy and its policy, and sought simply the interest of that country and not of the world, I would have made that report. I would have come out, as these gentlemen have, and said distinctly that we ought to legislate for the creditors and not for the debtors; that more money should be put into the pockets of the multimillionaires, and that the people, the plain, common people of the country, should not be consulted in regard to the matter.

I am not in the habit of appealing to the prejudices of the poor against the rich. I know but one rule in my legislative conduct, to protect all alike and treat all alike, and it is not just to the debtor who has contracted his indebtedness under silver and gold to strike silver out of the currency and take more than one-half in excess of his property to pay a debt so contracted.

No living man can justify legislation like that. If we had the power now to put this country, all obligations being obliterated, to the test whether we should have gold or silver, one standard or the other, it would be a fair issue. But as we are now, with debts contracted to the amount of $8,000,000,000 in the United States, to strike down the ability by one-half of the debtor to pay his obligation is not only unjust and ruinous, but absolutely wicked.

GREAT BRITAIN FOR HERSELF.

Now, Mr. President, another argument is made daily and hourly by the metropolitan journals. It is said we can not maintain a different standard from Europe. We must not put this country in a position of isolation. We must not, to use a much-abused term, put a wall around the people of the United States. I am not disposed to be prejudiced against England. The English are a great people. They understand the chief end of commercial life better than any people who have ever existed, even than the Venetians. I am not here to array the people of the United States against those of Great Britain. We come from the same lineage, and they simply exercise the right that we exercise—to take care of themselves. I can understand how an Englishman would be for the gold standard. The gold standard makes England financially the mistress of the world.

In 1844, after they had demonetized silver in 1816, the British Parliament passed the bank act, in which they made it mandatory on the Bank of England to buy every ounce of gold that came from any portion of the world for all time to come, at the fixed valuation of £3 17*s.* 8*d.* an ounce, a fraction over $20.

ENGLISH LEGISLATION ENHANCES PRICE OF GOLD

What was the inevitable result? All the world except England was on a silver or a bimetallic standard. Germany was on the exclusive silver standard. The Latin Union was on the silver standard. Every country of any importance in the world was championing silver; and yet our ancestors deliberately took up the gauge of battle and said to the whole world, "You shall have gold," as my predecessor here, Mr. Benton said, red gold, and although their first step was challenged to the death, they said, "Every ounce of gold produced anywhere in the world shall be bought by the Bank of England at the price we have named," and that fixed the price of gold in the remotest parts of Asia.

Every man who had an ounce of gold knew what it was worth, taking off the cost of transportation. He knew that the Bank of England was bound to pay that or give up its charter. Their object was to make England a gold emporium and chain the gold standard upon the people of the whole world, and they have almost succeeded in that gigantic endeavor. By fixing the price of gold they enhanced its value and forced the world to take their standard.

GOLD THE GENIUS OF CENTRALITY.

If this country should now surrender silver it becomes like iron or lead or any other metallic commodity, and its qualities as money are destroyed forever. I repeat, if I looked at this subject from the English standpoint I would unquestionably advocate gold. Gold represents the genius of financial centrality. If England can bring the whole world to a gold standard, with her vast carrying trade, with her large colonial system, she is mistress of commerce and finance.

Mr. STEWART. Ten thousand million are owing her from other countries, Mr. Gladstone says.

Mr. VEST. My friend mentions Mr. Gladstone. Who could have stated the matter more succinctly and distinctly than he did in the debate in the House of Commons three months ago on the continuation of the Brussels conference? Mr. Gladstone said, "Why continue the conference? What necessity is there for England to send any more commissioners? We do not intend to go to anything else but the gold standard. We are the creditor people of the world, and we want money to have the highest purchasing capacity, the largest quantity of which can be put in the smallest bulk."

That is an honest statement. He said, "We do not propose to negotiate." Germany has joined England. After Germany had wrested with iron hand from France $1,000,000,000, principally in gold, she looked across the channel and saw England the mistress of the seas, and Bismarck, looking to the splendid future of a consolidated empire, whose commerce should rival that of Great Britain as her armies had conquered France, said, "We will go to the same basis financially: we will adopt gold." Then they took their silver, melted it into bars, carried it over to France across the frontier, and added insult to injury by asking the French, after paying them $1,000,000,000 of war indemnity, to coin their silver in order to help them to get more gold in their rivalry with Great Britain.

Mr. HOAR. Mr. President——

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from Massachusetts?

Mr. VEST. Of course.

Mr. HOAR. Does the Senator from Missouri mean to say to the Senate that he thinks it is for the best interest of Great Britain to ruin her debtor classes and her rent-paying classes, by having a constantly appreciated and tightening standard of value? I understood the Senator to say that if he were an Englishman he would be in favor of a gold standard. The importance of that declaration is very great to my mind, because it involves the opinion of the Senator from Missouri that England will never consent to an international agreement to the contrary. In that point of view it is of pretty practical importance to the people of the United States to understand whether he is right or not.

I wish to ask the Senator, in reference to the argument he has just made, whether he thinks that the establishment of a single gold standard in England will not ruin her debtor classes, including her rent-paying classes, who are her farmers; and, in the next place, whether he thinks it is for the interest of England to do that?

Mr. VEST. I think the question of the Senator from Massachusetts is very wide of the real issue which I was attempting to discuss, and for this reason: I argued the injustice of our now eliminating silver as a money metal on account of existing obligations. England went to the gold basis in 1816, and no matter how much her people suffered, and they did suffer, she forced them to submit, as she always does. England never hesitates in her career of conquest and power.

Mr. HOAR. I do not wish to interrupt the Senator to thrust an argument into his speech. I would not wish to do it for my own satisfaction, because I am listening with the very greatest interest and in general with the greatest assent to what he says; but as I understand the Senator, he argues it does not make any difference whether England has been monometallist since 1816 or not; but as I understand the Senator, he argues that the adoption of the gold standard to-day by the nations of the world, including England, is to adopt a measure for the payment of debt which is constantly increasing its burden and is constantly to increase its debt in future.

Mr. VEST. I do. I say that emphatically.

Mr. HOAR. That is the Senator's argument?

Mr. VEST. It is.

Mr. HOAR. Now, the Senator says that if he were an Englishman he would be in favor of that. That is a very important declaration coming from the Senator with his present relations to the financial policy of this country, because it is equivalent to a declaration that the circumstances of the future will never induce England to agree with other nations to a reëstablishment of bimetallism. In that point of view my question seems to me very pertinent to the exact point the Senator is making.

Does the Senator believe that it would not be a great increase of the burden of debts and of rents in Great Britain and Ireland to have this monometallic policy continue there and be concurred in by other nations? If the Senator believes with me that it would be a great and increasing burden, then I ask him if he thinks it would be for the interest of Great Britain to do that thing, and to ruin her debtor and her rent-paying classes. If he believes with me that it would not be for her interest, and retracts the statement he has just made, then he leaves us some hope that we may get an agreement with England in the future.

Mr. STEWART. Will the Senator from Missouri let me answer that question?

Mr. HOAR. I should like to have the Senator from Missouri answer it first, if he will.

Mr. VEST. I will answer it, and then yield to the Senator from Nevada. When I used the expression that if I were an Englishman I would favor the gold standard, I was simply emphasizing my statement that it was a selfish policy; that it had been established by England for the aggrandizement of the commercial and wealthy classes——

Mr. HOAR. To that I agree.

Mr. VEST. And that they acted then exactly as they acted with regard to India. The 250,000,000 people in India received no consideration from Great Britain when Great Britain closed the mints to private coinage. The only question was, what is the effect of the free coinage of silver in India upon the English people, and that was all they considered.

Mr. HOAR. That I agree to; but I submit to the consideration of the Senator that an aggrandizement of the wealthy and commercial classes by the ruin of the others is even more ruinous and injurious to Great Britain than it would be to us under like circumstances, for that class is much more defenseless.

Mr. VEST. My argument as to ruin was in regard to the debtor class in our own country, if we now strike down silver; but, I say emphatically, that in my judgment the gold standard even in England, where it has been established since 1816, does oppress the poorer classes, and that it is intended to put money in the pockets of merchants and investors.

I do not believe that England would ruin her producing classes. The English are too wise to do that. When they found they were about to ruin the people of India by an absolute gold standard there they relaxed in their policy and said they would simply go so far as to close the mints to private coinage; and they are now reflecting very seriously as to whether they will not retract that action. The other day, when Balfour and Leonard Courtney attacked the action of the British Government, the most significant speech made on that occasion was by the Parsee member of the Commons who represents India, and who said that if the policy adopted by the Government was continued it would end in the ruin of his constituents.

If England sees that she is about to kill the goose that lays the golden egg she may stop, but just so far as she can go with this centralizing policy, based upon the gold standard that extends her commerce and enriches her wealthy classes, she will go. Against the application of that policy to this country I protest. Now, if the Senator from Nevada wants to say anything I will hear him.

Mr. STEWART. I should like to state that there are two classes in England, the same as here. When England resumed specie payment after the Napoleonic war, after they had had twenty-two years of suspension, they had a debt of four thousand million dollars, which was worth about thirty or thirty-five cents on the dollar. An English pound was worth only seven or eight shillings; they made it worth twenty shillings a pound and created a bonded aristocracy, which has ruled England from that time till now. The debt of the English people of corporation and other bonds is largely more than $4,000,000,000. Added to the national debt of $4,000,000,000 it would probably make seven or eight thousand million.

Mr. Gladstone says that the countries outside of the United Kingdom owe the United Kingdom $10,000,000,000. It is this vast bonded indebtedness which rules England. This bonded indebtedness prevented the royal commission from reporting in favor of bimetallism. Six of them were in favor of bimetallism and six against it. I will quote the substance of the conclusion of the six monometallists. They said:

ENGLAND A CREDITOR NATION.

"We can not close our eyes to the fact that England is a creditor nation of debts payable in gold, and any increase in the volume of the currency would be to her disadvantage."

So long as the bonded debt, foreign and domestic, controls the policy of England, which it has done for eighty years, so long she will refuse to have silver used. She has been making a battle during all that period to enhance the value of money and to increase obligations to pay money.

The bonded debts which control England do not consist of rents, as spoken of by the Senator from Massachusetts; they are bonds, which are supposed to rest on good security. A large portion of these bonds are of corporations of the United States. It is supposed that the United States are indebted to Europe in the shape of bonds of various descriptions to the amount of $3,000,000,000, at least $2,000,000,000 of which are held by England and makes up a part of the $10,000,000,000 which the world outside of England owes England.

The holders of that bonded indebtedness constitute the moneyed aristocracy of England; they have been in control for many years and have succeeded in every contest against the interest of the English people as against the interest of our people. The farmers, the mechanics, the artisans, and all the people of England are bimetallists; nearly all the writers on political economy are bimetallists.

It is the power of the bonded indebtedness which not only controls England but all the balance of the world. That is the power we are compelled to fight. It is commercial England, as they term it; and that is what I understood the Senator from Missouri to mean. He did not mean the English people, who are ground down the same as we are. He meant the colossal, concentrated power that is governing England and is governing the world, which is demanding the repeal of the act of 1890.

Mr. VEST. Mr. President, I have said that I believe the principal object of the English Government is to concentrate, as far as they can, their commerce, wealth, or the products of it, in the merchants of England, the commercial classes. As to their nobility and the landed aristocracy, their autonomy provides for them; but in the carrying trade, in the extension of commerce and the use of the instrumentalities that are most valuable to commerce, and gold is one of them, they hope by constant accretions to make the British Empire the most magnificent the world has ever seen.

Whenever one of their colonies comes in contact with this system of home accretion the British Parliament immediately takes the province in hand and corrects that mistake. While England ostensibly allows everyone of her colonies to fix its own tariff, she manages most decidedly and absolutely to make that tariff, whatever it is, subordinate to the interests of the English manufacturer at home.

Now, there is a significant fact in regard to the demonetization or attempted demonetization of silver in India, and I read again from this pamphlet:

> Soon after the rise of gold began in 1873 a large cotton-spinning trade, begun previously in India, with English machinery, to supply India itself, felt at once the stimulus supplied by the difference in exchange. It prospered rapidly, grew, and continues growing fast and steadily, and exports to China and other silver countries. Here are comparisons of the English and Indian exports of cotton yarn, in pounds, to China, Hongkong, and Japan, which have for some time been supplied annually to the Economist by Mr. Abraham Haworth, of Manchester. They show how the product of silver wages beats the product of gold wages, and beats them more as the divergence between the metals widens.
>
> The quantities are given in pounds weight. The contrast between the stationary quantities from England and the rapid expansion of the Indian export indicates plainly a sad future for Lancashire trade if gold wages there must continue competing with silver wages in foreign markets. India will on the present footing beat Lancashire everywhere, meanwhile in the large class of goods made of Indian cottons, but ultimately in any material.

Then follow statistics showing that from 1876 to 1881, England exported to China and Japan yearly $38,560,000 in these cotton goods. India then exported only $19,641,000. From 1882 to 1887 England had dropped off to $33,682,000, India having increased from $19,641,000 to $71,319,000. In 1888, one year, England sent to China and Japan $44,642,600 worth, and India went from $71,319,000, the preceding year, to $114,707,300. In 1889 England sent to China and Japan $35,720,200 of these cotton goods, and India $126,766,800 against $114,707,300 the preceding year.

In 1890 England exported to China and Japan $38,057,400. In the meantime, in the same year, the Indian export increased from $126,766,800 to $145,112,800 worth of cotton manufactures, and it was time for the English merchants to stop this rivalry. The child had outgrown the parent. The colonial manufacturers had taken away the market in Japan and China, and it was necessary to do away with silver in order that the monopoly of this eastern trade might go back where it had originally been, in the English manufacturer and the English merchant.

Now, says this author, Mr. John Monteath Douglas, of London:

> Japan has also in the more recent years established a number of mills, which are exceedingly successful and multiplying very fast. The latest news is that the first half of 1892 has produced nearly as much yarn as the whole of any prior year.

Then he goes on to discuss the condition of India, which I shall not delay the Senate by reading, because subsequent events have settled that question to a very large extent.

Mr. President, we are told that the Bank of England controls the finances of the world. It is a poor argument, it seems to me, to a people who in twenty-five years have paid off two-thirds of a war debt of $3,000,000,000, to tell us that England has more financial ability and is a stronger country in a monetary sense than the United States. The Bank of England is not the mistress, financially, of the world; it is not the largest bank in the world. If our friends the monometallists would be more accurate and go to the resources of the large banks of the world, they would find this to be so. The Bank of Germany has $185,000,000 of gold and $100,000,000 of silver.

SILVER IN GERMANY.

I call the attention of the Senate to the fact that we are constantly told that Germany is on a gold basis. Germany has $100,000,000 in silver thalers of full legal-tender quality to-day.

Mr. COCKRELL. And perfectly equal with gold?

Mr. VEST. Yes, perfectly equal with gold.

Mr. PUGH. And at the ratio of 15½ to 1.

Mr. VEST. Yes, 15½ to 1 is the ratio there.

Mr. PALMER. Is that circulating like ours?

Mr. VEST. Every dollar of it is in circulation, answering all the purposes of gold.

I see in a New York paper, carried away by the enthusiasm of the gold standard, a statement that Germany would hail with acclaim, quoting some Amsterdam merchant, if we should go now to the bimetallic standard and continue to coin silver, because Germany would immediately unload her waste silver on the United States. Has not Germany had an opportunity to do that under the Bland act and under the Sherman act? If silver is a drug in the market and they want to sell it at any price, why have they not brought it here?

Mr. GRAY. I suggest that at present under the Sherman act they could only get the market price for it.

Mr. VEST. If they are so sick of it they would take anything for it. If it is the drug that they say is now creating financial dyspepsia in Germany, why do they not throw it out, even if it takes lobelia and ipecac? They have $100,000,000 full legal-tender silver, and yet Germany is on the exclusive gold standard. The Bank of Germany has $185,000,000 in gold and $100,000,000 in silver. The Bank of England, the boasted mistress of the finances of the whole world, before whose fetish we are to bow down now or we shall cease to exist as one of the first nations of the world, has $135,000,000 of gold and no silver, except subsidiary coin. It is true under the law of England—now mark it—that any man from any part of the world can draw gold out of that bank; yet whenever they find that the export of gold is too large, they put up the rate of interest and stop the exportation.

Mr. STEWART. They discriminated in the way of exchange when the Barings failed.

Mr. VEST. Ostensibly they say to the whole world: "We are on the gold standard; come and get all the gold you want, and we will pay you £3 17*s.* 8*d.* for every ounce you bring us." Yet, the minute they find there is too much gold going out, they put up the rate of interest and prevent its exportation and contradict absolutely their pretense.

Spain has $35,000,000 in gold and $20,000,000 in silver. Austria-Hungary has $55,000,000 in gold, and $85,000,000 in silver. The Bank of France has $330,000,000 in gold and $225,000,000 in silver, and Mr. Horace White says in an article which attracted my attention in the last Forum, that the man who says that France is on a bimetallic basis is an idiot, and ought not to be listened to in any part of this country. He says the poor creatures actually believe it when they say it; but they are ignorant, they do not know, they are not numbered with the financial four hundred who understand this question. France not a bimetallic country with two hundred and twenty-five millions of legal-tender silver in the reserve of the Bank of France to-day!

Mr. STEWART. And seven hundred millions of standard silver dollars.

Mr. VEST. And seven hundred millions of standard silver dollars in the whole country, and yet it is not a bimetallic country! Mr. White says in this article that as soon as you refuse coining a metal it is demonetized. I belong to those poor, benighted, and ignorant creatures who think that when you demonetize a metal it ceases to be money. Is not silver money in France to-day, in Germany, in Austria-Hungary, in Holland, and in Russia? Yet he says that denying it free coinage demonetized silver; in other words, that silver is not money to-day in the United States. I must confess that I am benighted if his definition is correct; but I am not surprised at it. Listen to what Mr. White says about this question and about India. Here is the spirit of monometallism. I am not caviling about words, but it shows the genius of this centralizing scheme, to use no other word, which is now being urged upon our people. He says:

> It would be rash for anybody to predict the future course of events in India. We may be pretty sure, however, that the men who have directed it and who are responsible for its consequences have not acted without careful circumspection. If they are censurable at all it is for too great delay rather than for undue haste. But before anybody censures them for too great delay let him put himself in their place. Let him charge himself with the des-

tinies and fortunes of 250,000,000 of people, for the most part very poor and too ignorant to know what is good or bad for them in a financial way.

In this last particular they are not alone among the nations of the earth, but the peculiarity in India is that a handful of men have to decide the most important questions without much, if any, aid from public opinion, and without ever referring them to the hustings. When it comes to questions of high finance this may be an advantage to the governed, but it adds enormously to the responsibilities of the governors and will surely give them pause when such a momentous step is to be taken as a change in the monetary standard.

It is a blessing to have the favored few to determine these questions for you; it is a great boon of Providence that a few gentlemen in New York are to determine this question for the American people, and all of us who decline to follow them and abandon the traditions and policy of the Government and the manifest dictates of common justice are either guilty of a crime intentionally, or else we are put in the role of lunatics. It is a favorite expression now to talk of the "silver lunacy."

Mr. President, I am ready to follow that great lunatic, Thomas Jefferson, on this question. I am willing to follow the men who made the Constitution of 1789, and said that no State should make anything but gold and silver a legal tender for the payment of debts. If they did not mean that silver was a money metal, then the English language has become so nebulous as to be useless.

The Bank of France has three hundred and thirty millions of gold and $225,000,000 of silver. The Russian State Bank has $480,000,000 of gold.

We are told that it is impossible to sustain silver in this country unless we have a conference with other nations of the world and all will agree to it. France sustained the bimetallic standard for eighty years before 1873, with Germany on one side on an exclusive silver basis and England on the other with a gold basis; and to-day the French people are financially the first people in existence. England, the so-called mistress of finance, when the Baring failure took place and the world was racked and tortured with doubt and uncertainty, borrowed $15,000,000 in gold from the Bank of France in order to sustain her credit—$15,000,000 in gold from a country which had $700,000,000 of legal-tender silver and $225,000,000 of it a bank reserve!

FINANCIAL STRENGTH OF FRANCE DUE TO SILVER.

I asked a very prominent monometallist the other day to explain to me why France had not been ruined. "Why," I said, "was she able to pay Germany $1,000,000,000 of gold, and then leap to the front of all other nations in almost a decade, loaded down and weighted with this destructive silver, amounting to $700,000,000 of legal tender?" "Oh," he said, "have you ever been to France?" "Never; I have never had time, because I have not seen my own country." He said, "If you went there it would be explained to you in a minute." "Please give me the benefit of your tour?" "Why," he said, "the peasantry of France hoard their silver; they are like the people of India; when they get a silver dollar they save it; they do not want paper money." "But," I said, "the Bank of France issues paper money that is equivalent to gold everywhere." "Oh, yes," he said, "but they are a peculiar people; they hoard silver." "Well," I said, "are they hoarding something that they do not want, like the people now hoarding silver here? Are they hoarding something that will not purchase anything? Why is it that they take a drug, a poison financially, and put it away to keep?" "Oh," he said, "they are peasants." "Very good," I said, "I will accept your argument on that basis."

Now, look at the South. There are 4,000,000 negro peasants, anxious to get silver. All of us who know them know that they prefer silver to any metal in the world. Why can we not float $500,000,000 of silver in this country, instead of being told that we are shipwrecked if we continue the process another day? Why are we to demonetize it?

Why, Mr. President, if I have heard anything, it was that to go on with the increase of silver metal, even to buy the bullion and issue the bullion notes under the Sherman act, would bring us to bankruptcy.

Why, I asked this gentleman, and I ask now, can we not go to silver coinage with a country increasing in population as no country in the world has ever increased, when we are standing almost sword in hand to keep immigration from our soil? France is a finished country—*acompli*, to use their own tongue—with her population fixed, and yet she maintains this enormous amount of silver, and is to-day the strongest nation, financially, in the world. The Director of the Mint said recently, as to the financial power of France, and it is also valuable as showing the effect of legislation on the price of silver:

The French ratio of 1 to 15½ was a fixed point about which the price of silver moved. The London price fixed the relative value of silver and gold for the commercial world, but the commercial value could never vary very widely from the coinage value as long as the mints of the Latin Union stood ready to transform gold and silver into coin at the ratio of 1 to 15½.

I say that it is not the overproduction of silver which has brought down its value. The reports of our Director of the Mint show that the legislation of 1873 of this country and Germany caused the phenomenal and abnormal fall in the price of silver. How could we expect this metal to hold its own with gold when we had taken away from it its chief value, that of money?

The report of the Director of the Mint for the last year, 1892, shows that we produced in this country $33,000,000 in gold, and $11,376,037 was taken for the arts, leaving a little over $20,000,000 in the United States of gold production and $74,000,000 in silver, out of which $7,209,362 was taken for the arts—$74,000,000 of silver, with a population of 67,000,000, increasing at the rate of from 500,000 to 600,000 each year, and with enormous resources and this increasing population and the negro population of the South anxious to take silver, and preferring it, we are told that we can not float silver if we have free coinage.

In the Brussels Conference I was struck with this statement coming from Mr. Boissevain, the delegate from the Netherlands. He said:

In my opinion the chief cause of the fall in the gold price of silver has been the enormous decrease in the monetary use of silver during the last twenty years, in consequence of the legislative measures which date from the new monetary law enacted in Germany.

THE CAUSE OF SILVER DEPRECIATION.

How could we expect silver to maintain its value when the two largest nations in the world, the two most important nations, Germany and the United States, struck it down and took away from it its money value and reduced it to the basis of silver spoons and forks and plate? We give free coinage to gold, and it goes up and up, and we say to it "*Io triumphe.*" Here is the idol financially of the whole world! Take away the monetary value of silver, and then say, "Here is a metal that is debased and depreciated." What has done it? I have read the tables to show that overproduction did not do it. It was legislation that did it; the settled determination by adverse laws for the benefit of the capitalists and the financial centralizationists of the world to bring us to a gold basis for their own purposes.

Mr. President, it is not my purpose now to discuss the measures that ought to be adopted to relieve the country from its present depression. I have offered the resolution now pending before the Senate because I honestly believe that anything is better than the uncertainty which now prevails in financial and business circles. A great philosopher once said, that in all the affairs of life the moment of uncertainty was the moment of greatest agony. It is peculiarly true as to business, that the moment of uncertainty is the moment of greatest distress. With our resources and our people, we have only to fix our policy and stand by it, and prosperity will come again to this country.

I had occasion to say in the opening of my remarks that we had passed now the stage of experiment and of makeshifts. What is the matter with this country to-day? It is because the opinion has been sedulously inculcated that we were about to go to the gold standard and silver money would be worthless, and men would be paid in it as to contracts that are to be met in the future. It makes no difference to the capitalists whether that be the policy or not. Like men in a panic, every man wants his money if his neighbor wants his, and where one man in the community wants gold all want gold.

Mr. WHITE of Louisiana. May I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Missouri yield?

Mr. VEST. With pleasure.

Mr. WHITE of Louisiana. I suppose the Senator means to say that that opinion is inculcated if we go to a silver standard. He said a gold standard.

Mr. VEST. I meant what I said, Mr. President. I meant that it has been inculcated sedulously that we must go to a gold standard and that silver must be destroyed. If we have heard anything since the commencement of this session and just preceding it was from the metropolitan journals, that all Congress could do was to meet and repeal the Sherman silver act and adjourn, and of course the newspapers know. [Laughter.]

Mr. PALMER. The Senator will allow me to ask him a question?

Mr. VEST. Certainly.

Mr. PALMER. Would the repeal of the Sherman act be going to the gold standard?

Mr. VEST. I think the unconditional repeal would. Not one single silver dollar will be coined again if we repeal the Sherman law unconditionally. I am no friend of the Sherman law, but it is the ulterior consequences that I am voting on. Let us talk frankly. Suppose we repeal the Sherman act unconditionally and bring in a free-coinage bill, and suppose both branches of Congress should pass it by a fair majority, we have every reason to believe that the President of the United States would veto it and we will not have the constitutional majority to pass it over the veto.

Mr. PALMER. Will the Senator allow me to ask another question?

Mr. VEST. Certainly.

Mr. PALMER. How does the purchasing clause of the Sherman law aid free coinage?

REPEAL A STALKING-HORSE FOR MONOMETALLISM.

Mr. VEST. I think it does not aid free coinage, and I never thought so, and I voted against it, although I was a free-coinage man. I voted against it and said at the time that I voted against it because it made silver a commodity. I am willing to repeal it, but I am not willing to give up the whole silver question with the repeal. You can not make the repeal of the Sherman act a stalking horse for monometallism.

Mr. PALMER. Does the Senator mean that the Sherman law is to be maintained to compel free coinage?

Mr. VEST. Not to compel. I meant to say that until there is some assurance that we are not to go to a gold standard and that we are not giving up the last muniment of silver and leave it without any legislation, we do not propose to take a step which leads to monometallism.

Mr. PLATT. May I ask a question?

Mr. VEST. Yes.

Mr. PLATT. The Senator says that if we repeal the Sherman law unconditionally, it is highly probable, at least, that no bill for the coinage of silver would be approved by the President. Does he not think the President would approve a bill for the coinage of silver at a commercial ratio between silver and gold, or something near that?

Mr. VEST. I do not know, and am not authorized to say. I only know that the President has sent us a message in which he does not say one word of bimetallism, and I take it for granted that if he had any idea of sustaining bimetallism he would have said something about it.

Mr. PEFFER. Will the Senator allow me?

Mr. VEST. Certainly.

Mr. PEFFER. I should like to inquire of the Senator from Missouri how it would be possible to establish a commercial parity or the commercial ratio between gold and silver without subjecting both of those metals to the same test, the commercial test, involving a repeal of the laws which now protect gold in the market.

Mr. VEST. Well, Mr. President, I am not prepared to enter into a discussion of that question. I have some views of my own in regard to it. I agree generally, if I understand the Senator from Kansas, with what he states, if he means to say that the laws which now discriminate for gold are the laws which are adverse to silver necessarily.

Mr. PEFFER. That is not what I mean at all in this connection. What I mean is this: Under the law since the beginning of our national history gold and silver were both mintable at our mints at a fixed valuation, and the law prescribed the value of both metals for coinage purposes. In 1873 the silver dollar was dropped from our coinage and in 1874 utterly demonetized, throwing silver bullion upon the market as a commodity, the same as wheat and corn and cotton. Now, I ask the Senator—and it was the question asked by the Senator from Connecticut [Mr. PLATT] which inspired this question upon my part—whether it will be possible to establish a commercial ratio, or a commercial parity, between the two metals unless we submit them to the same test by taking away the protection which the law affords to gold, or else restoring the old protection which the law gave to silver?

Mr. VEST. I did not at first understand the Senator from Kansas. I agree with him, and I wish to say I am obliged to the Senator for asking the question.

We are often asked, "How are you going to restore the parity between the two metals"? No man living can tell with any accuracy what will be the effect of giving free coinage to silver. As to the diminution of its value we know—I think I know—what was the result of taking free coinage away from silver. What will be the result if we restore it nobody can tell accurately, but we know it will be very great.

I have been attempting to argue that when you take away from silver its chief value, that of a money metal, you strike it the most deadly and fatal blow possible. Give it free coinage, and then we shall see whether it can hold in the markets of the world its place alongside of gold; but it is unfair and unjust to tell us that silver has depreciated in the face of the fact that it has been degraded and its principal value taken away from it by legislation.

But for one single instant permit me to say another word in regard to the contention that we must have a general international agreement as to the ratio between the two metals.

Mr. HOAR. Before the Senator passes from the point he was just making I should like to ask him a question, if he will yield.

Mr. VEST. Of course.

Mr. HOAR. I understood the Senator to say just now that France was a bimetallic nation, although she has stopped her silver coinage, because he said, I think, that she had $175,000,000 in circulation.

Mr. VEST. Seven hundred million dollars.

Mr. HOAR. Should we not be a bimetallic nation for a great many years to come if we stop all silver coinage?

Mr. VEST. I have alluded to that.

Mr. HOAR. I did not hear the Senator.

Mr. VEST. Of course great stress is laid upon the fact that we could maintain the silver we had already coined. As a matter of course we could do that, but the time must come when that silver, for one cause or another, would pass out of existence, and then this country would be upon a monometallic basis.

Mr. HOAR. How long does the Senator think it would take to get out of circulation our $491,000,000 of silver, which would be largely in excess of our gold circulation?

Mr. VEST. Well, Mr. President, that is a question which nobody can answer.

Mr. HOAR. Does the Senator think it would happen within fifteen or twenty years?

PRESENT LEGISLATION HOSTILE TO SILVER.

Mr. VEST. I think not; but it might happen in less time. In the meantime, if we should stand upon our present basis and keep silver under the ban as it is to-day, and yet undertake to sustain it as money, we are simply increasing the burdens of our own Government. Just so long as we keep silver in its present degraded condition with reference to gold, we make it more difficult to sustain as a money metal.

We are told by the monometallists to let silver alone and issue bonds and bring gold here to sustain our credit. Others have told us that silver ought to be put up at auction and sold to the highest bidder and let the Government stand the loss, whatever it may be.

But there is another consideration, and I did not intend, until the Senator from Massachusetts interrupted me, to allude to it. Argument would be so potential as to amount to demonstration before I would ever agree to strike down one section of this country and prostrate it for all time to come. If we are to destroy silver, there are a million people in the Western silver-producing States whose principal product is destroyed.

THE WEST CRIES FOR BREAD, AND NEW YORK FOR GOLD.

It was said the other day, rather dramatically, by an ex-member of this body, that in the extreme West the people are crying for bread and in New York they are crying for gold. I have letters now in my committee room from friends who went from my State to Colorado, stating that they had given all they could give to the houseless and homeless and hungry, and they could give no longer. Suppose we to-day were called upon to pass a law stopping the factories of New England. Sir, language fails to describe the torrents of eloquence we would hear from that section in protest.

Suppose we were called upon to strike down the wheat product of the Dakotas and the Red River of the North, would we not expect to hear from every man in that section who was able to utter a sentence in protest against this destruction of property and even of life? Mr. President, I know how a Senator feels in fighting against a proposed law that he honestly believes will destroy all the prosperity of his section. When the force bill was here, with my convictions I would have sacrificed life to defeat it; and if I were here from one of those silver-producing States in the West I would fight the demonetization of silver as I fought the force bill, for it involves all that those people can hold dear in the way of property rights and the comforts of life.

I say arguments must be brought here "stronger than proofs of Holy Writ" to make me do this. If I can, by any possibility, by legislation, tentative or otherwise, keep this great disaster from those people, citizens of this Republic, of the same blood and lineage with ourselves, I will take the responsibility of even a mistake on my part rather than perpetrate what I consider such an outrage. I know those Western States, not from description, but experience; I know what their people have endured in leaving the comforts of what was then civilization in the Eastern and Middle States, and going, with rifle in one hand and pick in the other, to blaze the pathway of civilization in the cañons of the Rocky Mountains. They have built up this industry upon the faith pledged to them by the people of the United States in its Constitution and laws that the product of those mines should be considered as a money metal; and we are now asked, because the financial four hundred in New York and the commercial classes in England think they alone intellectually can dispose of this question, to beggar these people and say to them, "Find something else to do; we want gold, gold, gold."

No, Mr. President, I will not do it. If the time comes when I find I have made a mistake, I can at least have the consolation of knowing that both my heart and head approve the action I propose to take on this measure.

A single word about the necessity for an international agreement. I have endeavored as best I could to study this question and I have come to this conclusion: Every civilized country in the world has consulted its own self-interest and established its own basis of money. Take the report of the Herschell committee, that examined into this whole question in order to ascertain what were the financial systems of the different countries of the world before they would make a recommendation as to India to the English Parliament.

I am told that we are to come under a regular rule and that this is a scientific process, which insures unanimity and international agreement. There is Russia, with paper money payable in roubles, which are never seen, and there is neither gold nor silver in circulation, although they have an enormous war chest of $480,000,000 in gold. There is France, as I have shown, on the gold standard, with $700,000,000 of legal-tender silver. There is Austria-Hungary, with gold and silver. There is Holland, with a large silver circulation, though on a gold standard, and so on. But I will read the synopsis, though I can not refrain from giving a crumb of comfort to my friends the Populists. Here is a prosperous country, that has neither gold nor silver, but entirely irredeemable paper. The Herschell commission say in the case of Brazil:

The case of Brazil is perhaps the most remarkable of all as showing that a paper currency without a metallic basis may, if the credit of the country is good, be maintained at a high and fairly steady exchange, although it is absolutely inconvertible and has been increased by the act of the Government out of all proportion to the growth of the population and of its foreign trade. The case, it need hardly be said, is not quoted as a precedent which it is desirable to follow.

The Brazilian standard coin is the milreis, the par gold value of which is 27*d*. A certain number were coined, but have long since left the country, and the currency is and has since 1864 been inconvertible paper. The inconvertible paper was more than doubled between 1865 and 1888, but the exchange was about the same at the two periods, and very little below the par of 27*d*. It had gone down to 14*d*. in 1868, the date of the war with Paraguay, but had risen again, and was, in 1875, as high as 28⅛*d*. In 1889, when the quantity of paper money was increased from £12,468,000 to £18,322,000, the mean rates of exchange showed an advance of about 11¾ per cent. Since the revolution which displaced the empire and established the republic the paper issues of the banks were increased by more than £30,000,000 in less than three years, so that the paper issue in 1892 amounted to £51,372,700, and as the result of this and of diminished credit the exchange in that year ranged from 10½*d*. to 15½*d*.

It is a remarkable fact that Brazil to-day has neither gold nor silver as a basis, but has simply fiat and inconvertible money.

Mr. HOAR. What is the fluctuation in exchange? Will the Senator please read that again?

Mr. VEST. In 1892 it was from 10½ pence to 15½. That was under an issue of £30,000,000 in three years, which, as a matter of course, affects exchange in any country. But I come now to the synopsis and conclusion of the commission after examining all the financial systems of the world:

It is impossible thus to review foreign systems of currency without feeling that, however admirable may be the precautions of our own currency system, other nations have adopted different systems which appear to have worked without difficulty, and have enabled them to maintain for their respective currencies a gold standard and a substantial parity of exchange with the gold-using countries of the world, which has, unfortunately, not been the case with India. This has been effected under all the following conditions, viz—

I ask attention to this extraordinary condition of financial affairs, when it is demanded of us that all the world shall come to one ratio and standard of value—

(*a*) With little or no gold coin, as in Scandinavia, Holland, and Canada;

(*b*) Without a mint or gold coinage, as in Canada and the Dutch East Indies;

(*c*) With a circulation consisting partly of gold, partly of overvalued and inconvertible silver, which is legal tender to an unlimited amount, as in France and other countries of the Latin Union, in the United States, and also in Germany, though there the proportion of overvalued silver is more limited, the mints in all these countries being freely open to gold, but not to silver, and in some of them the silver coinage having ceased;

(*d*) With a system under which the banks part with gold freely for export, as in Holland, or refuse it for export, as in France;

(*e*) With mints closed against private coinage of both silver and gold, and with a currency of inconvertible paper, as has been temporarily the case in Austria;

(*f*) With a circulation based on gold, but consisting of token silver, which, however, is legal tender to an unlimited extent as in the West Indies. The case of Holland and Java is very remarkable, since in that case the gold standard has been maintained without difficulty in both countries, although there is no mint in the Dutch East Indies, no stock of gold there, and a moderate stock of gold in Holland; whilst the currency consists of silver and paper legally and practically inconvertible into gold, except for purposes of export. The case of Canada, which maintains a gold standard without a gold coinage, is also very remarkable.

The case of Austria-Hungary is also interesting, and presents a remarkable contrast to that of India.

It will be seen that a country with a silver standard, and a currency consisting partly of over valued silver but chiefly of inconvertible paper, has been able, by closing its mints against private coinage for a series of years, and whilst still continuing to coin silver on Government account, to maintain a fairly steady rate of exchange with gold using countries for a considerable period preparatory to adopting a gold standard.

In the face of this statement, what becomes of the argument that we can not maintain exchange with the gold countries of Europe if we have silver coinages in the United States? Here I have read the absolute proof that these countries maintain their exchanges, and yet some of them have silver and gold, some have silver alone, others have paper inconvertible into either silver or gold.

I repeat my statement, that this financial question, instead of being one of a great national brotherhood, of which we have heard so much lately, is simply a matter of adjustment according to the self-interest of the countries which are called upon to act for themselves. If, with our resources, we can not maintain any system, I am mistaken in the American people and their history.

We have come to the parting of the ways. We are now at that point when one road leads to the gold standard and the other to the bimetallism which our fathers established, and which the policy and traditions of this country have always favored. That we may consider it with a deep sense of the responsibility resting upon us for ourselves and our posterity is the duty of every legislator. If a Democrat can not be a Democrat in the larger sense of the term, he should not approach it; if a Republican can not be a Republican without looking to his party standard and the narrow signification of nomenclature, let him not approach it; if our friends, the Populists, can not consider this question without antagonism to both the old parties, they have forgotten the meaning of the name of their party, the People's party of the country.

APPENDIX A.

AVERAGE GOLD PRICES OF COMMODITIES AND OF SILVER,

Calculated by Augustus Sauerbeck, esq., of 3 Moorgate Street Buildings, E. C., London, in his long and elaborate paper on Prices of Commodities and the Precious Metals (Journal of Statistical Society, September, 1886), and continuation of it (Journal of Statistical Society, March, 1892). The commodities are the forty-five leading articles of commerce, or thereabouts, valued separately, but classified under six general heads: "Vegetable food," "Animal food," "Coffee, sugar, and tea," "Minerals" (chiefly metals and coals), "Textiles," and "Sundry materials" (such as cotton, flax, hemp, jute, wool, silk, oil seeds, petroleum, chemicals, indigo, timber). The lists and valuations show the greatest care, and are accepted generally as absolutely reliable. Mr. Sauerbeck decidedly recognizes the appreciation of gold. His evidence and statistics in the Report of Gold and Silver Commission and its appendix are valuable.

How these prices are calculated is explained above.

Average gold prices of commodities and of silver.

Year.	Vegetable food (corn, etc.).	Animal food (meat, etc.).	Sugar, coffee, and tea.	Total food.	Minerals.	Textiles.	Sundry materials.	Total materials.	Grand total.	Silver.
1846	106	81	98	95	92	77	86	85	89	97.5
1847	129	88	87	105	94	78	86	86	95	98.1
1848	92	83	69	84	78	64	77	73	78	97.8
1849	79	71	77	76	77	67	75	73	74	98.2
1850	74	67	87	75	77	78	80	78	77	98.7

1868	113	88	96	100	85	106	102	99	99	99.6
1869	91	96	98	94	89	109	100	100	98	99.6
1870	88	98	95	93	89	106	99	99	96	99.6
1871	94	100	100	98	93	103	105	101	100	99.7
1872	101	101	104	102	127	114	108	115	109	99.2
1873	106	109	106	107	141	103	106	114	111	97.4
1874	105	103	105	104	116	92	98	100	102	95.8
1875	98	108	100	100	101	88	92	93	96	93.3
1876	92	108	98	99	90	85	95	91	95	88.7
1877	100	101	103	101	84	85	94	89	94	90.2
1878	95	101	90	96	74	78	88	81	87	86.4
1879	87	94	87	90	73	74	85	78	83	84.3
1880	89	101	88	94	79	81	89	84	88	85.9
1881	84	101	84	91	77	77	86	80	85	85.0
1882	84	104	76	89	79	73	85	80	84	84.9
1883	82	103	77	89	76	70	84	77	82	83.1
1884	71	97	63	79	68	68	81	73	76	83.3
1885	68	88	63	74	66	65	76	70	72	79.9
1886	65	87	60	72	67	63	69	67	69	74.6
1887	64	79	67	70	69	65	67	67	68	73.3
1888	67	82	65	72	78	64	67	69	70	70.4
1889	65	86	75	75	75	70	68	70	72	70.2
1890	65	82	70	73	80	66	69	71	72	73.4
1891	75	81	71	77	76	59	69	68	72	74.1
1892 (10 months)	67	84	66	73½	72	56	66	64½	68½	65.4
Average, 1882–1891	71	89	69	77	73	66	74	71	74	77.2
Average, 1878–1887	79	95	76	84	73	71	81	76	79	82.1

In addition to this, I append a table showing the remarkable tenacity with which the prices of wheat and cotton have adhered to the value of silver:

Year.	Wheat.	Cotton.	Silver.	Year.	Wheat.	Cotton.	Silver.
1872	1.47	19.3	1.32	1883	1.13	10.8	1.11
1873	1.31	18.8	1.29	1884	1.07	10.5	1.01
1874	1.43	15.4	1.27	1885	.86	10.6	1.06
1875	1.12	15.0	1.24	1886	.87	9.9	.99
1876	1.24	12.9	1.15	1887	.89	9.5	.97
1877	1.17	11.8	1.20	1888	.85	9.8	.93
1878	1.34	11.1	1.15	1889	.90	9.9	.93
1879	1.07	9.9	1.12	1890	.83	10.2	1.04
1880	1.25	11.5	1.14	1891	.85	7.0	.90
1881	1.11	11.4	1.13	1892	.80	7.3	.86
1882	1.19	11.4	1.13	1893	.67	7.0	.73

Mr. LODGE. Mr. President——

Mr. COCKRELL. Does the Senator desire to proceed this evening?

Mr. LODGE. I shall be very happy to give way if the Senator desires to move an adjournment or to go into executive session.

The PRESIDING OFFICER. The Chair desires to ask what disposition is proposed to be made of the joint resolution which has been pending?

Mr. COCKRELL. Let the joint resolution still lie on the table.

Mr. VEST. I understand that other Senators desire to speak on it.

The PRESIDING OFFICER. The joint resolution will lie on the table.

Mr. COCKRELL. I ask that the table which my colleague presented and asked to have printed with his speech may also be printed as a separate document.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Missouri?

Mr. HOAR. What is the request?

Mr. COCKRELL. A table which my colleague requested to be printed, giving ratios, etc., was ordered to be printed in the RECORD, and I ask that it be printed as a separate document, so we may have it without the whole speech. It is Soetbeer's statistical table.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Missouri? The Chair hears none, and the table referred to will be printed as a separate document.

Mr. HOAR. I understand the desire of my colleague is to speak to his own resolution, and not to the pending resolution. I had an understanding that I should follow the Senator from Missouri [Mr. VEST], but I have no desire to speak until my colleague has spoken.

BUSINESS OF THE SESSION.

Mr. LODGE. Mr. President, I now ask that the resolution submitted by me on the 8th instant may be laid before the Senate.

Mr. COCKRELL. If the Senator from Massachusetts will yield, I will move that the Senate proceed to the consideration of executive business.

Mr. LODGE. I will yield for that purpose.

The PRESIDING OFFICER. Before submitting the question on the motion of the Senator from Missouri, the Chair will lay before the Senate the resolution referred to by the Senator from Massachusetts [Mr. LODGE], which will be read.

The Secretary read as follows:

Whereas Congress has been called in extraordinary session on account of the unfortunate condition of business; and

Whereas some measure of relief can be obtained by the immediate and unconditional repeal of the purchasing clauses of the silver act of 1890: Therefore,

Resolved, That the Committee on Finance be instructed to report at once to the Senate a bill to repeal the purchasing clauses of the silver act of 1890, and that a vote be taken in the Senate on said bill on Tuesday, August 22, at 2 o'clock p. m., unless it is sooner reached.

The PRESIDING OFFICER. The question now is on the motion of the Senator from Missouri [Mr. COCKRELL] that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 4 o'clock and 20 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, August 15, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 14, 1893.

SECRETARY OF LEGATION.

Edward C. Butler, of Massachusetts, to be secretary of the legation of the United States to Mexico, vice Charles A. Dougherty, recalled.

ASSISTANT SOLICITOR OF THE TREASURY.

Norborne T. N. Robinson, of Louisiana, to be assistant solicitor of the Treasury, vice Felix A. Reeve, resigned.

UNITED STATES ATTORNEY.

William C. Perry, of Kansas, to be attorney of the United States for the district of Kansas, vice Joseph W. Ady, resigned.

CONSUL.

Otto H. Boyesen, of Grand Forks, N. Dak., to be consul of the United States at Gothenburg, Sweden, vice Charles H. Shepard, recalled.

COLLECTOR OF CUSTOMS.

Bradley B. Smalley, of Vermont, to be collector of customs for the district of Vermont, in the State of Vermont, to succeed George G. Benedict, resigned.

CHIEF ENGINEER REVENUE CUTTER SERVICE.

First Assistant Engineer Edward F. Hedden to be chief engineer in the Revenue Cutter Service, in place of Horace Hassell, deceased.

FIRST ASSISTANT ENGINEER REVENUE CUTTER SERVICE.

Second Assistant Engineer Eugenious A. Jack to be first assistant engineer in the Revenue Cutter Service, to succeed Edward F. Hedden, promoted.

SECOND ASSISTANT ENGINEER REVENUE CUTTER SERVICE.

William E. Maccoum, of Maryland, to be a second assistant engineer in the Revenue Cutter Service, to succeed Samuel B. McLenegan, resigned.

PENSION AGENT.

George W. Skinner, of Big Cove Tannery, Pa., to be pension agent at Pittsburg, Pa., vice Herbert H. Bengough, to be removed.

SECRETARY OF OKLAHOMA TERRITORY.

Thomas J. Lowe, of Guthrie, Okla., to be secretary of Oklahoma Territory, vice Robert Martin, to be removed.

REGISTERS OF LAND OFFICE.

John J. Beavers, of Benton, Ark., to be register of the land office at Little Rock, Ark., vice Patrick Raleigh, resigned.

Edwin P. Harman, of Denver, Colo., to be register of the land office at Denver, Colo., vice John A. McBeth, to be removed.

Wiliam D. Lindsay, of Guthrie, Okla., to be register of the land office at Guthrie, in Oklahoma Territory, vice Thomas J. Lowe, nominated to be secretary of Oklahoma Territory.

Edward G. Spilman, of Huntington, W. Va., to be register of the land office at Kingfisher, in Oklahoma Territory, vice Jacob C. Robberts, term expired.

RECEIVER OF PUBLIC MONEYS.

James C. Caldwell, of Kingfisher, Okla., to be receiver of public moneys at Kingfisher, in Oklahoma Territory, vice Jacob V. Admire, term expired.

HOUSE OF REPRESENTATIVES.

MONDAY, *August 14, 1893.*

The House met at 11 o'clock a. m., and was called to order by the Speaker. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY, D. D.

The Journal of the proceedings of Saturday was read and approved.

APPOINTMENT OF COMMITTEES.

The SPEAKER announced the appointment of the following committees:

On Enrolled Bills—Mr. Pearson, Mr. Russell, Mr. Latimer, Mr. Hines, Mr. Hager, Mr. Adams, and Mr. Gillett of Massachusetts.

On Mileage—Mr. Lynch, Mr. Strait, Mr. Pendleton, and Mr. Mahon.

On Accounts—Mr. Rusk, Mr. Paynter, Mr. Tate, Mr. Mutchler, Mr. Ikirt, Mr. Wells, Mr. Post, Mr. Wright of Massachusetts, and Mr. Marvin.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. COX, its Secretary, announced that the Senate had passed without amendment joint resolutions of the following titles:

Joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress; and

Joint resolution (H. Res. 2) providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793.

MILEAGE OF SENATORS, REPRESENTATIVES, AND DELEGATES.

Mr. HOLMAN. Mr. Speaker, I ask unanimous consent for the present consideration of the joint resolution which I send to the Clerk's desk.

The SPEAKER. The gentleman from Indiana [Mr. HOLMAN] asks unanimous consent for the present consideration of a joint resolution which the Clerk will report.

The Clerk read as follows:

Joint resolution (S. R. 3) making immediately available the appropriation for mileage of Senators and Members of the House of Representatives.

Resolved, etc., That the appropriation for mileage of Senators, Members of the House of Representatives, and Delegates from the Territories made in the legislative, executive, and judicial appropriation act for the fiscal year 1894, approved March 3, 1893, be, and the same is hereby, made immediately available and authorized to be paid to Senators, Members of the House of Representatives, and Delegates from the Territories for attendance on the first session of the Fifty-third Congress: *Provided*, That payments hereunder shall be in lieu of mileage authorized by law for attendance at the first regular or the next session of the Fifty-third Congress.

The SPEAKER. Is there objection to the present consideration of the joint resolution?

Mr. POWERS. Mr. Speaker, I object.

The SPEAKER. The gentleman from Vermont [Mr. POWERS] objects.

Mr. HOLMAN. I believe it is in order anyhow, Mr. Speaker.

The SPEAKER. The only reason why the Chair asked unanimous consent was, that an order was adopted by the House in relation to the pending bill which seems to assign all the time to its consideration until the period when the vote should be taken. Therefore the Chair did not feel that, without consent, he could interrupt or take away any part of the time which had been agreed upon for debate.

Mr. HOLMAN. This resolution simply makes available now the appropriation which was made for the next session.

Mr. POWERS. I withdraw the objection.

The SPEAKER. Is there further objection to the consideration of the joint resolution?

There was no objection.

Mr. HOLMAN. I will demand the previous question.

Mr. O'NEILL of Pennsylvania. I would like to ask the gentleman a question. Suppose this called session should not continue very long, as the country hopes it will not. Suppose, for instance, having acted upon the financial question, having repealed the purchasing clause of the Sherman bill, and having given the banks the right to issue circulation up to the par value of their bonds; suppose we should get away by the 1st of October, does the gentleman's joint resolution propose that we shall not have mileage for coming to this extra session, to which we have been called properly by the President of the United States, and not by any act of ours?

Mr. HOLMAN. This measure does not prejudge that subject. It leaves it all open.

Mr. O'NEILL of Pennsylvania. It appears to me that it does prejudge it. I think the gentleman should have offered a joint resolution giving us our mileage and also allowing us the usual amount for stationery.

Mr. HOLMAN. That is provided for already.

Mr. O'NEILL of Pennsylvania. For the extra session?

Mr. HOLMAN. Well, this may not be an extra session. We can not positively answer as to how long we will be in session.

Mr. O'NEILL of Pennsylvania. It was called as an extra session. Now, I do not know but we may desire to have stationery, and we ought to be allowed to have a settlement for that, if we should sit here for a couple of months.

Mr. COOMBS. You can get the stationery allowance now.

Mr. O'NEILL of Pennsylvania. I have seen the same thing done before at a called session, and I simply rise to say that in my opinion the joint resolution ought to refer only to the extra session, and not to apply in anyway to the regular session in December, for the country wants us to get out of this session as soon as we can—to adjourn long before the first Monday of December.

Mr. HOLMAN. If I had thought, Mr. Speaker, that any objection was to be raised, I would not have offered the resolution. The question to which my friend has referred will come before the House for consideration at a later time. For the present this seems to be the safer course to pursue.

Mr. O'NEILL of Pennsylvania. Will not the gentleman consent to amend by striking out the words "in lieu of?"

Mr. HOLMAN. I would not like to do that at present.

Mr. O'NEILL of Pennsylvania. And let the resolution read without that proviso concerning the regular session?

Mr. HOLMAN. That comes up later.

Mr. REED. It always comes up later.

Mr. HOLMAN. I demand the previous question.

Mr. O'NEILL of Pennsylvania. As the question has been brought up, we might as well settle it here.

The SPEAKER. The gentleman from Indiana demands the previous question.

Mr. O'NEILL of Pennsylvania. I move to strike out the words "in lieu of."

The SPEAKER. The gentleman from Indiana demands the previous question.

Mr. HOLMAN. I must insist on the resolution in its present form.

Mr. O'NEILL of Pennsylvania. You can not call the previous question when I have the floor.

Mr. HOLMAN. The resolution gives satisfaction to those gentlemen who have examined it.

Mr. O'NEILL of Pennsylvania. I insist on the amendment.

Mr. HOLMAN. Rather than consume the time of proper debate I prefer to withdraw the measure.

Mr. REED. Withdraw it, then.

Mr. O'NEILL of Pennsylvania. Withdraw it.

The SPEAKER. The Chair will state to the gentleman from Pennsylvania that striking out the three words "in lieu of" would not accomplish the gentleman's purpose.

Mr. O'NEILL of Pennsylvania. I want to strike out all the words necessary to make this really apply to the session that might unfortunately continue until December.

Mr. HOLMAN. Mr. Speaker, I demand the previous question.

The SPEAKER. The gentleman will please present his amendment.

Mr. HOLMAN. I had called the previous question, I think.

The SPEAKER. The gentleman from Pennsylvania has, however, been recognized, and understood that he had the floor.

Mr. O'NEILL of Pennsylvania. I think the gentleman from Indiana had better let this lie over until to-morrow.

Mr. HOLMAN. I submit the resolution to whatever action the House deems proper.

Mr. O'NEILL of Pennsylvania. Then I move to strike out the words which by implication extends this to the December session.

The SPEAKER. Will the gentleman please indicate those words?

Mr. O'NEILL of Pennsylvania. I move to strike out the words "in lieu of" and the words following.

The SPEAKER. That does not accomplish the purpose sought. The gentleman will please look at the resolution.

Mr. O'NEILL of Pennsylvania. Let the resolution be reported again.

The SPEAKER. The gentleman can examine the resolution.

Mr. O'NEILL of Pennsylvania. I move to strike out the proviso.

The SPEAKER. The Clerk will report the resolution, so that the House may understand what it is.

The resolution was again reported.

Mr. O'NEILL of Pennsylvania. I move to strike out the proviso.

The SPEAKER. The question is on the amendment.

Mr. HOLMAN. I call for the previous question on the resolution and amendment.

The previous question was ordered.

The SPEAKER. The question is on the amendment to strike out the proviso.

The question was taken, and the Speaker announced that the ayes seemed to have it.

Mr. HOLMAN. Division.

The House divided, and there were—ayes 91, noes 28.

So the amendment was agreed to.

The joint resolution as amended was ordered to be engrossed for a third reading; and being engrossed, it was accordingly read the third time, and passed.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted—

To Mr. O'NEIL of Massachusetts, for ten days, on account of sickness.

ENROLLED JOINT RESOLUTIONS SIGNED.

Mr. LATIMER, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolutions of the following titles; when the Speaker signed the same:

Joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress; and

Joint resolution (H. Res. 2) providing for the appropriate commemoration of the one hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793.

SILVER.

The SPEAKER. The gentleman from Louisiana [Mr. BOATNER] is entitled to the floor.

Mr. BOATNER. Mr. Speaker, the gentlemen who have here-

tofore addressed the House on the pending bill and amendments have very graphically described the present condition of the country and the dangers which confront us. The gentleman from New York [Mr. HENDRIX], speaking on the last legislative day, said:

I ask you to listen to the employés of hundreds and hundreds of workshops and factories that are idle. I ask you to listen to the expressed fears of the dread penury that will come on with the blasts of winter. I ask you to listen to the spoken fear that proceeds from the minds of men that we are entering upon a period black with sorrow and with woe. The condition of the country about us you well know. It is not necessary for me to tell you of the banks that are tottering, that are failing, that have already suspended. It is not necessary for me to tell you that currency is at a premium in the city of New York to-day, and that it sold there yesterday at from one to four dollars premium.

The gentleman proceeded in eloquent language to further depict and describe the conditions prevailing in the country at this time. The gentleman from Ohio [Mr. HARTER] also described the condition prevailing in the West, and besought this House to exert its constitutional power to relieve that condition by appropriate legislation. The gentleman from New York, further addressing himself to this subject, denounced as "rot" the statement made by the gentleman from Missouri [Mr. BLAND] that this condition of things had been brought about and precipitated by the action of the members of this House who are demanding the unconditional repeal of what is known as the Sherman law.

The gentleman from New York denounced that statement as "rot," and yet, Mr. Speaker, neither he nor any other gentleman who has spoken upon this subject has been able to show any connection between the Sherman law and the existing condition of things. It is very true that our banks are failing—that is, that they are suspending payment. It is true that enormous sums of money have been withdrawn from circulation and hoarded.

But, Mr. Speaker, what connection has the Sherman law with this condition of things? The Sherman law authorizes and requires the Secretary of the Treasury to buy four and one-half million ounces of silver every month, and to issue the legal tender obligations of the Government in payment thereof. And if any distrust is created by reason of the existence of the Sherman law and of the purchases made under it, that distrust ought to be directed against the currency which the Government is issuing and not against private institutions. Why, Mr. Speaker, if I learn that a debtor of mine is going to fail, I do not go and get his notes and bury them and lock them up in a safety vault; I take his notes and go to court for my money.

Under the existing condition of things it is argued that, because this Government is issuing a class of circulation which is upon an alleged insecure basis, and which men say it will be beyond the power of the Government to take care of, public confidence is destroyed. If public confidence were destroyed or undermined by reason of that fact, it would be public confidence in the Government, and instead of runs upon the banks there would be runs upon the Treasury itself. Men would not have gone to their banks to draw out silver certificates for the purpose of hoarding them when they were told and believed that those certificates were going to fall to their intrinsic value of the bullion they represented. They would not hoard money which they were told and believed would be worth less than its par value.

If they had been alarmed by the legislation known as the Sherman act and by the purchases of silver made under it, they would have gone to the Treasury with those silver certificates, those obligations of the Government, and demanded that "universal money" which the advocates of the pending bill seem to be so fond of. There would have been a run upon the Treasury instead of upon the private banking institutions of the country. But, Mr. Speaker, I charge that the assertion made by the gentleman from Missouri [Mr. BLAND] is no "rot," but is the truth.

I charge, sir, that the advocates of this measure, these thick-and-thin gold men of the Democratic party and of the Republican party who have been endeavoring ever since I have been in Congress to force this Government to an issue of cheap bonds, are responsible for the excitement which has created the destruction of public confidence and has caused a run upon the banks and the withdrawal of large amounts of money from circulation. They are the men who have sown the wind and we are now reaping the whirlwind. There is nothing in or about the Sherman law, there is no deduction that can be drawn from that law, which would justify anybody in making the assertion that the United States Government is not good for every obligation that it has put upon the market.

There is a provision on the Sherman law which declares it to be the established policy of this Government to maintain the parity between the two metals, gold and silver. Everybody knows that the United States Government is behind every single dollar that is issued under the Sherman law. There is not a dollar issued under that law which is not redeemable in gold at the Treasury of the United States. Everybody knows that, and everybody knew that all along, and, if there is not gold enough in the Treasury to take care of those securities, every sensible man in this country knew, every banker knew, every editor knew, every politician knew, that this Government had credit in the markets of the world to buy enough gold to redeem as much money as it could possibly issue under the Sherman law in ten years, that it could sell enough gold bonds in ten days to redeem every one of those obligations, and that it would do so if the necessity arose.

Sir, the people have not lost confidence in the Government. You have heard of no one going to the Treasury and demanding gold for the circulating notes of the Government unless he wanted it for export. No man has gone there and asked for gold to hoard it, or to use it in the purposes of ordinary business. On the contrary, Mr. Speaker, gold has been freely exchanged for the currency of the country—the greenback, the Treasury note, the silver certificate.

In support of the charge that what may be denominated the gold clique of the Democratic party and the gold clique of the Republican party are responsible for this unnecessary scare—for this scare which is without any foundation on earth, except in the fears which have been created in the minds of the people—I call your attention, Mr. Speaker, and the attention of the country to certain significant facts.

During the last session of this Congress a determined effort was made here to obtain the unconditional repeal of the purchasing clause of the Sherman act. Persons came here claiming to represent the incoming Administration, and insisting that we should repeal that provision; they insisted that a crisis would come upon the country unless that should be done. They made this demand, Mr. Speaker, in the face of the following declaration in the platform of the Democratic party, which every man elected on our side of the House is bound in honor and conscience to support:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall ensure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

The President before his election, in reply to the notice of his nomination, said:

The people are entitled to sound and honest currency, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State, whether gold, silver, or paper, it should be so regulated and guarded by governmental action or by wise and careful laws that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

So, sir, in June, 1892, the Democratic party, in national convention assembled had declared that bimetallism was a possibility, and had pledged the faith and honor of the Democratic party to attempt its incorporation into the laws of the country. The nominee on that platform, in commenting upon it, had also declared that it was practicable and had laid down the lines upon which the attempt to carry it into execution should be made. But, sir, the echoes of the election had hardly died away before there was a committee here, before there were Democrats elected to this floor upon that platform, pledged by every consideration of honor and conscience to stand by that platform, demanding and insisting that this House should stultify itself and should stultify the Democratic party in the United States; that before we came into the possession of the Government, before we had the Executive and both branches of the legislative department we should put an impassable barrier between us and the accomplishment of the very purposes for which we were elected.

Why, sir, gentlemen from New York, after having been elected on this platform in November, said in December that it was impossible to execute the pledges contained in the platform, to maintain bimetallism in the United States. They say now it is nonsense and "rot." The whole delegation of the Empire State, Republican and Democratic, standing upon a platform practically similar in every respect, with no distinction whatever in point of principle, come here and say that the platform on which we have gone before the people, and upon which we have carried the country is "rot"—is impossible of execution—is an idle dream; that bimetallism can never be accomplished. And this, I repeat,

Mr. Speaker, after they had pledged their honor and faith and the honor and faith of the Democratic party to make the effort.

Mr. WARNER. Will the gentleman yield for a correction?

Mr. BOATNER. I will.

Mr. WARNER. On behalf of myself, as one member from the State of New York, and I believe on behalf of the whole New York delegation, I want to say that we come here pledged to carry out, and we intend to help in carrying out, every single pledge made in the Democratic platform at Chicago. [Applause.]

Mr. LANE. Now is the time to do it.

Mr. BOATNER. Mr. Speaker, I am delighted to hear this declaration. It is the first utterance with any such ring that I have heard since I have been on this floor. Why, sir, those who pose as the friends of the Administration were recognized on this floor to bring in a bill, and what was the bill? It was to repeal the "cowardly makeshift"—no more.

I say that the national Democratic party is pledged to the principle of bimetallism, leaving nothing for the judgment of Congress except the question of ratio. I say that the Republican party is essentially committed to the principle of bimetallism, leaving nothing to Congress except to fix the ratio. But the Republicans are under no responsibility in this matter. We have control of the Government in all its departments, and upon us is the responsibility. The question is, are we going to carry out that platform, or are we going to repudiate it?

The gentleman from West Virginia [Mr. WILSON], heretofore considered as one of the soundest men on our side of the House, brings in a bill which seeks to repeal a single section of that legislation which was declared to be a "cowardly makeshift." "A cowardly makeshift" in what? A "cowardly makeshift" because, while it pretended to be a measure in the interest of silver and its restoration to circulation as a money metal, it stopped short of the fundamental principle of free coinage and put silver upon the plane of any ordinary commodity—made it subsidiary and subordinate to gold, and therefore merely accumulated a stock of bullion in the hands of the Treasurer, to be a menace to the general market. Therein consisted, sir, the element of the "cowardly makeshift." But if that was a "cowardly makeshift," what, under the construction these gentlemen would give to the Democratic platform, was the Democratic platform itself? If the Sherman law was a "cowardly makeshift," as has been alleged, what is the Democratic platform, if we merely execute and carry into effect one of the clauses, itself dependent upon the other clauses, the nonexecution of which defeats the intention of the convention and thwarts the will of the people? I say what will be our answer to our constituents? What is to be our response when we are asked why we failed to carry out the pledges that were made by us before election and by the Democratic platform in its declaration of principles?

For my part, sir, I consider that I have come here with instructions. I consider that I have come here instructed by my people to carry out every plank in the Democratic platform from beginning to end, and I shall do so to the letter, as far as my voice and ability will permit me to do. [Applause.]

Now, Mr. Speaker, referring to this question of responsibility for the existence of this scare, I wish to call the attention of the House briefly to an address which was delivered before the St. Louis Chamber of Commerce and published on authority of that chamber on the 20th day of May by Mr. George E. Leighton, in which Mr. Leighton rehabilitates the calamity howl which he had uttered in 1886 about the effects of the Bland law, and in which he predicted as early as the 20th day of May that the country was to go to ruin and destruction because of the existence of the Sherman act. He says:

> I do not claim to have had any exceptional insight. It was simply the statement of a familiar law, as old as the world's commercial history—a law which any monetary system must recognize, or it will break down. Its operation in the United States is as sure as in the Argentine Republic or Australia. To-day we are face to face with the conditions there set forth. The higher law has asserted its authority. Gold has been withdrawn and hoarded for future use. It has been put away in safe-deposit boxes in this city, as in every other, to an extent of which few persons are aware. Balances have been placed in foreign exchange. Foreign capital invested in gold has been and is still being withdrawn from the country before it can be paid back in depreciated silver, and all these causes, operating silently and slowly, have caused the practical disappearance of gold from the ordinary channels of commerce.

And it is a fact that these utterances were printed and spread broadcast throughout the United States; and they are in line with the editorials and utterances of those who were thick-and-thin advocates of monometallism, and demanded that this Government should have the gold standard and the gold standard alone. This was before there was any serious disturbance and when the dangers to result from a continued execution of the Sherman act existed chiefly in the imagination of the crusaders who had undertaken the task of frightening the country into abandoning the policy which the people declared for and adopting the financial system advocated by Wall street and JOHN SHERMAN.

Now, sir, suppose that these political journals and these gentlemen who seem to mold public opinion had immediately replied to such utterances as that by showing that the Government of the United States is amply able to make good every dollar that it pays out, in whatever shape; that foreign capitalists might withdraw gold as they see fit, but that the Government, under existing legislation and legislation to be adopted, can issue bonds if necessary to buy gold and thus to maintain its credit in the most ample manner and that it will do so if necessary; is it not perfectly apparent that such a line of argument would have convinced the people that there was no necessity, no reason, no bottom whatever to the fright which had seized upon them?

Why, if you look at the list of banks which have failed, you will discover the fact that nineteen out of every twenty of them are not only absolutely solvent, but in the ordinary condition of affairs in this country would be held to be in a flourishing state—perfectly sound, perfectly solvent, with abundant assets to meet every obligation. And yet, notwithstanding this fact, by a senseless fright, created by gentlemen who have put monometallism before every other consideration, the country has been frightened into an unwarranted condition of apprehension, a senseless scare, which has brought ruin and disaster in its wake. And I say that it is on these gentlemen, and those who came here last winter who insisted upon the repeal of the Sherman law, and those who have advocated from that time to this the doctrine that bimetallism is an impossibility, who have been demanding the repeal of the Sherman act, on them and on their shoulders alone rests the responsibility for the deplorable condition in which we find the country to-day.

We are told that this is all "rot." But, Mr. Speaker, that it is the truth is my candid, honest, sincere opinion. I do not say—I do not pretend to say—that they expected or anticipated any such results from their utterances and endeavors. I do not say that it was done with any such design or intention. But I do say that it is my firm belief that it was their intention to bring about such an apprehension, such a fear in the mind of the public, and thereby produce such a pressure on this body from the business community, that we would lose the exercise of our calmer judgment, and be compelled, in view of the public demand, to assent to an unconditional repeal of the Sherman act, and thereby leave the country on a gold basis, in line with Great Britain and Germany.

Now, Mr. Speaker, I desire to call the attention of the House to the platforms of all the political parties. I have read the platform of the Democratic party. That is not capable of misconstruction. It commits the Democratic party to the principle of bimetallism, or there is no meaning in the English language. The platform of the Republican party is equally clear and unambiguous. I will ask the Clerk to read the paragraphs which I send to the Clerk's desk, the first being the extract from the Republican platform.

The Clerk read as follows:

> *Gold and silver money.*—The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper shall be at all times equal. The interests of the producers of the country, its farmers, and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

Mr. BOATNER. Now, I will ask the Clerk to read the platform of the People's party upon the same subject.

Mr. REED. Is it not worth while to read that part of the Democratic platform on the State-bank tax? The gentleman from New York [Mr. WARNER] announces that the whole platform is to be carried out.

Mr. BOATNER. If he is serious, that practically settles the question, and futher debate is unnecessary.

Mr. REED. If the gentleman from New York is in favor of the other, the country would like to know about it.

Mr. BOATNER. I will now ask the Clerk to read the paragraph of the platform of the People's party relating to this subject.

The Clerk read as follows:

> Silver, which has been accepted as coin since the dawn of history, has been demonetized to add to the purchasing power of gold by decreasing the value of all forms of property as well as human labor, and the supply of currency is purposely abridged to fatten usurers, bankrupt enterprise, and enslave industry. A vast conspiracy against mankind has been organized on two continents, and it is rapidly taking possession of the world. If not met and overthrown at once it forebodes terrible social convulsions, the destruction of civilization, or the establishment of an absolute despotism.

Mr. BOATNER. I was not referring to that special plank of the People's party platform, but rather to the one in which it is declared that the People's party favor the free coinage of silver at a ratio of 16 to 1.

Now, Mr. Speaker, every member on this floor, except one,

was elected either upon the Democratic, the Republican, or the People's party platform. I found during the remarks of the gentleman from Ohio [Mr. HARTER] the other day that he had not been elected upon the Democratic platform. As he is neither a Republican nor a Populist, he is the lone independent in the House, and the only gentleman in the House who is entitled to the freedom of opinion upon this question. It seems that he did not adopt or indorse the Democratic platform, but wrote a platform for himself; so that he alone, I repeat, is entitled to vote as he pleases upon the question at issue without violation of pledges made by himself or his party.

Now, the gentleman from New York, and other gentlemen who claim to represent the views of the President, say that they are in favor of bimetallism; but the question is, when are they in favor of it and how are they in favor of it? How do they propose to carry the principle of bimetallism into effect? They had the opportunity to introduce a bill here reflecting their views, and the way they propose to give us bimetallism is to absolutely repeal all laws under which a dollar of silver can be coined, which, as the gentleman from California [Mr. BOWERS] put it the other day, is a proposition to increase the circulation by destroying one-half of it.

I repeat, sir, that if the gentlemen who are advocating the pending bill are in favor of bimetallism they should have brought us a bill which proposed to execute the provisions of the Chicago platform. They should have given us the wise legislation provided for by that platform, by which the country could have the free use of both gold and silver. They should have conformed to the suggestion of the President in his message of acceptance, and safeguarded the free use of both gold and silver with such wise legislation as would secure the convertibility of the dollar, to carry into effect the views which His Excellency at that time entertained, and which he gave to the country in the shape of a formal letter of acceptance.

I will not, Mr. Speaker, enter upon any discussion as to whether bimetallism is practicable or not. I will not enter upon any discussion as to the effect which the legislation of the world has had on the price of silver. That was fully discussed years ago. The views now presented are ancient history, and the country has declared its wishes. I will not set my judgment against the verdict, and content myself with calling the attention of the House to the fact that we are bound and pledged by the platform upon which we were elected to attempt to carry bimetallism into effect, and that all political parties in this House are pledged to that common purpose. In my judgment the attempt to repeal existing laws without the substitution of other legislation which will conform to the verdict of the people, as given in November, is a betrayal of the people who have trusted us and an abandonment of the principles we profess, and upon which we asked and received their votes. I say that, as American Representatives, we have no right to do this.

I see gentlemen around me elected upon the Democratic platform, elected by Democratic constituencies, elected by people who demand that the Democratic platform shall be executed to the letter, who say that they consider they are executing that platform by destroying the legislation which authorizes the coinage of silver and by not substituting any other legislation to take its place. Of course, if this is satisfactory to the consciences of these gentlemen it is satisfactory to me, but I want to see them face their constituencies.

I want to hear from the country. I want to hear from the Southern States, where we were only able to hold the people in line by pointing to this very plank in the platform and by pointing to Mr. Cleveland's letter of acceptance and by saying, "the Democratic party is bound in honor and conscience to stand by it, that it has never betrayed the people before and will not do so in the future." We have got to go home if this bill passes and say, "Gentlemen, you were correct when you said that the platform of the Republican party was a sounding brass and a tinkling cymbal. You were correct when you said that the platform of the Democratic party was a mere snare to catch votes. You were right and we were wrong. You understood the situation, and we did not."

I do not believe that a House of Representatives, Democratic by nearly 100 majority, will ever go before the people with any such record. I believe it is a record which can not be maintained, can not be justified, and that we can not give any reasonable excuse on our part and say that we could not repeal the Sherman bill, and by the very same act provide legislation under which the principle of bimetallism provided for by the Chicago platform could be carried into effect and gold and silver coin could be coined by the United States upon equal terms.

I say, sir, that I do not believe we could ever make any explanation to the people of any such betrayal of them, and I for one trust this House will not put us in such an attitude before the country. [Applause.]

I yield the remainder of my time to the gentleman from Ohio [Mr. LAYTON].

Mr. LAYTON. Mr. Speaker, we are now convened in extra session for the one purpose, above all others, of making such changes in our financial legislation as will best conduce to restore the confidence of the people in the stability of the money of the country. To this end the President, in whom the whole people have confidence, with the approval of his able Cabinet, has said to us in his most admirable and unanswerable message that the first thing to do is to repeal the purchasing clause of the Sherman act. Pursuant to this suggestion of the Chief Magistrate of the nation, who was elevated to his high office a second time with such unanimity, at a reasonably early hour, viz, on the fourth day of the session, such a bill was introduced by the distinguished Representative from West Virginia [Mr. WILSON].

Thereupon the equally distinguished gentleman from Missouri [Mr. BLAND] gave notice that he proposes to so amend the bill as to provide for the free and unlimited coinage of silver at a ratio of 16 to 1, or, in any event, not exceeding 20 to 1. Or, in case of the failure of said amendments, then to substitute the "Bland-Allison act of 1878." And then in a proper and commendable spirit it was agreed between the various sides of the question at issue that fourteen days' debate shall be had before voting thereon, so as to give the subject that careful consideration its vast importance demands and all sides a fair opportunity to be heard.

This debate has now progressed many days, and many learned and earnest speeches have been delivered upon substantially all sides of the question, from which, and the conferences going on at the other end of the Capitol, it is made apparent to all that the two great parties, as represented in the Fifty-third Congress, are substantially divided on the question of finance into three classes, who may be appropriately named or called "single gold-standard men," "free coinage or single silver-standard men," and "limited bimetallists."

For the present, until I see my way more clearly, at least, I desire to be classed with the latter, providing always such a thing as bimetallism, limited or otherwise, is longer possible, consistent with the true and permanent prosperity of the country. And while I do not represent, nor am I authorized to speak for any member but myself, yet from many earnest conversations held with my immediate colleagues and other members on this floor and elsewhere, I am convinced that my class is numerously represented here, and hence presents a fruitful field for converts to either the first or second class, providing we can be convinced by fact and argument, calmly and fairly presented, that bimetallism is no longer tenable or maintainable in this country by reason of the present attitude of foreign nations.

And why should not we, permit me to inquire, be friendly to bimetallism? Have not we from infancy, and our fathers before us, been taught that gold and silver is the money of our Constitution, in spirit if not in letter? Has not the big white dollar always been held up and pointed out to us as the "dollar of our daddies?" And above and beyond this, have not the platforms of both of the great parties for years and years recognized both as the money metals of the country? In support of this latter query, suffer me to quote briefly from the last Republican national platform, adopted at Minneapolis in June, 1892;

> The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether silver or gold, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

In further support of and answer to the latter query, I now quote from the last Democratic national platform, adopted without a dissenting voice at Chicago in the same month and year:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal.
>
> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin.
>
> We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

And now in still further support of the same interrogatory I

come nearer home to my beloved State of Ohio, which I have the honor to represent in part on this floor.

The country has abiding faith in the integrity, patriotism, and exalted courage of President Cleveland. True to the people and watchful of their interests, he will enforce honest and economical methods in the conduct of public affairs and secure to every section of the country the blessing of good government.

I next quote from the Ohio Republican State platform adopted at Columbus last June:

We favor honest money, *composed of gold, silver*, and paper, maintained at equal value and under National and not State regulation. * * *

And I next quote from the Democratic State platform very recently adopted at Cincinnati:

We hereby approve the platform of the Democratic party adopted by the National Convention at Chicago, and especially those portions referring *to the tariff and to currency legislation.*

Hence we see from these quotations from the national platforms and our State (Ohio) platforms that both parties are committed to bimetallism in some form or other.

And as a message or guide to my State colleagues on this floor as to what our action should be in this great emergency, I take the liberty of here quoting further from the latter platform:

We congratulate the country upon the early prospect of measures of relief as outlined by the President's late message to Congress, and we have confidence that the Democratic Congress will devise laws to furnish such relief.

I may be permitted to add here that this latter paragraph met with the unanimous approval of the convention, coupled with five minutes continuous cheering. And hence I may inject here also that it does not look very much like an anti-Administration convention, as many newspapers would have us believe.

In saying what I have relative to Ohio, or calling the attention of the House and my colleagues as I have to the platform of the party, I do not mean to be understood as reflecting in the slightest degree upon any of my colleagues, or upon my distinguished colleague [Mr. HARTER], who so ably addressed the House last week in support of a gold standard. I hold my colleague in high personal esteem. I know him to be earnest and conscientious in his views. I know him to be a successful business man of large and varied experience, a good Democrat, a hard student of economics and finance, and hence whatever he may say on this or kindred subjects is justly entitled to earnest and serious consideration. Neither do I propose to censure, condemn, threaten, or abuse anyone for his views upon this complicated question. No converts either way are to be gained by such procedure. In this connection I fully approve what is said in a recent editorial of the leading journal of this city:

First of all, we say, let the antisilver newspapers discard their vicious trade in fiction, and then let antisilver men of all sorts and conditions imbibe a more charitable, considerate, and becoming spirit. The silver men are not fools and traitors and conspirators. They do not belong to an inferior order of virtue and intelligence. They are not here to be disciplined by conceited doctrinaires and snubbed by flabby Mugwumps. They are entitled to their opinions. They represent constituents who honor and respect them. They are American citizens devoted to the nation's welfare. And they must be met as such by those who propose to help or be helped by them in solving the problem of the day.

And, on the other hand, had this same editorial also condemned the silver men and their newspapers for their equally vicious trade in fiction and attacks upon those they somewhat viciously call "gold bugs of Wall street and London," it would have met my hearty indorsement also. In times like these it does not become us to indulge in epithets or hard names, nor will the people in their struggles for relief long endure it. In this same connection I would kindly say to the distinguished gentleman from Missouri [Mr. BLAND], whom personally and for whose sincerity, candor, and ability I also entertain high regard, that he can not hope to win votes from my class by any threats as to the dire calamity that will befall us at the hands of our respective constituencies.

I remember well, as does, no doubt, the gentleman from Missouri, that during the discussion of this same question in the Fifty-second Conress a Representative from the State of Tennessee, who was recognized as the able lieutenant and counselor of the gentleman, while earnestly protesting against the opposition of one of his colleagues from the same State, from the Memphis district, most vehemently warned him that his conduct would result in his misrepresented constituency relegating him to the rear when next a candidate. But in looking around this Hall we notice the shoe got on the other foot, for we see here the smiling countenance of the gentleman from Memphis, while it is said these Congressional Halls will know the other gentleman no more forever.

Times and circumstances change, and many good and intelligent men change with them. At one time in the history of this country many of our fathers, and many of the ablest and best men now on this floor, believed that slavery was right. They do not believe so now. At one time many of the best men of this country believed in "Knownothingism," which swept the land like a whirlwind in 1854–'55. They do not believe so now. Later on many of the flower of this land honestly believed that a State had a right to withdraw from the Union and establish a government of her own. They do not believe so now. Still later on many of the bright minds of the country, and a great portion of the masses, believed in fiat money—"Greenbackism," so called. They do not believe it now.

Still later a large majority of the people seemed to prefer protection and the Republican party. They do not do so now. And hence none should be blamed or censured for changing their mind, providing always it is honestly done. It is scarcely necessary for me to say to the "silverites" of the Rocky Mountain regions, for whom I have the warmest sympathy, that neither can our support be secured by any threats of secession, revolution, or riding in blood up to the bridle bits. When I say this I do not refer to the representatives of those small States or Territories on this floor, for I understand they utterly repudiate any such sentiment.

No, gentlemen, all this should be thrown aside, and a friendly, charitable, patriotic spirit manifested here that will best accomplish that which the emergency demands. It is an absolute truism that all important legislation is the result of a series of compromises. If it be within the bounds of possibility then let us throw aside all partisan and sectional feeling, and, rising above all of these, resolve that we will speedily do what all the people say should be done, viz, speedily repeal the purchasing clause of the Sherman act. And to this end we of the third class—the conservative party—beg of you Republicans and Democrats of the first and second class to come together, for the present at least, on some common ground, so that the people's will may be done, confidence restored, and business resumed.

By reason of the fact that this great question has, most unfortunately, to a certain extent at least, well-recognized sectional lines, Ohio, in common with her sister North Central States of Indiana, Illinois, Michigan, and Wisconsin, is surrounded on three sides with States favorable to the other classes I have named; on the east with the Eastern States almost solidly for the gold standard, and on the south and the west by States and Territories largely in favor of the white metal. Hence, geographically speaking, if I may be permitted to use the expression and it is entitled to any consideration in this debate, Ohio, by reason of her location and her surroundings, is naturally inclined to be conservative and somewhat undecided upon this question; and if the way can be found, in a spirit of compromise, to vote for the repeal of the obnoxious purchasing clause of the Sherman act, and at the same time retain bimetallism as a part and parcel of the monetary policy of this Government, it should be adopted.

Just now, as indicated by the many able addresses made on this floor within the last few days, the first class say nothing but a single gold standard will do the work; but we conservatives, who are very loth to abandon bimetallism, shake our heads and say, No, that will not do, for it destroys silver as money entirely. On the other hand, the second class say that the only solution is the free coinage of silver at a certain ratio, which means the silver standard only. We say, No, that will not do, either, for it will drive gold from the country. We think there is, there certainly must be, some sort of middle ground that will accomplish the purpose quite as well and preserve both of the money metals, to a certain extent at least. For instance, it has been suggested that we coin all the silver bullion now on hand and many millions more to a certain limit. Why would not this be a happy medium, for the present at least? With something like this, as one of the conservatives I would vote for the bill. Free and unlimited coinage at any of the proposed ratios as we now see it would be but jumping from the frying pan into the fire—would give no permanent relief—and hence we can not vote for it at this time. If some such reasonable compromise can not be reached, in compliance with the wishes of the President and this Administration in whose judgment and patriotism I have the greatest confidence, and in compliance with what I believe to be the wishes of substantially all of the twenty-three thousand intelligent Democratic voters of my district and the will of about fifteen thousand Republican voters as well, I will vote for the bill now under consideration, without the proposed amendment or substitute. I will do this, however, relying upon the good faith, the honor, and the patriotism of a Democratic Administration and a democratic Congress, coming from the East and the West, the North and the South, if they will but signify such intention—that at the earliest reasonable opportunity in the coming regular session of this body some permanant legislation shall be enacted on the lines laid down in our Chicago platform, that will give all our people good, sound, stable money worth dollar for dollar all the world wide.

I would also suggest, as conferring an immediate source of relief to a large extent at least, that in accordance with the third plank of our Ohio State platform, the national banking laws be

so amended as to permit them to issue their currency to an amount equal to the par value of the United States bonds which they may deposit with the United States Treasurer to secure their circulation, instead of but 90 per cent thereof as now, to the end that the volume of currency may be immediately increased.

And while it may not be possible to adopt any tariff legislation at this session, yet it seems to me that in order to fully restore confidence and promote business prosperity, we ought not to adjourn until we have called down the cold, audacious bluff that is now so shrewdly going the rounds of the Republican press—to the effect that we really have no serious intention to disturb the McKinley bill—by passing a resolution in substance that at an early stage of the coming session we expect to, and will reform, revise, and reduce the tariff on the lines laid down in our Chicago platform in accordance with the will of a very large majority of the voters of this land, as expressed at the ballot box last November.

In other words, that we will place substantially all raw material on the free list, reduce the tariff on all the necessaries of life that go to furnish the poor man his food, his home, his clothing, his shelter, and his fuel; increase the tariff on the luxuries, repeal all bounties and subsidies. If this does not produce sufficient revenue, add $1 per barrel on beer and 35 cents on whisky. If sufficient is not yet forthcoming, make up the residue by a fair and well-regulated tax on large incomes and inheritances. [Applause.]

I sincerely believe that this action is due to the business of the country, to the producer, the manufacturer, the consumer, the importer and the merchant, so that they may know on what lines these changes will be made, arrange their business accordingly and thus revive trade and commerce, for tariff reform will surely and speedily come.

All this being done, I believe this extraordinary session could terminate in the sure hope that our action would meet the approval of our constituents, and that in a short time confidence would be once more restored and general prosperity would again prevail. [Applause.]

Mr. PATTERSON. Mr. Speaker, I congratulate the House on its good temper. We are in the midst of a great financial crisis. Not only are the eyes of the American people upon us, but the eyes of the civilized world. On occasions like this we are called upon to test the value, the wisdom, and the safety of our institutions. We are required, in the name of the people, to understand and to rightly solve a most difficult problem. If there was ever a time in the history of the American Congress when the representatives of the people should be cool, dispassionate, patriotic, and intelligent, it is now.

I am no financier. I have not a dollar on earth invested in any moneyed institution; and whatever information I have on this subject has been acquired since I entered public life, and for the sole purpose of enabling me to discharge a duty which I owe to my constituency and the country at large.

In the discussion of every important question there are always points on which the disputants are agreed. On this question I think I can safely say that all intelligent men are agreed on the following propositions:

It is recognized by all enlightened, and especially by all commercial countries, that there is an absolute necessity for a fixed, uniform, and certain standard of value. Gold and silver are recognized the world over as the two money metals. I believe I may say, furthermore, that the double standard of gold and silver, if it can be maintained, is admitted to be more uniform, fixed, and certain than a single standard composed of either metal. Again, it is universally conceded by intelligent men on this subject that the double standard can not be maintained unless the legal ratio corresponds substantially with the commercial or market ratio. They are also agreed that where the single standard is gold in a country it may safely use a large volume of silver as subsidiary to the gold, whereas in a country where silver is the standard gold can not be used at all.

There is not a country on the earth where the gold standard prevails in which there is not a large circulation of silver. The United Kingdom has a circulation of over $100,000,000. The Empire of Germany has a circulation of more than $210,000,000. The Republic of France has a circulation of $700,000,000. This country has silver now in circulation and hoarded in the Treasury amounting to about $700,000,000. Now, there is not a silver country on the habitable globe where gold is not treated as a commodity. It is a commodity in China, it is a commodity in Mexico, it is a commodity in all of the South American Republics. Wherever silver is the standard, gold is eliminated from circulation and silver alone is the medium of exchange.

The doctrine of the monometallist is that no single government or combination of governments can fix a double standard between gold and silver that will so dominate the market as to make the commercial ratio conform to the legal ratio. They therefore insist that the maintenance of a double standard is impossible, and that all governments must eventually adopt either the single gold or single silver standard.

Bimetallists, on the other hand, insist that it is possible to hold the two metals on a parity, and that the double standard insures more volume, safety, and uniformity to the currency of a country. However, they are divided into national and international bimetallists. The national bimetallist contends that for the first eighty years of our national existence we coined both gold and silver until silver in 1873 was demonetized. They say that when you destroy the use of an article you destroy the demand for it and it goes down in price. They insist that following the demonetization of the silver dollar in 1873 there was a rapid decline in the price of silver, and that if it was remonetized the demand for it would be so increased as to restore it on a parity with gold.

The international bimetallist insists that every enlightened country in the world, that every commercial nation on the earth, including the United States, has abandoned the double standard and adopted the single gold standard; and that in view of these facts, and the constant variation in the commercial value of silver, it is impossible for any single government to fix a ratio which will dominate the silver market of the world, and therefore that bimetallism is impracticable and impossible without international coöperation.

Now, Mr. Speaker, the question under discussion is simply this: My friend from West Virginia [Mr. WILSON] has introduced a bill to repeal the purchasing clause of what is known as the Sherman act. My friend from Missouri [Mr. BLAND], under the order adopted by the House, proposes to offer certain amendments to that bill. The first amendment is for the free, unlimited, and independent coinage of silver at the ratio of 16 to 1. If that is voted down, then an amendment to coin it at a ratio of 17 to 1. If that is voted down, then at a ratio of 18 to 1. If that is voted down, then at a ratio of 19 to 1. If that is voted down, then at a ratio of 20 to 1; and if that is voted down, then he proposes to offer as a substitute what is known as the Bland-Allison act, passed in 1878.

Should we adopt the free, unlimited, and independent coinage of silver, at either of the ratios named in the amendments offered by the gentleman from Missouri? In arriving at the conclusion that we should not, I have been largely influenced by the facts in our own experience. Before calling attention to them, I invite attention to a few of the facts of history which preceded our first coinage law. At the beginning of the sixteenth century the commercial ratio between gold and silver was 10.75 to 1. At the beginning of the seventeenth century it was 12.25 to 1. At the beginning of the eighteenth century it was 15.27 to 1.

From the beginning of the eighteenth century down to the year 1873, a period of one hundred and seventy-three years, there was unprecedented stability in respect to the commercial ratio between gold and silver. At no time during those one hundred and seventy-three years did silver rise above the ratio of 15 to 1, or fall below the ratio of 16 to 1. The variance in the commercial ratio during the last fiscal year has been greater than it was during that entire period of one hundred and seventy-three years. There has been a greater variance in the commercial ratio between gold and silver since 1873 than there was in all the centuries transpiring from the discovery of America to that time.

In 1792, when Washington was President, Jefferson Secretary of State, and Hamilton was Secretary of the Treasury, our fathers took up this question of the free and unlimited coinage of gold and silver. Hamilton found that the commercial or market ratio at that time was almost exactly 15 to 1. He ascertained that for one hundred years prior to that time the ratio had been about 15 to 1, varying only very slightly. The bill which he prepared, and which was enacted into law, provided for coinage of gold at the rate of 24.748 grains of pure gold, and 27 grains of standard gold to the dollar, and 371¼ grains of pure silver, or 416 grains of standard silver to the dollar, the ratio being fixed at exactly 15 to 1.

Now, I desire to impress upon the House the fact that these, the fathers of the Republic, and acknowledged statesmen of the age in which they lived, recognized the fact that the legal ratio had to correspond with the commercial or market ratio, or else the two metals could not be maintained in circulation, and that the ratio fixed by them was made to conform exactly with the market ratio for that reason. What was the result? Within less than five years after the passage of the act of 1792, and before Washington retired from the Presidency, silver began to fall in the market.

I desire particularly to call attention to another fact. Our grandfathers knew no difference between the gold and the silver dollar. They interchanged them on a parity, innocent of any

knowledge that there had been a departure of the legal from the commercial ratio. But our grandfathers discovered before the year 1810 that gold was going out of circulation. Silver had gone down to 15.60 to 1. There was a profit to the brokers and scalpers of about 4 cents on the dollar, and that was a sufficient inducement to buy up the gold in circulation and ship it to foreign parts. By the year 1810 gold had been practically eliminated from our currency.

In 1834, during President Jackson's second administration, the attention of Congress was called to this fact. A change in the ratio was recommended and on the floor of Congress it was declared without contradiction that not a dollar of gold had been in circulation in the United States for more than twenty years. The difference of 3 or 4 cents on the dollar had absolutely driven gold out of the country. The act of 1834 was passed fixing the ratio at 16 to 1. At that time silver was worth about 15.60 to 1, and Congress purposely increased the ratio so as to make gold the cheaper money, in order that it might be induced to flow into the country. This was accomplished by reducing the gold in a gold dollar from 24.748 to 23.2 grains, making the ratio exactly 16 to 1.

By the act of 1837 a slight change was made by adding a fraction of gold to the dollar, making it 23. 22. This act was passed to make both the gold and silver dollar 900 parts fine and 100 parts alloy. Since that time we have had the standard gold dollar of 25. 8 grains and the standard silver dollar of 412½ grains. Now, what was the result of this ratio of 16 to 1? In 1828, when Andrew Jackson was first elected President of the United States, there were coined in the United States only $140,000 in gold. In 1836, when his successor was elected, there were coined over $4,000,000, and in 1847, just ten years after he retired from office, and before the discovery of gold in California, there were coined $20,000,000 in gold.

Now, what was the effect on silver? France was coining that metal at 15½ to 1, and the difference between that ratio and 16 to 1, amounting to less than 4 cents on the dollar, was sufficient to cause silver to take its departure to foreign countries. When gold was discovered in California, silver went up higher. The result was that gold, at the ratio of 16 to 1, became the cheaper money and silver was practically eliminated from our circulation. In 1852 we coined $56,000,000 in gold and only $999,000 in silver. Silver had been so completely eliminated from our circulation that the people were without small change, consequently, in the month of February, 1853, Congress, recognizing this condition of affairs, provided by law for the coinage of half-dollars, quarter-dollars, dimes, and half-dimes in silver at the rate of only 384 grains to the dollar. These coins were made, confessedly cheaper than gold in order that no one would be induced to buy them up on speculation and send them out of the country. They were made a legal tender to the amount of $5. In this way, the people secured small change for their daily transactions.

So it appears that long prior to the war, in 1834, Congress purposely changed the ratio so as to invite gold into the country, thus showing that Andrew Jackson's administration of the Government evinced a decided preference for gold. Again, in 1853, a preference for gold was shown by making silver subsidiary to that metal. From 1853 until the breaking out of the war gold was practically the standard and silver was used as mere token money.

Now, under the act of 1792 silver was overvalued to the extent of 3 or 4 cents on the dollar. This made silver the cheaper metal, and the difference was sufficient to eliminate gold from our circulation and to practically bring the country to the single silver standard. Under the act of 1834 gold was overvalued and became the cheaper money, to the extent of 3 or 4 cents on the dollar, and the result was that the silver dollar was driven out of the country and fractional coins were introduced at a ratio which made them so much cheaper than gold that they remained with the people.

Now, let us come to the amendments offered by my friend from Missouri [Mr. BLAND]. He proposes by his first amendment the free, unlimited, and independent coinage of silver at the ratio of 16 to 1. Now, the average bullion price of a silver dollar for the fiscal year ending June 30, 1893, was 65.064 cents. This shows a difference between the legal and the commercial ratio of 35 cents on the dollar. I put it to every intelligent man on this floor, can we stand that? Can we coin silver at the ratio of 16 to 1 without bidding adieu to every gold dollar in circulation, and bringing this country abruptly and at once to the single silver standard?

Mr. RAWLINS. Will the gentleman yield for a question?

Mr. PATTERSON. With pleasure.

Mr. RAWLINS. Did not the gold leave this country upon the fixing of the ratio of 15 to 1 because France had a ratio of 15½ to 1; and did not the contrary effect take place when we adopted the ratio of 16 to 1, France still having a ratio of 15½ to 1? Now, let me ask one other question.

Mr. PATTERSON. I would prefer one at a time, if you please.

Mr. RAWLINS. This is in the same line as the other. If France, with silver to the amount of $19 per capita, a rate which in this country would give about $1,400,000,000 of silver, can maintain a ratio of 15½ to 1, why can not we maintain the two metals at a parity on a ratio of 16 to 1, especially in view of the fact that if we should consume all the silver produced it would take ten years before we could accumulate the same quantity per capita which France now has?

Mr. PATTERSON. Mr. Speaker, I am confining myself to our own experiences here in the United States. I shall not take time to elucidate what may have been the effect of the coinage laws of France or Germany on our currency. That they had the effect described in the question only goes to show that I am right in saying that the double standard can only be maintained through the instrumentality of international co-operation. I say that the fact remains that silver was the cheaper money by three or four cents on the dollar under the act of 1792, and that gold was consequently expatriated. I say that gold was the cheaper metal by three or four cents on the dollar under the act of 1834, and consequently silver was driven out of the country.

Now, in regard to the other question: I desire to say that in order to maintain her silver in circulation France has absolutely stopped the coinage of silver at her mints, as well as the purchase of silver bullion. She has not coined a dollar or purchased an ounce of silver, I believe, since the year 1878, and she has only been able to keep the silver already coined on a parity with gold by excluding that metal from her mints. This question is exactly within my line of argument, because if we repeal the purchasing clause of the Sherman act it would enable us, not only to maintain on a parity with gold every dollar of silver now in circulation, but to coin every ounce of silver in the Treasury and assimilate it with our currency. But we have got to follow the example of France and maintain the single gold standard, or we can not accomplish that result.

Now, sir, I will pass over the amendments of the gentleman from Missouri, proposing a ratio of 17 to 1, 18 to 1, and 19 to 1, and go directly to the proposed ratio of 20 to 1. How will that result? I have gone to the Director of the Mint and secured the exact figures. Take the averaged bullion value of the silver dollar in the open market for the last fiscal year, and it shows that a dollar coined at the ratio of 20 to 1 would be worth only 81 cents. I put it to the House, can we afford in this crisis to deliberately enact a law for the free, unlimited, and independent coinage of silver dollars of the intrinsic value of only 81 cents each? Is it not just as obvious as that the sun shines in the heavens, if we do it, that silver as the cheaper money will drive gold entirely out of circulation?

If 3 or 4 cents on the dollar in favor of silver drove gold out of circulation under the act of 1792, what would 19 cents on the dollar in favor of silver do at a time when every enlightened nation has demonetized silver and it is constantly fluctuating like iron and copper in the open markets of the world?

But some of my friends may say I am putting silver to an unfair test. They say that for the last twelve months silver has been under fire. Very well, let us concede that. I will go back, then, to the first day of July, 1885, and then I will reckon down to the 30th of June, 1893, a period of eight years, a period embracing a Republican administration, a period embracing a Democratic administration, a period embracing the extraordinary rise of silver after the passage of the act of 1890, and a period which leaves altogether out of the account the extraordinary fluctuations in the commercial value of silver during the month of July last. What do we find? We find that the averaged bullion value, during that period, of a silver dollar, coined at a ratio of 20 to 1, would be intrinsically worth exactly 90.29 cents.

Now, I put the question to the House again: If 3 or 4 cents difference drove gold out of the country under the act of 1792, and if 3 or 4 cents difference retired silver under the act of 1834, what, I ask, will 10 cents on the dollar do in this age of telegraphy, in this age of boards of trade, in this age when the commercial transactions of the world are printed and daily placed on every man's breakfast table?

And now, sir, I desire to especially call the attention of the House to this phase of the question. The gentlemen favoring coinage of silver at a ratio of 20 to 1 discredit silver already coined at the ratio of 16 to 1. They admit to that extent that the legal ratio between the two metals must conform to the commercial. How can any member abandon the ratio of 16 to 1 and go to the ratio of 20 to 1 without recognizing the importance of the market value of silver in fixing the ratio? How can he abandon a dollar of the bullion value of 65 cents and adopt a dollar of the bullion value of 81 cents with any degree of consistency? Why ad-

vance in the direction of the commercial ratio without going the entire way? To do so is an admission of the doctrine for which I am contending. The member who votes for the ratio of 20 to 1 abandons the field and concedes that the two metals can only be maintained in circulation on a parity so long as the ratio established by law coincides with the ratio established in the open market. His only justification lies in the fact that he may hope that the bullion value of the silver dollar may increase until it reaches a parity with gold. It is, however, inconceivable that a member of Congress would take the chance to drive gold out of the country and involve its commerce in the throes of ruin and bankruptcy in order that he might see if his anticipations as to the rise in silver were realized.

Mr. Speaker, very much has been said by some of our friends in respect to the Chicago platform. The men who advocate the views which I entertain are charged with recreancy to the party platform and unfaithfulness to the pledges which the Democratic party made to the people before its accession to power. I will read the financial plank of the platform adopted at Chicago:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal, or charge for mintage; but the dollar unit of coinage of both metals must be of equal, intrinsic, and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

No man on this floor would more gladly welcome the free, unlimited, and independent coinage of silver on the terms proposed in the Chicago platform than I. Gentlemen here propose to coin a silver dollar of the bullion value of only 65 cents. Am I recreant to the Chicago platform because, in my judgment and in the discharge of the duty I owe my constituency, I believe such a dollar has not the intrinsic value of a dollar worth a hundred cents? Am I recreant to the Chicago platform because I rise in my place on this floor and declare that a dollar coined at the ratio of 20 to 1, a dollar of the bullion value of only 81 cents, has not the exchangeable value of a dollar of the bullion value of 100 cents? Am I to be charged with faithlessness to the platform of the party because I am convinced that such dollars, being the cheaper money, would drive $650,000,000 in gold out of circulation and involve the country in a panic which would bring distress and disaster to all our people?

Mr. SNODGRASS. Will the gentleman allow me a question just there?

Mr. PATTERSON. With pleasure.

Mr. SNODGRASS. At what ratio are you willing to allow silver to be coined freely?

Mr. PATTERSON. I will answer my colleague. In view of the extraordinary fluctuations of silver in the markets of the world for the past twenty years, in view of the fact that every enlightened government on earth has demonetized silver; in view of my conviction, after careful investigation and mature reflection that we can not, independently of the balance of mankind, establish a legal ratio between gold and silver that would absolutely dominate and fix the commercial value of silver in the open market and hold the two metals permanently on a parity, I am not prepared to vote for any ratio that you might name. [Great applause.] I would not take the risk of guessing at a matter of so much importance. On the one hand I might do silver an injustice; on the other I might drive gold out of the country and entail disaster on the people I represent. I will go, however, as far as my colleague can go in pursuing a policy and in taking such steps as will bring about international coöperation for the free and unlimited coinage of silver. This, in my judgment, is the only policy we can pursue with safety. I submit to my colleague that such a policy is in entire accordance with the declared principles of the Chicago platform.

Mr. SNODGRASS. Then you favor the single gold standard? Let us understand each other.

Mr. PATTERSON. Well, we are coming to an understanding. The country is now at the gold standard, and the question I am considering is whether we ought to adopt either of the makeshifts embodied in the amendments of the gentleman from Missouri, unsettle our unit of value, and drive gold out of circulation, or retain the gold standard, firmly holding our paper currency and the silver we already have on a parity with gold, in accordance with the principles of the Chicago platform. I am decidedly for the latter policy. [Applause.]

For the benefit of my colleague [Mr. SNODGRASS], I call his attention to the platform adopted by the Tennessee Democracy at its last State convention. The concluding paragraph of the financial plank is as follows;

And we further favor the continued coinage of both gold and silver bullion in such manner as that every dollar so coined shall be equal to every other dollar.

This, I submit, is in accordance with the Chicago platform, and it is in accordance with the views which I entertain to-day. My convictions are that owing to the fluctuations in the commercial ratio of gold and silver that we, the representatives of the people, have not the power, however earnestly we may desire it, to adopt a legal ratio for the free, unlimited, and independent coinage of silver that will dominate, control, and fix the market ratio throughout the world, so as to make every dollar so coined equal to every other dollar. [Applause.]

Now, Mr. Speaker, I come to the Bland-Allison act, which, after all amendments are voted down, is to be offered as a substitute for the bill to repeal the purchasing clause of the Sherman act. During the month of July the average bullion price of a fine ounce of silver was 72¼ cents. At this rate it cost the Government in Treasury notes $3,252,500 to purchase under the Sherman law 4,500,000 ounces of silver. Under the Bland-Allison act we are required to purchase not less than $2,000,000 worth per month. Two millions of dollars at the rate of 72¼ cents per fine ounce would purchase 2,758,551 ounces, which, if coined at the ratio of 16 to 1 would make $3,558,530. Therefore, at this rate, under the Sherman law, we would add to our currency monthly $3,252,500 in Treasury notes, whereas under the Bland-Allison act we would add to our circulation monthly $3,558,551 in silver. I agree with the gentleman from New York [Mr. HENDRIX] that if we are to make a selection between the two evils it would be better for the country, for its commerce, and all its people to retain the Sherman law than to reënact the Bland-Allison bill.

Mr. Speaker, let us for a few moments look into the history of silver coinage in the United States. Up to 1873 we had coined only 8,031,000 silver dollars. We hear gentlemen pleading piteously for the dollar of their fathers; but, strange to say, for eighty-one years, including all that period from the inauguration of Washington in 1789 down to the year 1878, when the Bland-Allison law was enacted, we coined only $8,031,000 in silver. During the same period we coined $137,000,000 in small silver coins. In 1878, when the Bland-Allison act was passed, the bullion value of a silver dollar was only 86 cents, and then it was that our friends developed an affection for the dollar of their fathers which their paternal ancestry never had—an affection that was never manifested when a silver dollar was worth a hundred cents, and an affection that was conceived in a passion for depreciated money. [Applause.]

The Bland-Allison act was in no sense a free-coinage act. It provided for the purchase of silver in the open market by the Government just as an ironmonger would purchase pig iron. It provided for the purchase of $2,000,000 worth of silver per month and for its coinage into money at the ratio of 16 to 1. The bullion purchased under the act cost the Government $308,199,262. The same bullion could be purchased to-day for $218,469,014. This bullion was coined into 383,000,000 silver dollars, or into forty-eight times as many silver dollars as our fathers coined in eighty-one years.

Under the Sherman act we have coined $36,087,000, and under the act of 1891 we have coined the trade dollars into over $5,000,000, making a total coinage under the Sherman and Bland acts and the act for the coinage of trade dollars of $419,332,000, or fifty-two times as many silver dollars in less than fifteen years as our fathers coined in eighty-one years. Now, we have 130,465,000 fine ounces of silver in the Treasury, which if coined would make $168,294,000. Add these and it gives us 587,626,000 silver dollars, or more than seventy-three times as many silver dollars as were coined from the 4th of March, 1789, up to the day when the Bland-Allison act was passed, in February, 1878. This does not include the coinage of $186,000,000 in fractional silver currency.

Mr. Speaker, how has all this silver been kept on a parity with gold? This is a question which involves a proper understanding of a situation which has deluded and deceived the people. It has been kept on a parity with gold simply because it has been propped up, held up, and sustained by gold. This Government annually receives revenue through internal and custom-house channels amounting to about $500,000,000. All this silver money is by law not only a legal tender in the payment of debts, but it is receivable for all public dues; by law it has the right to flow through the revenue channels into the Treasury of the United States.

The United States during all these years has been discharging whenever it was required to do so, all its obligations in gold. The holder of Treasury or United States notes can now, and could at all times since the resumption of specie payments

on the 1st day of January, 1879, go to the Treasury and demand gold. The Government has always paid gold, because if it should elect to pay silver, gold would instantly go to a premium and the country would be precipitated to the single silver standard.

My friend from Louisiana [Mr. BOATNER] has said that no one has been able to trace the cause of the prevailing financial panic to the Sherman silver law. Now, let us see how it is. We have 419,000,000 silver dollars in actual circulation, 130,000,000 fine ounces of silver in the Treasury, $147,000,000 of Treasury notes outstanding, issued for the purchase of silver bullion, and $346,000,000 of greenbacks in circulation. This makes 912,000,000 of currency and silver dollars already coined which have access to the Treasury through the revenue channels. Now, what is the result? As soon as the country takes alarm, instead of gold flowing through the revenue channels into the Treasury, silver, Treasury notes, and greenbacks take its place; they block the way and gold ceases to fill the Government coffers.

On the other hand, the holder of greenback or Treasury notes, whenever he sees proper to do so, may demand of the Treasurer their payment in gold. Gold the Treasurer must pay; for if he dares to pay silver, the parity is destroyed, the country is precipitated to the silver standard, and gold goes to a premium.

Now, to show the combined effect of the Bland and Sherman laws, let us see what per cent of the money received from customs at the port of New York in the month of June, for the past six years, was paid in gold. In June, 1888, the Government collected $10,996,484, 74 per cent of which was paid in gold. In June, 1889, it received $10,697,716, of which 74.7 per cent was gold. In June, 1890, the Government received $14,992,128, of which 94½ per cent was received in gold. In June, 1891, it received $9,131,418, of which only 12½ per cent was gold. In June, 1892, it received $9,591,270, of which only 8.2 per cent was gold. In 1893, in the month of June, the Government collected at the port of New York, $18,068,560, and not one cent of it was paid in gold. Now, think of it; with no gold flowing into the Treasury, and with obligations outstanding sufficient in amount to absorb five times the amount of the gold reserve, could there be a more proximate and direct cause for want of confidence? That the crisis through which we are now passing was precipitated by this condition of affairs is, to my mind, obvious.

The business communities, I assert, throughout the United States attribute the situation to this cause, and there is a concensus of opinion among business men throughout the country that the repeal of the purchasing clause of the Sherman act will arrest the panic and restore confidence. I know there are thousands of people in the country, I might say ninety out of every one hundred of those who are panic-stricken by the financial situation who do not understand these matters; but the shrewd capitalist who has money to lend or invest, or the shrewd business man who is seeking to borrow money, knows the cause.

The capitalist will not loan his money when there is a probability that it will be paid back to him in a depreciated currency; and the merchant, the manufacturer, and the railroad operator, are therefore unable to command money or credit for the transaction of business. This condition of affairs immediately finds its way to the wage-earner, who wants money for his labor, and to the farmer, who wants money for his products. This want of confidence has gone abroad in the land. The rich and the poor, the wise and the unwise, the wage-earner who toils in the field or the workshop, the business man behind his counter, and the manufacturer, the hum of whose machinery is hushed into silence, are all confronted with a situation which it is our patriotic duty to relieve. [Applause.]

Mr. BLAND. Will the gentleman permit me to ask him a question?

Mr. PATTERSON. Yes, sir.

Mr. BLAND. If the occasion of the alarm is what the gentleman states, I would like to ask him how it is that England not only returns to this country our obligations, which are made payable in currency and in coin, but is returning at the same rate of discount, without a particle of difference in the exchange, the obligations which are made payable expressly in gold?

Mr. PATTERSON. My answer to that question, and I believe it to be correct, is this: Gold would come into this country, even if it was at a premium, but the fact that gold returns to this country is no sufficient reason why under present conditions it should flow into the channels of trade and commerce. Our people may hoard gold, they may import it from England, their coffers may overflow with it, but it does not follow that they will put it into circulation on a parity with silver until something is done to relieve the situation.

Mr. ALLEN of Mississippi. Are they not hoarding all sorts of currency?

Mr. PATTERSON. I think so. I know of a gentleman of intelligence who has hoarded $5,000 in silver certificates; I know of a lady who took $13,000 in currency out of a bank in Memphis and locked it up in a vault; I know of a laboring man who hid $500 in currency. These people were frightened, but they do not understand the cause. My friend from New York [Mr. HENDRIX], who addressed the House on yesterday, who is a banker, and who has studied the conditions which environ our circulation, knows the reason. The masses, who toil in the field and the workshop, are the principal sufferers from monetary panics, and yet they have neither the time nor the opportunity to understand the derangement of our monetary system.

Mr. BLAND. I desire to ask the gentleman whether the people are taking the money out of the banks because they are doubtful about the value of the money, or because they are afraid of the banks? [Laughter.]

Mr. PATTERSON. I will answer that question. In the city of Memphis, in which I live, there has not been a bank failure in twenty years, and there is not a man, woman, or child living in that community, so far as my knowledge extends, who suspects any bank in the city. They are perfectly solvent and are esteemed to be so by their patrons. That is my answer to the gentleman's question.

Mr. BLAND. Mr. Speaker, I desire to state that I do not wish to reflect upon the banks. I think it is all a mistake for people to take money out of solvent banks; but some of the banks were not very solvent, and the people got scared and took the money out of them.

Mr. WILLIAMS of Mississippi. If it be true that the masses who are scared by the causes which the gentleman states, but which they do not understand, and that the capitalist, who does understand this question, is scared for a different reason, why is it that the capitalists are to-day paying a premium for the silver dollar in New York City?

Mr. PATTERSON. Well, that, Mr. Speaker, is a business matter which I have not investigated. [Laughter.]

Mr. BYNUM. They are paying a premium for paper money, too.

Mr. PATTERSON. Yes, they are paying a premium, I understand, for other small currency. I can not give the reason for that, unless it be to secure currency to pay wage-earners. The question is outside my line of thought and of my argument.

Now, sir, I desire to call attention to the fact that President Cleveland in December, 1885, sent his annual message to Congress, in which he graphically portrayed the very events which are transpiring to-day. He gave the country warning then. He told Congress that this crisis would ultimately be precipitated upon the people, and just how and why it would occur. Then he was a prophet. Now he comes with his special message, recommending the repeal of the purchasing clause of the Sherman act, with that prophecy fulfilled.

We have come, Mr. Speaker, to the place where the roads fork. It is perfectly demonstrable that we can not maintain gold and silver on a parity in this country under a free-coinage act. The fluctuation of silver in the markets of the world is too great. Independently and alone we can not take the risk of unlimited free coinage. The time has come when we must take our choice. We must retain the single gold standard, as we have done in the past, or abandon it and go to the single silver standard. This is an alternative forced upon us by the environments of the age in which we live, and we can not do otherwise if we would than to accept it and make our choice.

[Here the hammer fell.]

Mr. COOMBS. I ask unanimous consent that the gentleman's time be extended. We would like to hear him further on this question.

The SPEAKER *pro tempore* (Mr. BOATNER). How much time does the gentleman desire?

Mr. PATTERSON. I can not tell exactly how soon I shall be able to finish my remarks.

The SPEAKER *pro tempore*. The gentleman from New York (Mr. COOMBS) asks unanimous consent that the time of the gentleman from Tennessee (Mr. PATTERSON) be extended so as to allow him to conclude his remarks.

There was no objection.

Mr. PATTERSON. Mr. Speaker, I am very much obliged to the House for its courtesy. Now, sir, I was remarking we have come to the time when we must elect. We must retain the single gold standard or we must abandon it and precipitate the country to the single silver standard. That is the crisis now upon the country; that is the alternative which is forced upon us. I beg to say I do not want it that way; I would rather have it otherwise; but my judgment tells me that we must make the choice. Now, which shall we do? We already have the gold standard; we have had the gold standard since the 1st day of January, 1879.

I prefer to retain that standard. I prefer it because the people prefer it. I prefer it because gold is more convenient than silver.

I prefer it because gold is the standard of commerce throughout the world. I prefer it because it is the standard of the nations to which we sell our products, and it is the money with which we must adjust our balances of trade. I prefer it because if we retain the gold standard we can assimilate with our currency not only the silver now coined, but the bullion in the Treasury. But if we abandon the gold standard and drift to the silver standard, then gold will become a commodity; it will no longer be a part of our currency, and we will take our place, not with the enlighted nations of Christendom, but side by side with China, with the Republic of Mexico, with the republics of Central and South America, and every other semicivilized country on the globe.

I desire to say that I am willing to go as far as any member of Congress in the direction of protecting our silver now in circulation. I am willing to do all I can in the way of legislation; in the way of increasing our circulation by the amount of the uncoined silver in the Treasury. In order to bolster up silver I would vote for an act prohibiting the coinage of gold below the denomination of ten dollars, and to refund the gold coins below that denomination into eagles and double eagles. I would vote for an act calling in every Treasury note, every national-bank note, every greenback note under the denomination of ten dollars, and to refund them into denominations of ten dollars and upward. I would be willing to provide by law that the entire circulation of this country below the denomination of ten dollars should be silver or silver certificates. I would go further than that; I would vote for a law requiring the national banks to receive and pay out silver on a parity with gold, and I would forfeit their charters if they refused to comply with it. I would go further, and in order to hold silver on a parity I would make silver redeemable in multiples of ten dollars in Treasury notes. I would retain the ratio of 16 to 1.

By these and similar precautions we could hold in circulation on a parity with gold every dollar of silver now coined, and coin and put in circulation every ounce of silver in the Treasury. This would give us a silver circulation amounting to $700,000,000, about the amount in circulation in the Republic of France. If France, with less population, smaller territory, and fewer resources than we have, can take care of that amount of silver money, I see no reason why we should not do so. But gold, as in France, would be the standard, and silver would be the younger brother, leaning its head upon the shoulder of gold.

Mr. SIMPSON. Will the gentleman permit me a moment?

Mr. PATTERSON. Go ahead.

Mr. SIMPSON. I would like to ask the gentleman whether he still holds to the same views that he announced during the first session of the last Congress. Speaking on the 10th of March, 1892, of the Republican Administration and its policy, he said:

Now, let us trace its legislative history since the close of the war and see how perfectly it has conformed to the bidding of its masters. In respect to the currency it began by the demonetization of silver. At the time silver was disgraced and barred as a money metal it was at a premium and was not in circulation. Coin at this juncture was unknown to the people and consequently the blow at silver was not then felt; and the people, even the wisest of the people in official life, did not realize or even know what had been done. No one but the conspirators dreamed of the far-reaching effects of this secret stab at silver, which had been recognized as a money metal from the earliest dawn of history. Then followed the process of rapid approach to the resumption of specie payment which occurred in 1879. The currency during that period appreciated in value and all property correspondingly depreciated, leaving a vortex in which was swallowed up in large measure the prosperity of the people.

Mr. PATTERSON. I take pleasure in answering the gentleman. In 1873 the people of this country were enormously in debt and we had an enormous national debt. I believe that at that time the coinage of the silver dollar ought to have been continued, and that the people, as well as the Government, ought to have had the opportunity to pay their debts then existing in the cheaper currency, because it was the currency when the debts were contracted. But that has been twenty years ago. The wrong then committed has passed into history. We live now under different conditions. The debts then existing have been practically paid. Nearly three-fourths of the national debt has been paid and the remainder has been funded at a lower rate of interest. The proposition now confronting us is entirely different. We have been at the gold standard since the 1st day of January, 1879. Every contract made since that date has reference to that standard. We can not, independently of international coöperation, adopt the double standard. I am not willing to attempt to secure an impossible double standard and make the United States the laughingstock of Christendom by driving it to the silver standard. [Applause.]

Mr. SIMPSON again arose.

Mr. PATTERSON. The gentleman must excuse me. I have yielded to him once, and I do not wish to get into a colloquial discussion. One word more. I maintain and will always maintain my right to change my opinions upon all public questions, where, on further information and reflection, I am convinced that I was in error. I will never, so long as I am in public life, foolishly adhere to an error when I can correct it. I say very frankly to the gentleman from Kansas that I have modified my views on this subject to this extent: Before I investigated the subject I was of the opinion that we could, independently of the outside world, adopt the double standard. I am as much in favor of free bimetallic coinage as I ever was, but I now believe that that result can only be brought about by international agreement.

I have discussed this subject somewhat freely with the people I have the honor to represent during the last canvass, and I said everywhere to them that on reflection I was inclined to the opinion that our candidate for the Presidency was right in his views on this subject. I have no hesitancy, at any time or place, in the correction of a mistake. Suppose a client should walk into a lawyer's office some evening with a case, and the lawyer should advise him to pursue a certain course, but on reflection he should be of a very different opinion the next morning. Now, that lawyer would be a pretty fool, at the next consultation with his client, to insist that he should pursue the error which he had advised him to adopt the evening before. "Consistency," says Carlyle, "is the hobgoblin of little minds." I do not subscribe to the doctrine, "Once a fool, always a fool." [Laughter and applause.]

Mr. SIMPSON. Then the gentleman is willing to concede that he was in error at that time?

Mr. SNODGRASS. Will my colleague yield for a question?

Mr. PATTERSON. I am speaking now with the indulgence of the House, and am getting quite tired.

Mr. SNODGRASS. Only a pertinent question in connection with what you have just said.

Mr. PATTERSON. Very well, what is it?

Mr. SNODGRASS. I want to know if the lawyer my colleague refers to should advise his client on a very important question at night, and make such a sudden change and confess his ignorance in the morning, if it would not awaken fears in the client as to the ability of the lawyer?

Mr. PATTERSON. My answer to that is that while it might weaken the confidence of the client in the ability of the lawyer, it would at the same time very much strengthen the confidence of the client in his honesty. [Great applause.]

Mr. Speaker, there are certain popular delusions pervading the country to which I desire to call the attention of the House. One of these is, that the situation which has made it necessary for the President to call Congress in extra session, was brought about by means of a conspiracy. It reminds me of the old-time charges that Jefferson Davis was alone responsible for the war between the States; that all of the Southern people were peacefully disposed and wanted to remain in the Union, but Mr. Davis wanted them to go out, and they went out; when the truth was, Mr. Davis appeared only to the public eye on the crest of the storm; whereas the cause which produced the storm emanated out of conditions existing at the formation of our Government. So now, we find on this floor, men in whose intelligence and patriotism I have confidence, saying that this crisis in our affairs, affecting alike every section of our common country, and every class of our citizens, is the result of a conspiracy, and that the banks are conspiring and have conspired to bring it about.

Why, Mr. Speaker, the banks are the first to feel the effects of a financial panic, and the recent decline in the price of bank stocks all over the country shows this. The banks, the manufacturers, and the business establishments of the country are the first to take alarm and the earliest to suffer in such times as these. From them the distress reaches to the toilers in the field and the workshop, and there it remains the longest. This assumption is not only unwarranted, but it is dangerous and foolish to impress such a doctrine on our fellow-citizens. It is much wiser to trace the cause, as the President has done in his message, to vicious financial legislation. Again, it is said that the masses of the people are opposed to the financial policy of the Administration, and that Southern or Western members who entertain views in common with the President on this subject are antagonizing the people who sent them here.

In this connection, let me call attention to recent history. Mr. Cleveland was first elected President in 1884. Soon after his election, and before he was inaugurated, he wrote the letter to the Hon. A. J. Warner, dated February 24, 1885. On the 8th of December, 1885, he sent his annual message to Congress, and on the 10th of February, 1891, he wrote his letter to the Reform Club. In these several papers, Mr. Cleveland, with his usual boldness and frankness, not only took grounds against the Bland-Allison act, but against the free, unlimited, and independent coinage of silver. The position of no American statesman on any subject was ever better known by the people, or more widely discussed, than was the position of Mr. Cleveland on the silver question. It was often asserted through the public press that it precluded his nomination in 1892.

Mr. SNODGRASS. Will my colleague allow me to ask him a question?

Mr. PATTERSON. I hope my colleague will not again interrupt me.

Mr. SNODGRASS. Just one question.

Mr. PATTERSON. Very well.

Mr. SNODGRASS. When Cleveland was a candidate for the Presidency you knew all these things, did you not?

Mr. PATTERSON. I did.

Mr. SNODGRASS. Were you not a strong advocate of the nomination of DAVID B. HILL?

Mr. PATTERSON. I was not.

Mr. SNODGRASS. Did you not talk to myself and others in his interest?

Mr. PATTERSON. I have never said one word against Senator HILL, and have always spoken kindly of him.

Mr. SNODGRASS. Did you not say words for him?

Mr. PATTERSON. I shall not refer upon this floor to any private conversation which occurred between my colleague and myself. [Applause.] I do not recall the conversation he refers to, but my colleague has no right to call me to account for any conversation on this floor, and I shall not refer to it. My attitude on this question was not assumed because I was for President Cleveland or Senator HILL, or anybody else. I am advocating what I believe to be the proper solution of an absorbing public question in the interest of my constituency and the country at large, and any conversation I may have had with my colleague in our daily intercourse is not pertinent or proper for discussion on this floor. [Applause.]

I was going on to say, Mr. Speaker, that Mr. Cleveland, in view of his well-known attitude on this subject, was taken up by the South and West and nominated for the Presidency. Now, my distinguished friend from Missouri [Mr. BLAND], who made the opening speech for his side, threatened with defeat every member from the great Mississippi Valley who sustains the financial policy of the President. In reply, I say the States in the great Mississippi Valley, notwithstanding he did not have the support of his own State, with a spontaniety never surpassed in popular government demanded his nomination and election, and the people of those States have abiding faith in him and will uphold and support his Administration.

Another delusion in the minds of some of our friends of Populist tendencies is that the President's financial policy is in the interest of what they call the money power, and they never tire in their denunciation of the greedy creditors. Mr. Speaker, who are the creditors of this country? The very men which these gentlemen assume to be the creditors are really the debtors. The railway companies, the manufacturers, and the business men of the country, are really the borrowers of money. The wage-earners and those who work for salaries are the real creditors. I do not overestimate the number when I say there are 20,000,000 of people, men, women, and children, who are working for wages. Assume that they earn $10 a week, and they are creditors every Saturday night to an amount exceeding $200,000,000, and the amount of money due them annually by the week, by the month, or by the year, exceeds all the gold and all the silver in circulation on the habitable globe. These are the people who are really most interested in sound finance. Disturb the unit of value, bring distrust, panic, and financial disaster upon the country, and they and their wives and children are the ones who are impoverished and starved in the wreck of commerce, the suspension of manufactories, and the bankruptcy of the business men of the country.

Another delusion is, that cheap money necessarily means plenty of money. The facts which transpired during the civil war exposes this fallacy. National bank notes and greenbacks, being the cheaper money, drove gold and silver entirely out of circulation during the suspension of specie payments. The highest amount of these notes in circulation at any one time was $804,787,480. On the 1st day of January, 1862, it was estimated that we had on hand in gold and silver $250,000,000. During the suspension of specie payments, our mines produced in gold $751,650,000 and $379,000,000 in silver, aggregating a coin production during the period of $1,130,650,000, which, added to the stock on hand January 1, 1862, foots up a total of $1,380,650,000. Our stock of gold and silver on hand January 1, 1879, the date of resumption, amounted to $332,258,031, which, being deducted from the amount on hand when suspension took place and the amount produced during that period, leaves $1,048,391,969 in coin which was driven out of the country by the cheaper money—a sum $243,604,489 greater in amount than the highest aggregate of greenback and national bank circulation that was in use at any time during that period. These figures illustrate what would occur in the event gold should go to a premium in this country. It is true we would have cheaper money, but it is furthermore true that our stock of gold, amounting to $650,000,000, would be forced out of circulation.

Another hypothesis assumed by the other side in debate is, that there has been a very great appreciation of money and depreciation of property, growing out of the scarcity of money. For twenty-five years we have been attributing all the inequalities in the condition of our people, not to the scarcity of money, but to unjust taxation. I am sorry to say that some gentlemen have traveled so far in the direction of the People's party as to attribute the vast inequalities in the distribution of wealth to the absence of cheap money and plenty of money, and they talk about the appreciation of gold and the depreciation of property as glibly as the Populist orator. We have been at the gold standard since the 1st day of January, 1879, and whatever accumulations of wealth we have had in the past ten years have been measured by that standard.

I hold in my hand a statement signed by the Superintendent of the Census. It shows that in 1850 the estimated value of property in the United States was $7,125,000,000. In 1860 it was $16,159,000,000. In 1870 it was $30,068,000,000. The latter estimation was in the inflated currency of the war period. In 1880 it was $43,642,000,000. In 1890 it amounted to the enormous sum of $63,648,000,000. We have had, therefore, a much greater increase in the estimated value of property in this country from 1880 to 1890 than in any other period during our history. The property of all the people, the hut of the poor, the mansion of the rich, are all measured by the same standard of value. If the standard had been too short we would not have had this vast accumulation of wealth. It is true there are vast inequalities in the distribution of this enormous wealth; but this does not grow out of the scarcity of money, but out of unjust and unequal taxation.

In conclusion, I beg to address a few remarks to my Southern colleagues. Those of them who know me know that every pulsation of my heart is in sympathy with the people with whom my lot is cast. I was born and reared in the South. The younger years of my manhood were spent in the Confederate army. For twenty-eight years I have longed for the upbuilding and uplifting of our Southern country. I have, in common with my old comrades, aspired to bring it into such relations with the Union that it could, without taking a single diadem of glory from its brow, maintain its relations in the Union with loyalty, with dignity, and with honor. [Great applause.]

For more than thirty years we have had a fearful struggle. We have had a struggle for local self-government. We have had a struggle for equal taxation. We have had a long and weary march. At last we have won a triumph for local self-goverment and for just taxation. At last both Houses are Democratic and we have a Democratic President. And now, that we are about to achieve peace and prosperity and justice for our people, the Aarons appear to persuade us that we will never see the fruition of our hopes until we secure a cheap dollar. They are breeding distrust among our people. They go out and denounce New York City all over the Southern States as a Sodom and Gomorrah, and call upon their people to cast their lot with the Populists of Kansas and Colorado.

I shall never forget, and you can never forget, my Southern colleagues, that New York City has been the Malakoff of the intrenched camp of the Democracy during all these years of our travail. This great metropolis, predestined by the Almighty when he created the hemispheres to be the metropolis of North America, has alwas been our friend and has always been Democratic. [Applause.] It has always contended for local self-government in the Southern States and held its shield between us and those who would oppress us. Whenever the sky was dark in every other direction, we of the South could always look with confidence to New York City for succor and sympathy. It has from the beginning struggled in common with us against Federal interference in our local affairs, while the Seymours, the Tildens, and the Clevelands of New York inspired the movement for tariff reform, and have brought the American people back to a sense of their constitutional obligations. [Applause.]

Mr. PENCE. Will the gentleman permit me to ask him a question?

Mr. PATTERSON. No, excuse me. I am in haste to conclude. These Aarons attribute the depressed condition of the people to the absence of cheap money and not to unjust taxation. For twenty-five years, upon every stump and upon every highway in the South, we have preached the doctrine of unjust, unequal, and unfair taxation, and now that we have elected to the Presidency by an overwhelming majority the recognized tariff-reform leader of the country, we are in this crisis, brought about by the fear of cheap money, persuaded to follow that *ignis fatuus* into a wilderness of financial disaster, confusion, and bankruptcy.

They tell our people that they are overwhelmed with debt. It is true that a people absolutely stripped of money and personal property by the ravages of war must necessarily accumulate slowly under the administration of laws by which they are taxed unequally and unjustly.

It is true that, in comparison with other sections of the Union,

our people are still poor; but it is furthermore true, that when compared with them we are practically out of debt. Pennsylvania sustains about the same relation to the North that Alabama does to the South, and it is instructive to introduce a comparison between them. In taking the census there was an estimate made of the mortgage indebtedness on lands in the respective States. The estimate embraces all lands measured by the acre and by the lot. The mortgages in Alabama amount to only $39,000,000, while the mortgages on acres and lots in Pennsylvania amount to $613,000,000.

The mortgage indebtedness of Pennsylvania, a State whose people would gladly see the purchasing clause of the Sherman act repealed, exceeds by $200,000,000 the aggregate mortgage indebtedness of the ten States which composed the Confederate States. My own State of Tennessee has a mortgage indebtedness of only $40,000,000, while your State, general [addressing Gen. BLACK of Illinois], has a mortgage indebtedness on acres and lots amounting to $380,000,000. It amounts in your State to $100 per capita, while in my State it amounts to only $23 per capita. In your State 19 per cent of the estimated value of real estate is mortgaged, while in my State there is only 8 per cent.

Again, in the South we make surplus crops of cotton and tobacco largely in excess of the demand of the American market. These products are shipped across the Atlantic and sold in the open free markets of the world. They are all practically shipped to the countries having a gold standard. After supplying all the spindles of the United States, the people of the Southern States since the war have shipped and sold in other countries, at free-trade prices, cotton which realized $5,000,000,000 in gold. Where has it gone to? Has the want of cheap money dissipated it? Has the want of a 65-cent dollar made it useless? No; it has been practically filched from the pockets of the Southern people by unjust tariff laws, and, so far as I am concerned, I intend to hold, if possible, my constituency to the issue of tariff reform until the system of protection, under which they have been robbed, is abolished. [Applause.]

Mr. Speaker, I regard this as a grave and serious crisis in our affairs. It is a momentous crisis so far as the Southern States are concerned. No other section of the Union is forced to lean on the Democratic party for prosperity, good order, and good government like the South. Should either one of the amendments offered by my friend from Missouri meet with the approval of Congress, it seems to me inevitable that the President will veto the bill as a measure fraught with more mischief than the Sherman law. In that event, in my judgment, the present situation will develop into a condition of confusion and bankruptcy, which will discredit the Administration to such an extent that it may fall short in the accomplishment of the beneficent ends which we all have so much at heart.

I believe there is an imperative necessity for the repeal of the purchasing clause of the Sherman law. This is the consensus of opinion throughout the business community of the United States. I do not go back to see what I have said here, or what I have said there, under different conditions, or unadvisedly. I am dealing with the living present. I am acting for a confiding and trustful constituency, whose interests it is my highest duty to protect. I am acting for the country at large, whose welfare it is my duty to promote. I do not look forward to the future to see what my personal or political fortunes may be. I would rather be right on this question than to return to Congress. I have given the subject much time and study. I have given those who sent me here my best efforts to solve the problem rightly, and I will answer to them for my vote. I have taken my stand. Others may take the course which duty and patriotism point out as best for their people and their country. So far as I am concerned, I am now, and shall always be, with Jefferson, with Jackson, with Tilden, and with Cleveland, for sound money, for economic government, for fair, just, and equal taxation, and home rule. [Prolonged applause.]

Mr. BAILEY. Mr. Speaker, my distinguished friend from Tennessee [Mr. PATTERSON] might have extended his Biblical history and reminded the House that the leader who had brought the children of Israel in sight of the promised land never lived to enter it. [Laughter.] I have, Mr. Speaker, been not a little diverted by the change in the arguments of our friends on the other side, and, as I heard the distinguished gentleman from New York [Mr. HENDRIX] on Saturday last describe what he called the "evolution of finance," I could not avoid thinking that some financiers had been undergoing that same process of evolution. [Laughter.] Up to within the past few months it was not common to find a pronounced advocate of the single standard in this country. The men who denounced silver and demanded its demonetization professed themselves to be bimetallists, but insisted that the ratio between the two metals could only be fixed by an international agreement; along this line the argument proceeded until now, and when they think that they have brought the people up to that point, they go a stage further, and beginning with the distinguished gentleman from Maryland [Mr. RAYNER], who opened this debate, one after another their leaders have declared that even an international agreement can not preserve the parity of these two metals. If they succeed in destroying silver money in this country now, ten years from to-day not one of them will vote for its rehabilitation under any circumstances.

Mr. Speaker, if the bill and substitute now pending before this House involved the use or disuse of silver as money in this country alone, it would be difficult to overstate their importance, and their importance is intensified many fold when we consider that the effect of our decision here will be practically to decide this question throughout the world, and perhaps for all time to come.

Gentlemen on the other side, at least, will not find it convenient to deny this view of the situation, because their argument of most frequent repetition is that the United States, even with the aid of other silver-using countries, can not maintain our double standard. If this be true, then it certainly must follow that the other countries, without the aid of the United States, can not maintain their single silver standard. And so it is, that whatever the form in which it may be presented, the great issue which confronts us, is the preservation or destruction of silver as a money metal amongst all nations.

I have been puzzled to understand why the representatives of a free people should desire such a result. I am aware, of course, that each of the two schools of monometallists gives us a different reason for the faith which they both profess. One school contents itself with the scholastic argument that the double standard is absurd. But, Mr. Speaker, it appears to me to be assuming very much—more, indeed, than any man in this day and generation is justified in assuming—to stigmatize a policy established by Alexander Hamilton, with the concurrence of Washington and Jefferson, as an absurdity. And especially so, sir, when that policy was continued in successful operation for more than eighty years, and those years, whether tested by the increase or by the distribution of our wealth, the most prosperous in our history. I prefer to receive my instruction on financial policies from that period which brought us peace and kept us in contentment, rather than from a narrow sect of intolerant and "bookish theorics."

The other school votes to establish a single standard because it does not believe that this Government can sustain the double standard against the practice of what gentlemen choose to call the commercial nations. Mr. Speaker, I am very free to say that this argument deserves the most careful consideration, and proceeding as it does from men with whom I agree on so many questions, I shall atttempt to make the best and most dispassionate answer to it that is within my power.

The serious, and I may say the fatal, vice of this argument is, that it overestimates the importance of our monetary system as related to our foreign commerce, and underestimates its importance as related to our domestic transactions. Our imports and exports added together aggregated less than $1,800,000,000 during the last fiscal year, while our dealings with one another in our own country will exceed this sum by more than twenty times, and it therefore appears to me too plain for disputation that we can not in justice to our people ignore the domestic aspect of this question.

Again, sir, in our foreign commerce the usual course of business is that we pay for our imports with our exports. If I send a shipload of cotton to Liverpool and bring a shipload of cotton goods back to this country, I can use the money or the exchange which I receive for my cotton in payment for my cotton goods. And even if I desire to trade with different countries I can still attain the same result. If I send a cargo of wheat to London and bring a cargo of wine from Paris, I can use my London exchange in payment for my Paris wine.

But, sir, there is another, and, as I think, a stronger answer still. It is this: In the settlement of international balances we seldom use either of the precious metals, except when the balance of trade is against us, and this occurs, and ought only to occur, at rare intervals. When we use them at all we do not use them as money. If we use gold or silver coin we use it as bullion and at its bullion value. You might double the amount of silver in your silver dollar or divide the amount of gold in your gold dollar without making any possible difference in the settlement of foreign balances, because they each would be taken then, as now, according to its weight and fineness.

What difference can it make to me whether the London merchant who owes me $6,000 pays me in six thousand gold dollars, worth a hundred cents on the dollar, or in ten thousand silver dollars worth 60 cents on the dollar? It might, indeed, make a very great difference if you would open your mints, because I could then coin my silver into American silver dollars, and the wheat or cotton which I sent abroad would discharge $10,000 of my debts, while to-day it acquits me of only $6,000.

It has become the fashion, Mr. Speaker, in the discussion of this question, to lay great stress upon the necessity of all commercial nations conforming to one financial system. Yet, sir, the history of the very country to which the advocates of this policy most frequently refer unanswerably refutes their argument. England for more than fifty years maintained her single gold standard, while all the countries with which she traded maintained either the single silver standard or the double standard of both gold and silver. Yet it is not averred in all the volumes of English history, nor is it asserted in her parliamentary debates, that the difference between her monetary system and that which prevailed in other countries ever interfered with English commerce. England adopted a single gold standard in 1816 when she was exhausted in blood and treasure by her long Napoleonic wars, but she maintained it alone against all the world. Shall we in the evening of this nineteenth century, with our sixty-five millions of people, with our free institutions, with our measureless resources, and with a wealth surpassing even the dream of Oriental fable, confess ourselves unequal to an easier task? To do so would be an impeachment of the wisdom of American statesmanship and a calumny upon American energy and American patriotism.

OBJECT OF DEMONETIZATION.

Mr. Speaker, great as the temptation is to pursue this argument of the monometallists further, I must desist; and I crave the indulgence of the House while I submit to it what I conceive to be the real purpose which inspires this last and greatest attack upon the silver money of the world. I do not mean to impute such motives to gentlemen on this floor; but I entertain no sort of doubt that the men who are behind this movement are simply striving to double the value of the money which will be left by destroying one-half of the money which now exists.

It is within the knowledge of every member of this body that this question of a standard assumed no special significance until after the gold discoveries in California, followed shortly afterward by those in Australia; and in the earlier stages of the controversy the avowed and only object of demonetizing either metal was to enhance the value of the metal which remained. In support of this assertion I send to the Clerk's desk an extract from the official résumé of the French monetary commission of 1869, which I will ask him to read.

The Clerk read as follows:

There has been a striking coincidence between the rise of prices and the production of the new mines of gold and silver. The annual production of the two metals, which was only $80,000,000 in 1847, exceeds now $200,000,000. It has nearly tripled, and it is easy to see that the real value of the metals has diminished. It is difficult to estimate exactly what the diminution is; but whatever it may be, it demands the attention of governments, because it affects unfavorably all that portion of the population whose income, remaining nominally the same, undergoes a yearly diminution of purchasing power. As governments control the weight and standard of money, they ought, so far as possible, to assure its value. And as it is admitted that the tendency of the metals is to depreciate, this tendency should be arrested by demonetizing one of them.

Mr. BAILEY. The concluding sentences of this paragraph, Mr. Speaker, state the doctrine of the monometallists, which is that whenever the accidents of mining threaten to increase the volume of money, and thus reduce its value, the Government should interfere for their protection.

In 1873 the monetary commission of the Netherlands convened and adopted the same reasoning. Two years after that, and one year after silver had been demonetized in this country, we find Victor Bonnet writing to the French Journal of Economy that—

What the world has to fear is not so much the scarcity of gold as the decline in the value of all money, if we keep both the precious metals in use as money.

It is true that the effort to demonetize gold—and the first effort was in that direction—proceeded upon an exaggerated estimate of the production of gold and silver in the new mines. Mr. Ruggles, who was a delegate from the United States to the International Monetary Conference at Paris in 1867, declared to that body that the production of the precious metals in this country alone, long before the close of this century, would reach three or four hundred million dollars, and insisted that the work of "unification"—which was but another expression for the destruction of one metal—could not commence too soon.

I have here a book which comprises a series of articles contributed to the current prints in 1854, 1855, and 1856, and it was deemed a work of such merit that Richard Cobden, the great apostle of free trade in England, translated it from the French into his own language. It was written by one of the most brilliant Frenchmen of his day, to persuade his countrymen to the demonetization of gold. He urged that course expressly upon the ground that the production of the precious metals in the new mines of the world had so greatly increased the store of metallic money that the only way to maintain its value was to destroy the money quality of one of the metals.

After discussing the effect of the discovery of these new mines, and predicting a continued increase in their production, he closes the chapter in these words:

Under circumstances similar to those which I have hurriedly enumerated, the only way to prevent a fall in the value of gold and a consequent rise in the price of all other commodities, would be the discovery of a new demand equal in extent to the increased supply thrown upon the markets of the western world.

His theory was that gold must be demonetized or a new demand found for it. He preferred its demonetization, and Germany, accepting his theory, actually demonetized it in 1857. England had previously adopted the single gold standard, and as its demonetization would depress the value of all money in her borders, she hesitated. She appointed a commission and sent it to California and Australia for the purpose of examining their mines and reporting on the extent and richness of their deposits. That report was such as to disarm the fear of England about the increase of those mines. Before a final conclusion was reached, however, the discovery of the great Comstock mine, followed by the opening of other silver mines, rendered it certain that the annual supply of silver would soon again exceed the annual supply of gold, and straightway the usurers of the world cried out that silver must be stricken down!

In 1872, the year before the war against silver was inaugurated here, the production of our silver mines reached $28,000,000—a greater sum than ever before in their history, and at the same time the production of gold had fallen lower than during any year since the discovery in California. The same condition prevailed elsewhere as here: the scale of silver production was a rising one; the scale of gold production was a falling one, and with unblushing impudence the men who for twenty years had been demanding that gold should be demonetized at once reversed their position and demanded the demonetization of silver. They were then, however, as their disciples are now, true to the interests of their clients and anxious to demonetize the most abundant metal. The policy which Chevalier taught is still being pursued. England and Germany could not agree in the demonetization of gold, but they have agreed to find a new demand for it, and they are everywhere united in their efforts to destroy silver as money and thus create the necessity of filling that vacuum with gold.

Of course, Mr. Speaker, the present advocates of monometallism in this country disclaim all purpose or desire to increase the value of money by reducing its quantity. Giving them the benefit of that disclaimer, let us judge them by the effect of their conduct, without reference to their motives. There is not one amongst them who will venture to affirm before this House that the amount of money in any country does not largely determine its purchasing power. There is no great writer on the subject of political economy who does not lay it down as a primary law in the science of money that as you increase its volume you diminish its value, and as you diminish its volume you increase its value. This was the doctrine of Ricardo, who declares that by limiting its quantity coin can be raised to any conceivable value. It was the doctrine of John Stuart Mill. It is the doctrine asserted in many places by Mr. Walker in his excellent work on money. Indeed, I do not believe that any writer of respectable authority can be found who denies it. And if it is true, then whatever may be the motives which actuate our friends in advocating a gold standard, the effect of their procedure must be to increase the value of money by reducing its quantity.

RESULTS OF DEMONETIZATION.

But, Mr. Speaker, it is a waste of time to detain this House in arguing that to make money scarcer makes it higher, and I pass to a consideration of the results which will follow the enactment of this bill into a law. An important and practical effect will be that an indescribable scramble for gold will ensue at once. There is not in the world enough gold to furnish France, Great Britain, Germany, the United States, and Austria with as much gold as France has to-day. Where, then, will the other nations of the world procure the gold with which to establish their gold standard? Procure it they must, and will, but in doing so they can neither acquire enough for their own use nor will they leave enough for the use of the nations from which they take it.

Mr. Ricardo asserts that the precious metals will be distributed among the nations of the world according to their commercial needs. He does not contend that each nation will acquire enough for all its needs, but only that the stock of money in each country will bear the same proportion to its needs as the stock of money in other countries bears to their needs. This proposition has passed into the science of money as a fixed law, and according to it, if all countries adopt the gold standard, a redistribution of gold must occur. The dullest man in this House does not need to be told the consequences of this. The operation would manifest itself first in a tendency to limit purchases and increase sales on the part of all those countries which find it necessary or desirable to obtain gold. Nowhere is this tendency exhibited more plainly than in a recent report of the Treasury Department.

which shows that during the last fiscal year our exports have fallen off more than two hundred millions, and our imports have increased over ninety millions, as compared with the previous one. Allowing $50,000,000 for the mistake which is said to have been made our imports still exceed our exports during the previous fiscal year by more than $40,000,000.

We have another and impressive object lesson as to the effect of gold acquisition by other nations. During the past eighteen months the English banks, under the advice of Mr. Goschen, have been increasing their gold reserves. Austria-Hungary has been buying gold to complete the establishment of a gold standard. Under the influence of these two demands we have exported something more than one hundred millions of gold, and the country is threatened with a panic. Yet with a strange infatuation, gentlemen who declare that these evils are attributable to our exportation of gold are advocating a policy which is certain to more than double that exportation.

They tell us that we can go into the open markets of the world with our bonds and buy gold enough to insure the safety of our gold reserve; but if this bill becomes a law you will meet the other nations of the earth in these same markets, with their bonds in their hands, trying to sell them for gold. Not only this; but the individual debtor in every country which undertakes to change its basis will be called upon by his bank to cancel his indebtedness, so that the bank can provide its gold reserve. The waters of every sea will be white with the sail of ships seeking a market in which they can exchange their produce and their merchandise for gold. The great mass of property thus forced upon the markets, coupled with the enormous demand for money, will reduce the price of all property to well nigh the point of confiscation. The combination of these two forces—this unprecedented offer of goods and this unprecedented demand for money—will be followed by a greater and more sudden divergence between the value of money and the price of commodities than has ever before been witnessed in the history of the world.

Under these circumstances the only thing which can avert a universal and destructive panic is that the silver-using nations, perceiving the danger, will undertake the gradual adoption of a gold standard. This, while it will not subtract anything from the total suffering imposed upon the debtor class, will render their misery less acute by distributing it over a longer length of time.

It is not denied, and can not be successfully denied, that a law of this kind works a hardship upon the creditors of any country by requiring more of their property to pay their debts. But we are told that they ought to be willing to suffer this single misfortune, however great it may be, in order to establish a sound and permanent system, and we are assured that these bad effects are only temporary. Mr. Speaker, that is but a partial view of the subject. This bill, if it becomes a law will inflict a great and permanent injury upon all classes of our people except the money-lending class and the class whose incomes are fixed. I mean by this that a contraction in the volume of our currency must be followed by a contraction in the volume of our business. No subtlety about a standard of value and no refinement about the use of credits can convince me against the truth of this proposition. I know there is not an intelligent banker in the United States who would retire one-half of his capital and still attempt to transact his business undiminished in amount. I know that there is not a merchant or manufacturer so mad as to believe that he can withdraw one-half of his capital from his business without contracting his business to answer the reduction of his capital.

Even, sir, if we consider money merely as a medium of exchange, it still must be admitted that the amount of money ought to bear some fair correspondence to the exchanges which it is expected to perform. Of course there are credit devices which economize its use, but they derive their value from the fact that they are promises to pay in the money of ultimate redemption. Take the money of final payment from behind the checks and drafts about which we hear so much, and they would not be worth the clean paper on which they are written. The amount of our money must determine the amount and the value of the credits which we can use. No reasonable man, of course, expects a dollar in money to support every dollar of credit, but every sensible man knows that the more money we have, the safer our credit becomes.

All great writers on political economy affirm that money is necessary in the development of civilization and the extension of commerce; that without it there can be no division of labor, with its resulting skill and other benefits. Concede that proposition, and it follows as a corollary that enough money is necessary to attain the highest development of civilization and the greatest extension of commerce, and when we restrict the amount of money below the requirements of the people we obstruct the progress of mankind.

Gold alone can not furnish a sufficient supply of money to meet the necessities of commerce and civilization. There is not one-half enough of it now, and the supply as compared with the demand is diminishing. During the last year its entire production was about $133,000,000. Of this amount, something like $33,000,000 were produced by the silver mines; this source of supply will be lost when the silver mines are closed and the world will be left with an annual increase of about $100,000,000. Of this amount it is estimated that more than $70,000,000 will be annually consumed in the arts and in dentistry, leaving about $30,000,000 for money uses, and this is not enough to replenish the losses and the abrasion from the present stock.

Mr. Speaker, I shudder to contemplate the effect of this catastrophe upon my race. A stagnation of business and a paralysis of industry must follow it. Another long night of intellectual darkness and political degradation will settle down upon the world; and there is now no new America whose discovery will re-illume the ages and unfetter commerce. An eminent historian, in a passage which can not be too frequently repeated, ascribes the great disasters beginning with the fifth century to a failure in the supply of the precious metals. I send to the Clerk's desk a quotation from Sir Archibald Alison's History of Europe, which I will ask him to read.

The Clerk read as follows:

The two greatest events which have occurred in the history of mankind have been directly brought about by a successive contraction and expansion of the circulating medium of society. The fall of the Roman Empire, so long ascribed, in ignorance, to slavery, heathenism, and moral corruption, was in reality brought about by a decline in the silver and gold mines of Spain and Greece. * * * And as if Providence had intended to reveal in the clearest manner the influence of this mighty agent on human affairs, the resurrection of mankind from the ruin which these causes had produced was owing to the directly opposite set of agencies being put in operation. Columbus led the way in the career of renovation; when he spread his sails across the Atlantic he bore mankind and its fortunes in his bark * * * The annual supply of the precious metal for the use of the globe has tripled; before a century had expired the price of every species of produce was quadrupled. The weight of debt and taxes insensibly wore off under the influence of that prodigious increase; in the renovation of industry the relations of society were changed, the weight of feudalism cast off, the rights of man established. Among the many concurring causes which conspired to bring about this mighty consummation, the most important, though hitherto the least observed, was the discovery of Mexico and Peru.

I have here [exhibiting a book] the earliest treatise written in favor of a single standard, and while the author does not attempt to trace the causes which produced the dark ages, he corroborates Mr. Alison as to the agencies which revived commerce, the arts, and learning. After describing the discovery of America, and tracing the progress of mining up to 1545, he proceeds in the passage which I will ask the Clerk to read.

The Clerk read as follows:

From 1545 the scene changes. In one of the gloomiest deserts on the face of the globe, in the midst of the rugged and inhospitable mountain scenery of upper Peru, chance revealed to a poor Indian who was guarding a flock of llamas a mine of silver of incomparable richness. A crowd of miners was instantly attracted by the report of the rich deposits of ore spread over the sides of this mountain of Potoccho, a name which for euphony the European nations have since changed to Potosi. The exportation of the precious metals from America to Europe now rose rapidly to an amount which equaled, weight for weight, 60,000,000 francs (£2,400,000) of our day, and it afterwards rose even to upwards of 80,000,000. At that time such a mass of gold and silver represented a far greater amount of riches than at present.

Under the influence of so extraordinary a supply the value of these precious metals declined in Europe in comparison with every other production of human industry, just as would be the case with iron or lead if mines were discovered which yielded those metals in superabundance as compared with their present consumption, and at much less cost of labor than previously; just, in fact, as occurs in the case of manufactures of every kind whenever, by improved processes or from natural causes of a novel kind, they can be produced in unusual quantities and at a great reduction of cost. This fall in the value of gold and silver, in comparison with all other productions, revealed itself by the increased quantity of coined metal which it was necessary to give for the generality of other articles, and it was thus that the working of the mines of America had necessarily for effect a general rise of prices; in other words, they made all other commodities dearer.

Mr. Speaker, I could multiply these evidences until I had exhausted my own strength and the patience of the House, but these seem sufficient to establish my contention.

FLUCTUATIONS BETWEEN THE TWO METALS.

Now, sir, upon what theory are we invited to subject our countrymen to these appalling consequences? Upon the inconclusive and unsatisfactory argument that the market value of gold and silver fluctuates. Gold and silver fluctuated, in 1792, when our mint was established, but Alexander Hamilton, after long and careful consideration of the whole question, decided in favor of the double standard, and gave as his reason that—

To annul the use of either of these metals is to abridge the quantity of the circulating medium, and is liable to all the objections which arise from the comparison of the benefits of a full with the evils of a scanty circulation.

I do not deny, sir, that there is, and always will be, some difficulty in adjusting and maintaining any given parity between the two metals; but I regard that difficulty as insignificant when compared with the evils which must result from reducing the world to an insufficient supply of money. Fluctuation in market value is not an insurmountable obstacle. Surely there is wisdom enough in the American Congress to meet and solve these difficulties as they may rise. Free coinage itself will powerfully con-

tribute toward correcting fluctuation and settling the relative value of the two metals.

It is nonsense to tell me that a law which permits me to coin 412½ grains of standand silver into a debt-paying dollar will not greatly enhance the price of silver. It will, at least, render it more valuable in the payment of debts, and while the advocates of gold seem to have entirely overlooked the function which money performs as a standard of deferred payments, many of our profoundest thinkers on the subject regard this function as secondary to none of money's other uses.

Almost every gentleman who has spoken upon the other side, in discussing this phase of the question, has fallen into the curious contradiction of first asserting that this Government, acting alone, can not raise the price of silver bullion, and then in almost the next sentence declaring that if we enter upon a policy of free coinage the silver of all the world will flow into our mints. Both propositions can not possibly be correct, because there could be no inducement for silver to come here unless a free-coinage law had raised it above its present price.

It is beyond dispute, however, that a free-coinage law will increase its price, and it is barely possible that its first impulse may be in this direction. But will it come in any considerable quantities? Nobody now pretends to believe that the silver coin of the Old World will be brought to our mints, because 15½ ounces of their silver coin will buy 1 ounce of gold, while here it will require 16 ounces to buy an ounce of gold, thus entailing a loss of more than 3 per cent, in addition to the freight and the risk which must be incurred in bringing it across the ocean.

The only practical question for us to consider in this connection, is as to silver bullion, and it will help us toward a clearer understanding of that to recall the amount and the conditions of its production. During the last year the world produced about $175,000,000 worth of silver bullion. Of this amount the United States produced about $75,000,000, leaving $100,000,000 produced by all the other countries. Of this $100,000,000 not less than $30,000,000 will be consumed in the arts and as subsidiary coin by gold-standard countries, leaving only $70,000,000 for full monetary uses. Will that $70,000,000 come to our mints? I do not believe it will, because I believe that the silver-standard countries will need it to increase their circulation, and in order to retain it they will find themselves obliged to pay a price sufficient to keep it. It will be the same case as might happen with our wheat. If the wheat crop of Europe fails, the price of wheat advances here, and we are glad to sell our surplus at the advanced price; but when our surplus is gone our sales are practically ended, because whatever price they might offer us for that part of our crop which we need for home consumption we can not and will not sell it. The more the foreigner offers for it, the more our own people would be compelled to pay because they can not part with their bread. So it would be with silver—whatever its price might be, foreign countries which need it to increase their circulation would be forced to retain it for that purpose.

We often hear it asserted that it is not demonetization, but the difference in the amount of their productions, which has caused the displacement of the parity between gold and silver. This can not be true, for if this were the explanation the same cause would have produced the same effect at other periods.

During the nearly fifty years from 1801, when Mr. Jefferson became President, until after the gold discovery in California and Australia in 1848, the production of silver more than doubled the production of gold throughout the world, but their parities were without violent variations. Almost in a single year their relative production was reversed, and for a series of years the production of gold was more than twice the production of silver, and still their ratios were not seriously disturbed.

From 1687, the time when the world began to renew its liberties and its commercial vigor, down to 1873, when the silver dollar was dropped from our list of coins, the ratio between gold and silver fluctuated, but it never fell as low as 14 to 1, and never rose as high as 16 to 1, except in the two years of 1812–'13. They were both full money metals during that period; but since 1873, when one was left a money and the other degraded to a commodity, the ratio has risen from less than 16 to 1 to more than 27 to 1. The market value of gold and silver varies to-day so widely because one is a full money metal and the other is a commodity, and their value will continue to vary so long as this relation continues. The way, and the only way, to elevate and steady the price of silver is to open your mints to its free and unlimited coinage, and thus create, as a great nation like this easily can, an unlimited demand for silver at its coining value.

FOR WHOSE BENEFIT IS THIS DONE?

Mr. Speaker, it may not be improper for me to conclude my part of this discussion with a hasty glance at the classes who are to be benefited or injured by the enactment of this measure, which destroys a portion of the money of the world. The French monetary commission in 1869 declared that demonetization was for the benefit of those whose incomes are fixed. One of the earliest advocates of the single standard, discussing it in a country where the people did not rule and where, therefore, the object of all legislation and its effects could be frankly admitted, declares the same thing in a passage which I send to the Clerk's desk to be read.

The Clerk read as follows:

All commodities excepting gold, and every kind of property excepting that of which the income is from the present fixed, as is the case with the Government funds, ought, from the moment that the monetary crisis is terminated, to have attained in a gold currency double the price which they are at present worth, upon the supposition, quite arbitrarily, I admit, of the depreciation reaching 50 per cent. Thus, a house or a landed estate now worth £4,000, or 100,000 francs, would then sell for £8,000, or 200,000 francs.

The hectolitre of corn or of wine, the quintal of iron, or the meter of calico will undergo the same rise, at least if no change conducive to cheapness be introduced into the conditions of their production or into the relation between the supply and demand. It will be the same eventually with the wages of labor, and with all personal services, whether rendered in the factory or on the farm, or from the liberal professions; we are warranted in believing that their value will have doubled.

Thus, as a definite analysis, the proprietors of lands, houses, and other real estates, manufacturers, merchants, and their auxiliaries of every kind; public functionaries of all ranks; and also those who follow the different learned professions, will all find themselves in the end compensated in the new state of things with advantages equal to those which they now enjoy—all other things being equal. It is another class of persons, whom we have previously defined in a general way, who have to submit to a sacrifice in proportion to the fall in the precious metal.

Mr. BAILEY. Mr. Speaker, the other class of persons whom this writer says he has previously defined in a general way are described on a preceding page of the same chapter as the "income class." The proposition asserted here is, that the increase of money affects all classes favorably except the income class and the owners of government funds. The converse of the proposition must therefore be true, that a decrease in the amount of money affects the income class and the owners of government funds favorably and affects all other classes unfavorably. The authorities are unvarying and unequivocal in declaring that a decrease in the volume of money benefits nobody except the income class and the holders of government funds, and that the increase of money benefits everybody except them.

I do not believe, sir, that legislation ought to be shaped for the benefit of any particular class; but if special privileges must be conferred by law on somebody, they ought to be conferred in accordance with the time-honored maxim of Democracy, which declares the sum of wise government to be comprehended in the motto: "The greatest good to the greatest number."

It is useless to disguise, or to attempt to disguise, the fact that, in a large degree, this is a contest between the debtors and the creditors of the world. The debtors are willing to pay in the money of their contract, desiring, however, to exercise the option which the law has allowed them. The creditors are determined to destroy that option, and thus compel a payment in the more valuable money, rendered more valuable still by the aid of legislation.

We have even been pleaded with in this Hall to preserve the faith of the Government untainted. I trust, sir, that the American Congress needs no such urgence. I do not believe there is a thoughtful American citizen in this broad land, and surely there is not an American Representative in this Hall who does not unswervingly insist that every contract of his Government shall be fulfilled religiously and according to its terms.

But, sir, I am no more willing that Congress should take from the people and give to the bondholders than I am that it shall take from the bondholders and give to the people. It is one of those rules which works both ways, and ought to work either way with equal justice.

Our fathers sold these bonds, and the purchasers had it explicity nominated in the law that they were payable in coin of the standard then existing. Let us pay them precisely as our fathers agreed to pay them, and to the utmost farthing, even if it takes the pound of flesh and the heart's best blood goes with it. This far every honest man should be willing and anxious to go, but not one step farther. The law which authorized the issuance and sale of these bonds provided that they could be paid in gold dollars containing 25.8 grains of standard gold or in silver dollars containing 412½ grains of silver nine-tenths fine. This much I would pay if it impoverished our children, but one scruple more than this I will never consent to give.

It is a principle of both law and justice, sir, that a contract is faithfully kept when discharged according to its stipulations. This principle is as old as this Government—older indeed, because it was cherished and taught by the wise men in other lands before the dream of this Republic had ever glorified a patriot's brain.

OUR PLEDGES.

Sir, I think that, under our form of government, it is just as important that the Representative should keep his faith with his

constituents as it is that the Government should keep its faith with our creditors. We made a formal and a solemn promise last year that we would use both gold and silver as the standard money of this country; and, with the talk of "good faith" upon your lips, are you willing to repudiate your highest obligation?

Sir, the responsibility shall rest not upon us. Neither the bondholder nor the people shall be able to charge us with bad faith. We are not only ready to pay our bonds as we stipulated to pay them, but we are also ready to redeem the pledge which we made to the people at the last election and upon which we sought their suffrages.

We stand for no partial redemption. We go for a full, complete, and perfect performance of both the letter and the spirit of our promise.

I say to the gentleman from West Virginia [Mr. WILSON], and to those who are acting with him on this question, that if they will first join us in reëstablishing the equality of gold and silver, both at the mints and before the law, we will then join them in maintaining that equality in the melting pot as well as across the counter.

In other words, sir, we will coin for them a silver dollar that shall stand the test of fire as well as of commerce. Place gold and silver bullion on precisely the same conditions, and we will bind ourselves to make and keep the gold and silver dollar of the same intrinsic value. There is no Democrat here, and there are no Democrats elsewhere, who demand anything for silver which they do not readily concede to gold. As for my part, I would forfeit the good will of my people, and retire forever from the public service, before I would vote, after having restored the equal privilege of these two metals, to then permit them coined into dollars of unequal value. My constituents desire no such arrangement as this.

But, gentlemen, you deceive yourselves as to the temper of the people on this subject if you imagine that you can pacify them by shallow declamations about a dishonest dollar. If the present silver dollar is not an honest one, the people are willing to make it so, according to any reasonable definition that can be proposed, and all they ask of you to-day is an opportunity to fairly test the matter. Will you deny them this? Dare you do so in the face of your platform? If you do, then when you come again to ask their confidence and their support they may answer you with the bitter words of Macbeth about the weird sisters:

> And be these juggling fiends no more believ'd,
> That palter with us in a double sense:
> That keep the word of promise to our ear
> And break it to our hope.

You may go on, and in a blind obedience to the commands of the rich and powerful, you may strike down the money of the people and destroy the coinage of the Constitution. You may forget the millions who toil in the workshops and fields of this land, but they will not forget you. They are patient and long suffering, but they can not and will not endure all things, and when the heartless exactions of avarice have ground their faces into the dust, and aggravated their burdens beyond their capacity to bear them, they will arouse themselves to a consciousness of their strength, and then, when it may be too late, you will find what it is, having sown the wind, to reap the whirlwind.

If you do this work faithfully and well, the people will bless the memory of this Congress for generations and generations to come. If you do it ill, they will undo what you have done, and they will not only sweep from the statute book the unjust law which you have written there, but they will drive forever from power and place the recreant representatives who have betrayed their confidence and disappointed their hopes. [Applause.]

Mr. PENDLETON of West Virginia. Mr. Speaker, I think that this is a question upon which Democrats can very readily differ without being accused of having abandoned their party principles. I know at one time I entertained a very different opinion upon this question from what I entertain to-day. But I am one of those who believe in the lessons of experience, and I am disposed to learn by the tests of prosperity as well as adversity. I am a bimetallist, and shall vote to arrive at the double standard by what, in my opinion, is the only route that will lead to that end. I shall not quarrel with those who prefer another road.

The President of the United States, following the privilege conferred upon him by the national Constitution, has called the Congress of the United States together to meet what he says is a grave and a serious crisis. He has performed his whole duty in the premises; he has taken himself from the city of Washington to his quiet summer retreat, and has left it to this body, united with the Senate of the United States, to determine upon the measures that should be adopted for the benefit of the American people. And I am glad that Grover Cleveland is not here to-day endeavoring to exercise any influence of any kind or character upon the action of the individual members of Congress. He has performed his duty, and he has left it to us to perform ours; and I am willing to assume the responsibility along with three hundred and fifty-five other gentlemen in this House and eighty-eight members of the Senate of the United States.

We are told that we are facing a crisis. The first question that actually comes to us is, what is the crisis, and what has brought it about, and then what is the remedy to stave it off or abolish it?

What has caused the present crisis? Why is it that all over this land we see banks failing in all directions, find great business enterprises coming to a sudden halt, and men by the thousands thrown out of employment? In my opinion there is among many others one great fundamental reason that has more to do with it than anything else, and that is the lack of confidence upon the part of the American people.

The next question for us to consider is, what has brought to pass the lack of confidence that we now find prevailing North, East, West, and South? What is it? My distinguished friend from the State of Missouri [Mr. BLAND], whom I admire as highly as I do any member of this body, tells us that it is because we have failed to adopt the unlimited coinage of the silver dollar at a ratio of 16 to 1. Now, I admire that gentleman's courage. I admire his sincerity, and, above all, I honor and revere the loyalty with which he has adhered to what, under the present conditions throughout the world, must be a failing cause.

A year ago I was disposed to think differently upon this question from what I think now. Then, I am free to confess, I had given it no study, and I was ready to vote as I then thought was right, and I did vote at that time as I thought to be upon the right side of that question. Then I believed that. I believed that the free and unlimited coinage of silver at the ratio of 16 to 1 was our safest policy regardless of the action of the other commercial nations. I have studied this question, have examined and investigated it to the best of my ability, and I have found that I was in error in former days; and finding now what I believe to be the right course, I for one am ready to pursue and stand by it to the bitter end, whether it lead to my political defeat or political victory at the polls this coming election: and finding how mistaken was my judgment in the past I am not one to stand here and charge other men on the floor of this House with dereliction to their duty to their constituents, or with the violation of promises which they are alleged to have made to their people.

Now, what is the condition of affairs prevailing in this country, which has brought to pass the disasters and misfortunes of which we complain? I attribute that condition more to the use of unsound money than to any other known cause. I believe that nine-tenths of the financial panics, nine-tenths of the business failures that have been entailed upon the civilized world are due to the fact that the world has time and again surrendered itself to the evils of an unsound finance. We have seen in this country every method of finance advocated. We have beheld men of known intelligence advocating every theory upon the subject, whether history has contradicted them or not. All forms of fiat money have found friends, and nearly every financial folly has been greeted with applause.

What of other countries? Carry yourselves a hundred years back, and what do you find to have been the action of France, one of the most enlightened among the nations? At that time the French people were embarked in a great revolution? They thought they needed money to carry on the war that had been declared against them on the part of nearly all Europe. What did they do? They issued an almost unlimited quantity of paper money. They based it on what? Not on the only thing in which paper money could then be redeemable—coin, gold and silver then being the money of all nations but they first confiscated nearly two-thirds of the entire land of France, the land that was held by the nobles and by the priesthood, and said that they would make that land good for the redemption of this currency called the assignat currency of France.

Several thousand millions of francs were issued. In the course of a few years what was it worth? Just what Confederate money was worth when Lee laid down his arms on the 9th day of April, 1865. To replace the assignat came the mandat. Several thousand millions of them were issued, and in a few years more the same thing followed as to them, because the mandat was not redeemable in coin, not redeemable in money that was recognized as money throughout the civilized world. It met the fate that all fiat money has met at all times and under all circumstances, and became absolutely worthless, and was that much waste paper in the hands of the citizens of France.

The lessons of history tell us that a single nation's paper money is only good when there is a promise to pay or redeem it in the money that is current in all commercial countries, and a firm confidence that the nation has both the desire and the ability to keep its pledge. The fiat money of any nation, being redeem-

able in nothing that is recognized as money by other nations, is valueless. And what would money of this kind be? What effect did it have on the prosperity of the French people? It ruined thousands. It left the workingmen stranded in their endeavor to earn an honest livelihood by simply transferring the gold and silver money of the country to the pockets of a few speculators and the men who most thrive when money is necessary and when money in use is unsound.

Mr. DAVIS. Will the gentleman permit me to ask him a question?

Mr. PENDLETON of West Virginia. I will.

Mr. DAVIS. What had been done before that paper money found the people?

Mr. PENDLETON of West Virginia. That is a historical question which I would like to explain to my friend if I had time.

Mr. DAVIS. They were eating grass; they had nothing to eat; they were starving, and the corn failed before the paper was issued.

Mr. PENDLETON of West Virginia. The French Government in 1792 and 1793 confiscated a great proportion of the landed property of the country—in other words, the property of the priesthood and the property of the nobility—and then it passed a law, which you and I know to be in existence to this day, a law of inheritance that has transferred, in the course of time, almost the entire landed property into the hands of the mass of the people, where it is to-day. That money had nothing in the world to do with that law; but that money was based on what? On that land that the French Government confiscated, and they based it on two-thirds of the landed wealth of France and the sacred pledge of the Government to redeem it in land; and in a few years 3,000,000,000 of that money was worth no more than the Confederate promise to pay was worth when Gen. Lee surrendered.

Mr. DAVIS. I will ask the gentleman if two-thirds of that money issued by the French Government was not counterfeit?

Mr. PENDLETON of West Virginia. I can not stop to argue that with my friend. I have read French history one way and you have read it another.

Mr. SIMPSON. Will the gentleman permit me to ask him a question, for information?

Mr PENDLETON of West Virginia. One at a time.

Mr. SIMPSON. The gentleman from West Virginia admits that at the time of the breaking out of the French Revolution the lands had passed into the hands of a very small proportion of the people?

Mr. PENDLETON of West Virginia. Up to that time it had.

Mr. SIMPSON. And the condition of the people was very bad?

Mr. PENDLETON of West Virginia. Very bad indeed.

Mr. SIMPSON. Had France been running on a gold basis up to that time?

Mr. PENDLETON of West Virginia. Up to that time France had been running on a gold basis.

Mr. SIMPSON. Then you must admit that a gold basis naturally produced that result, and that the property had all passed into the hands of a few people because of the gold standard.

Mr. PENDLETON of West Virginia. No, sir; and I will tell you more about that. If the gentleman will not interrupt me he will find that I am somewhat acquainted with the history of the French Revolution as well as himself. Down to the time of the French Revolution nine-tenths of the lands of France were in the hands of a few people; secondly, nine-tenths of the people in that country, under the laws then existing, were practically in the condition of serfs and slaves. The feudal system had not then been abolished in France, and the gold basis had nothing whatever to do with it, or a silver basis, or any other basis, so far as affected the welfare of the people or the ownership of land. It was the old feudal law of inheritance that maintained property in the hands of the few and perpetuated an aristocracy.

Mr. SIMPSON. The gentleman from West Virginia asserted that the paper currency that they resorted to had put them in a very bad condition.

Mr. PENDLETON of West Virginia. Now, will you let me go on?

Mr. SIMPSON. If what I have said be true, the loss of the paper currency had nothing to do with it.

Mr. PENDLETON of West Virginia. If you will allow me, I will endeavor to give you the history of that matter. When the French Assembly, in 1788, met, it was confronted with laws that had been upon the statute books of that country for nearly a thousand years under the feudal system. They abolished the class privileges, and practically confiscated two-thirds of the landed property of the country, taking it from the aristocracy and the priesthood, conferring it upon the national government.

Several years after that, along about 1792 and 1793, when the French Government undertook to establish a paper fiat money, called assignats and mandats, they drove out the gold and silver that were current then throughout the world from general circulation and use in France. What was the result of that action? Several thousand millions of assignats or mandats were issued, based upon two-thirds of the land in France, and in a few years they were not worth more than the Confederate money was when Gen. Lee surrendered. Those who took it in payment of debts were ruined, and it became absolutely worthless in the hands of the holders, while financial distress and commercial ruin prevailed throughout all France.

The attempt was a signal failure, and in my opinion this experiment should be an everlasting lesson to the advocates of purely fiat money. You ask to what reason I attribute the failure of this paper money. Why? Because the faith of the French Government was not pledged to redeem a franc or a centime of that money in the money of the world at that time known to commercial nations, to wit: gold and silver.

Mr. SIMPSON. Does not the gentleman admit that the result which he describes was owing to the failure of the republican government and the restoration of the old regime, and not to the failure of the money itself?

Mr. PENDLETON of West Virginia. No; it was due to the failure of the money. The Republic of France did not go out of existence at that time, and not until long after this paper had become valueless. The consulate came in on the 18th of November, 1799, when Napoleon was First made First Consul. Then in 1804, in March of that year, Napoleon set aside the Republic and established the Empire.

Mr. SIMPSON. That is what I said; that it was owing to the failure of the republican government.

Mr. PENDLETON of West Virginia. But years and years before that this paper money had become rag money. It was not until April, 1814, that the old regime was restored, and it was re-restored in June, 1815. Now, I trust my friend will please let me alone on those questions. [Laughter.]

Mr. SIMPSON. But the gentleman has practically admitted that the failure of that money was due to the failure of the government that issued it, the same as the failure of the Southern Confederacy rendered its money valueless.

Mr. PENDLETON of West Virginia. The French Government never abolished that money, and never made any effort whatever to do anything with it except to pledge the national lands for its redemption, but long before the Government could carry out its promises the money had become rag money, was thrown away, had passed out of circulation, and had met with a death to which there was no possible resurrection. Yet France was then the most powerful nation on the Continent of Europe, and its armies were everywhere victorious. The republican government of France finally returned to the then money of the world, gold and silver.

Now, Mr. Speaker, take another great illustration or example in the history of the world which occurred a few years before that, and I think it will demonstrate the folly of the gentlemen who are preaching fiat money on the floor of the House of Representatives, which ought to be the most intelligent body in the world, because I am sure that it represents the most intelligent people that breathe beneath God's sun.

Take our old Continental currency. We fought through the war of independence, we achieved our victory and established ourselves as a proud and strong nationality among the nations of the globe. We were flushed with triumph; were strong, and were growing stronger. We had this Continental money on hand. What did we do with it? Not a dollar of that Continental money was ever redeemed, and of what value did it become? Rag money; waste paper. Why? Because the Continental Congress, or the American nation never at any time pledged itself to redeem that money in gold or silver, which were at that time the recognized money of the world.

Mr. DAVIS. If the gentleman will permit me, Mr. Gallatin, Secretary of the Treasury in 1818, delivered his opinion of that money——

Mr. PENDLETON of West Virginia (interposing). Mr. Speaker, I would like to answer all the questions the gentleman may desire to ask, but if I undertake to do so I shall be kept discussing this one point until my time has expired.

Mr. DAVIS. Mr. Gallatin said——

Mr. PENDLETON of West Virginia. I prefer to go on and discuss the question that is before the House. What I have been saying so far is merely preliminary to the main question; and let me say to the gentleman, further, that it is very hard work to talk in this Hall in hot weather, and I need whatever voice I have.

Mr. DAVIS. I will not ask the question.

Mr. PENDLETON of West Virginia. Now, Mr. Speaker, I started out with the bold proposition that nine-tenths of the evils

that have prevailed in our country have been due to an unsound, unstable currency, and I believe that whenever this country shall arrive at a period when it will establish for itself a sound and stable currency it will become more flourishing than any other country of which history makes mention—than any other country that to-day exists in the civilized world. Why should it not? We have every resource here, every capacity for the establishment and the maintenance of a glorious, prosperous, powerful country. Why, then, should we not one and all strive to establish a sound currency?

There is one style of argument used here to which I desire to call attention. There are men who argue on the silver question exactly as the Republicans do upon the tariff question. Our Republican friends, those of them at least who proceed to the extreme of a prohibitory tariff, argued last fall that this country was sufficient unto itself; that we could legislate for ourselves and make whatever tariff we chose to make, regardless of other nations. The Democrats took issue with them on that proposition.

We said that all nations grow rich by trade. We proclaimed that Europe wanted the breadstuffs, the corn, the cotton, the bacon, and the hams of America, while we wanted things from them; that if we laid down as a fundamental rule that we did not intend at any time or under any circumstances to pay attention to the wishes of foreign countries, and did not allow their people to sell their products here, they would return to us in kind with retaliatory tariffs of their own, and prohibit the exportation of our products to them. We went to battle with gentlemen on that side of the question who made arguments of this character, and I am glad to say we have prevailed in three successive campaigns.

And now, when the battle is on for sound money, for an upright currency, we are told again by the very gentlemen on this side of the House who fought against that theory of our Republican friends that this country can maintain a currency of its own independent of the action of the other civilized nations of the world; that, trading with them and finding our great markets for our breadstuffs among the nations of old Europe, we can make old Europe take anything for money that we choose to call money, whether it be a money metal with them or no.

There never was a falser theory; there never was a more erroneous doctrine. We can not do it. There is only one ground upon which we can do it; there is only one method by which we can attain that supreme condition—when we can make a currency exclusively our own, when we can establish a currency which will circulate only throughout the United States and be the money of the American people, the balance of the world to the contrary notwithstanding. And what is that condition? To build around yourselves a Chinese wall, and declare that you will not trade with other nations; that you are sufficient unto yourselves and intend to live unto yourselves.

So long, however, as you do not desire to occupy the position of China—so long as you desire to be a civilized nation marching onward in the path of progress and prosperity, moving forward in enlightenment, in culture, and refinement, and enjoying all the blessings of civilization, you are obliged to obey the old biblical injunction—trade with all nations and thereby grow rich and prosperous. These nations all have a money metal that is common with us, and is also a money metal with us, to wit, gold.

While you do this you must have a money to deal with; you must have a circulating medium that is common not only to you, but to the civilized world; because when you begin to pay balances, to make exchanges, you must use the money of the world for that particular purpose. Suppose, for instance, that this Government should carry out the suggestion of a free-silver friend of mine who sits not very far from me; suppose it should demonetize gold—absolutely drive gold out of existence—and make this country an exclusively silver country.

How, then, could we carry on our trade with foreign countries? All other nations having gold for their money metal, the United States having silver for its money metal alone, how could we carry on trade with each other? We would go back to the condition of Asiatic and African savages, and our trade would be trade in kind and by barter; that alone. That is why it is impossible as a fundamental doctrine of political economy for any one nation to establish for itself and maintain for itself exclusively any money which is not on a par with the money used in all the countries of the civilized world. Other nations will demand of us the money that is common to us and them and will leave our own exclusive money for our use alone. It can not be done; you may make whatever ratio you please, and it will not be done. The money that is universal money will leave us and we shall find ourselves solitary, with no medium of exchange that is common to all the world.

Why, sir, to-day, what is the condition of affairs? It is true that I sympathize with the cry that Colorado is sending up to the heavens. I sympathize with the feeling of the people of Nevada upon this question as deeply as their own members on this floor can do. But at the same time they can not come to this Congress and ask us, when the interests of 65,000,000 of people are involved, to legislate exclusively for their benefit, forgetting the interests of every other portion of those 65,000,000 who live under the same flag and are entitled to the same protection as the people of Colorado or Nevada. Why can not we make their money the exclusive money of this country? Why can we not maintain the free and unlimited coinage of their money at a ratio of 16 to 1, as they desire that we should do?

In the first place, I am myself a bimetallist. I believe that conditions can be made to exist by the action of Congress when silver and gold, freely and fully coined at a ratio of 16 to 1 or 15 to 1, or any other ratio that all the civilized and commercial nations may agree upon, can and will circulate in this country, and all other countries, as the money of the world. And that condition, I think, can be brought about by proper legislation on the part of the American Congress.

But why can we not, my friends, maintain this free and unlimited coinage to-day at a ratio of 16 to 1, or at any ratio whatever? In the first place, we might even out of our earnings present Colorado and Nevada yearly a dollar for every fifty-eight cents of their silver, as we are now doing, and yet survive. The other sixty-five millions might do this for a time, and that is what we are really asked to do, and not make use of this product as money at all. When we, however, are asked to make use of their product as a money metal which the other trading nations will not take, we disrupt, break down, disorganize, and steadily damage our whole industrial situation, and leave ourselves at the mercy of all nations, a subject for both laughter and universal plunder.

In 1816 a movement against silver began on the part of England, which movement I think has been disastrous to the world, as I would like to see both metals maintained, believing that the maintenance of both metals is for the greater prosperity of all the nations. England, it is true, in 1816 made herself a monometallic country—decided in favor of gold and suspended further coinage of silver. My friend from Texas [Mr. BAILEY] asks us why it was that England with her wealth and her power was able to maintain gold as her sole money metal, and why we can not maintain silver as our sole money metal if we so desire? I will tell him the reason. England could maintain gold as her sole medium of exchange for one reason, and one reason alone, because gold was money all the world over.

Everywhere—in every civilized nation of the world—the English guinea was good for what it called for. But suppose under the conditions in which silver exists to-day we should attempt to make silver the solitary money metal of this country and make it the basis of all values, could we, with all the wealth, all the power, all the resources of this grand and magnificent country of ours sustain silver upon that basis? I say we could not, because there is no other commercial nation ready to join us to-day in such a movement—because no other nation that maintains any standing in the commercial marts of the world is ready to rally to our support, to uphold our hands in an event of that character.

In 1816 England demonetized silver; in 1871 Germany suspended the further coinage of silver. In 1873 France did likewise, and France was followed by the nations of the Latin Union, by Holland, Belgium, Switzerland, and Italy, and to-day the same policy obtains in every civilized nation on the continent of Europe. The consequence is there is no commercial country in the world ready to stand by and maintain us in any such situation as is asked by our free silver friends.

But there is another reason, Mr. Speaker, why we can not maintain silver as a money metal without the alliance of other nations, and that is that we are a borrowing nation. Why can not we maintain it at 16 to 1 to-day? The first reason of all is that the United States is a borrowing nation, and has been for a hundred years past. And it is said that while the balance of trade has been against us for some years, that for the past year this balance of trade has been on our side and in our favor. But that is not alone the question to be considered when you take these matters into consideration.

There is something else besides the balance of trade that compels annually the vast flow of American gold across the broad waters of the Atlantic Ocean. One hundred millions are expended every year by American tourists on the Continent of Europe, all of it American gold. One hundred millions more are expended every year by American importers when they pay the freight charges on the carrying trade, nearly all of which is in the hands of England and other European countries. These

two great elements of indebtedness have to be met by this country abroad with gold coin. These make the real balance against us on every annual settlement with Europe.

But what else do you find? Several thousand millions of dollars of foreign capital have been loaned in this country. Why, in my little State of West Virginia I know of two railroads alone that owe fourteen million dollars of gold in London, the money mart of the world, and 6 per cent of interest in gold has to go there every year to meet the obligations of these two roads. The Northern Pacific Railroad is owned mainly by German capital, the Reading by English capital, and the same is true of the Erie, it being also owned by English capital, and other business enterprises are run by foreign capital; until to-day the foreign investments in this country have been so great, so numerous, that it is estimated anywhere from three to five thousand millions of dollars will be required to cover the investments which have been made by foreign capital within the limits of this country. Now, the interest on this vast amount of money has to go abroad every year, and in gold; and that is far more in every respect than any balance of trade, or any possible balance of trade that may be in our favor.

Thus we have to settle annually with Europe. How can we do it? Can we, as some gentlemen proclaim, do so with our products? We can not. In our mutual trading for the year they have already taken all of our products they desire or need for the year. How, then, must this settlement be made? It must be made in money, and in money that can be used everywhere. They will not take our silver, as it is with them only a commodity, like wheat, corn, and cotton, and fluctuates while a commodity, just as other articles fluctuate in value. We must, then, pay in gold. But suppose a policy should be adopted that would compel all nations to coin silver and gold at an agreed ratio. There would then be no greater demand for a gold dollar than a silver dollar, and we could pay our debts and collect our credits in either and be satisfied with either, for the use of both at the agreed ratio would be universal, and there would be no greater demand for the one than the other.

Mr. ALLEN. If it would not interrupt the gentleman, I should like to make a suggestion, with his permission. Does he think it well enough for us to adopt a policy that will enhance the value of these loans, and take more of our labor and products to pay that four or five billions of dollars of which you speak?

Mr. PENDLETON of West Virginia. No, sir; I did not say I favored any such policy as that.

But, Mr. Speaker, we not only have that question to consider, that the balance of trade is really against us, that for years under present conditions, with reference to silver, this country has to settle with Europe large balances, and they have to be paid in gold, in the money of the civilized world; but there are other considerations that are equally important. If we undertake to pay those annually occurring debts in the silver that we take out of our mines, which the nations will now only take from us as bullion, and send it across the water for that purpose, we get only for the quantity of silver in our silver dollar, fifty-eight or sixty cents, yet we coin it to-day, endeavor to stand alone in its maintenance, and someone loses from forty to fifty cents on every dollar. Who sustains this loss? The sixty-five millions of Americans. Who now profit by it? The silver kings of Nevada, Colorado, and Montana, who palm it upon the American people under this Sherman act at nearly double its real value. When we send it abroad, which trade compels us to do as bullion, all that we can get for it is its value as a merchandise in the markets of Europe.

We have to meet that condition; we have to be prepared to face that crisis every year, and how can we do it if we adopt for ourselves in the first place the money of the civilized world, and then adopt for ourselves another money peculiar to ourselves alone? The drain from abroad will come from what direction? Our balances will have to be paid year by year in gold, and gold alone, until the entire gold circulation of the country has been absorbed and evaporated, and we shall be left with silver on our hands which the nations will neither take nor recognize as money.

But what has brought this crisis on the people? Why is it that all through the land capital has become timid, labor doubtful, banks suspending, all business industries at a standstill? Simply the want of confidence and the apprehension which has been engendered in the public mind abroad in the holders of our securities as to our ability to pay these gold balances which we have owed for years. When they find we are making this silver currency a money metal in this country, at a ratio of 16 to 1, equal to gold, they will have none of it; they do not want it; and because, further, while it may be worth a dollar here, there across the water it is worth only 58 cents, and they are hastening to call in their loans in consequence; they are trying to get their investments at home, for they fear they may be compelled to take one-half to two-thirds of the amount they have loaned here, and that we shall in the end pay them this very silver which has so depreciated. There is a wish to get out first while the gold is still to be had.

What has been the effect on American capitalists? American capitalists are governed by the same apprehension, and believe that the same result will come to them. They are withdrawing their money from American enterprises. They are calling it away from American industries, and are endeavoring to loan it abroad and invest it in securities that are payable in gold, which is good from one end of this continent to the other, and from one corner of the civilized world to the other. That has been the cause.

Now, why does such a cause as that exist? Why shall we not do something to restore the confidence both of foreign people and of home people in the faith, in the good credit and the soundness of the American dollar? Here is the greatest field for investment that can be found in the civilized world to-day. We have 3,000,000 square miles of territory, a large portion of it yet uncultivated; magnificent rivers and grand and glorious forests; the finest climate to be found upon the globe; every room for investment; the land calling for capital, farmers calling for capital, manufacturers calling for money, labor calling for the dollars which will give it employment.

Why should not capital come here and why will it not come here when such a grand opportunity lies before it? The rate of interest in London is 3 per cent; in Paris it is 3 per cent; in Berlin it is 3 per cent, and all Europe is overflowing with money; all the great money centers have a superabundance and no field for investment at home. They are all anxious. They are overwhelmed with a desire to invest their money wherever they can receive a reasonable compensation with a good, sound, and safe security. And here we are, giving 6 per cent for money, and in some cases 8 and 10 per cent.

Let the capitalist abroad once come to understand that the dollar he loans here is to be paid him back in the same dollar when it finally comes to his hands again, and just as good as he loaned, and European capital will come over here in overwhelming volumes, to be invested in this country, and to continue to build up and make it great and glorious and grand and prosperous, as it ought to be under our free, equal, and just laws. [Applause.]

Now, my friends, can we by ourselves maintain the free and unlimited coinage, I mean without international agreement, of the silver dollar at any satisfactory ratio, and at the same time have a sound and stable currency and make it equal to the gold dollar?

To be perfectly frank, when I began the consideration of this question I intended to vote for a ratio of 20 to 1, and at that ratio for the free and unlimited coinage of silver. But the more I have studied the question the more I have found that we would just be in the same trouble that we would be in with a ratio of 16 to 1. A ratio of 16 to 1 prevailed when, in this land? When France was coining silver at 15½ to 1. When Germany was making silver her sole money metal. When Italy, Switzerland, Belgium, Holland, and all the commercial countries of Europe save England were coining silver at a ratio of 15½ to 1. And how much did we coin in this country? Why did we not coin more than we did? We coined practically none at all, except for subsidiary coinage, down to 1873, because the very moment the silver miner found that he could get an ounce of gold in France or other European countries for 15½ of silver, he naturally went there with his silver instead of coming here, where it took 16 ounces of silver to purchase one of gold.

So I say, when we are asked to return to this old ratio of 16 to 1, under that ratio we never coined any silver money, and we had no silver money, practically, outside of the subsidiary coinage, ever in circulation. Now, with a ratio of 16 to 1 we could not coin it in those days when France, Germany, Italy, Spain, and all continental Europe stood ready to uphold our hands and maintain us in that coinage and accept silver as money. That being so, what can we do to-day, when we alone, practically, among the civilized nations of the world propose to establish a ratio of that character.

Mr. CAPEHART. Would the gentleman be willing to vote for any ratio?

Mr. PENDLETON of West Virginia. No, sir; not now, but will vote for an agreed ratio with three or four of the leading commercial nations.

Mr. CAPEHART. Did your constituents in the convention which nominated you, less than a year ago, give any expression of opinion on that subject?

Mr. PENDLETON of West Virginia. None whatever, except to adopt the national platform at Chicago.

Mr. CAPEHART. I have the platform on which the gentleman was elected, and if he will pardon me I will read it.

Mr. PENDLETON of West Virginia. I yielded to the gentleman for a question. I did not yield for a speech.

Mr. CAPEHART. This was last year, less than a year ago.

Mr. SIMPSON. Let us hear it.

Mr. CAPEHART. (Reading)—

That we are in favor of a bimetallic currency of gold and silver——

Mr. PENDLETON of West Virginia. And so am I.

Mr. CAPEHART. (Reading)—

and the free coinage of both metals, establishing such parity between the two as shall keep both in circulation.

Mr. PENDLETON of West Virginia. That is what I am in favor of; I want just such a parity as will keep both in circulation, and that is what Grover Cleveland is in favor of, and that is what every bimetallist is in favor of.

Now, I say, how can we maintain any of these ratios when we find there is no other civilized nation with whom we are prepared to deal that will sustain us in any such ratio? We find ourselves again in the situation of having one money that is current throughout the civilized world, and another coin that is current only here. The same old result will follow as followed before. Gold will leave the country and we shall be left here entirely on a silver basis.

So that I can not see how we can maintain any of these ratios. Silver is treated as a commodity by nearly all the civilized world. Its value depends to-day very largely upon the supply and demand of the article, and if we adopted the ratio of 16 to 1 we should find silver worth how much? Fifty-eight cents on the dollar. Suppose we should adopt the ratio of 20 to 1, we should find silver worth 80 to 85 cents on the dollar. Suppose we should adopt a ratio of 50 to 1, then silver might be worth a dollar and a quarter. But my objection would still be the same—the lack of stability, the continual fluctuations of our metal, while the balance of the world would have a stationary currency that was good not only abroad, but also here, and which would give them absolute dominion over us.

That is the great cardinal objection with me to any such proposition as that which is made here. But if we should obey the platform adopted at Chicago and wipe out of existence the purchasing clause of the Sherman act, where would the country stand? Suppose before we plunge into the free-coinage field we make an honest effort to have other nations help us.

Let us not take this step alone and expose ourselves to be fleeced, bled, and plundered by all the nations. If they see us fighting alone, not one will come to our rescue. Some think that we would make debts greater. No at all. We shall, nevertheless, have all our present currency left to us. Not a dollar of silver will be demonetized, and not a debt would be increased the hundredth part of a cent in value. The same currency that we now expect to pay our debts with we would still have.

What would necessarily follow such a course? Simply this would come to pass: As soon as it was found that this country no longer intended to coin the silver of the world, as soon as it was known that continental Europe had ceased to coin the future silver product, and that the United States had joined with continental Europe upon that line of action, what country of all the civilized nations of the earth would be the first to call for the free and unlimited coinage of silver at a ratio to be agreed upon by an international convention? Why, the country called Great Britain would be the first to make that demand. Why? Because, with $10,000,000,000 loaned out to the balance of the world, she would find it necessary to devise some means of bringing about, at some time in the near future, the payment of that ten thousand millions, amounting to one-fourth of the entire wealth of the British people.

Where is that money loaned? Mainly to countries that have only silver with which to pay, and as soon as Great Britain found that the gold for the payment of the interest and principal of her vast foreign investments was exhausted she would naturally demand the remonetization of the metal in which alone that indebtedness could be paid. Further, when she found that all South America, with India, China, and other countries with which she carries on trade, and with whom the balance of trade is always in her favor—when she found that those countries had not the gold with which to pay her, she would be down on her knees again calling upon the nations of the civilized world to provide some means by which she could collect her loans and have her balances paid. In that way we should find that she would be knocking at our doors in less than three years, demanding that silver and gold should be again made the money of civilization, at a ratio to be agreed upon by an international convention. In order to have us remonetize she would gladly do the same.

That is the course I favor, and that is what I believe will come to pass if this Sherman act be stricken from the statute book of the United States. [Applause.]

Now, Mr. Speaker, as it is very difficult to speak in this Hall, and as I find that I am growing more than exhausted from the heat, I shall conclude by simply calling attention to one other point to which some of our friends have adverted with a good deal of what I think unjust criticism. I refer to what they call a departure on the part of a certain section of the Democracy from the national platform of the Democratic party. As I read that platform I can not find any other policy in it than the one that I have been attempting to lay down here. Let us read it:

We denounce the legislation known as the Sherman act of 1890 as a cowardly makeshift fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal.

Its author is anxious for its speedy repeal. Its supporters are anxious for its speedy repeal. Its author was a good Republican, its supporters were good and honest Republicans, and they are, one and all, anxious for its speedy repeal, and so am I, in obedience to the dictates of the Chicago platform adopted by the Democratic party in convention assembled.

Further:

We hold to the use of both gold and silver as the standard money of this country, and to the coinage of both gold and silver, without discriminating against either or charge for coinage, but the dollar unit of coinage of these metals shall be of equally intrinsic exchangeable value, and be adjusted by international agreement.

As I understand it, the national convention gave us two roads of obtaining the free and unlimited coinage of the silver dollar; and if we could not do it and maintain a parity of the metals at a ratio of 16 to 1 or that of any other ratio by ourselves, then it left open to every Democrat, every true follower of the doctrines of that party, the other remedy. It left open to us that of international agreement.

I am satisfied that a ratio of 16 to 1, or a ratio of 17 to 1, will accomplish nothing, as well as a ratio of 20 to 1. But I am satisfied, along with Grover Cleveland and other good, honest, sterling Democrats, that the only way in which we can accomplish that full, complete, and ample remonetization of silver is by an international agreement made with three or four of the leading commercial countries of the world. When that is done, and I believe it will ultimately be done, and at no distant date, then the promises of the national platform of Chicago will be kept, the faith of Grover Cleveland will be maintained, and the Democratic party will have fulfilled every financial pledge to the people of this country for the future as well as it has done in the past; and I for one am content to wait for that, expecting we shall see the dawning of prosperity once more come upon this beautiful land of ours. [Applause.]

If we should fail in obtaining international agreement I should then favor an issue of Treasury notes redeemable on demand in gold. A gold reserve in the Treasury of one hundred millions sustains three hundred and forty-six millions of Treasury notes and one hundred and forty-seven millions of silver certificates, and no holder of a Treasury note ever calls for a dollar of that gold because the Government promises to pay in gold and the creditor is satisfied with the promise This is confidence. Issue one hundred millions of bonds for another one hundred millions of gold. Put the gold in the Treasury as a reserve. On that issue $500,000,000 in Treasury notes, the good old greenbacks, and send them into circulation from time to time as they are needed. Get them out among the people just as the first three hundred and forty-six millions were thrown into circulation. Not a dollar of the new gold would be called for as long as our faith was pledged. We would know that we could get the gold when we wanted it. Confidence would be just the same, money would be plenty, and this great old land of ours would march onward in happiness, honor, and long-continued prosperity.

Mr. LACEY. Mr. Speaker, as a member of the minority of this House I can not but complain of the form in which this debate has been brought upon us. The division of the question by the special rule adopted has been left wholly to the members of the majority of this House, and we are called upon to decide simply between two propositions: An absolute and unconditional repeal of the so-called Sherman act upon the one hand, or on free coinage upon some ratio less than the commercial one upon the other. No middle ground is offered; no opportunity to present a new or different proposition has been granted to the Republicans of this House.

I desire at sometime before the vote is taken to submit and ask unanimous consent that the following amendment may be offered to the bill as introduced by the gentleman from West Virginia [Mr. WILSON].

The Clerk read as follows:

To amend the bill by adding the following:

"*Provided*, This act shall not take effect until the silver circulation of the United States shall have been increased to $700,000,000."

Mr. LACEY. Mr. Speaker, it seems that there is a fair ground for an adjustment between these two extremes of the ques-

tion. It is not the mere fact that the Sherman law exists, and is adding about 4½ tons avoirdupois every day to the Treasury stock of silver; but it is the idea that this addition is to continue without limit, that there is no end to it, that has frightened the foreign investors of the world. They fear that we will come to a silver basis under the Sherman act, and they fear free coinage at a ratio less than the commercial ratio. It is not the silver of the Sherman law thus far purchased that they are afraid of, but it is that its purchase will continue without limit. It is the addition of an uncertain volume of silver money that has influenced foreign investors and caused them to withdraw their money while it could be done in gold. And it is to this extent, and this extent alone, that the Sherman act is responsible in any degree for the present condition of the country. The tide of foreign investment has in part only been checked by this law.

We were told when the Chicago convention met that the McKinley bill would destroy the industries of this country, and the Democratic party denounced in its platform "a policy which fostered no industry so much as that of the sheriff." The sheriffs, after the election of Mr. Cleveland, were expected to go out of business, but theirs has been the most profitable pursuit since the 4th of March of any in the country. There has been no contraction of sheriff's deputies.

It is not true, Mr. Speaker, that the Sherman law did excite great fear in this country. No panic ensued until a Democratic Senate became certain at the other end of the Capitol.

I remember well, Mr. Speaker, in the Fifty-first Congress, when this compromise was brought about, that only fourteen Democrats could be found to vote against the free coinage of silver at a ratio of 16 to 1.

Our opponents have now divided, and have taken charge of both sides of the discussion. Each side is claiming to represent the orthodox principles of the Democracy. "While the cat is away at Buzzards Bay the mice will play;" and the discussion thus far has been between the two wings of the Democratic party. They can not flap together, and their discussion on the meaning of their platform is highly amusing. One wing says it is a gold-standard platform and the other wing says it is a free-coinage document. It was admirably adapted to campaign purposes in either New England or Texas.

What, then, may be asked, is the principal difficulty with which the country is confronted to-day? When it became certain that we were to have a revision of the tariff laws, then loss of confidence came and the business of this country was put into cold storage, where it has since remained, and where I fear it will stay until our brethren on the other side give the country some assurance that the nation is to be left alone to resume the prosperity which it enjoyed when the election of 1892 took place.

You gentlemen on the other side have been returned by a large plurality of the voters of the United States. Your majority in Congress is one of almost unexampled magnitude, chosen upon a mistaken belief as to the effect of your tariff policy; yet the gentleman from New York [Mr. HENDRIX], who spoke the other day, told you that there was nothing the matter with the country except the Sherman act. "Repeal that act," he said, "and go home and let the country alone until December." If the country could be sure that you would spare its industries after December all would be well.

Why was there no difficulty up to the 4th day of last March? This law had been in force for more than two years. Why was there no panic previous to that time? You must recognize the fact that there can be no revision of the tariff laws of a great country like this without unsettling values and demoralizing a great many of its industries; and the sooner you determine what industries are to be spared, the sooner the country will adapt itself to the proposed change of conditions and go about its business.

But to simply repeal this law and give us no proper substitute—to stop the increase of currency under the present statute and provide for no other form of increase, is not, in my judgment, wise legislation. The sailors have a motto to never to let go a rope with one hand until they have taken hold with the other. You ask us to repeal the Sherman law without knowing what is to take its place, or offer only as a substitute free coinage at such ratio as would bring us at once to a silver basis. A majority can repeal that law; but when it comes to passing separately a new law to take its place, a two-thirds vote may be required, because a Presidential veto must be provided against. You ask us now, without any conditions, to repeal absolutely that law.

In the amendment which I sent forward and had read at the Clerk's desk I have suggested a limit of $700,000,000, because the Republic of France with 38,000,000 population has, without any difficulty whatever, maintained her silver coinage up to that limit. We have to-day between five hundred and six hundred million dollars of silver. If you adopt a provision such as I propose, fixing the limit at which this coinage will cease, you assure the people of the world that we are not going to a single silver basis upon a ratio of 16 to 1, and at the same time you do not, in the hour of this nation's greatest need—at a time when banks are failing, workshops closing, and when furnace fires are going out all over the land—stop the issuance of the additional supply of money which the country needs. For, if the Sherman law is repealed some other method must be devised, and you, gentlemen of the Democracy, are responsible and must present some new means of supply to the people. We should know what you propose. We should know what is to take the place of this law. Is it to be State-bank money? Let us know what you have in reserve.

Mr. BLAND. If the gentleman will allow me, I would like to ask him why he proposes to stop at a limit of $700,000,000 if France has that amount of silver coinage? Is not our country twice as populous as France? Why not put the limit at $1,400,000,000?

Mr. LACEY. I thank my friend for that suggestion. France, with 38,000,000 inhabitants, uses more gold and more silver per capita than any other country in the world, because of her peculiar methods of doing business and her custom of hoarding. We have nearly double the population of France, but our mode of business is to deposit our money in the banks and they loan it out; we carry on a credit system and a check system. The bulk of payments are made by checks.

I assume that we can not carry, that we do not need, so large a circulation as a people who do business under the methods adopted by the French nation. But I assume, Mr. Speaker, that we can maintain with perfect safety as large an amount of silver coinage as France. Therefore, I have suggested the idea of fixing the limit at $700,000,000 here and now, and the future can take care of itself, because we shall have the light of additional experience and shall have had time to adjust ourselves to the new policy of the party in power. By fixing this limit we restore confidence to the country upon this question; we tell the people we are not going to a silver basis alone. Then this scare, so far as silver may be to blame, ceases; for there will be a line beyond which we are not to pass without involving an instantaneous cessation of the issue of the currency provided for by the present law.

Mr. WILSON of Washington. I would like the gentleman to state how much gold France has back of the silver.

Mr. LACEY. I am not sure of the exact amount; nor do I regard that as a vital question. Her supply of both gold and silver is large.

Mr. WILSON of Washington. France has $900,000,000 of gold and $700,000,000 of silver.

Mr. LACEY. The question is not so much what amount of gold France has back of the silver, but the extent of her credit—the amount of faith that is given to her financial standing. We have $600,000,000 of gold and can maintain a gold basis upon a smaller reserve than any country in the world. At this very time, when all this complaint is made, the people are hoarding silver in exactly the same way that they are hoarding gold. Silver and silver certificates are being drawn from the banks and locked up in safe-deposit vaults. No distinction has been drawn between the two kinds of currency. Whatever doubt may exist abroad, we see no evidence of any American discriminating between the different kinds of currency. By the proposed amendment we would easily maintain the parity of the two coined metals; by fixing this limit we would be tided over the present difficulty.

This compromise, it seems to me, ought to restore confidence in our ability to maintain the equal value of all our money. The Democratic party, powerful as it is, but divided as it is, owes it to the country to give to those who are not in favor of the proposition of either wing of that party an opportunity to vote for something between those lines. This question is one upon which the people are divided; it is one upon which we have very many different theories. All our silver legislation in Congress since silver started on its world-wide downward march from a parity with gold until it reached 58 cents on the dollar—all our silver legislation has of necessity been the result of compromise.

It is perfectly evident, Mr. Speaker, that neither of the two wings of the party in power has yet been sufficiently clipped by patronage to be certain to be in the minority, and you may have to call upon our side of the House to determine which way this question shall be decided. And yet you have excluded us; you have wholly disregarded us; you have drawn your propositions in such a way as to give to the gentleman from Missouri [Mr. BLAND] as many different amendments as he chooses to propose, and have given to this side of the House not even the little, feeble opportunity to make one single amendment to your proposed measure. And yet you appeal to us, and to our side of the House, bidding us to be patriotic: "Forget your party, forget your past,

and come over to us and help us rescue the country from the deplorable condition it has been in ever since the 4th day of last March."

Now, my friends on the other side of the Chamber, permit me to say that in all justice and in all candor an opportunity to vote on some other proposition, to offer some amendment, some other means of solution than the one which has been proposed by the gentleman from Missouri should be afforded. I do not here or now desire to discuss at length the great question of free coinage on the one hand, or limited coinage on the other. Bimetallism can only be maintained under free coinage by putting a dollar's worth of silver into each coin of that denomination. The form in which this proposition is thrust upon the House, and the utter refusal to give anybody an opportunity to present anything unless it has been agreed upon in the Democratic caucus, is a remarkable specimen of unfairness in partisan politics. And we are expected to listen in silence to the claims that the present condition of business is wholly due to the silver law, and are warned that any claim on our part, indicating that the proposed tariff revision is the cause of depression, will be regarded as an unpatriotic attempt to make political capital.

Mr. Speaker, we are now called upon to decide a question for the whole country. There has seldom been a time when the plain people have looked to Congress in the same spirit that they do at present. They feel that some action is needed, but they are not disposed to dictate what it shall be. The troubled condition of our finances has shaken the confidence of many people upon this question—people who have heretofore entertained very decided views upon the subject. Many have asked for the unconditional repeal of the Sherman law. Others have asked for free silver coinage upon the ratio of 16 to 1. But when your constituent asks what you are going to do in Congress, and you respond by inquiring what he thinks you ought to do, there has never been a time when the voters throughout our country have so unanimously conceded that this is too great a question to dictate upon, and they reply by hoping that you will consider it and settle it in some proper way that will be for the good of the country.

I believe that there can be no solution except one which will recognize the views or give proper consideration to the views of all parties in the House. No question of this character can be fairly considered with all right of amendment cut off and ignored.

It is claimed that all that is needed to restore the halcyon days of the Harrison period is to pass this bill.

It is said that then we may go home and give American industries a commutation of their sentence until December. You should be sure, gentlemen, that you have discovered the real seat of the disease. He is a bad dentist who pulls the wrong tooth.

We may return to our homes, sir, but confidence will not follow us unless we take some affirmative action on the other great question which has closed the factories of the United States. That is a question that must be settled in some way. There are industries to-day which are paralyzed, that have suspended business, that will probably not be touched by any legislation this Congress will ever enact; but they fear and dread what may be put upon their shoulders and act upon the theory that the worst is to come. The old cry has been that the tariff is a tax. It is understood now that Democracy is a tax, and the most burdensome one ever put upon the backs of the American people.

Nothing short of some absolute settlement of the tariff question will entirely restore the confidence of the country, reopen the banks, and put the wheels of progress again in motion. And while our brethren on the other side of the House appeal to us to be patriotic, let us appeal to them to lay aside their mistaken principles. They appear to have had little difficulty in doing so up to this time; they have said that their platform means this or that; that it was to go in on and not to stay on after they got in. Kindly give the people the assurance that the platform is to be followed no further. We have heard gentlemen on both sides of the question read the same plank in different ways or repudiate it altogether.

Now, I ask you to lay aside the bold proposition of that platform that protection is unconstitutional. Lay aside your condemnation of that system under which the country prospered for thirty years under Republican rule; resolve to let our industries alone, and the people will rise up and call you blessed, not for what you have done, but for what you have forborne to do when you had the power. [Applause.]

Mr. WARNER. Mr. Speaker, I am so well aware, not merely of the importance, but also of the urgency of this question, that I should not allow its decision to be postponed to permit me to make any remarks upon it, except that I have a duty to perform. I have been so reassured, sir, by the remarks of my new-found friend from Colorado [Mr. PENCE], who broke all precedent and, omitting to attack New York, fired his sharpest arrows at Massachusetts, that I am emboldened to rise for the purpose of presenting a memorial of the Chamber of Commerce of the City of New York, in accordance with its request.

And, sir, to avoid any misunderstanding, I beg to be indulged for a moment while I introduce to this House the gentlemen in whose behalf I speak.

NEW YORK AND NEW YORKERS.

It is a mistaken idea, sir, that there are no institutions at New York other than banks. It is a great mistake to imagine that there are no people in New York other than bankers. It is a fact, sir, although gentlemen from the interior may perhaps be pardoned for occasionally forgetting it, that the reason New York City is where it is is on account of the Almighty having put New York Harbor where He put it; and we are there, not because it is a particularly good place to build banks, but because it is the place which we have selected as the best one at which to do business.

The Chamber of Commerce of the State of New York is, as I know some here will be surprised to learn, not composed either exclusively or mainly of bankers. On the contrary, it is composed of business men who stand in the same relation to banks as do the farmers and the business men of the West and South. We are borrowers from the banks, not lenders to the banks. It is to our interest to have money as easy as possible, in order that we may be facilitated as far as possible in doing our business and yours.

The first man upon the committee named in this memorial is Mr. John Claflin, a man whose business is to find wherever in the broad United States he can sell on credit the greatest amount of dry goods. The next is Henry Hentz, a man who is known as one of the leading, if not the leading, cotton-buyers of America, whose business consists in making as good a market as possible for every pound of cotton that he can find in the South and Southwest. The next is a man engaged in foreign commerce, and whose livelihood consists in the extent to which, by the development of that commerce, a market can be found abroad for the most wheat, the most cotton, the most pork, and the most of the other products of this great country.

Each is engaged in getting from the banks every bit of credit he possibly can, in order that he may be able to extend it to those with whom he deals in every part of the country. Upon your prosperity depends our possibility of prosperity. Whenever there is a State to be developed in any part of the Union it is we who are interested in the prosperity of that State, in order that we may get more trade. Whenever there is an abundance of currency needed to move the crops in any part of the country it is we who are interested in making that currency more abundant. It is we whose business consists in having those crops as great as possible, in order that we may have more business to do with you for your profit as well as ours.

Now, sir, I do not wish to infer that the strictures that have been made against the bankers of the city of New York are in anyway deserved. As a matter of fact, I believe that their interest as well is bound up in the prosperity of the whole country. As a matter of fact, I know that, before the banks of any part of the rest of the country even considered the question, the banks of New York made preparation to advance funds to all parts of the country, in order to keep from coming on—and when it came on, to keep from coming to a crisis—the very situation with which we are now confronted. But at the same time it is not the banks of New York, as such, for which I speak. And if there is any reason why they should be offered up as a sacrifice, not to the golden calf, but to the silver pig, I beg that the Chamber of Commerce at least may be exempted from that condemnation.

THE BUSINESS SITUATION.

Now, sir, we find ourselves in this position. We have exhausted our credit. We can, therefore, no longer extend credit to the rest of the country. We find ourselves unable to sell your merchants dry goods unless they will pay us cash, which they can not raise. We find it impossible to buy your cotton and your wheat, because we can not obtain the funds wherewith to pay for them. We find that, instead of being enabled to do your business to your profit and ours, the situation is such as to enforce a perfect paralysis alike upon the prosperity of the country, upon your opportunities for prosperity, and upon our possibilities in that line.

Now, sir, there have been presented to this House, too ably to leave any excuse that I should repeat them, some of the arguments to account for the present situation. I will omit them. I will only attempt to tell you the facts, with the sense of the responsibility that comes from knowing that upon the correct solution of the situation with which we are faced depends our commercial prosperity—the very existence, indeed, of the business of New York. If we are mistaken, we are mistaken upon a matter which most directly and most vitally concerns our own

interest. If we fail in our efforts, the result will be that we shall be the first and the worst sufferers.

Mr. HEPBURN. If it will not interrupt the gentleman, I would like to ask him a question.

Mr. WARNER. I shall be glad to hear the question.

Mr. HEPBURN. I understood you to say a moment ago that the banks of New York were unable to extend to the country the money to do their business.

Mr. WARNER. They are unable to extend to us, the business men of New York, the funds and the credits which we need to have to discount your notes and give you the credit upon which your enterprises depend, and which will enable us to do your business.

Mr. HEPBURN. Will the gentleman kindly tell us why the banks are unable to do that?

Mr. WARNER. That is what I am going to do.

Mr. HEPBURN. Is it not this, that they have been doing business on other people's money who are no longer willing to trust them with their money?

Mr. WARNER. The gentleman is entirely correct. Now, sir, the situation is not one which has come upon us without warning. Three years ago we began to be questioned by prudent investors in our own country, and more generally by investors from abroad, as to whether or not American investments were entirely safe. With the passage of the Sherman act this uncertainty and distrust increased. We saw signs of it in the growing insistence that all contracts should be made payable in gold. We saw signs of it in the abnormal return of American securities; we saw signs of it in the falling off in investments in those securities in quarters where they had been most favored.

These symptoms have steadily increased from that day to this. Our friends upon whom we depend for the money to enable this country to be developed have grown more and more suspicious and distrustful. Last winter, when they saw the free gold in the Treasury, having already dropped more than $75,000,000, go towards the vanishing point, there came a new wave of distrust; and more and more of our securities were returned. And now, just as we need money to market our crops, just as the solution of this question is forced by the action of India, the crisis has at last come. With a full sense of the responsibility under which the appeal is made, we ask you to repeal the act providing for the purchase of silver bullion.

OBJECTIONS ANSWERED.

Now, sir, there are certain objections made, certain suggestions made in answer to what I have said, which it is proper, perhaps, to note.

THE ACTION OF INDIA.

In the first place, we are told that this crisis has followed the demonetization of silver by India. I myself am not disposed to exaggerate the importance of India. I believe that the effect of the Indian demonetization of silver is exaggerated. But it is a fact that until lately India and the United States were suffering steadily increasing embarrassment in their endeavor to sustain the silver standard against the civilized world.

It is a fact that within the last few weeks, by the act of that Government which rules her destiny, India has been withdrawn from that task. Since that time we have staggered worse and worse toward what seems an inevitable fall. If we attempt to carry that burden alone, such will be our fate.

MONOMETALLISM.

It is also suggested that this repeal involves monometallism. Now, sir, there may be some people in this world, or in this House, who care particularly about the theories of monometallism and bimetallism. But I tell you frankly that the Chamber of Commerce of the State of New York do not care anything about either. What they want is whatever system may make money most abundant, currency most sound, confidence most widespread—this to enable them to do the most and most profitable business.

We are perfectly willing to go on under bimetallism, if that is the condition under which there will be most confidence and our currency will be most plentiful and most sound. We are willing to go on under monometallism, if that is the condition which will give us these results. But, sir, what we object to is this: Those among us who are Republicans consider it the most indefensible business policy; those among us who are Democrats consider it an undemocratic use of governmental power to sacrifice the interests of this great country in order to bring about either one system or the other.

We believe, indeed, that bimetallism would be better secured had not our Government put its meddling hand into this business; but we are are perfectly willing to go on with monometallism or with bimetallism, provided our Government does not force upon us an unsound currency, provided our Government does not so intermeddle with the good faith of contracts that business men throughout the world will be led to lose faith in the honesty of American finances and the soundness of American securities.

INDEPENDENCE.

The suggestion, however, is made in answer to this, that we should ignore other nations, and we are twitted with being dependent upon the "money sharks" of the East and the moneylenders of Europe. Mr. Speaker, the one man who is independent in this world is the man who has nothing. Take a man who lives upon a rugged mountain side, which no amount of cultivation can coax into productiveness, and he is independent alike of the money market and of the labor market. There is nothing under heaven that he can do with money, and there is no excuse for any labor to develop his estate.

But take the man of brains, who sees an opportunity for the development of a great, rich, growing neighborhood, and he needs all the money that, from every part of the world, confidence in the future of that neighborhood—confidence in the honesty of that neighborhood—confidence in the security of investments in that neighborhood—can bring. We are the greatest borrowing nation of the world, simply because the star of our promise shines brighter than that of any other nation in the world, and we shall best fulfill our grand destiny by getting as much help as we can from all parts of the world to develop these United States of ours.

Mr. Speaker, I am not one of those who believe that we are, in any strict sense, dependent upon Europe. I have no doubt if we should build a wall about this country that, after a generation perhaps, there would still be found a very large number of very healthy people here. I have equally little doubt that, if we should build a wall about Colorado, that State would find itself, after a generation, still inhabited by people speaking the English language.

But, sir, the folly that would suggest that we repel the investments which Europe has sent to assist in developing this country, if carried to its logical result, would repel from Colorado the investments that New York and Boston and Philadelphia have sent there, with faith in the future of Colorado, to help to develop that State. And, sir, just as, in direct proportion to its present prosperity, no Western State could for one moment afford to have withdrawn from its borders the investment of Eastern capital that is now employed in building it up, so, equal would be the fatuity of these United States if we should break down the confidence of the world and cause the withdrawal of all the foreign capital which, on account of their confidence in us, the people of other nations have sent us for our upbuilding.

FREE COINAGE.

It is suggested, however, by some of our friends on this side of the Chamber that we should try free coinage. One hundred years ago Alexander Hamilton established the free coinage of silver and gold in this country at a ratio of 15 to 1. The result demonstrated that he had made a mistake, and silver being overvalued in our currency, we went right straight to silver monometallism, and we stayed there for forty years. In other words, the fact that our Government was carrying on the coinage of these two metals at a fixed ratio did not suffice to raise the price of silver the 3 or 4 per cent which, during that time, separated it in the market from the price of gold; and under the lead of a Democrat of Democrats, under an Administration than which none was ever more Democratic, in view of the fact I have mentioned, expressly stated as the reason for its action, we changed the ratio in order to drive out silver and bring us to a gold basis.

During the next forty years the free coinage of those two metals at the rate of 16 to 1 did not raise gold the 3 per cent necessary to make it equal with silver. That brought us to 1873. For these last twenty years we have tried one juggling experiment after another, each announced in advance as a grand panacea calculated to keep the two metals together. Yet to-day they are farther apart than ever.

So, sir, when you ask us to accept the free coinage of silver at the ratio of 16 to 1, with the assurance that this will bring the two metals together, we say to you that for forty years we have seen a slight overvaluation of silver in the ratio fail to raise it to the mark of gold; that for forty years we have seen a slight overvaluation of gold fail to raise it to the price of silver; and that now, when the two metals are 40 per cent apart, the last thing that a man of common sense would expect another man of common sense to agree to is an attempt to try again these old experiments under the present aggravated conditions. In other words, you are asking us to justify the fears of the very ones whose lack of confidence in our present situation has brought us to this pass. [Applause.]

OTHER RATIOS PROPOSED.

It is suggested, however, that we compromise; that we adopt some other ratio than 16 to 1; that we try 18 to 1 or 20 to 1. Now, Mr. Speaker, if these gentlemen had not so often and so eloquently

explained to us that it was our duty to stand by 16 to 1, that the power of this Government is sufficient to put the two metals together at that ratio, we might have more confidence in their consistency, even if not in their judgment. But the very moment that they admit it is necessary to bring the ratio of coinage to coincide with or to approach the commercial ratio, they have convicted themselves of fallacy in the very ground of their argument.

If we are going to have any ratio, Mr. Speaker, for Heaven's sake give us 16 to 1. If you put the ratio at 16 to 1 we know exactly what will happen so far as financial prescience can prophesy anything. This ratio is so low that we know that it will immediately depreciate our currency to the present ruling commercial basis of silver; and we shall know how to prepare for it.

But, sir, if you put us on a ratio of 18 or 20 or 24 to 1, or any ratio which in your judgment seems to approach, or which does approach, the commercial ratio, we are then face to face with this dilemma. Should silver rise 3 per cent, or 2 per cent, or even 1 per cent, in its commercial value as compared to gold, it would destroy the efficacy of your ratio and would bring us to gold monometallism.

If silver should fall in value 2 or 3 per cent so as to change to that extent the relation between the market values of the two metals, we would immediately be driven to silver monometallism. We would be exposed to the alternation of silver monometallism and gold monometallism with invariable depreciation. If you are going to break down the present status, if you insist upon breaking up our business and yours, for Heaven's sake let us die in peace with the paralysis from which we are now suffering. Do not first stretch us upon the rack of silver monometallism and then upon the rack of gold monometallism—the two constantly meeting and passing each other—first doubling, and then halving, the metallic currency of the country. If you are going to give us anything in the line of a free coinage ratio give us something that, when we have taken the plunge, will assure us we have struck bottom.

THE CHICAGO PLATFORM.

It is suggested that we must carry out the Democratic platform. I agree to that; but, sir, there appears to be a misunderstanding about that platform. I thought I knew what it was. It was my good fortune to hear it read to the convention which adopted it. I have a copy of it here. I had supposed that it was an authentic copy. I find the pledges in that platform upon the financial matter to be these: First, for a repeal of the Sherman silver-purchase provision; next, the use of both silver and gold as the standard money of the country, and the coinage of them both without discrimination. I think that means free coinage; I will admit that it does.

But it is also provided that the dollar of coinage of both metals must be of equal intrinsic and exchangeable value, and be adjusted through international agreement or by such safeguards of legislation as will insure the maintenance of the parity of the two metals and the equal power of every dollar at all times.

Then follows a solemn assertion that we do this in order that the farmer and the laboring man may be spared from the evils of unstable money and a fluctuating currency.

Mr. Speaker, if there was ever a pledge made by man that was sacred, I think we have it here. But these gentlemen come to us without any pretext that an international agreement has been arrived at, without any suggestion of legislation, except such as has been discredited by the experiments of the past, and ask us to help them to inaugurate a new and worse series of financial experiments than any which have damned their inventors during the last hundred years in the nation's history. Whenever, sir, there shall be made a reasonable international agreement—although in this personally I have little faith—yet as a Democrat I will vote for it for the purpose of trying the experiment. Whenever any legislation shall be proposed which has not already been discredited by the experiments of the past, I will try to sink my doubts as to the probable value of it. But until one or the other condition is fulfilled, the Chicago platform expressly forbids free coinage.

It may be, however, that I have wrongly read the Democratic platform; and my respect for the gentlemen who agree with me in loyalty to the grand old party permits me to assume for a moment that they are right and I am wrong—and either that there is some twist of language that will put an entirely different construction upon that paragraph from what appears on its face, or else that the copy I procured from the national Democratic committee is not a correct one. But, sir, suppose that they are right. They appeal to us to carry out the whole platform; and with their hands on their breasts they appeal to their consciences in behalf of this suggestion.

Now, sir, I find a great many other planks in the Democratic platform, and I fail to appreciate the consistency of gentlemen who stand in their places and say they will fight the Democratic party in behalf of their consciences, and yet do not insist on carrying out the other planks of the platform to which they profess loyalty and allegiance. There is a tariff plank in that platform, which is, as far as possible, the representative of that issue upon which we went to the people; and yet no one on the Democratic side of this question has been so conscientious as to say we have got to have a repeal of the McKinley bill tacked on to the repeal of the Sherman law. There is also in the same platform a proposition for the repeal of the tax on State-bank notes, which my friends seem entirely to have forgotten.

Now, Mr. Speaker, I may have a poor conscience, but at all events it is not of the elastic kind, and if it occurs to me that I must insist on the whole platform being put into a single bill before I will help to carry out any plank of it, I shall be careful not to omit the leading provisions of the platform to which I appeal.

Mr. COX. You will vote for it all, then?

Mr. WARNER. I will vote for it all, altogether, or seriatim.

Mr. COX. I am with you.

Mr. WARNER. Even if we are to pass over for the moment this extraordinary development of conscience, there is another consideration. We have a number of distinct pledges in this platform, none of them more direct than——

Mr. COX. Mr. Speaker——

The SPEAKER. Does the gentleman yield to the gentleman from Tennessee?

Mr. WARNER. Yes.

Mr. COX. I have the promise of the gentleman from New York [Mr. WARNER] that if we will put the entire Democratic platform in one bill, he will vote for it.

Mr. WARNER. Every time.

Mr. COX. Now, your objection at present is, that we have taken a part of the platform but not all of it?

Mr. WARNER. No, sir, I have no objection; I am perfectly willing to vote for this bill. It is the gentleman himself who proposes to object; and my suggestion to him is, that it will be well to take up the planks of our platform just as fast as we can and put them into law without loading up one with another, to the danger of both.

Mr. COX. That is all right. Now, let us be fair with each other. Do I understand the gentleman correctly, that if we will vote for the repeal of the Sherman act he will vote for free coinage?

Mr. WARNER. I will vote for the free coinage of silver either protected by an international agreement or by such safeguards of legislation as will keep the metals at a parity; and that is verbatim what the platform promises.

Mr. COX. Will you vote for the free coinage of silver at any ratio?

Mr. WARNER. Yes, under proper legislation, in the very words of your platform.

Mr. COX. What do you mean by "proper ratio?"

Mr. WARNER. There is no reference to ratio.

Mr. HOLMAN. Proper legislation.

Mr. WARNER. The platform says—

or by such safeguards of legislation.

Mr. COX. What do you mean by "safeguards of legislation?"

Mr. WARNER. My dear sir, that is for you gentlemen to propose. [Laughter.] We know what we want and can formulate it.

Mr. COX. Well, we know what we want; but you propose to leave us to work it out, and when we get it done you will say "amen."

Mr. WARNER. Until you find out what you want we are not going to attempt to tell you.

Mr. COX. We know what we want.

Mr. WARNER. Now, sir, I shall detain this House but for a few words more——

Mr. CANNON of Illinois. If I understand the gentleman aright, if this bill passes without an amendment, and if the repeal of the purchase clause of the Sherman act be stricken from the statute books, then the gentleman stands ready to keep the next plank in his platform and to repeal the tax upon State-bank issues?

Mr. WARNER. I do. I voted for it in the last Congress. [Applause on the Democratic side.] I want to say right here, in answer to the gentleman, that while it is not peculiarly to the interest of the section from which I come—and I am glad he has brought it up just at this time—while we are not particularly troubled with a dearth of circulation, yet we recognize that the present system of currency is a financial straight-jacket into which no free country ought to be pressed. [Applause on the Democratic side.]

And more than that, sir, while my friends, although they are

so conscientious, have forgotten that plank of their own platform, this memorial of the chamber of commerce asks not merely for one thing, but for two. It asks for the repeal of the purchasing clause of the Sherman act, and also that measures be taken for the maturing of a plan for a safe and an elastic currency—an entirely different one from that with which we are cursed to-day.

Mr. McRAE. Are you willing to put that in the Wilson bill?

Mr. WARNER. No, sir.

Mr. McRAE. Why not?

Mr. WARNER. Because I do not propose to load up one plank of the Democratic platform with another plank which a part of the Democratic members in this House repudiated when they refused to join with us from the North in supporting that very proposition in the last Congress.

Mr. McRAE. Since you take the initiative in the one, will your friends also take the initiative in the other?

Mr. WARNER. We will take the initiative in introducing those matters which appeal most directly to our interests, and until we shall have been appointed the guardians of the rest of the country, we propose to leave it to take the initiative in those matters which most directly affect it.

Mr. McRAE. Should you not, then, apologize yourselves for introducing a measure to carry out only a part of one plank of the Democratic platform and not to carry out the other?

Mr. WARNER. My criticism is not that you do not introduce your measure; but that, without doing so, you interfere with the carrying out of the plank of the Democratic platform which we are insisting upon.

Mr. McRAE. Give us a chance and you will see whether we will or not.

Mr. WILSON of Washington. There is no chance now. You have cut us off.

FRIENDS OF SILVER.

Mr. WILSON. Now, Mr. Speaker, I have explained, I hope intelligibly even if not convincingly, that the people of the city of New York, the members of the New York Chamber of Commerce whom I represent, are borrowers instead of lenders of money; that their interests are the same as that of the rest of the country; that their prosperity depends upon that of other parts of the country, and that therefore your cause is theirs.

I ought to mention, sir, that there are others in the State of New York who do not come within that category. They are the people who withdraw their funds from banks, not because they have any doubt as to the soundness of the banks, but in order to ruin the merchants who are straining their credit in order to increase yours, men who are going about damaging the reputation and killing the fame of sound institutions, human hyenas who stab reputations in order that they may fatten upon the ruin they hope to produce. Every one of them is listening with eagerness to every word of my friend, the gentleman from Missouri [Mr. BLAND], who, indeed, does not sympathize with them, but with whom they sympathize. Every one of them is endeavoring to convince the business public of New York and the financial authorities of Europe that the President's recommendation will not be carried out, and that the plans of the gentlemen on the Democratic side whom we oppose here will succeed.

We have such men there—only a few of them, however, and God be thanked for that—the bears of Wall street and the Shylocks of Europe; and we wish you joy of your friends; they are not ours. On the other hand, sir, we are interested in having a plentiful currency of sound money; and, as I called to your attention, we ask not merely for a repeal of the Sherman act, but for a plan to be matured for a sound and elastic currency.

THE TROUBLE AND THE REMEDY.

I believe that there is no need of longer dwelling upon the causes of tight money. Gentlemen in this House have taught for years and years that it depended upon the action of Congress in issuing a few millions, more or less, of silver or of notes. If this country has learned anything from the present crisis so that it has been burned into its memory as with a red-hot iron, it has learned this, that while the currency has been increasing as fast as gold can be brought from Europe, and as fast as Government notes can be printed, money has been getting scarcer than before. Men are beginning to learn that the real money of commerce, the real currency for the transaction of business, does not consist in silver or in gold, but in the confidence of business men.

That, sir, is the matter in which the chamber of commerce is primarily interested. We want the Government, not to help us to do business, but to let us alone, so that we can have facilities to do business. This law is a destroyer of confidence, an interference with the development of this country; and we ask to have it repealed. We want that repeal, not as an end, but as a means; as a means to the reinstatement of the public confidence, so that, as in former flourishing times, every bale of cotton as it reaches the press, every bushel of wheat as it reaches the elevator, every ton of ore as it lies on the dock, shall be a basis of credit and be current money throughout Christendom. If that law, which puts it out of our and your power to restore that confidence, is once repealed we can coöperate with you in helping on what will be the greatest reaction of prosperity that this country has ever seen—in which, from Texas to Maine, from Florida to Washington, all will be blessed, and we with you will share in the benediction. [Loud applause.]

Memorial of the Chamber of Commerce of the State of New York.

JULY 6, 1893.

Whereas this country has often suffered greatly by reason of hasty and ill-advised financial legislation; and

Whereas it is now suffering from the effect of the silver-purchasing clause of the Sherman act, which, by creating distrust as to the interchangeability of our currency based on silver with our currency based on gold has caused widespread alarm, and has almost created a commercial panic; and

Whereas in consequence of this alarm money is being withdrawn from circulation, business is greatly depressed, many mills and manufactories are closing or preparing to close, and thousands of laboring men are about to be thrown out of employment; and

Whereas business enterprises will not be resumed nor labor be steadily employed until money can be obtained by manufacturers at reasonable rates; and

Whereas ordinary interest rates can not be expected until confidence in the stability of all the money of the country shall be thoroughly reëstablished, so that the lender may not fear repayment in dollars less valuable than those he lends: Be it

Resolved, That the repeal of the silver-purchasing clause of the Sherman act, which, month by month, renders increasingly difficult the maintenance of the parity of each dollar with every other dollar, is essential to the prompt restoration of national prosperity. This chamber, therefore, urges the speedy and unconditional repeal of such silver-purchasing clause.

Resolved, That in the judgment of this chamber a representative commission should be appointed by Congress, at the special session about to convene, which commission should diligently study the whole body of coinage and currency laws of the United States and other countries and report at the regular session of Congress, to the end that a comprehensive plan for a safe and elastic currency may be carefully matured in the light of the world's experience.

Mr. MEIKLEJOHN. Mr. Speaker, as the hour for adjournment under the special order has nearly arrived, I move that the House do now adjourn.

The SPEAKER. Before putting that motion the Chair would suggest that there is a very large number of gentlemen upon the list of those who are to address the House upon this subject. Generally gentlemen prefer to speak between 12 and 3 o'clock in the afternoon, but it is not possible that all can speak between those hours.

Mr. HUTCHESON. Mr. Speaker, I have only forty minutes, but——

The SPEAKER. There is a motion to adjourn pending, but if the gentleman desires to address the House, perhaps the mover will withdraw it.

Mr. MEIKLEJOHN. I withdraw the motion, Mr. Speaker.

Mr. HUTCHESON. Mr. Speaker, it is with some degree of timidity that, at this time of day and upon a question which has been developed on this floor with so much eloquence, I venture to add anything to the discussion; and, sir, were there involved in this discussion anything less than the integrity of the Democratic party and the best interests of the country I should feel that it was temerity on my part to venture upon any observations before this assembly. But, Mr. Speaker, though this is my first session as a member of this House, yet I represent to-day the Democracy of my State and the interests of my country just as sacredly as gentlemen who have been in this Hall for the last fifteen years, and I feel that I owe to them such suggestions as I can make regarding the question now before us.

Ordinarily in the Congress of this nation we find the parties arrayed in prearranged and definite party lines upon the one side and upon the other, and we draw our arms and bare our breasts, neither asking nor giving quarter. For such a conflict, Mr. Speaker, a spirited man is always ready, and in such a conflict he gives nothing that he is not willing to receive. But, sir, when we come into a controversy like this, where brother stands opposed to brother, the case is different. I do not agree, of course, with the position of the gentleman from New York [Mr. WARNER], but I would not, except in admonition or suggestion, lay my hand upon his shoulder, and when the controversy takes such a shape as that it embarrasses the conduct of the discussion.

Nevertheless, Mr. Speaker, I propose to treat this question as if every Democrat stood where he ought to stand. I believe, sir, that before this contest is over every Democrat will stand where he ought to stand.

Permit me now to review the arguments of gentlemen who have preceded me. The gentleman from Ohio [Mr. HARTER] began the discussion by presenting to this House the inquiry: "If you found a man drunk, would you give him more whisky?"

Now, Mr. Speaker, the very question before this House is: Is this man drunk? [Laughter.] It is the diagnosis of the disease that is first to be determined. I admit, sir, that we find the country sick. The first doctor, the gentleman from Ohio [Mr. HARTER], pronounced the disease drunkenness. The gentleman from Texas [Mr. BAILEY] tells us that the disease is depletion—

the want of substance. Carry out the figure: Is this country drunk with an excess of money, or is it weak and dying from a defect of money? Let us settle this question first, feel the patient's pulse, consult his appetite, and by the ordinary methods decide what the disease is, and then treat it.

If this country is sick from the effects of the Sherman law, then you will discover the fruits of that law rejected. But, Mr. Speaker, this sick country is crying with the agony of starvation for more of the very silver certificates which they say has brought on this panic, and no man doubts that a sufficient supply of them at this moment would allay this panic and set the wheels of commerce in motion. My people and your people are crying, Give us more of all money, including the Sherman certificates. This country is starving for money.

Mr. HENDRIX. About what is the size of the appetite?

Mr. HUTCHESON. Well, sir, if it is to be measured by that of New York, it is measureless and insatiable. If it is measured by the country, 10 per cent. [Laughter and applause.] I am glad the gentleman from New York asked me that question. New York comes and tells this country that she is in a panic, but I wish to tell the gentleman that my constituents have been in the same kind of panic for the last ten years—moneyless—and have had to stand it.

Mr. HENDRIX. I make it 12.

Mr. HUTCHESON. I will accept your amendment, sir. It is the best statement that you have offered to this House. [Laughter.] Mr. Speaker, I admit that it is a little immodest in me to speak during the first or second week of this session, but when I remember that the gentleman from New York has set me the example, not only of making a speech, but of prescribing the entire business of this session—for he told us to repeal the Sherman law and then adjourn and go home—I am encouraged to hope that the House will pardon my presumption. [Laughter.] With these compliments to the gentleman I trust he will let me proceed without interruption.

The other day I asked the gentleman a question while he was speaking, and he said he was unaccustomed to public speaking and declined to answer me. He had stated to this House, as I understood, that the high tide of gold was reached in 1885, and that from that time forth it declined until 1893. Mr. Speaker, I wish to make a point upon that proposition and to show that the gentleman is mistaken in his facts; that the logical truth of the facts when stated is the very reverse of the gentleman's position. The gentleman tells this House that after the passage of the Bland act in 1878, and after the passage of the Sherman act in 1890, gold became timid and did not come to this country. If that were true, the gentleman's argument would be sustained. The truth is, however, that at the time of the passage of the Bland act the amount of gold in this country (I do not undertake to speak with exactness, but only approximately) was $278,000,000.

If the Secretary of the Treasury tells us the truth, we have to-day $650,000,000 in this country. I ask the gentleman why gold, which is so timid, came here, notwithstanding its blushing timidity, and was willing to wed its fortunes to this country?

They tell us that New York and the cities say we are in danger of a financial panic on account of silver; that it does not matter whether we are really in danger, but because New York and the cities say so, therefore we must accept their dictum and vote in accordance with their request. Let me test that proposition a moment. When did this Congress come here to enact the clamors of the country into laws? Congress comes here to enact laws according to the facts. If a clamor were to be started in this House to-day—if there were an outcry that the building was on fire—what would be the duty of every man here? To accept the clamor and rush out like a madman?

No, sir; if the alarm were not well founded it would be the duty of every reasonable man to stand before this House and appease the clamor by denying the alarm cry. That would be the duty of a patriot and a humanitarian. If a certain number of people in this country were to tell you that they were opposed to white dogs because white dogs were assumed to be mad dogs, and then if you found some of the very gentlemen who had undertaken to raise this alarm rushing about the streets picking up the white dogs, taking them in their arms (as they take these white silver dollars), I would say: "It is not hydrophobia you are afraid of; you have gone short on dogs, and you want to create the impression that a white dog is not a good thing for anybody to have." [Laughter.] When you undertake to state a fact I test it by your manifestation of the faith that is in you.

But, Mr. Speaker, the question of the gentleman has led me into a desultory debate when I was undertaking to state a proposition upon which I desired to base an argument. It is this, and I beg the attention of gentlemen to it. In my opinion, Mr. Speaker, this discussion has taken a direction which is unfair to the cause of silver and to the cause of the country. It has been devoted almost wholly to the question of the ratio between the two metals, instead of covering the question of the function of money. This discussion has been devoted to determining whether a fixed ratio can be maintained between the two metals, while in fact the paramount question is, can one or two, or more than two, metals meet the functions of money and discharge the obligations of money in transacting the business of the country? The gentleman from Ohio told us that while the ratio is one thing and while the abundance of money is another thing, yet the volume and abundance of money are the most insignificant and least to be considered of all its elements.

Mr. Speaker, I stand here to maintain the reverse of that proposition; that so far from its being true that the volume of money is its most insignificant element, it is in fact the most paramount and important consideration connected with it. Pardon me if I give you a figure of speech to illustrate this matter. If we stood to-day at the point where time first began, and the question was presented to us what we should fix upon as money, how would you decide that question? You would ask, "What is to be its office?" If I should reply that money is to operate in the buying of every bale of cotton, every bushel of wheat or corn in this country—that such is to be its function and office—what, then, would you determine? You would see what there was in nature or art, in the province of man or in the gift of God, which would answer such a relation to the products of this world as to perform the function for which you were to provide a medium of exchange and insure a fair recompense to labor. Would you not? If you loved justice and your fellow-man you would.

If, Mr. Speaker, you were to divide the world by a river, planting the medium of exchange upon one side and asking those who had products which they wished to exchange to come to the other, what would you require? That the men who stood upon that river with the medium of exchange should have in their possession enough to pay the men who came upon the other side with their products—enough money to defray the expenses of the production. And I care not whether the medium of exchange was gold or silver or diamonds or dirt, if the man coming to that original congress to make a settlement should offer any commodity which would not meet the demand, you would reject that commodity and look for those commodities, one or more, which would answer the requirements.

Why would you do it, Mr. Speaker? Because the moment that river was approached by a bushel of wheat, for which there was no corresponding dollar, the bushel of wheat would be rejected and would perish in the hands of the man who produced it.

Now, let me illustrate this matter so that every man will understand it. I am going to try to make it so plain that even my Republican friends can understand it. [Laughter.]

Mr. CULBERSON (before the conclusion of Mr. HUTCHESON'S remarks). Will my colleague yield for a suggestion? It is now near the hour of adjournment.

Mr. HUTCHESON. Mr. Speaker, my colleague suggests to me that the hour has arrived for adjournment. I would like to proceed in the morning, if it be the will of the House.

Mr. WILSON of West Virginia. I move that the House do now adjourn.

Mr. CULBERSON. With the understanding, of course, that my colleague has the remainder of his hour in the morning.

Mr. BLANCHARD. I understand, Mr. Speaker, that the gentleman from Texas will have his time to-morrow.

Mr. CULBERSON. Certainly.

The SPEAKER. The gentleman has an hour under the rules of the House. He has consumed twenty minutes and will be entitled to forty minutes to-morrow.

The motion of Mr. WILSON of West Virginia was then agreed to.

And accordingly (at 4 o'clock and 58 minutes p. m.) the House adjourned.

SENATE.

TUESDAY, *August 15, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

WOOL SAMPLES.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of the Treasury transmitting further information in response to the resolution of February 27, 1893, relative to the report of the commission to select samples of wool for use in the custom-houses; which was read.

Mr. SHERMAN. Towards the close of the last session of Congress the report of the commission called for in the resolution was sent in without the papers. The papers are now communi-

cated, and I submit a resolution to print the report and accompanying papers together.

The resolution was considered by unanimous consent and agreed to, as follows:

Ordered, That Executive Document No. 3, Fifty-third Congress, special session, being a letter of the Acting Secretary of the Treasury transmitting a report of the commission to select samples of wool for use in the custom-houses, be reprinted, together with the additional information on the subject this day laid before the Senate.

REPORT OF VISITORS TO WEST POINT.

Mr. CULLOM. On behalf of the Board of Visitors appointed by the Vice-President and by the Speaker of the House of Representatives to attend the annual examination of the cadets at the United States Military Academy at West Point, N. Y., I submit a report, which I ask to be referred to the Committee on Military Affairs and printed.

The VICE-PRESIDENT. It will be so ordered.

PETITIONS AND MEMORIALS.

The VICE-PRESIDENT presented a petition of the Board of Trade of Louisville, Ky., praying for the repeal of the so-called Sherman silver law, etc.; which was referred to the Committee on Finance.

Mr. PEFFER. I present a petition of 158 citizens of Osage County, Kans., praying for the free and unlimited coinage of American silver. I wish to state in connection with the petition that the letter of transmittal informs me that the petitioners are composed of men representing all shades of political opinion, so that it may be taken as a fair representation of the views of the people in that section of the State. I move that the petition be referred to the Committee on Finance.

The motion was agreed to.

Mr. PEFFER. I present also a telegraphic communication which, while it is not exactly a petition, yet I think is proper to be presented in connection with other petitions. It is a telegram on the same subject from the State executive board of Kansas, the board consisting of all the State officers, in which they instruct their Senators, as far as their power of instruction goes, to vote for the free and unlimited coinage of silver, it being unquestionably practically the unanimous judgment of the people of Kansas. I move that the paper be referred to the Committee on Finance.

The motion was agreed to.

Mr. MCMILLAN presented a petition of the Board of Trade of Detroit, Mich., praying for the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented the petition of John Ederle and 10 other citizens of Battle Creek, Mich., praying for the enactment of legislation looking to the enlargement of the money uses of silver; which was referred to the Committee on Finance.

Mr. WOLCOTT presented a memorial of citizens of Illinois, remonstrating against the repeal of the so-called Sherman silver law without free coinage of silver at a ratio of 16 to 1; which was referred to the Committee on Finance.

He also presented a memorial of citizens of Sacramento County, Cal., remonstrating against the repeal of the so-called Sherman silver law without the remonetization of silver and praying for the creation of postal-savings depositories; which was referred to the Committee on Finance.

He also presented a petition of the General Assembly of Colorado, praying for the passage of a general bankruptcy law; which was referred to the Committee on Finance.

He also presented a petition of the Master Plumbers' Association of Denver, Colo., and a petition of the Denver (Colo.) Chamber of Commerce, praying for the freer use of silver as money of ultimate redemption, and an increase of the circulating medium of the country by the free coinage of silver; which were referred to the Committee on Finance.

Mr. CAMERON. I present a large number of petitions of merchants, manufacturers, and other business men of Philadelphia, Pa., indorsing the resolutions of the Trades League of Philadelphia, adopted July 28th last, praying for the immediate repeal of the silver-purchasing clause of the so-called Sherman law. I move that the petitions be referred to the Committee on Finance.

The motion was agreed to.

Mr. CAMERON presented petitions of the Foundrymen's Association of Philadelphia; of the Hardware Merchants' and Manufacturers' Association; of the Commercial Exchange of Philadelphia; of the Board of Trade of Scranton; of the Chamber of Commerce of Pittsburg; of the Board of Trade of Erie, and of William Connell and other citizens of Scranton, in the State of Pennsylvania, praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which were referred to the Committee on Finance.

He also presented the petition of A. V. Bennett and 80 other citizens of Pennsylvania, praying for the appointment of a commission to examine into the evils of immigration; which was referred to the Committee on Immigration.

Mr. QUAY presented a memorial of Corry Grange, No. 55, Patrons of Husbandry, of Corry, Pa., remonstrating against the repeal of the so-called Sherman silver law, unless coupled with a provision for the free coinage of silver; which was referred to the Committee on Finance.

Mr. PASCO presented the petition of Messrs. J. and T. Kidd and 35 other citizens and business men of Fernandina, Fla., praying for the immediate and unconditional repeal of the silver-purchasing clause of the so-called Sherman law; which was referred to the Committee on Finance.

He also presented a petition of the Florida Bankers' Association, praying for the unconditional repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

Mr. WHITE of California presented a petition of sundry iron and steel manufacturers of the Pacific coast States and Territories, praying for the removal of duties upon certain articles; which was referred to the Committee on Finance.

Mr. DANIEL. I present a petition from the trustees of Washington College, now known as the Washington and Lee University, located at Lexington, Va., praying for compensation for injury to property by troops during the late war. I move that the petition be referred to the Committee on Claims, and that it be printed as a document.

The motion was agreed to.

BILLS INTRODUCED.

Mr. BERRY introduced a bill (S. 420) granting the right of way for the construction of a railroad and other improvements through and on the Hot Springs reservation, State of Arkansas; which was read twice by its title, and referred to the Committee on Public Lands.

He also (by request) introduced a bill (S. 421) for the relief of the legal representatives of Calvin B. Cunningham; which was read twice by its title, and referred to the Committee on Claims.

He also (by request) introduced a bill (S. 422) for the relief of Thomas Boles; which was read twice by its title, and referred to the Committee on Claims.

Mr. FRYE introduced a bill (S. 423) to amend the act entitled "An act to incorporate the Maritime Canal Company of Nicaragua," approved February 20, 1889; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 424) for the relief of the Grand Trunk Railway Company of Canada; which was read twice by its title, and referred to the Committee on Claims.

Mr. HUNTON introduced a bill (S. 425) for the relief of the Potomac Steamboat Company; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 426) for the relief of the heirs of the late Mrs. Mary Ann Randolph Custis Lee, of Fairfax County, Va.; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 427) for the relief of Alexander Stoddart, of New York; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 428) for the relief of Samuel Marsh; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 429) for the relief of George H. Plant, of the District of Columbia; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 430) for the relief of certain citizens of Virginia; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 431) authorizing and directing the Secretary of the Navy to contract for the purchase of a lot of land opposite to the Gosport Navy-yard; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 432) to provide for an American register for the steamship El Callao; which was read twice by its title, and referred to the Committee on Commerce.

Mr. POWER introduced a bill (S. 433) granting to the State of Montana 5 per cent of the net proceeds of the sales of public lands in that State to support common schools; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 434) to provide for the examination and classification of certain mineral lands in the States of Montana and Idaho; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. ALLEN introduced a bill (S. 435) granting the right to personally inspect and have attested copies of all evidence and

reports filed or used in proceedings to obtain a pension, and for other purposes; which was read twice by its title, and referred to the Committee on Pensions.

Mr. BLACKBURN introduced a bill (S. 436) for the benefit of T. T. Garrard and others; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 437) for the relief of William J. Landrum; which was read twice by its title, and referred to the Committee on Claims.

Mr. McPHERSON introduced a bill (S. 438) directing the discontinuance of the purchase of silver bullion; which was read the first time by its title.

Mr. McPHERSON. I desire to have the bill read at length and referred to the Committee on Finance.

The bill was read the second time at length, and referred to the Committee on Finance, as follows:

Be it enacted, etc., That so much of the act of July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as directs the purchase of silver bullion is hereby repealed.

Mr. PUGH (by request) introduced a bill (S. 439) for the relief of David B. Gottwals; which was read twice by its title, and, with the accompanying papers, referred to the Committee on the Judiciary.

Mr. GEORGE introduced a bill (S. 440) to carry out certain findings of the Quartermaster-General and the Court of Claims; which was read twice by its title, and referred to the Committee on Claims.

Mr. KYLE introduced a bill (S. 441) to establish postal savings banks and to encourage the saving of money in small amounts; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. PETTIGREW introduced a bill (S. 442) to ratify the agreement made with the Yankton tribe of Sioux Indians, in the State of South Dakota, for the sale of their surplus lands, dated December 31, 1892; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. McMILLAN introduced a bill (S. 443) to provide for the sale of new tickets by the street railway companies of the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 444) making the surveyor of the District of Columbia a salaried officer, and to provide for more efficient service in the surveyor's office; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 445) supplementary to an act entitled "An act to provide a government for the District of Columbia," approved February 21, 1871, and also an act entitled, "An act for the government of the District of Columbia, and for other purposes," approved June 20, 1874; which was read twice by its title, and referred to the Committee on the District of Columbia.

He also introduced a bill (S. 446) for relief of Catherine E. Whitall; which was read twice by its title, and, with the accompanying paper, referred to the Committee on Claims.

He also introduced a bill (S. 447) to authorize the Secretary of the Interior to issue a duplicate of a certain land warrant to Emma A. Ripley; which was read twice by its title, and referred to the Committee on Private Land Claims.

Mr. VANCE introduced a bill (S. 449) for the relief of Joseph C. Hogan; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 450) for the relief of Bryan Tyson; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

He also introduced a bill (S. 451) for the relief of John D. Thorne; which was read twice by its title, and referred to the Committee on Claims.

Mr. CALL introduced a bill (S. 452) for the relief of John S. Sammis; which was read twice by its title, and referred to the Committee on Claims.

Mr. DANIEL introduced a bill (S. 454) for the relief of Washington College (now known as Washington and Lee University), located at Lexington, Va.; which was read twice by its title, and referred to the Committee on Claims.

Mr. VOORHEES introduced a joint resolution (S. R. 13) authorizing the Secretary of the Treasury to remit the 5 per centum penalty on merchandise now in distillery special bonded or custom warehouses upon which the tax is due or about to become due; which was read the first time by its title.

Mr. VOORHEES. I ask that the joint resolution may be read the second time at length and referred to the Committee on Finance.

The VICE-PRESIDENT. The joint resolution will be read at length, if there be no objection.

The joint resolution was read the second time at length, and referred to the Committee on Finance, as follows:

Whereas there exists at the present time a great and unusual stringency in the money market; and

Whereas under the operations of the internal-revenue law tax is now due and soon will become due on a large quantity of distilled spirits in excess of the demand for consumption, and which spirits are now in bonded warehouses; and

Whereas said internal-revenue law provides that if the said tax is not paid within three years from the date of entry into bonded warehouses a penalty of 5 per cent, with interest at 1 per cent per month, shall attach: Therefore

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to remit the said penalty of 5 per cent on all merchandise now in distillery special bonded or custom warehouses upon which the tax is due or will fall due within two months, if the said tax shall be paid within six months after the time now provided by law, together with interest at 6 per cent per annum instead of 1 per cent per month as now provided.

PROPOSED SUSPENSION OF STATE BANK TAX.

Mr. GORDON. Mr. President, I have purposely waited until this moment to introduce a bill to which I ask the attention of the Senate. It is not a panacea for all our ills, but I believe that if enacted into law it would end the panic in the South, at least, within fifteen days.

It is a bill not to repeal the 10 per cent tax on State bank issues, but to suspend its operation for six months. If the Senate will indulge me a few moments, I will endeavor to explain the necessity for it and its effect upon the Southern section of the country.

The present cotton crop is to be moved. Only yesterday a telegram was received from a cotton center requesting that something be done by the Treasury to have bills of lading authenticated or cashed or money in some way provided to move that crop. This bill would enable our own banks to move the crop. Take Savannah, for example, which is our leading port, with seven banks, all good and with an aggregated capital of $3,000,000. The programme is this: Bank A, say with $100,000 capital, would sign its own notes or promises to pay to the extent of $20,000 and place in trust abundant collateral to secure these notes or bills of convenient denominations—say for $5, $10, and $20 until they aggregated the $20,000 or 20 per cent of its capital. These would be good notes; but to render them vastly more secure and acceptable to the people, all the six banks would indorse them and thus make them equal in security to any bank bills in the country.

A like process is adopted for each of the other banks and to the extent of 20 per cent of its capital, which 20 per cent of notes or bills will likewise be indorsed by each of the other banks—these notes or bills being also of convenient form and denomination for a circulating medium in the State or locality. When this programme is finished for all seven of the banks, we would have an increase to the extent of least $600,000 in Savannah, which would be received by depositors, by the city authorities, by merchants, and others, because they would be fully as good as any bank bills in the discharge of people's debts—leaving the currency now in the bank vaults to be used in moving the crops. If the objection be urged that this suspension of the tax would permit State banks to organize or permit what is termed wildcat banking, the reply is that it would be utterly impossible, under this provision, to organize any bank within six months. No man with any brains or thought whatever would take a dollar of stock in a new bank of this sort, chartered by a State, which would be wiped out of existence within six months, or taxed out of existence by the expiration of the provisions of the bill.

Only last night, sir, I had a conference with a number of as able bankers as there are in this country. Each of them united in the opinion that the circulation thus provided would relieve our State and Texas and Mississippi and all the cotton States within a few days from the embargo now imposed by the want of currency.

It is a matter of gigantic moment, sir, to us. Our banks are not only without the ability to provide the money for moving this crop, but they are without the ability to command their own money lying on deposit in the city of New York. Their own bills or checks drawn upon their own funds in the city of New York may come back to them in some other shape than in currency. What is promised by this bill is a temporary currency which will pay the indebtedness of any citizen who is so fortunate as to possess it.

There is not a merchant in any of our towns who would not recognize the fact that any bank in good standing in our State which would issue notes thus secured would find them current in every section of the State. There is no better or more secure currency than this would be. It would be equivalent to a ship load of gold emptied into our markets, and would at once relieve the pressure, and make possible the use of present currency for moving the cotton.

I ask the serious attention of the Senate to this measure, and while I know the remark that it would relieve the panic in fifteen days is calculated to provoke a smile from those who oppose State banks and local currency, yet it is true that it would relieve the panic in my State in ten days after its passage. It would do it in every other Southern State. Our people know our banks. They have confidence in them in every city. The City of Savannah has never had a defaulting bank from the days of Oglethorpe to this hour. I beg pardon; I will qualify that statement to this extent: When the war came, some of our banks were, of course, broken; but at no time in our history has a Savannah bank failed to pay its depositors dollar for dollar except during the war.

Now, sir, with that knowledge of our people as to the solvency of our banks, with the indorsement of other banks upon the bills of the particular bank issuing this currency, I undertake to say it would answer all the purposes of gold or silver or Treasury notes of the United States.

This is all I have to say, sir. I ask that the bill be read and referred to the Committee on Finance. I trust the committee will report upon it at an early day.

The bill (S. 448) to suspend for six months the operation of section 3412 of the Revised Statutes of the United States, the same being section 122 of the national-bank act, was read the first time by its title and the second time at length, and referred to the Committee on Finance, as follows:

Be it enacted, etc., That the operations of section 3412 of the Revised Statutes of the United States, the same being section 122 of the national-bank act, imposing a tax of 10 per cent upon the amount of notes of any person or of any State bank or State banking association used for circulation and paid out by them, be, and the same are hereby, suspended for the period of six months from and after the passage of this act.

INCREASE OF NATIONAL-BANK CIRCULATION.

Mr. VOORHEES. I did not hear the order called for reports of committees, and I ask leave now to report a bill. I will state that I am instructed by the Committee on Finance to report the bill and to ask for its present consideration.

Mr. COCKRELL. Let it be read at length for information.

The bill (S. 453) to provide for the issue of circulating notes to national banks was read the first time by its title, and the second time at length, as follows:

Be it enacted, etc., That upon any deposit already or hereafter made of any United States interest-bearing bonds in the manner required by law, any national banking association which has made or shall make such deposit shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered and countersigned as provided by law, not exceeding in the whole amount, including circulating notes previously issued, the par value of the bonds deposited: *Provided*, That at no time shall the amount of such notes issued to any association exceed the amount at such time actually paid in of its capital stock.

Mr. VOORHEES. I desire to say a few words, and a very few. I wish to call the attention—

Mr. COCKRELL. One moment. I do not understand that the bill is before the Senate, because I intend to object to it, after the Senator finished his remarks. I do not want to have it understood that consent is given to take up the bill and consider it.

Mr. VOORHEES. I desire to say in connection with this report that the bill not only has the indorsement of the Committee on Finance and the Secretary of the Treasury, but it has a still higher indorsement. It was passed practically without debate and practically unanimously by the Senate at the last session of Congress, and twice before that. It has had full consideration heretofore. It was passed, I repeat, at the last session by this body, and at that time there was no such requirement, to my mind, as there is now for its enactment.

I have always thought the Government might safely resort to the full faith of its credit to supply the people with a circulating medium. It is no new thought to me, and no new measure. The peril at this time is so much greater that I think the Congress of the United States is far more instructed, as it were, by events than they were then to pass this measure.

Mr. President, I do not proclaim it as a measure of entire relief by any manner of means, but I look upon it as a measure of relief. To some extent it will help the people. The Secretary of the Treasury says that on the bonds now in the Treasury it will authorize an increase of our currency to the extent of $19,000,000. I am advised by others of great experience in financial matters that there is scarcely a doubt but that it will carry an increase of our currency of from $40,000,000 to $50,000,000, which at this time would be a solace and a comfort to our people in every quarter of the United States.

I repeat, Mr. President, if there were reasons heretofore for the passage of such an act by the Senate of the United States, those reasons are magnified now a hundredfold, and I sincerely hope that practically without discussion the Senate may do to-day, in the face of the extreme peril of our situation, what it has done heretofore for an increase of our circulating medium.

I need not say that the national banks are no favorites of mine. I have not been enamored of them and doubtless they have not been of me. They have done wrong and harm perhaps, but that is no reason why we should not seize upon them to bring about a measure of relief if they are capable of doing it. In this instance I believe they have the power to do good, and I desire to authorize them to the extent of the bill at least to render a measure of help to our people.

This is all I desire to say at this time in explanation of the bill and of its motives.

The VICE-PRESIDENT. The Chair understood the Senator from Indiana to request the present consideration of the bill.

Mr. COCKRELL. Mr. President——

Mr. VOORHEES. I do. I am instructed by the committee to make that request.

The VICE-PRESIDENT. Is there objection?

Mr. COCKRELL. There is objection.

The VICE-PRESIDENT. The Senator from Missouri objects.

Mr. COCKRELL. There is objection, because there are a number of Senators who desire to be heard upon this proposition, and who will have amendments to offer proposing to give to the masses of the people the same rights that are conferred upon the national banks and stop favorite and proscriptive legislation. There is no objection, so far as the validity of the national-bank circulation is concerned, to allowing the national banks to issue dollar for dollar, because their paper does not derive one particle of its currency and recognition by the masses of the people from its issue by the national banks.

As to whether the national banks are solvent or insolvent is an immaterial question. The masses of the people take the notes upon their confidence in the United States and the United States bonds deposited as security for the circulation. If every national bank in the United States to-morrow were wiped out of existence and declared insolvent, unable to pay a dollar, every dollar of national-bank circulation would be just as good as gold.

To-day, Mr. President, we have various kinds of money in circulation in this country. We have the greenback as full legal tender. We have the gold certificate, we have the silver certificate, we have the national-bank note, and we have the United States Treasury note or notes issued in the purchase of silver bullion; and to-day the honest, toiling millions of the United States know that the honor and integrity of the United States are back of every one of these dollars and they take one of them just as quickly as they take another.

There is no loss of confidence in this country in the money of the country; not a particle of it. The masses of the people will take a silver-purchasing certificate and a silver dollar just as quickly as they will take a gold dollar, and they take them from the bank and hide them away in their stocking and they place them in the vaults of the safe-deposit company. Why? Because they have unbounded confidence that they can let that money remain there one month or three months or six months, or one year or five years, and then take it out and at that time it will be just as good as any other money on God's green earth.

Mr. VOORHEES. If the Senator will allow me, I concur in every word he has said, and I merely wish to authorize more of that kind of money to be put in circulation. That is the object of the bill.

Mr. COCKRELL. I want still more than the measure of the Senator from Indiana proposes. We want still more, and you simply ask for this much. Besides, we do not want to have such a measure rushed through in a minute. The financial systems that are upon us were not created in a day, and they were not created by unanimous consent in a morning hour. I want it distinctly understood that the people of this country want to understand the measures that are passed at this time.

Senators may talk about this bill restoring confidence. Where is confidence lost? I appeal to Senators to stop and think what confidence is destroyed. It is not the confidence of the people of the United States in their currency. Think of it a minute. Is a man who has lost confidence in a silver dollar, a silver certificate, a Treasury note issued for the purchase of silver bullion, going to a responsible bank and draw out that money and hide it away in an old stocking or in a safe-deposit vault, to lie there a week, or a month, or six months, or twelve months? Why will he do that? Because he has no confidence that the money is good? Why, it is farcical. It is idiotic, nothing more, nothing less and nothing else, to talk about the people of the United States having lost confidence in their money. I do not care what kind of money it is, to-day the people of the United States know that the honor and integrity of the whole Government stand back of every dollar that bears the stamp and impress of the Government, and is receivable for all public debts and dues.

Mr. President, I confess that the people have lost confidence;

but in whom? In the financiers, the gold monometallists, who are undertaking to fasten their iniquitous and oppressive and robber system upon the toiling millions of this country.

Confidence has been lost in the banks that made this panic to order, who cut and hedged and rolled it in to suit themselves, and then it escaped from their clutches and is playing sad havoc with them and with all the people of the United States. It passed beyond their control, and the people have lost confidence in them. What is the result? The people go to the banks to draw out the money that is in the banks, and when they have drawn out 10 or 15 per cent of the liabilities of the banks they have absorbed all the money in the United States and there is no money that anybody else can get for any purpose. There is not money enough in this country; as a matter of course there is not; but the whole financial system that the distinguished financiers in the East have been building for years and years is based upon confidence, faith, hope, and charity. Destroy confidence and the fabric falls. That is all there is about it.

We have got just as much money in this country as we ever had. The people have confidence in every dollar we have got, but they have not confidence in the men who have misled them. Now, let the men who are complaining and whose actions produced this panic say to the people of the country, "This money is all good; we are solvent; we have misled you," and then they may restore confidence. Confidence in them is all that is wanted; confidence for the people to take back to the banks and deposit there the money and let it circulate; confidence that the people will take their money there and let the banks pay somebody else, and that person deposit it, and then somebody else can pay it.

You have got to keep the money of this country turning over almost daily or you will have a panic. There is not money enough in the country. I pointed it out here in 1891, and showed the statistics to prove that there was only about 10 per cent of the liabilities of the banks in cash. I then showed (and I shall at some proper time read what I then said) that the whole financial structure was based upon confidence, and the moment you destroyed that you had a collapse. I was called an inflationist then, a silver crank.

"Oh, no; no more money," we were then told. "Oh, do not touch the financial question;" and I have a pile of circulars now from those identical men begging and pleading, "Oh, do not touch the financial question; do not destroy confidence; just let us alone and we will get along splendidly," while they were just going headlong towards the precipice over which they have gone now. We let them alone. We could not help ourselves, we could not get any more money in this country, and they have gone over the precipice, and now they turn around and say, "Give us more money." More money! But how will they get it? Oh, no; they do not want to get it except it comes through their hands and they reap the richest cream off it in a high rate of interest. That is the way they want to get it. They want it first to come into the hands of the national banks that they may be enabled to dole it out to the people at the highest rates of interest that can be extorted in the midst of depression and financial crash.

We need more money in this country; but we have been told always that we were inflationists, that we were dishonest, that we were trying to scale down the public indebtedness of this country; and now what do we behold? We see this honest, this superlatively honest clearing-house of New York, who have the right in their own estimation to call everybody else corrupt and dishonest, issuing $36,000,000 of money. They say they have not enough money. We are exceedingly thankful that, notwithstanding these troublous times, they have demonstrated certain great principles for which the masses of the people have contended. They have demonstrated that this country has not money enough to answer the purposes of money in the transaction of its billions upon billions of business. Had we had in our country twice or three times the amount of money that we have to-day, this panic would not exist.

No man can say that it would. Treble the amount of money we have in this country and it would not give us the amount per capita that France has; and we should have had no panic. It would not have been in the power of a few single gold-standard men to clasp in their grasp the financial veins and stop the circulation of money.

Mr. President, I simply objected to the present consideration of the bill in order that we might have time to examine it carefully and prepare certain amendments to it. It can not be considered in the morning hour. Even if it could be, it is not proper that a measure of such vast magnitude and involving such important principles should be passed in the morning hour.

Mr. VOORHEES. Mr. President——

Mr. COCKRELL. One moment; I am not quite through yet.

Mr. VOORHEES. I beg pardon.

Mr. COCKRELL. Mr. President, I wish to state that I shall never give my vote to any policy or principle of legislation which tends to recognize the right of the national banks in the future to issue and control the paper money of this country—never, never. It is not right that the masses of the people should part with their right to control the volume of the money in the United States and place it in the hands of a corporate monopoly.

Mr. President, the Democratic party has stood, time whereof the memory of man runneth not to the contrary, opposed to placing the control of the paper circulation of the United States within the dominion and control of a concentrated money power, a corporate monopoly above the reach of the people and the power of law. It declared in its platform of 1840, and in 1844, 1848, 1852, and 1856, this to be a dangerous power to entrust to any monopoly.

I shall not vote for this bill if it gives any encouragement or hope to the national banks to believe that they will be allowed to issue paper currency after the payment of the existing bonded indebtedness of the United States upon which it is based—never. I have no objection to the national banks continuing as banking institutions, but never ought they to be allowed to control the volume of the paper circulation of this country. We know what they will do by what they have done.

In 1881, when we passed a refunding bill here to reduce the interest down to 3 per cent upon the bonds held by the national banks, they came down like a horde of hungry wolves from New York and in one day retired $18,000,000 of their circulation, and came within an ace, as the saying is, of producing a financial panic. That is what they did once, and they will do it again if they have the dominion and control and power over the paper circulation of the United States. Their circulation is perfectly good and nobody objects to it; but if this bill is to be construed as an indication that in the future we shall allow the national banks to issue the paper currency of the United States, then it ought never to pass.

Mr. VOORHEES. Mr. President, of course a single objection makes the bill go over until to-morrow. I give notice that at the proper time to-morrow I shall move to consider the bill, and shall ask to put it upon its passage.

I have nothing to say in reply to the Senator from Missouri, except that this bill has, in the very terms used here now, three times passed this body heretofore. It is queer that I have never heard this speech before in my life. I have heard neither it nor anything like it from anybody; but that is neither here nor there.

The VICE-PRESIDENT. The bill will be placed on the Calendar.

FINANCE COMMITTEE.

Mr. VOORHEES. I am instructed by the Finance Committee to ask permission for that committee to sit during the sessions of the Senate. I shall call a meeting of the committee the day after to-morrow. The public seems to be interested in these matters. I give this notice, and ask that the permission be granted.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Indiana, that the Committee on Finance be permitted to sit during the sessions of the Senate? The Chair hears none.

WITHDRAWAL OF PAPERS.

On motion of Mr. QUAY, it was

Ordered, That Julius M. Bates have leave to withdraw his petition and papers from the files of the Senate.

SILVER COINAGE IN INDIA.

Mr. PLATT submitted the following resolution; which was referred to the Committee on Printing:

Resolved, That 2,000 copies of the Herschell report on coinage of silver in India be printed for the use of the Senate.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed a joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives; in which it requested the concurrence of the Senate.

PROPOSED FINANCIAL LEGISLATION.

Mr. HOAR. Regular order.

Mr. BUTLER. I should like to ask permission of the Senator who called for the regular order to offer an amendment to the resolution of the Senator from Massachusetts [Mr. LODGE]. The amendment is intended to come in after the word "1890," in the third line of the resolution. I should like to have the whole resolution reported.

The VICE-PRESIDENT. Is there objection?

Mr. HOAR. I did not mean, in calling for the regular order, to interfere with the routine morning business; but I give notice that as soon as it is concluded, I shall call up the resolution in regard to the seat of Mr. Mantle.

Mr. BUTLER. I ask to have the original resolution and the amendment reported.

The VICE-PRESIDENT. The resolution and the amendment will be read.

The Secretary read the resolution submitted by Mr. LODGE on the 8th instant, as follows:

Resolved, That the Committee on Finance be instructed to report at once to the Senate a bill to repeal the purchasing clauses of the silver act of 1890, and that a vote be taken in the Senate on said bill on Tuesday, August 22, at 2 o'clock p. m., unless it is sooner reached.

Mr. BUTLER. Now let the amendment be read.

The SECRETARY. After the date "1890" it is proposed to amend by inserting:

Also a bill repealing the tax on such State banks of circulation as will support their circulation by approved State or municipal bonds; also a bill for the free and unlimited coinage of silver at a ratio to be settled by Congress.

The VICE-PRESIDENT. The proposed amendment will be ordered to be printed.

MILEAGE OF SENATORS AND REPRESENTATIVES.

Mr. COCKRELL. I ask the Chair to lay before the Senate House joint resolution No. 3. Let it be read the first time by its title.

The joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives was read the first time by its title.

Mr. COCKRELL. Now, I ask that the joint resolution be read at length.

The VICE-PRESIDENT. The joint resolution will be read at length.

The joint resolution was read the second time, at length, as follows:

Resolved, etc., That the appropriations for mileage of Senators, Members of the House of Representatives, and Delegates from the Territories made in the legislative, executive, and judicial appropriation act for the fiscal year 1894, approved March 3, 1893, be, and the same are hereby, made immediately available and authorized to be paid to Senators, Members of the House of Representatives, and Delegates from the Territories for attendance on the first session of the Fifty-third Congress.

Mr. COCKRELL. That is a joint resolution of the House of Representatives which makes the appropriation for the pay of mileage, supposed to have been for the first regular session, beginning in December next, available for the payment of mileage at this session. I am requested by a number of Senators, who have great confidence that it will have a tendency to allay any panicky feeling, to ask that the joint resolution may be now considered and passed. [Laughter.]

Mr. FRYE. Mr. President, I shall not object to the consideration of that joint resolution. I suppose that it is pressed because it is very much more important than a provision increasing our currency to about $40,000,000. That should lie over; that should await; but this resolution, by which I am to draw a couple of hundred dollars a month or two earlier than otherwise I should, it is important should receive immediate consideration. The country can wait. It is in no difficulty.

Mr. COCKRELL. I hope the Senator will then object to its consideration.

Mr. TELLER. Why does not the Senator object?

Mr. FRYE. Why should I object?

Mr. TELLER. I would suggest, if the Senator from Maine thinks that this joint resolution ought not to pass to-day, that he should object to it.

Mr. FRYE. I have not intimated that I did not think it ought to pass. I was praising the Senator from Missouri for urging the immediate passage of the joint resolution and simply criticising, to a certain extent, his objection to giving currency to the people and his insistence upon giving it to us.

Mr. PEFFER. I object, Mr. President, to the present consideration of the joint resolution.

Mr. GEORGE. I also object to the consideration of the joint resolution for which the Senator from Missouri asked consideration.

The VICE-PRESIDENT. The joint resolution goes over, objection being made to its present consideration.

SENATOR FROM MONTANA.

Mr. HOAR. I call for the regular order, and ask that the Lee Mantle resolution be laid before the Senate.

The VICE-PRESIDENT. The Chair lays before the Senate the resolution referred to by the Senator from Massachusetts, which will be read.

The Secretary read the resolution reported by Mr. HOAR from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. HUNTON. Mr. President, the question of a right to a seat on this floor is not only a question of the highest privilege, but of the greatest importance to the Senate and the States of this Union.

It should be decided without regard to its influence on parties, or the power of any party in this Chamber. Fortunately the decision now (no matter how made) will not affect party supremacy here. Let us, then, consider it calmly and judicially, free from partisan feeling, and make a precedent that will settle forever this vexed question and be a guide to the decision of like questions that may arise in our future history.

The exact question before the Senate is on the report of the Committee on Privileges and Elections giving the right to a seat here to Lee Mantle as Senator from Montana.

But there are two other like cases, one from Washington and one from Wyoming. The facts in these cases are practically similar. They raise the very same question. The determination of one will decide all three. We will therefore consider all at once.

In each of the cases the terms of the Senator elected by the Legislature of his State expired on the 4th day of March. In each of the States the Legislature had met and organized some time prior to the 4th of March, when the seat of one of the Senators from each State was vacated by operation of the Constitution. In each of the States the Legislature, in accordance with the act of Congress of 1866, proceeded to elect a Senator to fill the vacancy, and continued in daily session to elect until the existence of the Legislature was terminated by an express provision of the constitution of each State, and when thus terminated the power of the Legislature in each State expired, leaving the seat of each of the Senators vacated and the three States without their constitutional representation.

In the case of Montana and Wyoming the sessions of the Legislature expired by constitutional limitation a few days before the 4th of March, when the seats of the Senators were vacated. In the case of the State of Washington the Legislature expired by constitutional limitation after the 4th of March. So that in the former two States the vacancy occurred after the termination of the life of the Legislature, and of course during its recess, while in the State of Washington the vacancy in the Senate occurred when the Legislature was in session.

Since this statement of facts was compiled the Senator appointed from Wyoming has resigned, and this leaves only the cases from Montana and Washington for consideration. These facts, undisputed, raise the question whether under the Constitution the governor has the power to fill vacancies in this body which arise by the failure of the Legislature to elect.

There are two general classes of vacancies; one where the Legislature has elected a Senator, and the person elected has accepted the high honor, and a vacancy happens by his death, resignation, or removal; the other where the Legislature has not elected, and the vacancy happens by reason of the failure of the Legislature to elect. In other words, if the Legislature acts and the seat in the Senate is filled, no matter for how short a time, the governor has the right to fill the vacancy which may thereafter happen in any way. This is conceded by all. But if the Legislature has not thus acted, then the question arises whether the vacancy created by this failure to act can be filled by the governor. This is the question involved in this debate. The governor can fill the vacancy happening after the Legislature has elected for a term, but it is maintained by the minority of the committee that he can not unless the term has begun by election.

This construction looks technical, and it seems to me reflects on the wisdom of the framers of the Constitution, who certainly meant to provide for a full Senate and a full representation of all the States. They provided for elections by the Legislature, and for vacancies to be filled by the governor. It remains to be seen if they have failed to accomplish their object to have a full Senate.

There are two classes of rights belonging to the States under the Constitution.

The first embraces all those numerous rights which belonged to the sovereignty of the States and which were not surrendered to the United States, and the surrender of which was not considered necessary to the formation of the Government. The second consisted of those rights conferred upon the States, and were absolutely necessary to the formation of the Federal Government.

In this latter class comes the right of a State to send Senators to represent it on this floor. It is certain that without this provision in the Constitution—this agreement between the States—the election or appointment of Senators would have been unknown. This right of representation of State sovereignty in the Senate was vital to the formation of the Federal Government. Without representation in the two Houses there could have been no Congress and no legislative department of the Government.

In providing for this department the framers of the Constitution ought to have been, and it is maintained were, very careful to provide against vacancies in either branch of Congress. If there may be a vacancy in either House that the State could not fill, then there might, under extraordinary circumstances, be so many vacancies that Congress would cease for the time being to be a body representing the will of the people and States. This subject, the construction of first article and section 3 of the Constitution, should be approached and treated in the spirit which must have inspired its authors. If they failed to provide for the filling of vacancies in such cases as these, it is far better that these States should be in part without representation here than to violate the Constitution by their admission. Did they fail?

The clause of the Constitution involving the right of these Senators to admission is in the following words:

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

There is no other provision that relates to filling the Senate with two Senators from each State. No one can read this provision and fail to find an intention to keep the Senate "full—always full." "The Senate of the United States shall be composed of two Senators from each State." When it is composed of less than two from each State, it does not measure up to the standard prescribed by the Constitution. Its framers intended to provide for a full Senate. If this is so, we should incline to that construction which will more nearly and more certainly keep the Senate full. The Committee on Privileges and Elections, in their report, gives that portion of the Constitution under consideration this construction, which they maintain is authorized by the language of the clause, and enforced by the manifest object which its framers had in view.

The committee maintain under this clause that the governor has the right to appoint in cases where during the term of a Senator, and before it has expired by operation of law, a vacancy happens. No matter how, whether by death, resignation, abandonment, expulsion, or in any similar way "by resignation or otherwise." This is agreed to by the minority of the committee and is not disputed by anyone. The committee go further and maintain that this power to make temporary appointment extends to a case where the full term of a Senator has expired by operation of law, where the Legislature of the State, whose duty it is to elect a Senator, has had opportunity to elect, but has failed to do so. This last position of the committee is combated by the minority. Able speeches have been made on both sides. Which is correct?

The broader view commends itself to my mind. It seems warranted by the language of the clause and is better suited to carry out what must have been the intention of its framers: to keep, as nearly as possible, a full Senate. A full representation of the sovereignty of all the States; that our Government might be in reality, as well as in name, a representative government. The Constitution says the Senate shall be composed of two Senators from each State. This was the object of the framers of the Constitution—two Senators from each State, always in the Senate, to be chosen by the Legislature; vacancies to be filled by the governor. In order to test the value of this view of the minority we must first understand precisely what it is. It is very clearly stated by the distinguished Senator from Oregon [Mr. MITCHELL] in his elaborate and able speech on this subject, as follows:

The minority of the committee hold to the view that, inasmuch as the Constitution in plain and specific terms provides in the first instance for certain definite specific terms of Senators, first of six years, then four, then two years, by virtue of the classification to be made immediately after assembling in consequence of the first election, and then provides—

"If vacancies happen by resignation, or otherwise during the recess of the Legislature of any State"—

that the vacancy contemplated and referred to is a vacancy occurring by resignation, or otherwise, in one or the other of these fixed and definitely described terms, and that it has no reference whatever to any condition that may exist at the expiration of any of these regular terms, and this is so for a great number of reasons. First, because it is the constitutional duty of the Legislature of a State, not only in virtue of the provisions of the Constitution itself, but doubly so in virtue of the act of Congress of July 25, 1866, to provide by election in advance of such a vacancy for a successor to a Senator whose full term is about to expire. And it was never contemplated, as we submit, that the Legislature, no less than the executive, of a State would fail to perform this great constitutional function.

In other words, we confidently insist for the reasons already fully indicated that the vacancy referred to in the Constitution is a something that must be carved out of a term to which a Senator has been chosen. It is a vacancy that must "happen," not by a predetermined fact, not by the occurrence of something we all know long in advance of its occurrence is absolutely sure to occur at a certain date, but a vacancy which "happens by resignation or otherwise;" that is, which happens in *some such manner* as a *resignation*, in some *like manner*, some unexpected manner, in some manner that we did not anticipate, some manner we did not expect, some like unexpected and unanticipated manner such as death, abandonment, expulsion, or other like unexpected occurrence, and not only by resignation, but otherwise

He maintains that the vacancy must exist by resignation or otherwise, and the broad meaning of the word otherwise must be contracted by the word resignation, and that no other vacancy is meant except of a like character with that proceeding from resignation; that is, the power of appointment of the governor is confined to cases where the regular term had been filled by the Legislature and a vacancy occurred afterwards and before the expiration of the term.

Was this the meaning of the framers of this clause? Let us examine its history in convention.

In the Madison Papers, containing Elliott's debates, at page 377, it will be seen that the Committee of Detail, appointed to submit the form of a constitution, reported through Mr. Rutledge on August 6, 1787, the clause on this subject, as follows:

The Senate of the United States shall be chosen by the Legislatures of the several States. Each Legislature shall choose two members. *Vacancies may be supplied by the executive until the next meeting of the Legislature.* Each member shall have one vote.

If this report had been adopted and if this language was in the Constitution, of course no question like this could have arisen. The power of the governor to appoint to fill vacancies would have been unlimited. But objection was made.

Mr. Wilson objected to vacancies being filled by the executives of the States. It was unnecessary, as the Legislatures will meet so frequently. It removes the appointment too far from the people, and the executives in most of the States being elected by the Legislatures. As he had always thought the appointment of the executive by the legislative department wrong, so it was still more so that the executive should elect into the legislative department.

Mr. Randolph thought it necessary in order to prevent inconvenient chasms in the Senate, etc.

Mr. ELLSWORTH. It is only said that the executives may supply vacancies. Where the legislative meeting happens to be near, the power will not be exerted: as there will be but two members from a State, vacancies may be of great moment.

Mr. WILLIAMSON. Senators may resign or not accept. This provision is therefore absolutely necessary.

On the question of striking out "vacancies may be supplied by the executives;" Pennsylvania voted aye, Maryland was divided and could not vote, and New Hampshire, Massachusetts, Connecticut, New Jersey, Virginia, North Carolina, South Carolina, and Georgia voted no. Eight States voted against and only one for striking out.

The Convention by a vote of 8 to 1 refused to take from this clause the unlimited power in the governors to fill vacancies. Of course, if this exact language had been retained no question about the power of the governors in these cases could have arisen.

Mr. Williamson moved to add to the words "vacancies shall be supplied by the executives," the words "unless other provision shall be made by the State." This was objected to by Mr. Ellsworth, and was lost by the vote of four States for and six against it, as follows: Maryland, North Carolina, South Carolina, and Georgia in the affirmative, and New Hampshire, Connecticut, Massachusetts, New Jersey, Pennsylvania, and Virginia (6) in the negative.

Mr. Madison, in order to prevent doubts whether resignations could be made by Senators, or whether they could refuse to accept, moved to strike out the words after vacancies, and insert the words "happening by refusal to accept, resignation, or otherwise, may be supplied by the Legislature of the State in the representations of which such vacancies shall happen, or by the executive thereof until the next meeting of the Legislature."

This amendment of Mr. Madison was deemed by him necessary to prevent doubts—what doubts? The doubts whether a Senator-elect could refuse to accept or resign after acceptance. These doubts arose because of the rule in the English House of Commons, which prohibited a member from vacating his office. This rule in the House of Commons was avoided by the acceptance on the part of the member of another incompatible office. To avoid and remove these doubts, Mr. Madison wished to put into the Constitution the American doctrine that a Senator could refuse to accept and resign after acceptance. It was not because he was dissatisfied with the broad language of the clause, as reported by the Committee of Detail, but because he wished to remove these doubts.

It will be conceded by those who sustain the report of minority that the language of Mr. Madison would have given to the governor the right to fill all vacancies as fully as the language of committee of detail. Because the "otherwise" in Madison's amendment, if limited or contracted in its meaning at all, would be limited by refusal to accept and resignation. There the "otherwise" would have referred to cases like either of the two classes—where there was no commencement of a term by election, as well as the vacancy created after the term had begun by election.

Madison's amendment would have borne the same construction as the language of the original report, and its only object, as declared by Mr. Madison, was to remove doubts on another and different point.

It can not be, and probably will not be, denied that this clause, if adopted with Mr. Madison's amendment, would have given to the governor unlimited power to fill vacancies. This amendment was adopted unanimously, and by this unanimous vote the convention declared for the right of the governors to fill all vacancies arising from any cause.

Mr. MITCHELL of Oregon. May I ask the Senator from Virginia a question?

The PRESIDING OFFICER (Mr. COCKRELL in the chair). Does the Senator from Virginia yield to the Senator from Oregon?

Mr. HUNTON. Yes, sir.

Mr. MITCHELL of Oregon. The Senator will not claim, however, that the Madison amendment was incorporated in the Constitution as finally adopted?

Mr. HUNTON. I would not do the Senator's able speech the injustice to maintain that, and if he had a little patience he would have found that I do not claim that.

This unanimous declaration of the Convention was never reversed by any vote in that Convention. No other vote of the Convention, as far as I can find, was ever taken on this particular clause.

Mr. MITCHELL of Oregon. Was it not reversed by the vote adopting the Constitution?

Mr. HUNTON. It is true, then, that when the Convention unanimously adopted Madison's amendment, it was a declaration for unlimited power to fill vacancies by the governors, and if no other declaration was made by a specific vote on this clause we must look at this declaration in arriving at the intention of the framers of the Constitution. That is the position I take.

But, says the distinguished Senator from Oregon, the clause as framed by Mr. Madison did not go into the Constitution as finally adopted, but with the words "refusal to accept" stricken out, and therefore that class of vacancies embraced in the word "otherwise," which arise from a failure on the part of a Legislature to begin the term by election is not embraced, and the governors have no power to fill such.

I trust I have stated the position of the Senator from Oregon fairly and fully.

Mr. MITCHELL of Oregon. That is correct.

Mr. HUNTON. How was the language of Mr. Madison, unanimously adopted in the Convention, changed? If the Convention went back on its unanimous vote upon Mr. Madison's amendment and deliberately changed the phraseology of that amendment, then the force the Senator from Oregon ascribes to the change would have additional weight; but it was not so.

After the convention had gone through with the report of the committee of detail and satisfied itself as to the various provisions, a committee on style and order was appointed, whose duty was, without altering substance, to improve the language and style of the various articles already passed upon by the Convention.

To prove this, I cite from the Journal, acts, and proceedings of the Convention which formed the Constitution, and I take my citation from a book published in Boston by T. B. Wait, in 1819, which recites as follows:

SATURDAY, *September, 8, 1787.*

It was moved and seconded to appoint a committee of five to revise the style of and arrange the articles agreed to by the House; which passed in the affirmative—

And I beg the attention of Senators to the power and prerogative of that committee on style and order.

Mr. MITCHELL of Oregon. May I ask the Senator a question at that point?

Mr. HUNTON. Certainly.

Mr. MITCHELL of Oregon. Suppose it is true that the powers of the committee on detail, so far as the committee was concerned, extended only to improvement in style; suppose as a matter of fact that committee went beyond its powers and inserted language which will not, by any possible rule of construction, bear the interpretation that the original clause bore, and the Convention as a convention, finally adopted the clause as reported by the committee on style, are we in construing that Constitution to take the amendment with which the committee on detail dealt, or are we to take the language as we find it in the Constitution as finally adopted by the Convention?

Mr. HUNTON. There is no trouble in the world in answering the distinguished Senator from Oregon. We have to take the language as we find it in the Constitution as finally adopted; but when we construe that language upon a doubtful point, we have to take the proceedings of the Convention as a lamp to guide the mind of Senators in coming to a conclusion; and I submit to the Senator from Oregon that if he had carefully considered the proceedings of the Convention, as he seems to have considered everything else in connection with this question, he would have found light enough thrown upon the clause as finally adopted to have come to a different conclusion on the subject.

Mr. MITCHELL of Oregon. I said if it was a case of doubt, then there might be something in the Senator's argument; but I insist, with all due deference to him, that there is no room for doubt as to the construction of the Madison amendment and the construction of the clause which was finally adopted by the Convention.

Mr. HUNTON. Then the meaning of what the Senator says now is that he frankly confesses before the Senate that there is no particle of room for doubt as to his construction.

Mr. MITCHELL of Oregon. No, I am not contending that. I admit there is room for doubt, or so able a lawyer as the Senator from Virginia would not be found here advocating the other side. As between these two clauses, however, so far as they bear upon this particular question, I undertake to say there is no room for doubt. But these two clauses alone may not decide the whole question.

Mr. HUNTON. But the Senator from Oregon admits that there is doubt upon the construction of the Constitution as finally adopted upon this subject. There being doubt as to how it shall be construed, I maintain that it is the duty of the distinguished Senator from Oregon and all of his colleagues upon this floor to look at the history of the adoption of that clause of the Constitution and, if possible, to solve that doubt. That is all I maintain.

The resolution to appoint a committee of five to revise the style of, and arrange the articles agreed to by the House, was passed in the affirmative, and a committee was appointed by ballot of the Hon. Mr. Johnson, Mr. Hamilton, Mr. G. Morris, Mr. Madison, and Mr. King. Mr. Madison, whose amendment had been adopted unanimously in the Convention, was on this committee on style and order, and yet we have never heard a word in the Convention or out of it that Mr. Madison agreed to recede from the position he took when this amendment was unanimously adopted by the Convention.

Mr. HOAR. Although he himself reported the debates of the Convention.

Mr. HUNTON. Although, as the distinguished Senator from Massachusetts says, Mr. Madison himself reported the debates of that Convention.

The House adjourned. (Pages 346 and 347.)

This committee, under its power thus limited, made the change in the clause and adopted the language as it appears in the Constitution. The Convention did not authorize any change that affected the substance. We must conclude the committee did not intend to alter the substance, and when finally adopted the Convention believed there was no change of substance. That is a legitimate reason. This clause, thus embodied into our Constitution, must be considered in the light of what transpired in the Convention. If we believe, as we must, that the clause as amended on motion of Madison—adopted unanimously by the Convention—expressed the views of the Convention, then in all doubtful cases of construction, at least, we should follow the intention of those who framed the clause.

If this be so, then this clause must receive the broader construction of the committee, and their report must be sustained by the admission of these appointees to seats on this floor.

Lexicographers sustain the committee in the meaning it gives to the word "otherwise."

Webster gives as its meaning, "in a different manner," "by other causes," "in other respects." The Century Dictionary gives similar definitions. But the dictionaries most in use at the time the Constitution was adopted were probably Johnson's and Bailey's, both of which were published not long before the Convention adopted the Constitution.

They define "otherwise"—

Johnson's English Dictionary, London, 1755.

1. In an indifferent manner.
2. By other causes.
3. In other respects.

Bailey's English Dictionary, London, 1764.

1. Or else, by other causes, after another manner.
2. In an indifferent manner.
3. In other respects.

The committee maintain that the true meaning of the word "otherwise" in this connection is "in any other way," and will embrace all vacancies, no matter from what cause they may arise.

The minority claims that it means in any other way similar to resignation: that is, a vacancy happening after a regular term has been begun by election by the Legislature, and rely on some adjudicated cases to sustain this view. The cases relied on give the technical and judicial construction of the word "otherwise" when found in statutes.

It is at least doubtful if the meaning of any clause in the Constitution should be given a technical construction. Many of its members were not lawyers and no doubt looked to the plainer meaning of words like "otherwise" and believed they used the word as synonymous with "in any other manner." The Senator from Oregon in his speech, page 86, says:

But what is the meaning of the word "otherwise" in the connection in which it is employed in the phrase, "If vacancies happen by resignation or otherwise?"

The distinguished Senators from Massachusetts and Alabama, and other Senators who support the majority report, claim that the word "otherwise" in this connection, means "in any other manner," while we of the minority contend that, under the well-settled and universally recognized rules of constitutional and statutory construction, it means "in like manner," or some such manner as resignation.

He refers to the case of Fenwick vs. Schmaltz (L. R., 3 C. P., 315), and uses the following extract:

A general word which follows particular and specific words of the same nature as itself takes its meaning from them and is presumed to be restricted to the same genus as those words; or, in other words, as comprehending only things of the same kind as those designated by them, unless, of course, there is something to show that a wider sense was intended.

"Unless, of course, there is something to show that a wider sense was intended." This qualification will be found in the construction of like phrases in all the cases. This contrary intention does appear here. The unquestionable object of this clause was to "keep the Senate full—always full." The history of the Convention proceedings shows that by a vote of the Convention it was decided unanimously on Madison's amendment that this was the intention of the Convention, that the governor should fill the vacancy when it happened from refusal to accept, resignation, or otherwise; that this intention was never changed by any vote of the Convention, and the substance of the Madison amendment was embodied by the committee on style with the change only in the language expressing it.

It is submitted that there is in this case "something to show that a wider sense was intended," and this wider sense must be applied and the conclusion of the committee sustained. This wider sense given to the words "by resignation or otherwise" should be as the committee maintained "by resignation or in any other manner;" but whether we follow this plain meaning of the word, or the limited meaning placed upon it by the courts, there is enough in the history of the Convention to show that the broader sense and meaning were intended and that "otherwise," as here used, means "in any other way."

The precedents in this body also strongly and nearly unanimously sustain the conclusion reached by the committee. As recited by the committee they are as follows:

April 27, 1797, William Cocke was appointed a Senator from the State of Tennessee by the governor, his term having expired on the 3d of the preceding month. On the 15th of May, 1797, he presented his credentials, and was admitted to take the oath of office without objection or debate.

There is no use to deny or argue out of the precedents of the Senate that the case of William Cocke, in 1797, presented the identical question to the Senate of the United States which is presented in these cases here, and the Senate of the United States, without division or debate, decided that he was entitled to a seat upon the floor of the Senate, although appointed by the governor to fill a term which had not then begun, by election of the Legislature.

March 3, 1801, the seat of Uriah Tracy, of Connecticut, became vacant by the expiration of his term of office. On the 20th of February, 1801, the governor of Connecticut reappointed him a Senator. Objection being raised to his credentials, he was admitted to the oath by a vote of yeas 13, nays 10.

William Hindman, of Maryland, was afterward, on the next day, admitted to the oath on like credentials, without objection.

John Condit, of New Jersey, November 14, 1803, appointed a Senator from New Jersey to fill the vacancy at the beginning of the term, was admitted to take the oath. Mr. Condit's credentials had been presented October 17, previous.

March 4, 1809, Samuel Smith, of Maryland, appointed on that day by the governor of his State to fill the vacancy caused by the expiration of his own term, was admitted to his seat and sworn.

March 4, 1809, Joseph Anderson, of Tennessee, took his seat by virtue of an appointment from the governor of that State.

May 24, 1813, Charles Cutts, of New Hampshire, appointed by the executive to fill the vacancy during the recess of the Legislature, was, without question, admitted to take the oath. This vacancy was at the beginning of the term.

March 4, 1817, John Williams, of Tennessee, appointed a Senator by the executive of the State, to hold said appointment until the meeting of the next session of the Legislature, was admitted. His credentials were filed on the 10th of the preceding February.

March 4, 1825, James Lanman, of Connecticut, presented his credentials of his appointment by the governor of that State, "to take effect immediately after the 3d of March, 1825, and to hold the seat until the next meeting of the Legislature." Mr. Lanman was refused the seat by a vote of 23 to 13. The case was referred to a select committee, who report the facts, but state neither reason nor conclusion.

They refused Mr. Lanman a seat upon this floor, as it is maintained by the committee and sustained by the weight of testimony, not because the governor had not the right to appoint at the beginning of the term, but because the governor had no right to anticipate the vacancy and appoint before the vacancy happened.

The committee say they have looked into the Journals of the Senate, and that the cases of Cocke, Tracy, Anderson, and Williams are the only analogous cases they could find. There is a brief sketch of the debate in Niles's Register, vol. 28, p. 82, but no statement of the reason on which any Senator proceeded. There is no historical evidence from which we can determine whether the Senate rejected Mr. Lanman on the ground that the governor could not fill a vacancy happening at the beginning of the term, or on the ground that the governor could not lawfully make the appointment in anticipation, before the vacancy occurred, and before he could possibly know whether the Legislature might be called together before that time.

All the precedents which the committee cite, except that of Mr. Cocke, were cases where the appointment was made not when the vacancy happened in the recess of the Legislature, but only when the governor thought it might happen. In the case of Cocke, the date of the appointment is not given in the Journals, although in fact it was after the vacancy. The committee do not cite the case of Hindman, Smith, or Condit, nor the then recent case of Cutts, in deciding which some Senators then in office took part, where the appointments were made after the vacancy existed. There is, therefore, nothing to show whether the Senate meant to overrule all the precedents, some of which were not brought to its attention, or only so many of them as recognized the right of the executive to appoint when a vacancy had not happened.

Judge Story (Constitution, sec. 727, note 2) says: "In the case of Mr. Lanman, a Senator from Connecticut, a question occurred whether the State executive could make an appointment in the recess of the State Legislature in anticipation of the expiration of the term of office of an existing Senator. It was decided by the Senate that he could not make such an appointment. The facts were that Mr. Lanman's term of service as Senator expired on the 3d of March, 1825. The President had convoked the Senate to meet on the 4th of March. The governor of Connecticut, in the recess of the Legislature (whose session would be in May), on the 9th of the preceding February appointed Mr. Lanman as Senator, to sit in the Senate after the 3d of March. The Senate, by a vote of 23 to 18, decided that the appointment could not be constitutionally made until after the vacancy had actually occurred." (See Gordon's Digest of the Laws of the United States, 1827; appendix, note 1, B.)

So that the decision of the question of the contested seat of Mr. Lanman, according to Judge Story, was upon an entirely different point from the point involved in these cases; and this recollection of Judge Story was borne out by a report in the National Intelligencer of March 8, 1825. Recollect it was March 4, 1825, when the question came up, and four days later the Intelligencer reported the facts of the case.

Mr. PASCO. May I ask the Senator a question?

Mr. HUNTON. Certainly.

Mr. PASCO. I should like to ask the Senator from Virginia if Mr. Benton, in his great work on the debates, does not show that it was decided on the other view of the case?

Mr. HUNTON. That is one view of it; but it is not absolutely certain upon what ground the committee based its decision and the Senate based its decision. I said a while ago, and I repeat, that the weight of the testimony coming from Judge Story, from whom I have just read, and the report in the National Intelligencer, made four days after the question was raised in the United States Senate, shows that I am correct. What does that paper say in reporting the case? It says in an editorial note:

An important constitutional question was yesterday decided in the Senate by the refusal to admit Mr. Lanman to a seat in the Senate under a commission from the governor granted before the expiration of Mr. Lanman's late term of service. This is the first time the question has been adjudicated under such circumstances as to form a precedent; and we presume it may now be considered as a settled construction of the constitutional provision that a vacancy must have literally "happened," or come to pass, before an appointment can be made to fill it.

So that the Intelligencer, which had the confidence of the whole country in the integrity of its reports, four days after the question was raised in the Senate of the United States reported the case, and reported the point upon which the case turned and how it was decided. I say, therefore, again, that the weight of testimony is that the point here under consideration was not involved in the consideration by the Senate of the Lanman case.

The State of Arkansas was admitted to the Union in 1836. In October, 1836, the Legislature of that State elected Ambrose H. Sevier and William S. Fulton Senators. On the allotment of the Arkansas Senators to their respective classes, as required by the third section of the first article of the Constitution, Mr. Sevier was placed in the class of Senators whose term of service expired on the 3d of March, 1837. The Legislature of Arkansas had no opportunity to fill the vacancy, and were not in session after the result of the allotment was known in that State. January 17, 1837, the governor of Arkansas appointed Mr. Sevier to fill the vacancy which would take place on the 3d of March. When Mr. Sevier's credentials were presented at the winter session, Mr. Webster suggested a doubt of the validity of the appointment, in which Mr. Sevier himself concurred.

That was an appointment to begin a term, not to fill out a vacancy occurring by resignation or otherwise in the Senate, as understood by the minority of the committee, but an appointment to fill a term which begun by his appointment.

At the March session the credentials were referred to the Committee on the Judiciary. Mr. Grundy, from that committee, reported in favor of Mr. Sevier's admission, and he was admitted.

Mr. Grundy's report states that it is not intended by the committee to call in question the correctness of the decision in the Lanman case: that that case proceeded on the ground "that the Legislature should provide for all vacancies which must occur at stated and known periods, and that the expiration of a regular term of service is not such a contingency as is embraced in the second section of the first article of the Constitution."

I say, therefore, that the Lanman case is certainly no precedent which can be relied upon to sustain the position assumed on this floor by the minority report of that committee.

Coming down to a later period we find the case of Charles H. Bell, of New Hampshire. He was appointed by the governor to fill the vacancy happening in the Senate by the expiration of the

term of Senator Wadleigh on the 3d of March, 1879, during the recess of the Legislature.

The Committee on Privileges and Elections reported against the right of Mr. Bell and sustained, by their report, the doctrine of the minority report in this case. The report gave rise to an exhaustive and able debate, and resulted in the seating of Mr. Bell by a vote of 35 to 28. The Senate, by a majority of 7, sustained the doctrine of the report of the committee in this case. There was no doubt, and none can be suggested by the able Senators on the other side of this question, that this identical question was not only involved in the Bell case, but was ably debated pro and con upon the floor of the Senate and decided by a majority of 7 in favor of the right of the governor to appoint.

In 1885 Henry W. Blair was appointed Senator by the governor of New Hampshire to fill a vacancy which happened in the Senate on the 4th of March, 1885, and during a recess of the Senate. That was to fill a term which had not begun by election by the Legislature. It was not to fill a vacancy happening by resignation or otherwise, as understood by the minority of the committee, but it was an appointment by the governor to fill a vacancy occurring by the failure of the Legislature to elect at the beginning of the term.

Mr. MITCHELL of Oregon. I wish to ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from Virginia yield?

Mr. HUNTON. Yes, sir.

Mr. MITCHELL of Oregon. I ask if it is not a fact in that case, as also in the Blair case which followed it, that the Legislature of the State, whose business it was to elect a successor to the Senator whose term expired on the 4th of March, did not meet until the following June, and is it not a fact that it appears from the debates in those cases that many Senators placed their vote upon the simple and sole ground that the Legislature whose business it was to elect a successor had never had any opportunity to elect?

Mr. HUNTON. I certainly concede that.

Mr. MITCHELL of Oregon. Therefore——

Mr. HUNTON. No, no; wait a moment.

Mr. MITCHELL of Oregon. Very well.

Mr. HUNTON. I want to know now of the Senator if he concedes that if the Legislatures had not met in these three States and the term had not begun by election, the governor would have had the right to appoint?

Mr. MITCHELL of Oregon. No; I do not. With the view I have of the Constitution I think it would make no difference; but I do think and believe that the action in the Bell case and in the Blair case can not with propriety be referred to as a precedent for the position taken by the majority of the committee, from the fact that the Senator has conceded here to-day that many Senators voted to seat those gentlemen for the simple reason that the Legislature, whose duty it was to elect, had not had an opportunity to do so.

Mr. HUNTON. If that be true, the Senator from Oregon will excuse me for saying then the word "otherwise" in the clause of the Constitution means more than the Senator from Oregon concedes it to mean. If "otherwise" in the Constitution means that the governor has a right to fill the vacancies which occur by the failure of the Legislature to elect at the beginning of the term because the Legislature has not met in the meantime, then he concedes a meaning of the word "otherwise" which must be carried out by giving it the meaning contended for by the majority of the committee.

Mr. MITCHELL of Oregon. Certainly not. I have already said that under the view I take of the Constitution it makes no difference whatever whether there has been an opportunity on the part of the Legislature to elect or not, but it did make a difference to a great many Senators who voted on the Bell case and on the Blair case, who had gotten the idea, and perhaps hold to that idea yet for anything I know to the contrary, that because the Legislature, whose business it was to elect, had had no opportunity of electing, therefore the governor had the right to appoint. I do not believe it.

Mr. HUNTON. But it is true that in that case the Senate of the United States seated a Senator appointed by the governor of the State of New Hampshire to occupy a seat on this floor and to fill a vacancy which happened at the beginning of a term. The Senator can not escape that.

Mr. MITCHELL of Oregon. I admit that.

Mr. HUNTON. Then, that is a precedent even in the admission of the Senator from Oregon, that in that case the word "otherwise" must be construed much more broadly than he would maintain, and it must be construed to mean, according to this precedent, to fill a vacancy occurring by resignation or otherwise; that is by failure of the Legislature to elect at the beginning of the term because it has not been in session to elect. That yields, in my opinion, the whole question as to the construction of "otherwise."

Mr. HOAR. Mr. President, if the Senator from Virginia will pardon me for one suggestion, a very much stronger case than the present—because in the present case the Legislature has failed to elect, and there was no fault in the State or the people by not having a majority for any one person—is the New Hampshire case, where the people of the State had deliberately put into their constitution a provision which made it impossible. So that all the arguments which have been made on the other side will apply with much greater strength to that case than the present.

Mr. HUNTON. Certainly, I agree to that. So I maintain that in the New Hampshire case, the Blair case, the Senate of the United States deliberately placed upon the word "otherwise" a construction broader than is admitted by the minority in their report in the present cases, and put upon it a construction which can not be limited by cases where the Legislature had not met. It must be construed, as the majority of the committee maintain it shall be construed, that the word "otherwise" means "in any other way."

In the Blair case the questions involved now were again considered and ably discussed. Blair was declared entitled to his seat by a vote of 36 to 20. In this present Senate this question has been tacitly decided. In March, 1893, before the Senate met in called session, the credentials of the Hon. SAMUEL PASCO were presented and read to the Senate. They showed on their face that he was appointed by the governor of Florida to fill a vacancy happening on the 4th of March, 1893, at the beginning of a new term of six years. This case raised the very question involved here. Senator PASCO was seated without opposition or debate, and the distinguished Senator from Oregon sat in his seat and saw a Senator sworn in upon this floor whose credentials involved the identical question which he has so ably debated in three other cases.

These precedents ought to settle the question. They are, with one single exception, harmonious. Indeed, so strong are these precedents that one of the ablest as well as one of the most candid Senators of this body, while agreeing with the conclusion reached by the minority, asserts positively that he regards the question as settled in favor of the power of the governor to appoint in the cases under consideration. So clearly was he of this opinion that he did not object to the swearing in of the Senator from Florida [Mr. PASCO], whose case raised this very question. On page 72 of the RECORD, the Senator from Missouri, Mr. VEST, is reported to have said:

> Mr. VEST. If the Senator from Connecticut will permit me, I wish to make a single remark in reply to the Senator from Massachusetts and the Senator from Alabama, who made the same point, and that was, that we sat here silently and permitted the Senator from Florida [Mr. PASCO] to be sworn in without question. After the decision of the Blair case in 1885, which affirmed the decision in the Bell case in 1879, I have been so well satisfied that the opinion of the Senate was against me upon this question that I have never raised it; not that I ever gave up the correctness of my opinion, but because I considered it useless to bring it before the Senate again. The successor of Mr. Blair, or rather, I believe, the intervening Senator between Mr. Bell and Mr. Blair, was sworn in without opposition.
>
> I have not changed my opinion on the subject, because I did not object to the swearing in of that Senator, and the Senator from Florida himself knows that I affirmed to him privately my opinion that he was not entitled to a seat on this floor, in my judgment, although the ruling of the Senate in the Bell case and the Blair case had been otherwise. I did not raise the question, but I never considered myself estopped from doing it at any time if I saw proper to raise it.

While his judgment was not convinced, he yielded to the precedents in such cases and raised no objection to the swearing in of the Senator from Florida.

It would seem that this long list of precedents, extending from 1797 to the present time, should long since have settled this question, and those who, like the Senator from Missouri, believe that it was settled wrong should have acquiesced in this settlement, and these Senators whose right to seats on this floor is disputed, should have been sworn in without objection.

I have said the precedents from 1797 to the present time are harmonious.

A case of like character came before the Senate in 1794, in which the question under consideration was decided the other way. In that case, George Read, a Senator from the State of Delaware, resigned his seat in December, 1793, at which time the Legislature was not in session. The Legislature met the following January and adjourned in February without electing a Senator. On the 19th of March Kensey Johns was appointed a Senator by the governor. His credentials were referred to the Committee on Elections, and on the 28th of March, 1794, the committee reported the following resolution:

> *Resolved*, That Kensey Johns, appointed by the governor of the State of Delaware as a Senator of the United States for the said State, is not entitled to a seat in the Senate of the United States, a session of the Legislature of the said State having intervened between the resignation of said George Read and the appointment of the said Kensey Johns.

This resolution was adopted by a vote of 20 yeas to 7 nays.

This precedent is very much relied on by the Senator from Oregon and is entitled to great weight, because it followed in quick succession the adoption of the Constitution. It was doubtless decided by some of the framers of the Constitution.

But unfortunately for those who rely on this case, it was reversed in 1797, only three years after, and beyond question by many Senators who had also taken part in the decision of the Kensey Johns case three years before. It is just as probable that as many members of the Convention took part in the decision of the William Cocke case in 1797 as in the Kensey Johns case in 1794. Be this as it may, the Senate, without objection or debate, in 1797 decided this question in favor of the right of the governor to appoint for the beginning of a term, and this precedent has been practically followed ever since.

So strong have been these precedents that the Senator from Missouri has declared he considered this question settled in favor of the right of the governor to appoint where the Legislature has met and failed to make an election.

It is maintained with confidence that the question involved in the cases under consideration has been settled too long to be disturbed now, and that it has been settled in accordance with the true meaning of the Constitution.

I shall vote to seat these Senators, and shall feel assured I am carrying out the spirit which animated our fathers who framed this clause in the Constitution, "to keep the Senate full—always full."

PROPOSED FINANCIAL LEGISLATION.

Mr. LODGE. Mr. President, I ask for the reading of the resolution which I introduced last Tuesday.

The PRESIDING OFFICER. The resolution will be read.

The Secretary read the resolution submitted by Mr. LODGE on the 8th instant, as follows:

Whereas Congress has been called in extraordinary session on account of the unfortunate condition of business; and

Whereas some measure of relief can be obtained by the immediate and unconditional repeal of the purchasing clauses of the silver act of 1890: Therefore,

Resolved, That the Committee on Finance be instructed to report at once to the Senate a bill to repeal the purchasing clauses of the silver act of 1890, and that a vote be taken in the Senate on said bill on Tuesday, August 22, at 2 o'clock p. m., unless it is sooner reached.

Mr. GALLINGER. According to notice given yesterday, I desire to submit an amendment to that resolution.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. It is proposed to amend the resolution by adding thereto the following:

And that said committee be also directed to report to the Senate that in its opinion it is inexpedient and unwise for Congress to attempt to radically change the existing tariff laws of the United States prior to March 4, 1897.

Mr. LODGE. Mr. President, I do not propose to detain the Senate at this time with any elaborate financial or economic argument. I desire merely to make a very brief explanation of the reasons which induced me to offer the resolution and of the facts, as they appear to me, on which it rests.

The resolution contains two propositions—one in favor of the repeal of the purchasing clauses of the silver act of 1890, and a second one providing for taking a vote upon that repeal on a certain day. The repeal of the purchasing clauses of the silver act of 1890 is not with me a new idea born of the present condition of business in the country.

More than two years ago I introduced in the House of Representatives a bill for the repeal of those very clauses. Without now going into the abstract merits or demerits of that legislation, I did so because I believed that that legislation contained in itself the seeds of distrust; that it was likely in time to alarm and shake the business world. I thought that the business world would soon come to believe that the tendency of that legislation was to put the United States upon a single silver standard. Whether that belief would be correct or not I shall not pause now to discuss, but I think events have justified me in the fear which I then had of these results. The condition of the country to-day shows that the alarm growing out of those clauses which I anticipated has, in a measure at least, come to pass.

I am very far from thinking that these clauses are the only cause of the present condition of the country. I think there are others, some perhaps as potent as this, in producing the present lack of confidence; but that this silver act of 1890 is one great cause of the prevailing distress, and that it is the one uppermost in the public mind, I have no doubt or question.

I think the practical effect of repeal would be a tendency to lower the rates of interest on money, to make money easier and relieve the existing stringency. We have at least as abundant a currency to-day as we had a year ago, when money could be borrowed at a low or normal rate of interest. Our credit as a nation is as good. Every dollar of our currency is as good as it was then, and yet there is to-day almost a currency famine in the country, and rates of money are panic rates. The currency of the country is locked up. It is a truism; it is a commonplace to say so; we all know it. It is locked up. Why? Because there is no confidence. That is the answer which is always made, and it is the true answer.

The first step, therefore, as it seems to me, toward restoring confidence is to lower the excessive rates of interest which now alarm the small property owner, the man of limited means who has drawn his money out of the bank and put it in his pocket. Money in London to-day is lending at 1½ per cent on call, and at 2½ per cent for time money. There is a cable between London and New York. They are familiar with the worth of our securities and the credit of our Government. Money in New York is lending at anywhere from 10 to 20 per cent, and they are as eager to get a high interest in London as they are anywhere else in the world. Their money does not come in. Why? Because they have the belief (whether rightly or wrongly I will not pause to inquire) that we may at any time go upon a single silver standard, and they do not want the money they have lent in gold paid back to them in a silver dollar. The result is that there is a prohibition that stops English money from coming.

I think the repeal would remove that prohibition, and that foreign money would flow in; rates would decline; and when the rates decline then I think you would again see the hoards that alarm lest we were going on a silver basis has created at home return to the customary channels of circulation; we should have normal rates for money and some relief to our distress.

But I also believe, Mr. President, that there is one still more important effect to be derived from the repeal of these purchasing clauses. The public mind to-day is fixed upon them as one of the great causes of the present condition of things.

The universal belief of the business interests of the country to-day is that if the repeal could come it would bring relief to the country. It is said that this is mere sentiment. So be it. Confidence in business, on which prosperity rests, is a matter of opinion and sentiment. The business interests, which in their extended operation sooner or later touch the welfare of every human being in this country, however they may differ as to remedial legislation, agree that there is relief in the repeal of those purchasing clauses.

Mr. STEWART. Will the Senator allow me to interrupt him?

Mr. LODGE. I should like to finish what I am now saying.

The PRESIDING OFFICER. The Senator from Massachusetts declines to yield.

Mr. STEWART. All right. I should have liked to ask a question, that is all.

Mr. LODGE. It is the sentiment of the business interests, I was saying, that there is relief in repeal. It may be said that there is a panic existing. Suppose there is. If there is, you can not reason with a panic; you must quell it. Repeal will bring a measure of relief because the business world believes it will. It is largely a matter of sentiment. Yes! and if you can restore the tone to the sentiment of business by making this repeal, I believe you will take the first great step towards rescuing the country from the difficulties and distresses in which it is now plunged.

I do not for one moment forget that we must have affirmative and positive legislation in regard to our currency. It is necessary, in my judgment, in order to put that currency upon a firm and sound basis; but affirmative legislation will take thought, consideration, ample discussion, above all, time, and I believe that now it is more important than any financial or economic discussion that we should save time, that we should act promptly, that we should come to some decision here in Congress where we have been called together by the President in extraordinary session to meet this very emergency.

Something was said in the debate that sprung up the other day about politics in this matter. There can hardly be politics in my resolution, which is in direct line with wise and urgent recommendations of the President for immediate repeal. For my part, I do not think it is a question of large or small party politics. There is a great crisis upon this country at this moment. There is an amount of suffering going on and a still larger amount promised, the like of which I, at least, in my life have never seen. In the presence of such a crisis as that I for one believe that the usual arts of politics or party management will be consumed like stubble in the fire. They will not avail; and I think what the people want above everything is to see action, some sort of action here in this Senate Chamber. If we are to have free coinage, let us know it. If we are to have a limited coinage, let us know it. If we are to have an unconditional repeal, let us know it.

The Senator from Missouri [Mr. VEST] yesterday said, in referring to the condition of the silver States, that if we were to have legislation to close the mills of New England every Senator

from those States would be here ready to offer the most bitter resistance. Mr. President, the mills of New England are closed now. There is no need of further legislation. At this moment, with the exception of two mills, there is not a spindle turning in the city of Lawrence, and they employ 12,000 hands. There is only one mill going in the city of Lowell, and they employ over 20,000 hands.

There are over thirty thousand people out of employment at this moment in only two of the cities of the Commonwealth that I in part represent. Multiply it by ten and you get some idea of the distress that rests upon the State of Massachusetts. Multiply it by a hundred and you get some idea of the distress pervading the Northern States, and when there is such a blight resting on the industries of my own State, and of all the other great industrial States of the North, for one I have no mind for party politics or for delay. I ask simply for action. I believe it is the highest duty that the Senate can perform to take the quickest possible action.

It seems to me a case, Mr. President, to which I may apply the words of a very distinguished predecessor of mine, Mr. John Quincy Adams, "I would not deliberate; I would act."

Mr. WOLCOTT. Mr. President, the resolution offered by the junior Senator from Massachusetts [Mr. LODGE] does not afford proper scope for general discussion of the silver question at this time. When that discussion shall come before the Senate it will be upon broader and upon wider grounds. But I am unwilling to let the resolution upon which the Senator from Massachusetts has spoken so ably and so forcibly pass by without entering my protest as to the preamble which precedes his resolution. It recites that—

> Whereas some measure of relief can be obtained by the immediate and unconditional repeal of the purchasing clauses of the silver act of 1890: Therefore,
> *Resolved, etc.*

Mr. President, I agree with the Senator from Massachusetts that this is not a party question. I feel greatly relieved, in view of some unpleasant relations which some of us have sustained for the past few years on this side of the Chamber, that a question has arisen wherein the Democratic Executive and the Massachusetts Senators may agree. It is a most auspicious and a most significant occasion. It is a most delightful foreshadowing of the days when party rancor shall cease and all notes of discord be blended in one harmonious melody. I believe the next thing in order will be for the President of the United States, who is fortunately untrammeled and unembarrassed by any previous utterance on the subject, to frame some election law which may perhaps meet the views of the Senator from Massachusetts, and then our reconciliation will be complete. [Laughter.]

But, Mr. President, to bring relief by the repeal of a law there must have been some injury by that law. What injury has been inflicted by the Sherman act, and what is to be the measure of relief afforded by its repeal? I have yet to hear a single intelligent man state on his conscience that he believes the Sherman act has wrought the injury under which this country now suffers. I have yet to hear a single man of experience in financial matters or in public affairs say that the unfortunate financial crisis through which we are now passing has aught to do with the Sherman act. Everybody will admit, monometallists and bimetallists, that the Sherman act is vicious in principle and illogical so far as it affects the silver coin of this country.

It is vicious in that it makes of silver a commodity and dethrones it from the pedestal where it belongs. It is illogical and vicious in that it leaves the silver bullion in the Treasury uncoined and leaves this vast mass of silver coin a menace to Europe, which foreign nations that might incline to join with us in the double standard fear may be dumped upon her markets at any time. These are its disadvantages. It has likewise some advantages. It is a quasi recognition of silver. The one strand which yet holds this country back from monometallism has been of infinite value, in the hope for the final and full recognition of silver that it has inspired in the human breast. The fact that it has afforded an enlargement of the currency from month to month, keeping pace with the needs of this country, has been of inestimable advantage during the past three years; and after the Baring failure, if it had not been for the Sherman act, nobody knows how serious the panic might have been, how great the suffering we might have undergone.

Even, Mr. President, in these last few months the Sherman act has saved us from infinitely greater disaster than we would otherwise have encountered. As was ably said by the Senator from New Hampshire [Mr. CHANDLER] in a letter to a New York paper, it has given us a currency backed by the credit of the Government and by silver at its bullion value. That is a pretty good currency. Perhaps it is a little better currency than the $37,000,000 of clearing-house certificates now in circulation in New York backed only by rediscounted paper and held by people who are clamoring for the repeal of the Sherman act.

The only tangible statement I can get from anybody as to the injury which the Sherman act is inflicting, is by people who claim there is a lack of confidence in Europe by reason of the existence upon our statute books of the Sherman act. With such limited investigation as I have been able to give, I do not find that statement borne out by the facts. Our securities were enormously held in Great Britain, perhaps to the extent of $2,000,000,000. Great Britain suffered serious loss in Argentines and in Australia and her other colonies; she was forced to sell, and her securities came over here.

The cheapest came first. It is impossible to state what proportion of American securities held abroad are securities payable in gold and what are securities payable in lawful money; but it is nevertheless true and susceptible of proof that the securities which came back came back irrespective of the material in which they were payable. No better illustration of that can be afforded than the fact that the New York and New Haven Railroad stocks, the Pennsylvania Railroad stocks, and other dividend-paying railroad stocks which have permanent and steady value have not come back. Their dividends are payable in lawful money, and not in gold. Those securities are still largely held abroad. The cheapest and the weakest securities come first, and they come irrespective of whether they are payable in silver or in gold. The great sale of foreign securities, the great liquidation which has been taking place in the last few months in this country, has come not because Great Britain lacks confidence in American financial methods or American finance, but because they were compelled to sell. And it is true that when Europe had a little breathing spell there came again a healthy demand for our bonds abroad, which was checked by the Reading *fiasco*.

Almost every ill that flesh is heir to is attributed in these days to the Sherman law. I do not believe even a Philadelphia banker would accuse the Sherman law of being responsible for the Reading disaster. The whisky trust came next. Mismanaged and fraudulently conducted, it went to pieces and engulfed great fortunes. Was the Sherman law responsible for that? The cordage trust, organized and managed by the select financiers of New York, came up like a mushroom, and was dissipated, and vanished, and with it vanished millions of dollars. Would you say that the Sherman law was responsible for that? And yet the New York press figure up daily the market quotations of a year ago and the market quotations of to-day, and they strike the balance between them, and say that silver and the Sherman law are responsible for the difference.

If, Mr. President, the Sherman act is not responsible for the condition of affairs abroad, still less is it responsible for the condition of affairs here. They tell us, and the Senator from Massachusetts tells us, that if we will repeal the Sherman act there will be renewed confidence in this country. How will it come, and from whom? Will it come from the farmer who sees his grain commanding a lower price than ever before in the history of the United States? When you threaten him with cutting off $4,500,000 a month of increased circulation and bring him face to face with an appreciating currency which must bring in its train lower prices, are you going to bring confidence to him by cutting off the purchasing provision of the Sherman act and putting nothing in its place?

When the papers yesterday and the day before announced that the banks were unable to furnish the farmers of Indiana and Minnesota and the Northwest with even the currency sufficient to move their grain, do you mean to tell us that confidence is to come back if you will only unconditionally repeal the Sherman act? Will it bring confidence back to the railroads, who see diminishing earnings week after week, earnings which will diminish in a still greater ratio in the months to come, with a poverty-stricken people unable to get their currency from the banks, and with the price of their grain constantly decreasing? Is it to bring confidence back to them? Will it bring confidence to the millions of people in the far Northwest, who have seen their principal industry stricken down by the existing condition of affairs, and which the passage of this resolution would entirely obliterate? Will it bring them confidence? Those people, Mr. President, law-abiding and orderly, ask, under the protection of the flag, to be permitted to earn their living and to carry on an industry which the law has recognized since the foundation of the Republic.

The Senator from Massachusetts tells us that we want, first, unconditional repeal, and afterwards some measure will be enacted for the recognition of silver. You say to those people, already almost homeless, with the roof of their cabin gone and poverty before them, "If you let us knock out your foundation stone, and obliterate all trace of your home, and the place of your habitation, in the time to come, after we have had consideration, we will build you a stone-front house." Now, Mr. President, confidence will not thus be brought back.

Will you bring confidence to the banks by the repeal of the Sherman act? The banks do not want confidence; they want

money. They want other people's money. Is the repeal of the Sherman act to bring them confidence? Will the repeal of the Sherman act bring confidence to the laborer or the artisan who had his money in the banks and who has drawn it out? That is where the resolution seeks to hit. They want some legislation that will bring confidence back to that man. And that brings us, Mr. President, to the real secret and cause of the present existing financial panic. It has come partially because of European losses. It has come because Russia and Austria have been buying gold; and it has come because we have had to liquidate large holdings of foreign securities, and we have our money in their securities. It has come because we have purchased more than we have sold abroad.

But all these causes, Mr. President, are utterly independent of and irrespective of silver. If we did not have a dollar's worth of silver in the country and had never had a line of silver legislation, the gold would have gone abroad exactly the same. Silver is not responsible for that. But it is true that for months the financial institutions of the East have been crying out throughout the land that unless the Sherman law was repealed and silver demonetized they would be ruined.

We have heard it from the house tops, and those of us who are debtors have heard it *ad nauseam*, when we have sought to renew our loans; we have been told that unless you repeal the Sherman act we are all going to be ruined. They have raised a hue and cry and clamor they can not still, until finally the people of this country have begun to believe there is something wrong, not with the financial policy of the country, but with the institutions that hold their money, and they are drawing it out. They are not drawing it out because they distrust silver, or because they distrust our country, or because they distrust Congress, for the silver certificate is laid away in the stocking side by side with the gold dollar.

It is distrust of the institutions, and legislation can not help it, for confidence is a plant of slow growth, and it depends upon faith and trust in human action. All the legislation that we may enact will not bring confidence back to the man who has taken the money out of a financial institution solely because he does not believe that the financial institution would pay him his money when he called for it.

What legislation is needed, Mr. President, we are all at a loss to know. For my part, and in the small share I may have in it, I intend to conduct myself, not as a citizen alone of a section, but as a citizen of a great republic. We all seek a common result. We all seek that which shall be of the greatest benefit to our beloved country. Prophecy is futile, but I may be permitted to record my conviction that when prosperity does come back to this country it will be after we have announced to the world that we are a nation of bimetallists, believing in hard money, both gold and silver; when we have announced to the nations of Europe that we propose to have our share of the gold of the world; that we are rich enough to hold it, and are entitled by our resources and our credit to have it, and that at the same time we have opened our mints to the free and unlimited coinage of silver, and have returned to the paths of the founders of the Republic—paths which, so long as we followed them, brought us financial prosperity and happiness, and which, whenever we have diverged from them, have brought us financial disaster and panic.

PARITY OF GOLD AND SILVER.

Mr. HOAR. Mr. President, I desire to speak to the joint resolution of the Senator from Missouri [Mr. VEST], if the Chair will lay that measure before the Senate.

The PRESIDING OFFICER. The resolution of the Senator from Massachusetts [Mr. LODGE] will be temporarily laid aside and the joint resolution of the Senator from Missouri [Mr. VEST] will be taken up, if there be no objection.

Mr. HOAR. I ask that it be read.

The PRESIDING OFFICER. The joint resolution will be read.

The Secretary read the joint resolution (S. R. 4) to maintain the parity of gold and silver, as follows:

Resolved by the Senate and House of Representatives, etc., That the American people from tradition and interest favor bimetallism and the free and unlimited coinage of both gold and silver, without discriminating against either metal; that it is also the established policy of the United States to maintain the parity of the two metals, so that the debt-paying and purchasing power of every dollar shall be at all times equal; that it is the duty of Congress to speedily enact such laws as will effectuate and maintain these objects.

Mr. PASCO. I should like to ask what becomes of the pending resolution offered by the Senator from Massachusetts [Mr. LODGE]. Is it the understanding that it goes over until to-morrow without further action?

The PRESIDING OFFICER. It goes over for the present, if there be no other Senator who desires to be heard upon it to-day.

Mr. PASCO. It will be understood that it goes over until to-morrow?

The PRESIDING OFFICER. There will be no action had upon it.

Mr. GALLINGER. I give notice that to-morrow I desire to address myself very briefly to the resolution submitted by the Senator from Massachusetts [Mr. LODGE] and the amendment to it offered by myself.

Mr. HOAR. Mr. President——

Mr. STEWART. I should like, before the Senator from Massachusetts proceeds, to give notice that I desire to speak a few minutes on the resolution of the Senator from Massachusetts [Mr. LODGE]. I wish to call attention to the object of the panic and why the panic was created. I will state just a few facts.

The PRESIDING OFFICER. The resolution is temporarily laid aside, but may be called up when the Senator from Massachusetts [Mr. HOAR] has concluded his remarks.

Mr. HOAR. Mr. President, the American people have no reason to be ashamed of their legislative history. Our American constitutions, as well as the great measures which crowd and adorn our statute book, have very often been the product of times of excitement, of depression, and almost of despair. They have been enacted amid predictions of failure, amid taunts and expressions of contempt from foreign critics, and against powerful and angry opposition at home.

It has been the good fortune, as it has been the glory of the American people, that it has ever plucked the flower Safety from the nettle Danger; that it has made times of distress and commotion and evil its great opportunity. From the gloom of the Revolution, from the sorry story of the years which followed the peace of 1783—of feeble government, of disaster, of discontent, of broken faith, of depreciated currency, of stay laws, of suffering debtors, of cheated creditors, of lawlessness, of Shay's rebellion, and popular commotions North and South—came the State constitutions, the ordinance of 1787, the Constitution of the United States, the judiciary act, and the great legislation, State and national, which is at the foundation of all our institutions.

From the abject history of the Jefferson administration came the acquisition of Louisiana, the establishment of sailors' rights, and the great naval glories of the war of 1812. From the unutterable woe of the rebellion came the abolition of slavery, the permanent establishment of national authority, and the legislative achievements of the past thirty years.

I believe that from the present panic, if we will but rise to the occasion, we may yet get an equal blessing, a sound, secure, and stable currency. But we must deal with this great occasion as our fathers, in their time, dealt with like occasions. We must keep the panic out of the Senate Chamber.

In one respect the condition of the United States is peculiar. We settle our financial policy in accordance with the popular vote. The great mercantile nations of the world, in fact, and commonly in form, refer such things to experts. The administration in Great Britain consults the Governors of the Bank of England, the representatives of the chief mercantile houses, a few men who have become recognized authorities in financial circles, and acts upon their advice. Very few members of Parliament would think of thrusting their own judgment into a debate on a financial question against that of the men of their own party who are their recognized leaders on such subjects. I suppose this is still more true of France, of Germany, of Belgium, and of Holland.

But with us the finances of the country have been for a good while the football of parties and of factions. Every demagogue in public office, or seeking public office, every theorist desiring to get notoriety by extravagance, every anonymous and reckless scribbler who escapes contempt only by concealing his personality, every agitator who would marshal class against class, every anarchist who seeks to overthrow all social order, every brawler who would stir the passion of section against section, of labor against capital, of debtor against creditor, of the poor against the rich, prates glibly about the currency, and uses some misrepresentation or sophistry about the currency as his weapon of mischief.

Yet nothing is more certain than that a disturbance of the currency is an advantage only to the classes who are so attacked, and brings nothing but evil and disaster to the classes to whom the appeal is made. As Daniel Webster said nearly sixty years ago:

He who tampers with the currency robs labor of its bread. He panders, indeed, to greedy capital, which is keen sighted and may shift for itself; but he beggars labor, which is honest, unsuspecting, and too busy with the present to calculate for the future. The prosperity of the working class lives, moves, and has its being in established credit, and a steady medium of payment. All sudden changes destroy it. Honest industry never comes in for any part of the spoils in that scramble which takes place when the currency of the country is disordered. Did wild schemes or projects ever benefit the industrious? Did irredeemable bank paper ever enrich the laborious? Did

violent fluctuations ever do good to him who depends on his daily labor for his daily bread? Certainly never.

All these things may gratify the greediness for sudden gain or the rashness of daring speculation; but they can bring nothing but injury and distress to the homes of patient industry and honest labor. Who are they that profit by the present state of things? They are not the many, but the few. They are the speculators, brokers, dealers in money, and lenders of money at exorbitant interest. Small capitalists are crushed, and their means being dispersed, as usual, in various parts of the country, and this miserable policy having destroyed exchanges, they have no longer either money or credit. And all classes of labor partake, and must partake, in the same calamity.

Mr. President, there are subtleties in these financial questions surpassing the subtleties of metaphysics. No theologian, no schoolman, no doctor of the civil law, no writer on contingent remainders or resulting trusts or executory devises was ever called upon to deal with more hair-splitting distinctions and profound speculations, more logical puzzles baffling the human intelligence than can be found in the works of writers on finance in this or other generations. And yet it is not too much to say that there is no subject of legislation which so demands wise and dispassionate consideration, and whose clear understanding and correct resolution is so vital to all the best interests of society. As Alexander Hamilton declared in his famous report:

The general state of debtor and of creditor; of the relations and consequence of price; the essential interests of trade and industry; the value of all property; the whole income, both of the state and of individuals, are liable to be sensibly influenced, beneficially or otherwise, by the judicious or injudicious regulation on this interesting object.

Credit is the life-blood of trade. A sound currency is to the affairs of this life what a pure religion and a sound system of morals are to the affairs of the spiritual life. And we should beware of the men who seek to make of this great interest an instrument of personal or party advantage, or of exciting hatred or discontent, or disturbing social order, wherever such men may be found, whether in high places or low, whether speaking in the Senate Chamber or through the press, as we would beware of those men who have used the religious feelings of mankind as instruments for like purposes.

And, Mr. President, as, in dealing with the great religious problems which concern mankind a few strong instincts and a few plain rules—the lessons of experience—the authority of a few safe guides, are found by the masses of mankind sufficient unto salvation; as all the law and the prophets are summed up in two simple commandments, easily to be understood, and easy to be practiced, so, I believe, the path of safety through the financial difficulties which surround us is in like manner to be discerned.

No man whom the American people have trusted with any share of political power is entitled to be respected who approaches the duty of this hour in any partisan or sectional spirit or inspired by the desire to reap partisan advantage from the public calamity. Our task is to discover and to remedy the great evil under which all classes and all parts of the country suffer. The workshops are closing, the banks are stopping payment, workmen are idle, the homes of the poor are threatened with want, and the property of the rich is in peril.

We may differ in opinion as to the responsibility. But I hope we may find substantial agreement as to the cure. If I can find any opportunity to help save the ship, I care not whether a Democrat or a Republican is in command. Whatever errors President Cleveland or those who follow him have committed in the past—whatever mistaken purposes they may have for the future—I am willing to act with them in the present, if by so doing I can help to restore my country to the safety and the prosperity which she enjoyed up to March 4, 1893.

I can conceive of no better evidence of the prosperity of a nation than that its people are universally well employed at a rate of wages, or other form of compensation, which yields to them the necessaries and comforts of life. Indeed, it is not so proper to speak of this state of things as an evidence of prosperity as to speak of it as the definition of prosperity. That was the condition of the American people, beyond any other known, in the autumn of 1892, and for a long period before. The President himself, in his late message, describes the situation:

With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise.

Not only did this condition of things exist, but by the confession of our eminent statisticians, free traders, and monometallists, as well as protectionists and bimetallists, it was a condition of things which had been improving year by year. The purchasing power of wages had been increasing for twenty years, although the tendency at the same time had been to diminish the length of the day's work. The problem before us is to restore that condition of things. If there is any law on the statute book which has had the effect to disturb it, or if there be any threat or fear of new legislation which is to affect or disturb it, it is for us to change that law and to make that legislation impossible.

The misfortune of the American people, in regard to this currency question, is the spirit and temper in which it has been debated on both sides of this and the other House of Congress, and in the press. It is difficult to find upon either side an honest statement of the other's position or an honest answer to the other's argument. What bimetallist, what advocate of the free coinage of silver at the old rate can recognize himself, or his opinion, or anything he believes in and stands for, in the portraiture drawn by his antagonist? What man who believes either that we must submit to the standard of value established by the consent of the commercial world, or who even believes that the world's supply of gold is enough to meet its demands for a standard, or a currency, without sensible fluctuation or change of value, entertains any of the opinions or desires that are imputed to him by the press or by public speakers in certain sections of the country?

Mr. President, any man or party in the Eastern States who should desire to have the value or the purchasing power of the dollar increased in order that the value of debts, or that assured and permanent incomes might be increased, or in order that speculation in gold or in credits might be rendered more profitable, would be hurled from power and buried in infamy by the swift and righteous indignation of the whole people of those States. The prosperity, the power, the happiness, the rapid growth of the Northwest and the South are as dear to the people of New England as their own. What they want, what they desire and strive for, is not an appreciating standard of value but an unchanging standard of value, so far as the lot of humanity will admit.

The merchant, the manufacturer, the builder of railroads in the Eastern States is a constant and perpetual debtor. The wage earner, the depositor in savings banks, the holder of the policy of life insurance, the widow and orphan who are living on the spare savings of the husband and father in his lifetime are constant and perpetual creditors. They are alike interested that the obligation contracted to-day shall be precisely the same obligation, no greater and no less, when it is to be discharged, five or ten or twenty years hence, or whenever its annual or semi-annual interest is to be paid throughout that period. The present value of the dollar as a medium of present exchange can be ascertained with reasonable accuracy by the parties to any contract.

Appreciation and depreciation can be ascertained and provided for. But, to use the expressive phrase of Mr. Balfour, "money is the record of obligations extending over long periods of time." And it is an injury, it is destruction to any community which has risen in civilization above the pirate stage, when that record is liable to uncertainty or is the subject of speculation or gambling. If the people of the Northeast seem to the people of another part of the country to be contending for anything likely to bear hardly upon them, it is because they do not see or anticipate such a result, and not because they desire it or are indifferent to it.

So, Mr. President, on the other hand, I do not believe that any large number of the people of the Northwest desire the destruction of property, impairment of credit, or any injury whatever to the people of the Northeast. Their ambition is to acquire property, their hope is in the establishment and maintenance of credit. They always have depended, and for a long time in the future they must depend, for these things on a close alliance and an interchange of advantages with the people whose children they are, with the States whence they came, and with communities from whose institutions they have modeled their own, and with whom in the great and glorious future they must live or bear no life. Chief among the resources of the West is its alliance with a wealthy and prosperous East. The wealth of the East must perish but for its alliance with a wealthy and prosperous West.

There are wild utterances everywhere. They are heard from Boston and New York and Chicago as often as from San Francisco or Denver. But they do not come chiefly from Americans, and they do not represent the prevalent spirit of any American community.

The people of the United States are divided on this question. The two sides are, in my judgment, equally honest and equally intelligent. One believes that the policy of the other leads to an increase of the burden of debt, to the contraction of the world's supply of currency, and to that worst form of fluctuation in the standard of value, the constant increase of the purchasing power of money, with its consequent fall of price and strangulation of business. Another portion of the people believe, with equal sincerity, that the free use of silver, at its old rate, by a single nation alone leads to the destruction of the obligation of existing debts, the impossibility of any secure credit for the future, and turns all fixed business into speculation and gambling.

Each party is equally honest and sincere, and the two parties

desire, in my opinion, the same thing—a currency which shall be sufficiently abundant for all exchanges, domestic and foreign, and a standard of value which shall be as unchangeable through the years and generations as the wit of man can devise. The proprietors of silver mines not unnaturally desire to sell their product to the best advantage. But I do not think they or their advocates on this floor will claim that we shall adopt any policy with regard to the currency merely that they may sell their product at a profit. What they would say, I suppose, is that, believing as they do, the disuse of silver for the purpose of currency to be attended by consequences disastrous not only to the people of this country, but to all mankind, the fact that laborers and capitalists who are engaged in their special industries are likewise to be ruined by it, does not render it any more acceptable to them.

The great and fundamental difference between these two parties is the difference as to two questions of fact.

First. Is the existing stock of gold available for currency sufficient, with the yearly addition to that stock, to maintain prices at their present level and keep the burden of debt from growing heavier year by year in the future?

If it be, then the advocates of silver have no right to demand its consideration when we are regulating the currency, but must, like other producers, stand or fall by the general policies by which we encourage American industries.

But if it be not sufficient, if the cord of indebtedness is to tighten year by year around the neck of the debtor by the rapidly increasing value of the gold dollar, then the advocates of bimetallism are justified in demanding that every lawful resource of the Government shall be exhausted and every energy of the American people taxed to its utmost to prevent such a result.

Now, Mr. President, I can not find that the researches of our statisticians enable us as yet to decide this question to our reasonable satisfaction. The tables which are used by the bimetallists show a constant increase in the value of gold since 1873. As compared with the forty-five principal commodities selected by Mr. Sauerbach, they show a constant increase in the purchasing power of gold as measured in those commodities, and show, on the other hand, a comparatively small falling off in the value of silver. On the other side, the monometallists point out that if you strike out from the list the articles whose production has been greatly cheapened by increased labor-saving appliances, or whose price in the market has been lessened by the vast recent saving in the cost of transportation, there has been very little fluctuation in gold.

I can not myself escape the apprehension that the bimetallists are at least partially in the right. It may be that the appreciation of gold has not yet taken place to the extent of their belief. But there is a large stock of silver still in use in the United States and on the Continent. What has been done as to India, and what is to be done by us, have not yet had an effect which can be measured.

The second question is not so difficult. Is it possible for the United States to maintain a standard of value in separation or isolation from the rest of the civilized world?

Upon this question, if I could see any escape from the reasoning of the President in his message, I find no escape from the lesson of our recent experience. While I do not attribute our present disasters in any part to the legislation of 1890, I do attribute them, to a serious extent, to the failure of the present Executive to assure the country and the world that he would use the power given him to maintain the two metals at par. This, with the prevalent dread of what a distinguished member of this body described as "a war of extermination upon the protected industries of the country," accounts, in my judgment, for our existing condition.

I have been, ever since I was old enough to have an opinion on the subject, a bimetallist. I think that is true of all the American people down to 1873, with a very few exceptions. But it has been the bimetallism of Alexander Hamilton, of Washington and his Cabinet, of the framers of the Constitution, of the members of the First Congress, and of the Constitution of the United States. It always recognized and took for granted that the money standard of the world's dealings must be settled by the usage of commercial nations. It recognized also that if there were a change in the relative value of the two metals the more valuable metal must, in the end, prevail. I do not understand that there is any purpose anywhere to discard the use of silver. It is still, and always must be, a large instrument in the commerce of daily life in all countries. Even when the use of silver is directly confined to that of subsidiary coinage, it is not insignificant or unimportant. We have about $850,000,000 of subsidiary coinage, but every dime of that coinage passes from hand to hand a hundred times where the gold dollar would so pass once.

The lesson of all experience points to the use of gold and silver to effect exchanges and to measure values for the commerce of mankind. From the foundation of the world they have performed this great office. They are known as the precious metals in the universal language of civilized men. They are adapted and they alone are adapted, by permanence, by their capacity for being coined and stamped, for the convenience with which they may be kept and transported, to perform this service for mankind. They are the only complements of each other. If the weight and size of silver, in proportion to its value, be too great for use in large transactions, the size of gold, in proportion to its value, is too small for safety and convenience in the smaller and commoner transactions of life.

Silver circulates everywhere to-day, and will circulate everywhere until time shall be no more, as the money of the common people, whatever may be the action of the Government.

In the countries where gold is the only recognized lawful standard of value, silver is still the instrument of the commerce of man's daily life. Sometimes one has risen for a few years, perhaps for a generation, in value as compared with its companion, and sometimes the other. Sometimes mistaken financial policies, sometimes popular excitement, sometimes the schemes of designing speculators, may have depreciated or exalted one at the expense of the other. But this august and regal pair—the queenly silver and the royal gold—have maintained throughout all ages, and through all time will maintain their companionship and their supremacy. If you undertake to settle this question by driving either from the country, you will have no peace until it is restored. The principle which recognizes both has its foundation in nature, and in the experience of man.

Naturam expellas furca;
Iterum iterumque redibit.

You may drive out nature with your legislative fork, but again and again she comes running back. This doctrine is recognized in the Constitution. "No State shall make anything but gold and silver coin a tender." "No State shall coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts."

That the words "money" and "gold and silver" were regarded as equivalents in constitutional meaning is shown by the fact that the Constitution makes a separate provision as to bills of credit and does not include them in the sentence which applies to money. It is not gold or silver that a State may make a legal tender, but gold and silver, the legal value of which, by another clause of the Constitution, is to be determined by Congress.

Chief Justice Ellsworth and his associate, who represented Connecticut in the constitutional convention, in their report to their constituents of the proceedings of the convention, say that the new Constitution provides that no State "shall make anything but money a legal tender for the payment of debts," showing that, in their judgment, the word "money" and the words "gold and silver" are identical or equivalents.

Alexander Hamilton considered this question in his great report on the mint and the coinage. He gave fullest weight to the arguments of the monometallists. He admitted that the money unit had up to that time virtually attached to gold rather than to silver. But with the fullest concurrence of President Washington and the statesmen of his time, he declared for the principle of bimetallism. His arguments have not lost their original force. They have not been answered in any discussion. The people of the United States, when the tempest has passed, will settle down and be reconciled to the solution of this great problem in which Washington and his Cabinet joined. They never will be permanently reconciled to any other.

To annul the use of either of the metals as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from the comparison of the benefits of a full with the evils of a scanty circulation.—*Hamilton's Report, Lodge's Edition*, page 243.

Daniel Webster declared more than once, and with great emphasis, that the Constitution requires the coinage of both metals; and it would be a disobedience to our constitutional duty were Congress to discard either.

Mr. President, all our great financial authorities of both parties, from the framers of the Constitution, from Alexander Hamilton, and Jefferson, and Webster, and Calhoun, and Benton, and Chase, and Fessenden, Federalists and Republicans, Whigs and Democrats, down to the disturbed period which followed the war, have agreed upon this policy. There were differences which divided political parties. Whether Congress should authorize a paper currency, under careful safeguards, redeemable in coin, or should leave that to State discretion, or to private enterprise, was a question which divided parties and made and unmade Presidents and administrations. But down to the year 1863 it never was heard in this country that the legal tender and the standard of

value should be anything but gold and silver; nor was it ever claimed until 1873 that both gold and silver could not be relied upon to perform this service.

I have no doubt that the Committee on Coinage, who reported and enacted the statute of 1873, were actuated solely by a conscientious desire for the public good. I would give no countenance to the miserable slander that they were acting in the interest of capitalists or monopolists or of creditors; or that they desired to conceal what they were doing from the American people, or from anybody. They selected for their single standard what was then the cheaper metal, a metal not only then the cheaper, but of which a large and constantly increasing supply was confidently expected. The scheme was proposed in the report of the Director of the Mint, was recommended by the Secretary of the Treasury in his report, was printed in the House of Representatives thirteen times, was called to the attention of chambers of commerce, was the subject of deliberate discussion in some of them, and was well known to leading financiers.

The Senate first voted to request the President to open a correspondence with other countries in relation to the unit of value. That correspondence took place. Then the Director of the Mint proposed, in his report, to adopt a single gold standard. Then the Secretary of the Treasury urged the measure in his report to Congress. Then the matter was referred by Mr. Hooper of the House, to public bodies for their opinions.

I have the pamphlet report made to the New York Chamber of Commerce by Mr. Ruggles on the subject. It was well known to leading financiers. I saw some resolutions the other day, passed in Chicago, in regard to Mr. Ernest Seyd, and I think the honorable Senator from Nevada (Mr. STEWART) denounced him on this floor as an agent who came over here for the bankers of England to get Mr. Hooper to do this mischief. Am I mistaken?

Mr. STEWART. He was here on two occasions. He spent the winter here.

Mr. HOAR. Mr. Ernest Seyd was an authority on all practical mechanical measures connected with coin. Mr. Hooper wrote to England asking his assistance in the matter. Mr. Seyd wrote him quite a long letter early in the year 1872, and he then came here. I have his letter to Mr. Hooper, making the final discussion upon the bill which Mr. Hooper submitted; and after suggesting in that letter various practical reforms, which are of little or no importance in this connection, Mr. Seyd goes on with an able and elaborate argument against monometallism, and says the great fault he finds with Hooper's bill is that he undertakes to bring this country to the gold standard, which he thinks would be destructive, and against which he had written a book at home; and he urges upon him the free coinage of silver at the rate of 400 grains to the dollar.

Mr. STEWART. We never had any doubt that his public writings were to that effect.

Mr. HOAR. I am speaking about the letter, which I think I will bring down to show my friend from Nevada, and which is at my rooms at this moment. Mr. Seyd wrote it to Mr. Hooper after the bill was framed, most earnestly and laboriously urging him not to adopt monometallism and recommending that the standard of silver be 400 grains instead of 415.

Mr. GRAY. Mr. President——

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Massachusetts yield to the Senator from Delaware?

Mr. HOAR. Certainly.

Mr. GRAY. If the Senator from Massachusetts will permit me, I should like to ask, in view of the exceedingly interesting statement he has just made in regard to Mr. Seyd, whether there is anything that would prevent his putting that letter in the RECORD as part of his speech?

Mr. HOAR. I will state very frankly that I wrote to Mr. Hooper's son-in-law, asking him if he had any correspondence on this subject, and stated in the letter that I should treat what he sent me as confidential unless it were otherwise agreed; and although I have given that assurance I feel sure that there will be no objection to the publication. I have ventured to make this statement, and I expect to obtain leave to have the entire letter printed before long.

Mr. STEWART. I should like to see the letter in proof as part of the evidence showing what business he had here at the time.

Mr. HOAR. Mr. Hooper wrote to a gentleman named Alfred Latham, who, I think, was then or had been recently the Director of the Bank of England. Mr. Latham wrote back a letter in which he commends Mr. Seyd, and says he first showed Mr. Hooper's letter to Mr. Seyd, who is the great authority on that matter, except that Mr. Latham thinks that Mr. Seyd is in error in regard to the matter of monometallism. Thereupon this correspondence takes place. This is not a very important matter, but it shows the wild and excited state of mind which worthy gentlemen (some gentlemen, I am afraid, not very far from where I am speaking at this moment) get into in regard to the conduct and motives of those with whom they differ.

Mr. STEWART. If the Senator from Massachusetts alluded to me, I say frankly——

Mr. HOAR. I alluded to the Senator particularly.

Mr. STEWART. I say frankly I believe the bill was by design kept from the Senate.

Mr. HOAR. The Senator voted for it.

Mr. STEWART. I deny that.

Mr. HOAR. I do not want to go into any argument of that kind, but the Senator voted for it himself. It was printed thirteen times.

Mr. STEWART. I deny that.

Mr. HOAR. He did not vote against it.

Mr. STEWART. There was no vote upon it at all. I shall show right here, if the Senator will give me time, that nobody voted for it.

Mr. HOAR. But, nevertheless, it is true that it attracted little general notice. Mr. Hooper, the chairman of the committee, stated clearly to the House the effect of the bill and complained that he could not get the House to listen. Other members of the committee made the same statement.

Now, Mr. President, I suppose the fact is that all mankind, with the exception of a few experts, were very little instructed in regard to that measure.

Mr. STEWART. Has the Senator a reference to the speech of Mr. Hooper?

Mr. HOAR. No; but it has been quoted in debate more than once.

Mr. STEWART. If the Senator has the reference I should like to see it. I have looked over the RECORD and have not found it.

Mr. HOAR. I have read it within three weeks.

Mr. STEWART. I should like to see it.

Mr. HOAR. I do not believe that, in itself, it has ever seriously injured the finances of the country, or that it has had any considerable effect upon the price of labor or upon other prices.

We were not having specie at all and had not any specie circulation for three or four years after that time, and in 1878 in came the Bland act restoring silver and providing for a larger coinage of silver every year than we had had before in the whole seventy-three years of the century put together. I say this in justice to an old colleague [Mr. Hooper], but it has been the occasion and pretext for an agitation which has excited certain communities in this country, and the excitement which it has occasioned has been wholly to their harm.

Now, Mr. President, to return, both the great political parties in this country were of this way of thinking down to the last national election. It is needless to add that in the pledges of all other parties the retention of gold even to bear its part in a bimetallic system has no place. I read the Republican platform and the Democratic platform of 1892.

Mr. PEFFER. I wish simply to state to the Senate in answer to the suggestion of the Senator from Massachusetts, that so far as the Populists are concerned, we demand the retention of gold and silver and ask that whatever deficit there is to meet the business needs of the people shall be supplied with paper.

Mr. HOAR. I shall not detain the Senate very long by reading these platforms.

Here is the Republican platform of 1892:

Silver—The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other.

I now read from the Democratic platform of 1892:

Silver— * * * We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payments of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

This declaration of the Democratic party is, in substance, the same with that made by them in 1888 and in 1884. In all these years the present President has expressed his full and hearty

approbation of the platform adopted by the convention whose nomination he accepted.

[Democratic platform of 1880.]

Honest money, consisting of gold and silver and paper convertible into coin on demand.

[1884.]

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

[1888.]

Reaffirms the platform of 1884.

Grover Cleveland says, in his letter of acceptance, August 18, 1884:

I have carefully considered the platform adopted by the convention, and cordially approve of the same.

But the great question, of course, is the question of ratio. Here, too, we must follow—whoever may be disappointed and whatever the cost—

First, the principle laid down by our earlier authorities;

Second, the precedents of our legislation.

Alexander Hamilton declared that if the two metals, at any time, were separated the more valuable metal must be the standard for the reason that the fluctuations would be the more likely to attach to the inferior metal. No respectable American authority, until the recent discussions, can be found to the contrary. We can not establish a contrary policy to-day without entailing upon the country infinite mischief, and disregarding the opinion of the whole commercial world and without a separation from all the leading nations of the world in this matter of the standard. I hold that this is a thing almost as impossible as attempting to exempt our portion of the planet from the operation of the law of gravitation itself.

Everything points to an enlargement of intercourse and to closer relations in the future. The ocean voyage between the two hemispheres has been reduced from an average of thirty days to less than six days, and the time is at hand, in the opinion of the best naval architects, when ocean lines will make their ordinary voyage within a hundred hours. One-half of the population of the United States are within speaking distance of Washington by telephone. The time is undoubtedly at hand when the Atlantic will be no impediment to audible communication between the two continents.

Besides, the precedents of our own legislation, down to the time when the opinion of this country was divided upon this question, all point to the same result. If silver were queen, gold was king.

There is nothing which points to any considerable rise in silver in the near future, unless there may be some brief and temporary diminuation of the product. If it come, however difficult, there must be a new revision of the relation between the two metals. That can only take place by the common consent of commercial nations, and it will be idle and hopeless to expect it otherwise.

Believing, therefore, with Hamilton, that the bimetallic standard is that upon which alone this country can permanently and safely rest, and believing also, with Hamilton, that whenever the two metals separate the standard must be conformed to the more valuable, I am in favor of at once putting a stop to the purchase of silver for coinage. Otherwise it seems to me clear that our gold will take its departure, and we shall be left in that most wretched of conditions, a nation with a single monometallic standard composed of an inferior metal, constantly fluctuating and rapidly degenerating—a condition from which every wealthy commercial nation in the world, now including India, has escaped.

Another course may be suggested which might, under circumstances different from those which now surround us, prove practicable and desirable. That is, to coin a legal-tender silver dollar of a weight sufficient to make it equal in value to the gold dollar; make the gold and silver dollars receivable for all debts, public and private; make them interchangeable at the Treasury at the will of the holder; pledge the credit of the Government to maintain this relation, and provide that if at any time the bullion value of the silver dollar should fall to a point more than 2 or 3 per cent below the gold dollar the coinage of silver shall cease until the ratio be restored. This plan will go far to answer the arguments of those persons who think the stock of gold in the world insufficient to supply the world's need of a currency and dread falling prices, increased burden of debts, and strangulated business. But I fear we can not adopt it now.

First, it would not be accepted by the special representatives of the producers of silver, without whose concurrence it can not be adopted.

But, second and chiefly, because we have on our hands four hundred and twenty million of standard silver dollars, of which three hundred and eighty million are in circulation, either as coin or by the certificates which represent them, not now taking into account upward of fifty million of subsidiary coin. If this policy were to be adopted now, we must either attempt to maintain, side by side, two standard silver dollars of different weight or we must call in and recoin our existing silver currency at a cost to the Treasury of a sum which might not improbably equal 50 per cent of the entire value of our silver coinage. We must, therefore, abandon for the time being an attempt to make our present silver product useful for currency and remit that question to the future. It will be all we can do to support our present stock of silver coin without depreciation.

Mr. President, no man can regret more than I do any temporary distress which may fall upon those young communities which have lately taken their places in the sisterhood of American States. I would go, as I have heretofore gone, to the very limit of public safety, in my regard for their special condition. But they must not expect—I do not believe that their representatives here will seriously claim—that we should be affected, in regulating the currency, by a desire to promote the sale of a particular product. If I recollect rightly, the representatives in this Chamber of the six new States were divided evenly on the question of the free coinage of silver.

Mr. TELLER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Colorado?

Mr. HOAR. I do.

Mr. TELLER. The Senator from Massachusetts says he does not think the representatives of the silver States would insist on that. I wish to ask the Senator if he does not know the representatives have repeatedly declared that they would not insist on it?

Mr. HOAR. Well, I said a little more than that I did not think they would insist on it. I said I did not think they would seriously claim—and I will do justice to the Senator from Colorado, although I do not recollect any occasion in his life when he ever did justice to me—I will do justice to the Senator from Colorado and say he never has put this silver argument upon the grounds which are imputed to him by his Eastern critics. He has never, in my hearing, from the beginning of our financial discussions, stated that his people have a right to sell to the Government a product in the creation of which they are deeply interested, and that we must conform our currency policy accordingly.

Mr. TELLER. I have never claimed that.

Mr. HOAR. I do not think such a policy would, in the end, be of advantage to the silver-producing States themselves. I believe that if this country should be put on what is called a silver basis, and our home supply of coinage could be furnished by Colorado and the other silver States—I believe if the whole world could be put on a silver basis, and these silver States could furnish all the silver, it would be an unmixed evil to them. No nation, no State ever got permanent strength or prosperity from its wealth of the precious metals. There always has been, and there always will be, an element of chance, not to say gambling, in that product. Spain and Mexico and Peru tell their own story. The true prosperity of California began when the great profits of her yield of gold ceased and other industries appeared. I was specially gratified by the note of courage in an utterance attributed to the senior Senator from Colorado, in which he told his people not to be down-hearted—they could be a powerful State without silver. I am not sure that it would not have been better, both for Nevada and for the country if there were not a mine within her borders.

I believe that the idle silver miners of Colorado will find some other employment than shedding blood, and some better leader than their present governor.

I am told that Colorado produced in 1892, fifty-five millions of coal, sixty millions of farm products, thirty-four millions' worth of cattle, and that her manufactures were seventy-five millions, while her silver product was about twenty-three millions. Two hundred and twenty-four millions of these products, the demand for which no legislation can affect, is a pretty good showing for a State not yet twenty years old. Of the wealth she produces even now, her silver product is not a tenth.

I do not think we shall gain much by discussing here the responsibility for the condition of things that exist in this country. It is our duty to agree, if we can, upon a remedy. We shall probably, all of us, have something to say to the people when they are asked to determine to what leaders they shall give their confidence hereafter. But I voted, after the best consideration of the subject of which I was capable, for the much-abused statute of 1890. I have seen no reason to change my opinion of the wisdom of that vote in the light of subsequent experience. That law has been most bitterly attacked. I desire to leave on record somewhere, and the records of the Senate seem to me the fittest place, the reason which governed my action.

The law of February 28, 1878, commonly known as the Bland bill, as it passed the House of Representatives, provided for the free coinage of silver without limit, at the rate of 412½ grains to the dollar. The owner of the silver bullion, under the operation of that bill as it passed the House, could have taken it to the mint and received a legal-tender dollar, coined and stamped, for every 412½ grains of silver. This not only would have enabled the owner of the silver to make a large profit, as the process of its degeneration went on, but it would have been an issue of fiat money, pure and simple, so far as the difference went between the bullion value of the silver dollar and of the gold dollar.

The Senate amended the House bill by limiting the amount to be purchased to a sum which was not to be less than two million and not more than four million dollars' worth a month, at the discretion of the Secretary. The Secretary was to purchase the bullion at its market value and coin from it all the 412½-grain dollars it would make. The bill so amended passed both Houses over the veto of President Hayes. But the fiat money remained, and for twelve years had been accumulating in the Treasury.

For that issue of fiat money the act of 1890 substituted the purchase of silver at the rate of 4,500,000 ounces a month. But it declared it the duty of the Secretary of the Treasury to maintain its parity with gold, to do which it would become his duty to use all the powers committed to him by the resumption act of of 1875.

Mr. STEWART. I ask if that is in the law?

Mr. HOAR. That is his duty, and he has the power.

Mr. STEWART. To declare that that is the policy?

Mr. HOAR. Yes, sir; if that is the policy in passing the law it is the duty of the public officer who executes the law to carry out the policy.

Mr. STEWART. Then there are other provisions in the statute which directed specifically what he should do for the purpose of carrying out the law.

Mr. HOAR. I understand that. There are other provisions in it, and there are a good many other reserved powers in the statute of 1890 which have not been very publicly discussed, and which it may be necessary hereafter to discuss; but I am speaking now of this provision.

Mr. STEWART. I will discuss that hereafter.

Mr. HOAR. In other words, instead of the fiat money of the Bland bill, every dollar of the property and the utmost limit of the credit of the people of this country were pledged to the maintenance of our silver currency on an equality with gold.

It is true that the amount of silver to be purchased was increased by the act of 1890 from the limit of from two to four million dollars' worth a month—at the discretion of the Secretary of the Treasury—to a fixed amount of 4,500,000 ounces a month, without discretion; to be purchased, however, at its market value, so that the profit of the transaction inured to the Treasury.

It is true also that since the Bland bill was enacted but two millions' worth a month had been in fact purchased. But that condition of things could only continue so long as there should be a Republican Secretary of the Treasury, or a Democratic Secretary differing wholly from his party. In the not unlikely accession of the Democratic party to power we had every reason to expect that silver would be purchased to the largest monthly limit permitted by law.

This was not only the opinion of Democrats who might be termed extremists, but of the leaders of the party in Congress, with perhaps, half a dozen exceptions. Certainly no man represented, then or now, what would be called the moderate and conservative opinion of his political associates more than the present Secretary of the Treasury. He had, and deserved, their full confidence, as he had and deserved the friendly regard of all who have been his associates in the public service. If the personal inclination of his party had been followed, without considerations of special availability in one or two States, he would have been preferred to Mr. Cleveland as a candidate for the Presidency itself. It was natural and almost inevitable that, in the case of Democratic success, Mr. Carlisle should be called to the Treasury, and should be clothed with the discretion given by the Bland bill.

Now Mr. Carlisle had voted for the free coinage of silver, of which he was an avowed advocate, although he desired that the profit should go to the Government and not to the owner of the bullion. In his very able speech in favor of the Bland bill, as it finally passed the House, delivered in the House of Representatives February 21, 1878, he gives his opinion on this subject, and especially his opinion as to the proper exercise of this discretion by the Secretary of the Treasury. He says:

> My position upon the subject is briefly this: I am opposed to free coinage of either gold or silver, but in favor of unlimited coinage of both metals upon terms of exact equality. No discrimination should be made in favor of one metal and against the other; nor should any discrimination be made in favor of the holders of either gold or silver bullion and against the great body of the people who own other kinds of property.

He goes on to denounce Mr. Sherman, then Secretary of the Treasury, as well known to be hostile to the purposes of the Bland bill, and to denounce the resumption act of 1875 as a destructive scheme. He says:

> The Senate has declared by a large vote that the coinage should be limited to a sum not less than $2,000,000 per month. If the execution of this measure could be intrusted to a public officer whose opinions upon the subject were in accord with those of the great majority of the American people, and whose sympathies were with the struggling masses who produce the wealth and pay the taxes of the country, rather than with the idle holders of idle capital, the provisions alluded to would be of little consequence, because he would coin the maximum instead of the minimum amount allowed by the amendment.

Let me not be understood for a moment as desiring to cast any imputation either upon the integrity or the wisdom of the present Secretary of the Treasury. I suppose that he has changed his opinion as to what would be a wise exercise of his discretion under the Bland bill, even if he were vested with it. But I suppose that, in common with a large number of his countrymen, his change of opinion has been brought about naturally and honestly, as well as inevitably, by a change of situation. The argument which might have convinced as honest a public officer as Mr. Carlisle in 1878, appears very differently in 1893. In 1878 all parties in the United States expected to continue the coinage of silver. The question was whether it should be limited or unlimited. There was no reason to doubt that if the consent of Great Britain could be had, every other European Government would gladly open its mints again to silver. Many great and conservative British financiers then thought that the way to protect India was not to put her on a gold basis, but that England herself should resume the coinage of silver at a proper ratio.

It is no secret that some of the cabinet of Lord Salisbury and that Mr. Goschen himself inclined to this view and were ready to adopt it as the policy of the Government, if the consent of the business men of London, with anything near unanimity, could have been had. This opinion has within a few days been reaffirmed by Mr. Balfour. I have never agreed with the opinions expressed in favor of the free coinage of silver by Mr. Carlisle, and those who then thought with him; but justice to them requires it to be admitted that the question was a very different one when the policy of the commercial world, outside of this country, was still undecided, from what it is now when that policy is settled.

This then was the condition of things under the bill for which the Sherman bill was a substitute. The Bland bill of 1878 required the addition to our silver coinage of $2,000,000 worth a month, not redeemable in gold, and legal tender for all obligations, public or private. The Secretary of the Treasury was bound to the purchase of at least $2,000,000 worth a month, and to coin from it all the dollars it would make. But he was at liberty in his discretion to purchase and coin $4,000,000 worth a month.

If we had a Secretary entertaining the then opinion of Mr. Carlisle, who favored and voted for free coinage of silver, and who favored the passage of the Bland bill over the veto of President Hayes, we were to have $4,000,000 worth a month, or $48,000,000 worth a year. Now this, so far as the difference between gold and silver was concerned, was fiat money pure and simple.

What would have come if this law had been continued? If we had had a Democratic Administration—if that Administration represented the opinion of nine-tenths of the Democratic party—we were to have forty-eight million dollars' worth of fiat money a year. To what condition would this have brought us, inevitably and swiftly, even if the smaller quantity alone were coined? I will let Mr. Cleveland himself answer this question.

He declares in his message, December 8, 1885:

> This operation will result in the substitution of silver for all the gold the Government owns applicable to its general purposes;
>
> That the—
>
> hoarding of gold has already begun;
>
> That—
>
> the two coins will part company; * * * then will be apparent the difference between the real value of the silver dollar and a dollar in gold: * * * gold, still the standard of value, and necessary in our dealings with other countries, will be at a premium over silver; * * * rich speculators will sell their hoarded gold to their neighbors who need it to liquidate their foreign debts, at a ruinous premium over silver, and the laboring men and women of the land, most defenseless of all, will find that the dollar received for the wage of their toil has shrunk in its purchasing power.
>
> That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage. We have been saved by the most careful management and unusual expedients, by a combination of fortunate conditions, and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.

In his letter to A. J. Warner and others, members of the Forty-eighth Congress, February 24, 1885, Mr. Cleveland says:

> Gold would be withdrawn to its hoarding places, and an unprecedented contraction in the actual volume of our currency would speedily take place. Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm, the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil. From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them.

Mr. President, the representatives of the people did deliver them. With no help from Mr. Cleveland or his political supporters, the Republican party arrested the swift progress of the danger which threatened us, and removed a large part, though not the whole, of the evil of the Bland bill. The act of July 14, 1890, while it for a short time increased the amount of silver which the Secretary of the Treasury might purchase and coin, declared the "established policy of the United States to maintain the two metals at a parity with each other."

By the statute approved January 14, 1875, the act to provide for the resumption of specie payments, the Secretary of the Treasury is authorized to use any surplus revenues not otherwise appropriated, and to issue, sell, and dispose of, at not less than par, any bonds of the United States described in the act of Congress of July 14, 1870. Those bonds were: A bond bearing 4 per cent interest, running for thirty years; a bond bearing 4½ per cent interest, running fifteen years; a bond bearing 5 per cent interest, running ten years.

So that the act of 1890 substituted for the issue of twenty-four million gold dollars' worth of fiat-silver money yearly the present purchase of silver, with the whole faith and resources of the Government pledged to maintain its equality with gold.

It is said that we had in the Treasury June 30, 1893, $362,000,000 of silver in coin and $118,000,000 in bars; and this is true. But of this four hundred and eighty millions, three hundred and forty millions, or thereabouts, is in practical circulation in the form of silver certificates.

We had, at the same time, in the Treasury, $110,000,000 of gold in coin, and seventy-eight millions in bars. Of this one hundred and eighty-eight millions, ninety-four millions, or about 50 per cent, was in practical circulation in the form of gold certificates.

While the gold certificates in circulation amount to only one-half or thereabouts of the gold in the Treasury, the silver certificates in circulation are about two-thirds of the silver in the Treasury. We have one hundred and fifty millions of silver certificates in circulation against ninety-four millions in circulation of gold certificates.

I suppose it will not be claimed that, so far as the silver is in practical circulation, the most convenient form of that circulation is not the deposit of the bullion, or coin, in the Treasury, and the transfer from hand to hand of its paper representative. I suppose that if all the silver now in the Treasury should be replaced by an equal value in gold dollars, and the silver destroyed or sent out of the country, as large a proportion of the gold as the amount of the silver certificates bear to the entire mass of silver would circulate in the form of gold certificates.

Under the statute of the United States, which differs in that respect from that of some States, the repeal of an act which itself repeals a former act does not revive such former act. So in voting to repeal the act of 1890, or any part of it, we do not revive the legislation from which Mr. Cleveland anticipated such mischievous consequences in the near future. Were the Bland bill now to be revived I, for one, should not consent to repeal the law of 1890, and to vest in Mr. Carlisle the discretion which he is so solemnly pledged to exercise, of purchasing silver and issuing fiat dollars of 412½ grains at the rate of 4,000,000 gold dollars' worth, or at present rate 7,371,428 silver dollars a month.

This discretion, it will be remembered, was vested by law wholly in the Secretary and is beyond the control of the President himself.

Mr. COCKRELL. Will the Senator from Massachusetts yield for just one word of explanation?

Mr. HOAR. Certainly.

Mr. COCKRELL. I simply wish to ask the Senator why he calls the standard silver dollar, now commanding a premium in gold in the city of New York in the hands of the bankers there, a fiat dollar?

Mr. HOAR. It is a fiat dollar for so much of it as is not worth the dollar for which it passes. Of course a fiat dollar may pass at an equality and sometimes at a premium, but it is none the less a fiat dollar in the ordinary definition of the word.

But, Mr. President, there was another reason equally controlling:

One party, the Democratic party, almost unanimously—aided by Republicans enough to make a majority of both Houses of Congress—were well known to be in favor of the free, unlimited coinage of silver at the rate of 412½ grains to the dollar. There were a few exceptions in the Democratic party. But that the friends of free coinage of silver represented its settled opinion and its deliberate purpose is shown by the fact that at its advent to power the Secretary of the Treasury and every Democratic member of the Committee on Finance of the Senate, with a single exception, is a person who was then of that way of thinking.

Now, Mr. President, it is notorious—no honest man who remembers the history of that time will deny—that the alternative presented to us was the passage through both Houses of Congress of a bill for the free coinage of silver or the adoption of the measure of 1890—a measure far better than the existing law which it repealed, on the one hand, and infinitely better than the new law with which we were menaced, on the other. It is true that President Harrison undoubtedly would have vetoed a bill for the free coinage of silver. But it is also true that the passage of such a measure through both Houses of Congress—arrested only by the opinion of the Executive—would have caused infinite mischief in its effect upon the public credit, both abroad and at home.

Mr. TELLER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Colorado?

Mr. HOAR. Certainly.

Mr. TELLER. I should like to ask the Senator from Massachusetts if he has forgotten that the House of Representatives had voted down a free-coinage bill?

Mr. HOAR. I understand it——

Mr. TELLER. And that when the chairman of the conference committee reported the bill, he called our attention to the fact that the other House had determined not to have free coinage?

Mr. HOAR. I understand that very well, but it was because of this compromise law of 1890.

Mr. TELLER. No compromise had been made.

Mr. HOAR. The House of Representatives would have passed a bill for the free coinage of silver by a very considerable majority, in my judgment, if we had rejected the conference report.

Mr. STEWART. The Senator from Ohio [Mr. SHERMAN] stated——

Mr. HOAR. I know all about that.

Mr. STEWART. He sated that it was impossible to get a free-coinage bill, and therefore the conference agreed upon this measure.

Mr. HOAR. I do not so understand it. He did not say so. He said they had voted against it.

Mr. STEWART. That is the fact about it.

Mr. HOAR. The Senator does not question my statement that I voted for the law of 1890 under that belief?

Mr. STEWART. Oh, no.

Mr. HOAR. Now, you tell us that the main cause of the present difficulty is that foreigners will not keep our securities so long as they are afraid they will be paid in depreciated silver, although the whole credit of the Government of the United States is pledged to make every silver coin as good as gold coin anywhere. What do you think would have been the effect on our credit of the continuance of the coinage of silver dollars under the Bland bill, there being neither obligation nor authority resting upon the Government to exchange these silver dollars for gold dollars, and the purpose of the American people being learned only from the fact that under its existing law it was coining $24,000,000 worth of fiat money annually, to grow to $48,000,000 worth whenever a Secretary of the Treasury agreeing with Mr. Carlisle should come into power; and that there was a Congress, both of whose Houses were purposing to substitute for that an unlimited coinage of depreciated silver whenever they could get rid of the constitutional restraint imposed only by an individual will?

There has never been a day since the resumption of specie payments until long since the present Administration came into power when, if you had taken a thousand dollars in gold and a thousand dollars in silver into any national bank in the country, the bank would have given a dollar for its choice between the two as a deposit. It may be that a bank—one of whose customers was paying a large body of workmen their wages on a pay day—might have given something for the silver for convenience of making change. The silver currency of the country was maintained practically on an equality with gold.

I believe that if President Cleveland in his inaugural address had declared that every authority vested in him, or in the Treasury Department, would be used to keep every dollar of our currency as good as every other, and had been left at liberty by the pledges of the platform on which he was elected to add as-

surances that there should be no change made in the protective system which should not take effect far enough ahead to allow existing industries to adapt themselves to the new condition of things, the calamity which is upon us would not have come.

The purchase of silver under the act of 1890, in my judgment, is a wasteful and extravagant expenditure of the public money. It never could have been excused, but as an escape from the fiat money of the Bland bill, and from the threat of an absolute free coinage of silver. But we could have maintained our national credit and the integrity of our national currency in spite of it, without disaster or panic, but for the advent of President Cleveland to power.

Mr. DUBOIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Idaho?

Mr. HOAR. Certainly.

Mr. DUBOIS. I should like very much if the Senator from Massachusetts would make a little clearer his statement in regard to the danger of free coinage at that time. I was a member of the other House then and recall the fact very distinctly. I think we could not pass a free-coinage bill through the House, and I understand that the Senator himself says that President Harrison would have vetoed a free-coinage bill. I should like to have the Senator make it a little clearer why the act of 1890 was passed to save us from free coinage.

Mr. HOAR. I have made it as clear as I know how. I will repeat in substance what I said. Undoubtedly Mr. Harrison would have vetoed the bill for the free coinage of silver. There is no doubt about that whatever; but they tell us—and that is the point I am making and I repeat it—the monometallists or whatever, President Cleveland in his message says, that the panic was caused by the fact that foreign nations are afraid we are going to pay them in depreciated silver currency, which, whatever may be its credit here, whatever it may be maintained at here, they can not take home with them and pass for their dollar's worth, and that is what has caused our trouble.

My proposition is that, if foreign nations take that view of the present law, what would they have taken of the Bland bill? I am going to show in a moment that you could have coined a good many more dollars under it than under the Sherman law. What would be the effect on the credit of the American people? If they are frightened by an existing condition of things which maintains silver on a parity with gold, what sort of fright would they have had when you put out $24,000,000 or $48,000,000 worth of silver with no obligation to keep it even with gold, and that only as an alternative to a condition of things in which both Houses of Congress wanted the free coinage of silver and could not get it over the President's veto. That is the point.

It may be well, before leaving this subject, to point out exactly the extent of the difference in the matter of purchasing silver under the operations of the much-reviled law of 1890 and that of which it took the place. Taking the average price of silver from the time when the Bland bill was repealed and the law of 1890 took its place, down to the first day of August, 1893, at the rate of $2,000,000 worth a month—the smallest amount which the law made it the duty of the Secretary to acquire—it appears that only $23,000,000 more of silver has been purchased under the Sherman law than would have been uttered if the Bland bill had continued in force.

At an expenditure of $23,000,000, therefore, this country escaped from the evil which President Cleveland anticipated as coming upon us in the near future, and which he so vividly and eloquently portrayed; escaped the certain addition of upwards of thirty-seven millions a year, or upwards of one hundred and ten millions in three years of fiat silver currency, and the not impossible addition of twice that amount; and escaped, also, the danger of having both Houses declare for the unlimited coinage of silver. We have also to set against this expenditure the actual value of the bullion received for this twenty-three million so expended.

But this is not all. If the other limit in the discretion of the Treasury Department had been reached—in accord with nearly the unanimous desire of the Democratic party—we should have had about $112,000,000 more of the fiat money, and the balance would have been $89,000,000 in favor of the law of 1890.

Taking the price of silver as it was on the first of the current month (70 cents an ounce), $2,000,000 worth, coined into dollars, would have produced $3,685,714, while 4,500,000 ounces of silver at the same price cost only $3,150,000; showing that the purchase of silver under the Sherman law, at the present prices, is more than a half million dollars a month less than would be coined under the Bland bill.

Mr. MCPHERSON. That is the minimum?

Mr. HOAR. That is the minimum. I have made two tables here to show that very clearly.

The following shows the operation of the Bland bill and the Sherman law compared:

	Minimum.	Maximum.	Absolutely.
Monthly purchases of silver under Bland bill, at 83 cents (estimated average) an ounce, coined into dollars, would have produced, since Sherman law was enacted:			
One month	$3,108,433	$6,216,866	
Three years	111,903,588	223,807,176	
Four million five hundred thousand ounces silver, at 83 cents, cost:			
One month			$3,735,000
Three years			134,460,000
A monthly purchase of silver under Bland bill, at present price of silver (70 cents), coined into dollars would produce:			
One month	3,685,714	7,371,428	
Four million five hundred thousand ounces silver, at present price (70 cents), would cost			3,150,000
Monthly indebtedness under Sherman law less than it would be under Bland bill, at present price of silver	535,714	4,221,428	
Average monthly excess of the amount of silver certificates over market value of the silver (or silver dollars they represented) when coined, which would have been issued under Bland bill since Sherman law was enacted (silver at 83 cents an ounce):			
One month	1,108,433	2,216,866	
Three years	39,903,588	79,807,176	
Monthly excess at present price of silver	1,685,714	3,371,428	

NOTE.—(1) Under Sherman law the coined dollars (and certificates) represent the market value of the silver, when coined, and no more.

(2) Under the Sherman law the entire credit of the Government is pledged to keep silver at a parity with gold. Under the Bland law there was no such obligation.

Or to restate the comparison a little more compactly:

	One month.	Three years.
UNDER SHERMAN LAW.		
4,500,000 ounces of silver, at 83 cents (average)	$3,735,000	$134,460,000
UNDER BLAND BILL.		
$2,000,000 worth of silver a month, at 83 cents	2,000,000	72,000,000
Excess represented by certificates (and the coined dollars)	1,108,433	39,903,588
	3,108,433	111,903,588
Against Sherman law	626,567	22,556,412
$2,000,000 worth of silver, at 70 cents (approximately rate of last purchase)	2,000,000	
Excess when coined	1,685,714	
		3,685,714
4,500,000 ounces of silver, at 70 cents		3,150,000
In favor of Sherman law at present time		535,714

NOTE.—Three hundred and seventy-one and one-fourth grains pure silver (amount in one silver dollar) being by law worth a dollar in gold, 1 ounce of silver (480 grains) is worth $1.29, making the Bland dollar at par when silver is $1.29 per ounce.

We are told by our Democratic friends of sound money in the Eastern States, we are told by the newspapers who are the special organs and supporters of the President that it is our duty in this day of our country's trouble to forget party and to coöperate with the President in renewing public confidence and restoring a sound currency. They tell us we must say nothing and do nothing that will weaken his authority or impair his just influence. They tell us we ought to stand by him in all honest efforts and all lawful and healthy measures. The advice is good. We will take it. When he cries to the Republican party to lend a hand to get him and the country out of the morass in which he and the country are sinking, we will do it. We will neither taunt nor upbraid him till he is safe on dry land out of the swamp, and not then unless he tries to plunge the country into another.

Now let them deal with us in the same way. Let them deal out to us the same measure of justice they ask for him. The weight of this burden is upon the shoulders of Congress where the responsibility for all legislation rests. The President's duties, as he said when he accepted his first nomination, are chiefly executive. He has sent in his message, and his constitutional relation to that whole subject is over until we send him a bill.

Now let him and his organs do justice to the men who have fought this battle. When he or they have occasion to discuss our action in enacting the law of 1890, let them repeat to the people what he said about the condition of things from which that bill extricated the country. When they say that the in-

crease of our silver under the Sherman act hurts our credit abroad, let them tell the people that we should be now purchasing $500,000 worth a month more if the law which it repealed were in force. When they say that our securities are sent home because foreign investors are afraid we shall come to pay them in silver, let them in honesty and decency tell the people how foreign investors would, in their judgment, have felt if, instead of the pledge of the honor and all the resources of the American people to maintain the silver dollar at a parity with gold, no such obligation existed anywhere, and both Houses of Congress had declared themselves in favor of the free coinage of silver into dollars, worth from 60 to 70 cents in gold, and the measure had been kept from becoming law only by the interposition of a single will.

Now, Mr. President, I have but a word or two more to say in regard to the necessity which seems to me to be upon us, and which I regret as much as any man in the country, of temporarily suspending the coinage of silver under the Sherman law. Gentlemen must remember, Senators representing the especial silver interest must remember, what we have got and what we are to have in the way of silver coinage in this country for a long time to come. The stock of gold on the 1st day of January, 1893, in this country of coin was $597,961,390, and the bullion in the Mint $81,826,630 more, making together $679,788,020. At the same time we had a stock of silver amounting to $501,378,706, and bullion at its cost value $99,824,220 more, making $601,202,926.

But if this bullion be coined into dollars under the present arrangement, the money value of the silver bullion to be coined would make in dollars $183,961,740. If you deduct its cost, $99,824,220, and add the $84,137,520 balance, you are to have, as against a stock of gold coins, in this country $679,788,020, and a stock of silver coin and to be coined of $685,340,446. The present gold coinage is only about $30,000,000 a year. Nobody supposes that our silver will leave the country or be melted up at that rate of value in dollars. So it will take two and one-half years to have a stock of gold in this country, of gold coin, equal to the existing stock of silver coin. When you remember that there were but $8,000,000 of silver coined by this country down to the year 1873, I do not think our silver friends are quite warranted in calling us gold bugs, and threatening to wade up to their horses' bridles in blood, when the policy which is proposed maintains for them $685,000,000 of silver, $70,000.000 more than the stock of gold coin in this country, and equality even between the two coins will not arrive for two and one-half years.

There is a great difference between a declaration by this country, in time of panic, of a purpose to establish and adhere to an exclusively gold standard of value and an exclusively gold currency as a medium of exchange, and the declaration that we will adopt the policy to which all the commercial nations of the world have come, until by their consent a bimetallic standard can be adopted. At present, and for a long time to come, our supply of silver in circulation and in the Treasury must largely exceed our supply of gold. Advocates of silver, or bimetallism, can not complain unless they take the ground that we shall establish a currency of our own in order to maintain a market for their product—an avowal which I think no Senator on this floor will have the courage to make.

No candid advocate of silver currency can affirm that the people of the United States have not gone to the extreme limit of public safety in the struggle to maintain silver in connection with gold as the monetary standard. We have purchased this metal and coined it and given it a legal-tender power beyond its value for fifteen years. We have, at the expense of the people, purchased it in large quantities beyond any public necessity and beyond any desire of the people to use it as money. During all this time it has been constantly on the decline. Even India has abandoned it. Certainly the experiment has been fully tried and the Government has gone to the extent of its resources in obedience to their desire.

I suppose, Mr. President, that with the coinage of the silver dollar stopped this country could maintain without difficulty our present volume of silver currency on an equality with gold. Some of our friends are apt to point with dismay to the mass of silver coin in the Treasury. But every coin in the Treasury that is represented by a silver certificate is in practical circulation in the most convenient way. I do not believe that the great commercial nations of the world will long submit to be deprived of the great advantage which seems to me to come from the use of both the precious metals. I look still for an international agreement upon this subject. If that shall come, the relation of the two metals to each other will be carefully reconsidered.

But I believe one can be—I will not say established by law, but I will say—ascertained by experience which, when recognized by law and by the common consent of mankind, can be maintained without substantial change for generations to come. From such a condition of things the communities upon whom the present crisis bears the hardest will reap, in my opinion, the most abundant harvest. They will cease to depend on a single product, fluctuating in price, with its ever-present temptation to gambling and speculation.

I am not unmindful of the opinion of some of the wisest and best financiers that the supply of gold is sufficient for the world's wants for a metallic currency and a standard of value. I do not agree with them; but it may be that the product of gold will increase, at least, to the world's needs in that respect, if not sufficient now. This opinion may, in the end, prevail. I do not think anybody who can be trusted has settled yet what are the wants of the world's business, or has any very clear idea on the subject or knows very accurately what is likely to be the world's product of gold.

Within twenty years silver has been discarded as a measure of value in every country of importance but Mexico. It is not a measure of value in the United States, and has not been since 1834. There is no human probability that it will ever be restored to that function unless some time in the future the supply of gold shall become subject to great fluctuation and the supply of silver become steady. We can not provide for such contingencies and it is needless to speculate about them. But I am utterly opposed to a declaration that we will never use silver again as currency, or will never again coin it for a legal tender.

To make such a declaration by Congress, or to adopt such a policy, would, in my opinion, arm every agitator and anarchist and socialist with an almost irresistible weapon. They would say that by the perpetual adoption of a single standard the world's burden of debt would be constantly growing heavier, and that the prices of the world's product would gradually and constantly be falling. In support of their contention they would point, not only to the opinions of the fathers, but to the recent utterances of nearly every public man of all parties; of candidates for the Presidency; of nominating conventions; and, with scarcely an exception, of every person clothed, or likely soon to be clothed with legislative authority. They would point to the fact that even in England the representatives of the last Tory administration inclined more and more to the bimetallic standard, properly adjusted, and to the policy of giving silver a share in the function assigned to the precious metals. I suppose they adhere to that view now. I do not believe that a policy of eternal monometallism, adopted in a time of panic, could stand.

It is enough for the present occasion to say that there should be no further coinage of silver, except by the unanimous consent of commercial nations. Upon that policy, if we adopt it voluntarily, we can stand. If we decline to adopt it voluntarily, we shall be compelled to it, alike by the loss of trade and by the necessities of all classes; chiefly, however, of the laboring men of the country, who can not live without a stable currency and a steady credit.

Mr. STEWART. Mr. President, I desire to correct a mistake which my friend has fallen into in regard to the condition of the two Houses at the time the compromise bill referred to was passed. The chairman of the committee of conference who reported the bill on that occasion stated the reason for its passage to be a compromise which had been reached. The Senator from Ohio [Mr. SHERMAN] explained the situation as follows:

> The House of Representatives after full consideration sent to us a bill, printed in this document precisely as it was passed by the House. It came to the Senate.
>
> The Senate engrafted upon it the principle of free coinage, together with some other provisions, changing the character of the House bill. Indeed, the Senate made a substitute for the House bill, embodying no part of the House bill except a single section relating to the national banks. In this condition the two bills went before the committee of conference. The House of Representatives had by a decided vote, which I need not repeat, determined against the free coinage of silver, and the question then arose whether the two Houses could be brought to an agreement upon a proposition based upon both bills, embodying both, but omitting the free coinage of silver. That was the problem to be solved.

He then went on to say that they solved the problem. The House by a decided majority vote had refused to pass a free-coinage bill, and the conferees on the part of the Senate, being charged with carrying out the views of the Senate, were forced to yield. I take it for granted that the Senate conferees did not yield until they found it was necessary to do so. They were the organ of the Senate, and I take it enforced the views of the Senate.

It was reported by their chairman that they had done the best they could, that the House, by a decided majority, had refused free coinage; and therefore, to carry out the views of the Senate, which was in favor of such legislation, they had made the compromise with the House conferees and brought in the compromise measure. I do not think we should hear any more of the excuse that that was done to avoid free coinage. It seems to me the facts of the record are sufficient to disprove that, and

I hope that we shall hear no more of that excuse, because it can not be doubted that the chairman of the committee reported to the Senate the truth of the case at that time.

Mr. HOAR. I wish to say that, while I perhaps do not know as much about finance as the Senator from Ohio or the Senator from Nevada, I am stating what was my opinion at the time. I suppose the Senator from Nevada does not question that that was my belief.

Mr. STEWART. Not at all, but I hope the Senator from Massachusetts will not question what I stated was my belief that we could not get free coinage, and we were forced to take the compromise bill, as a free-coinage bill could not be gotten through the House.

Mr. HOAR. That is another thing. I think the Senator will come to a different conclusion if he inquires among the persons who were there. It is true that the Senator from Nevada and other Senators who voted with him for the compromise measure did not mean to go away from the coinage of silver, but they knew perfectly well, as we all knew, that President Harrison would likely have vetoed such a bill.

I am speaking of the likelihood of the passage of a bill for the free coinage of silver, for I know that there has not been a time since Andrew Johnson went out of power when such a bill could have passed a President of the United States of either party.

Mr. STEWART. I am not talking about the President.

Mr. HOAR. I was speaking of the two Houses, and I reaffirm, as the result of my information at that time—and I think there were a great many Senators who so understood it—that the House would have passed a bill for the free coinage of silver but for this compromise. If the Senator from Ohio thought otherwise, he was misinformed.

Mr. STEWART. The chairman of the committee of conference is supposed to have done his duty and represented the Senate, and he reported that there was no possibility of getting the bill through the House, because it had been beaten by an overwhelming majority. Therefore the Senate believed it. That is the official record. As to the silver Senators, if they had supposed there was the slightest possibility of getting a free-coinage bill through the House they would not have agreed to this compromise, but they would have allowed Mr. Harrison to take the responsibility. At no time would they recede one step or yield a point which they believed vital to their whole country. That was their position. They were told that this was a compromise, because the House would not pass a free-coinage bill, and the chairman of the committee, who was the organ of the Senate, made a statement that that was not correct.

I believe he made a truthful statement when he told us that we could not get it through the House. There might have been a majority in the House for a free-coinage bill, but under the machinery of the House the majority was not able to enforce its opinion. I wish to say that ever since the act of 1873, if an unbiased vote had been taken in the two Houses, without party machinery, without legislative advantages in any sense, a free-coinage bill would have passed, and the act of 1873 would have been wiped out. The people have sent their representatives here for twenty years asking for the righting of this wrong. There is no doubt about that. But the machinery of the House was such that it was impossible for them to accomplish their object, and it was so reported by the chairman of the committee of conference on the so-called compromise bill.

Mr. HOAR. There might have been a majority for it in the House, as the Senator says, but the machinery there prevented its passage.

Mr. STEWART. We had no hope about it. All these things are done by machinery. The gold men operate by machinery.

There are many things in the speech of the Senator from Massachusetts to which I shall reply at a future time. I shall not do it now. I simply wish to call attention now to the declaration of the junior Senator from Massachusetts [Mr. LODGE], in which he gave us the cause of this panic, the cause of the distress. He said that our foreign creditors feared that we would pay back to them in silver money that which they had loaned to this country in gold. I wish to inform that Senator and Senators who do not know it that every obligation of the Government of the United States is payable in silver and was so when the contract was made. Where no special contract was made payable in gold, silver has been received, except during a short interregnum, which was soon corrected. It was the legal-tender money of this country when these debts were contracted.

When foreigners invested in our securities they knew the law and they made the contracts in view of the existing law. They invested to be paid in our money. What is wanted now is that our laws shall be changed and that foreigners shall be paid in a different money. That is the demand of the bondholding aristocracy of London to-day. Their demand upon their debtors in this country has made this panic. The three thousand millions which they have invested here they demand shall be paid in a different money from the contract under which the investments were made. They say that we shall change our money and deny our people the right to pay according to the contract; they say we shall repeal the Sherman law and deprive the people of any money but gold, to the end that they may be paid in gold; that there is distrust because the people of this country will not abide by their contracts.

The only object of this panic, the only object of this distrust, is to change the laws of the United States, to change contracts, and convert contracts payable in either gold or silver into contracts payable in gold alone, so as to augment that colossal power in Great Britain which has dominated the world for the last eighty years; that colossal power which, according to Gladstone, holds foreign obligations to the extent of $10,000,000,000. He sneers at the idea of a monetary conference which shall consider the question of restoring silver, and says, "We are a creditor nation; we owe the world nothing, but they owe us $10,000,000,000, outside of the United Kingdom, and we will march on and change their laws and force them to pay in dearer money, so that we can add to the $150,000,000 in interest which we are drawing annually from America." England wishes to add to that largely, doubly if you please, and the desire of the American people to have the money of the contract, to do justice, and not to be absorbed by Great Britain, and their resistance of Great Britain's demands, is said to be the reason why this panic has been brought on.

The fight is not with Wall street. Wall street is simply an appendage of London. It is in London where they hold $10,000,000,000 of foreign obligations, $4,000,000,000 of British national obligations, and $4,000,000,000 of British obligations of other corporations than the Government; $18,000,000,000 or $20,000,000,000 of obligations which call for money; and they want to change them from bonds payable in the money of the greatest country in the world, and compel payment in gold alone. They have obligations enough now to enslave the world for all time on the gold standard, and they know it. It is commercial supremacy which they demand.

When the royal commission sat and considered these questions they did not mince the matter that the demonetization of silver was appreciating gold. Philosophically they all understood it; the twelve agreed until they came where the road forked, then six were for bimetallism and the other six said "We can not close our eyes to the fact that Great Britain is a creditor nation; all debts should be payable in gold, and any addition to the circulating medium of the world would be to the disadvantage of Great Britain." That was the turning point of that royal commission; that was the animus of their report; that is the force which is operating upon this country, and the question is, shall we submit and have no kind of money except what Great Britain dictates?

The President says we shall have the money accepted by all nations. Did we have any say in what kind of money Great Britain should have? We had no voice in that. But still we must submit to their dictation; we have no power under the Constitution to have our own constitutional money, gold and silver!

Why talk about sudden changes; why talk about anarchy? Who ever heard of more violent anarchists than the anarchists of finance, who undertook to destroy one-half of the world's money to enhance the value of the other half? There was about $3,500,000,000 of legal-tender silver in the world and about the same amount of gold, and when legal-tender silver no longer performs any monetary function, except that of subsidiary coin, prices must fall 50 per cent. Contracts have been made on the basis of both metals, and when you require payment on the basis of one, that doubles the obligation.

Senators talk about anarchists. It is the financial anarchists who plot against the liberties of the people and make civil order impossible. It is the anarchists of finance who repudiate the time-honored principle of gold and silver coin at a metallic basis, and who are forcing the world, where contracts have been made on that basis, to pay on the contracted narrow basis of gold. It can not and will not be done.

Mr. COCKRELL. Mr. President, I have heard time and again about the noncoinage of more than 8,045,838 silver dollars from the foundation of the mint up to 1873, the date of the demonetization of silver. The charge has been made that nobody wanted the silver dollars, that nobody would take the silver dollars, that nobody would put his metal into the mint and have it coined into the standard silver dollar, because it was not a money that anybody wanted.

That is the inference, that is the intention, that is the impression the Senator from Massachusetts [Mr. HOAR] intended o

leave, that nobody would use a silver dollar from 1792 up to 1873, and that is the argument which has been used here a hundred times; it has been gone over and over.

Why is it that we did not coin any more than $8,045,838 between the organization of our Government and 1873 when silver was demonetized? Let us look at it. What are facts? In the first place, we did not produce any silver in this country, and we had no silver metal to coin, to amount to anything. What is the record on that point on the production of silver? The entire production of silver up to 1834, was insignificant. From 1834 to 1844 it was $250,000, $25,000 a year; up to 1854 it was $50,000, and it never got up to a million dollars until 1861, when it was $2,000,000. Then it ran on up to 1873, when it was $35,750,000.

Let us see what was the coinage. In the five years prior to the demonetization of silver, in 1873, we coined in this country 3,622,498 standard silver dollars, being 45 per cent of our total coinage. In the year 1871 we coined $1,117,136; in 1872 we coined $1,118,600; and in the year just before the demonetization of silver, up to the 12th of February, 1873, in one month and twelve days, we had coined 977,150 silver dollars, more than had ever been coined at any time in the whole history of the Mint.

Mr. HOAR. Will the Senator state precisely what he understands, if he knows, the amount of the coinage of silver dollars down to 1853, if that is the time when the subsidiary coinage began, and also of the other United States silver coins, half-dollars, etc.?

Mr. COCKRELL. I have not made the calculation. I understand the Senator's point.

Mr. HOAR. I did not mean to mislead the Senator. What I said on that subject was not part of what I had prepared myself to say, but I stated it in answer to some interruptions, and it is quite possible in making my statement of $8,000,000 that I did not include the half-dollars.

Mr. COCKRELL. No, the Senator did not. Seventy-five million dollars of them were coined prior to 1853.

Mr. HOAR. It would not affect the point of the argument the least in the world whether the amount was $75,000,000 or $8,000,000. I was saying that the present amount of silver we have now is enormously larger than all we coined, put together, down to 1873.

Mr. STEWART. There was $160,000,000—I figured it up some time ago—of full legal-tender silver coined in the United States previous to the act of 1873. Then there was a large amount of half-dollars and quarter-dollars coined after 1853, when the amount of silver in them was reduced, but the main circulation in this country during all the time was foreign imported coin.

Mr. HOAR. All I meant to say was that I thought the amount of silver we have got now is going to keep us pretty respectably, considering the amount we had down to 1853.

Mr. COCKRELL. I understand. In 1793 and 1795 we coined $204,000; $72,000 in 1796; $7,000 in 1797. Then in 1799 we coined $423,000, and in 1804 the coinage ceased; and we coined no more until 1836.

Mr. STEWART. We coined no more dollars.

Mr. COCKRELL. I am talking about silver dollars, if the Senator pleases; I am not talking about the other. I will come to that in a minute.

Mr. STEWART. All right.

Mr. COCKRELL. I am talking about the silver dollar that everybody denounced and abused. In 1838 we began the coinage again, and coined a few thousand dollars up to 1859, when we coined $636,500, and in 1860 $733,930. The coinage fell off again until the five years I have mentioned preceding the demonetization of silver, and it began in 1868 at $182,700; in 1869, $424,300; in 1870, $445,462; in 1871, $1,117,136; in 1872, $1,118,600, showing a large and rapid increase.

Before 1853, which the Senator from Massachusetts inquired about, we had coined $75,961,554.90 of standard silver half-dollars, quarter-dollars, dimes, and half-dimes, and every one of those was a full legal tender absolutely in the payment of all debts for all sums whatever. That was our own coinage.

Mr. President, I have shown you the facts in regard to our coinage. What more? I hold in my hand a pamphlet, which the Committee on Finance have just prepared, in which I find the act of February 9, 1793, entitled, "An act regulating foreign coins, making them a legal tender, and establishing their value, etc.," which made foreign coin legal tender in the payment of all debts in the United States, public and private. The law remained on our statute book up to 1857. The Spanish milled dollar and the Mexican dollar and other silver coins were all full legal tender in the payment of debts, public and private, within the jurisdiction of the United States.

Will some Senator please tell me who could be found in America who would take a full legal-tender dollar to the mint in order to have it recoined into a standard silver dollar? Will a Senator from any State answer the question? What sense, what propriety, what necessity was there for anybody to take a full legal-tender coin to the mint in order to have it coined into another full legal tender? There was a risk run. If the coin was worn a little, there would be a loss, because if it were recoined into the American coin it would have to be of full weight, whereas a foreign coin worn somewhat, without being accurately tested, it would still pass as a full legal tender.

What is the use of making a fuss about this? Here were thousands and millions upon millions of Mexican dollars, milled dollars, all over the country, cart loads of them, in the land offices. They were the only things that would be received for land in Missouri for years and years in the land offices. The silver dollars were all over the country; they were full legal tender, and there was then no necessity for coining them. But after we took away from the foreign coinage the full legal-tender power and began to produce silver in our own country, the coinage of the silver dollar began, and was increasing very rapidly up to the very minute the mints of the United States were stopped against its coinage.

Mr. ALDRICH. Will the Senator allow me to ask him a question?

Mr. COCKRELL. Certainly.

Mr. ALDRICH. Will the Senator be kind enough to explain in that connection how it happened, in 1857, when the silver foreign dollars were in circulation and were a legal tender, that a Democratic administration demonetized them? They were only foreign coins.

Mr. COCKRELL. They did not demonetize silver. They never did it.

Mr. ALDRICH. In 1857 a Democratic Congress and a Democratic President took away from the only silver coin in circulation the power of legal tender.

Mr. COCKRELL. They did not do any such thing.

Mr. ALDRICH. They did exactly that.

Mr. COCKRELL. They never did any such thing. It is not worth while to quibble. The Senator has not got his mind covering the whole subject-matter.

Mr. ALDRICH. I have my mind perfectly clear upon that subject.

Mr. COCKRELL. Not at all. The legal-tender quality was never taken away from the full standard silver dollars, half dollars, quarter dollars, and dimes which were of full weight.

Mr. ALDRICH. The facts are exactly these: There was only one kind of silver dollars in circulation in the United States, and those were foreign coins; they were legal tender, and had been from 1792 to that time, when a Democratic Congress and Democratic President took away from the only silver coins in circulation their power of legal tender.

Mr. COCKRELL. I beg pardon. We had free coinage for silver dollars. We were producing our own silver then, and so there was some reason why the full legal-tender power should not be continued upon foreign coins when we were producing silver ourselves and had just commenced the yield of silver in this country, and had the half dollars and the others. No, no, Mr. President, the Democratic party never demonetized silver; never in the world.

Mr. PLATT. They demonetized foreign silver.

Mr. COCKRELL. The Democratic party has always stood for bimetallism.

Mr. SHERMAN. I wish to inform the Senator from Missouri, and the Senator from Rhode Island as well, that in 1853 what is known as the Hunter act did practically demonetize and take away the legal-tender power of silver for amounts over $5.

Mr. COCKRELL. That only related to the depreciated silver half dollars.

Mr. SHERMAN. The Senator is mistaken. We coined them again. We reduced silver at that time. It was worth more than the ratio of gold, and in order to get the circulation of silver coin, the amount of silver in the fractional coins was reduced to about 14 to 1. That was by the Hunter act of 1853. My friend from Rhode Island said 1857.

Mr. ALDRICH. I followed the Senator from Missouri in saying 1857.

Mr. COCKRELL. That was only the subsidiary coin.

Mr. SHERMAN. All the coin under one dollar, half dollars, quarters, and all the rest were reduced in that way.

Mr. COCKRELL. The weight and fineness of the half dollar, the quarter dollar, the dime, and the half dime by the law of 1853 were reduced, and they were then limited in legal-tender power.

Mr. SHERMAN. That is correct.

Mr. COCKRELL. There is no doubt about that. Nobody contends to the contrary.

Mr. HOAR. When did foreign silver cease to be a legal tender?

Mr. COCKRELL. In 1857, but the reduction of the amount of silver in the half dollar, the quarter dollar, the dime, and the half dime was made for the purpose of keeping them in circulation in the country, because the amount of silver in the dollar was more valuable as a metal than the amount of gold in the gold dollar or than the coined gold, just as silver continued to be up to 1873.

Mr. ALDRICH. I hope my friend from Missouri before he sits down will answer my question, why it was that a Democratic Congress and a Democratic President in 1857 took away the full legal-tender power from the only silver dollar which was then in circulation, or had been in circulation from 1792 to 1853?

Mr. COCKRELL. It was not the only silver dollar.

Mr. ALDRICH. Yes, it was.

Mr. COCKRELL. I have stated exactly the years. Here is the record. Is the Senator trying to deny the record? Here is the coinage year by year.

Mr. ALDRICH. Of half dollars.

Mr. COCKRELL. Of dollars.

Mr. ALDRICH. Very few of them.

Mr. COCKRELL. Our population was sparse and small compared to what it is now.

Mr. ALDRICH. As a matter of fact, susceptible of proof, there were none in circulation except the Spanish milled dollars and Mexican dollars.

Mr. COCKRELL. There were American dollars. The Senator has lived in cities all his life and never out in the country among the stalwart people who have built it up and who handle the money itself, and not checks and drafts. I have seen the silver dollar when a boy. I have seen the Spanish milled dollar. My father took silver dollars to the land office, 30 miles off, on horseback.

Mr. ALDRICH. That is an evidence that they were in circulation.

Mr. COCKRELL. They were silver dollars, and we coined them. The Senator certainly knows the record here. I am only reading from what is perfectly manifest, "the report of the Director of the Mint on the production of the precious metals in the United States during the calendar year 1892."

We coined in 1793 to 1795, 204,791 silver dollars; in 1796, $72,920; in 1797, $7,776; in 1798, $327,536; in 1799, $423,515; in 1800, $220,920; in 1801, $54,454; in 1802, $41,650; in 1803, $66,064; in 1804, $19,570; in 1805, $321. In 1840 we began to coin again, and in 1859 we coined $256,500; in 1860, $218,930, and the next year, the war going on, as a matter of course there was no coinage of any consequence of either gold or silver; but we had coined thousands upon thousands of the silver coins. We were then beginning to produce silver in large quantities, and it was only right and proper that we should have that silver go into our mints and be coined into our own dollars. There may have been a patriotic feeling among our Congressmen at that day, as there has always been in the Democratic heart, a feeling that the dollar of the country, the unit of value, should have upon it the insignia of the power and authority of the United States and not of a foreign government.

Mr. ALDRICH. My friend from Missouri must have misapprehended the nature of my question. There has been a great deal of loud declamation on the floor of the Senate about the crime of 1873, and the authors of that act, the Republican party, and everybody else has been charged with a very heinous offense in its passage. Now, I desire to call attention to the fact that a Democratic Congress sixteen years before that time had deliberately demonetized silver and taken away from the only dollar which was in circulation, or could have been in circulation for three-fourths of a century, its full legal-tender power, and I wanted the Senator to explain how it was.

Mr. COCKRELL. They did not take away the coinage. The Senator does not dare say that. They allowed free coinage to the standard silver dollar.

Mr. ALDRICH. I must be very stupid——

Mr. COCKRELL. If they took it away from one, they left it on our own coin.

Mr. ALDRICH. The only dollar in circulation was the foreign coin, which had been legal tender from 1792 to that time, and the Democratic party deliberately demonetized silver and took away from it its legal-tender power.

Mr. STEWART. It is a mistake to charge that on the Democratic party.

Mr. ALDRICH. Let me finish. Now, the Senator from Missouri says, in answer, that it was because we had begun to produce silver. He made a statement a few minutes before in which he said we never had produced silver prior to 1873. There must be some mistake in his argument on one side or the other. We certainly were not producing silver in 1857. There must have been some other reason for demonetizing silver in 1857, and I should be glad if some of the advocates of free coinage will state the true reason.

Mr. COCKRELL. The only additional reason I can give just now is that the House was Republican and passed it, and the Senate had to agree to it.

Mr. GORMAN. I move that the Senate proceed to the consideration of executive business.

Mr. STEWART. Mr. President——

The PRESIDING OFFICER (Mr. PASCO in the chair). The Senator from Maryland moves that the Senate proceed to the consideration of executive business.

Mr. STEWART. Let me explain what was done. I suppose the debates will show——

The PRESIDING OFFICER. The Senator from Maryland has moved that the Senate proceed to the consideration of executive business. The question is on that motion.

The motion was agreed to.

Mr. STEWART. An executive session while I am on the floor!

The PRESIDING OFFICER. The Sergeant-at-Arms will clear the galleries and close the doors.

Mr. GORMAN. Mr. President——

Mr. STEWART. I have been on the floor all the time.

Mr. GORMAN. I supposed the Chair recognized me to make the motion; but, of course, I shall not insist upon it if the Senator desires to speak.

Mr. STEWART. I was on the floor.

The PRESIDING OFFICER. The Senator from Nevada took the floor after the motion for an executive session had been submitted to the Senate.

Mr. GORMAN. Then I will move to reconsider the vote by which the Senate agreed to proceed to the consideration of executive business.

Mr. STEWART. The Senator may have been previous to me, but I thought I had the floor.

Mr. GORMAN. If the Senator desires to speak, I will move to reconsider the vote.

Mr. STEWART. I desire to correct a false impression.

Mr. GORMAN. I move to reconsider the vote by which the Senate agreed to proceed to the consideration of executive business.

Mr. STEWART. In 1857——

The PRESIDING OFFICER. The Senator from Nevada will pause a moment. The Senator from Maryland [Mr. GORMAN] had moved that the Senate proceed to the consideration of executive business, and that question had been put. The Senator from Nevada desiring to address the Senate, the Senator from Maryland now moves that the vote by which the motion to proceed to the consideration of executive business was agreed to be reconsidered. That will be the order in the absence of objection, and the Chair recognizes the Senator from Nevada.

Mr. STEWART. I have only a word to say. I wish to state the case correctly. The United States simply stopped recognizing foreign coins as legal tender, but kept the mints open for the coinage of our own silver until after the war, when we had a large debt and England wanted to control it.

Mr. GORMAN. I now renew the motion that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 10 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, August 16, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 15, 1893.

JUDGE OF PROBATE.

Jefferson A. Huff, of Utah Territory, to be judge of probate in the county of Grand, in the Territory of Utah, vice Lilliston B. Bartlett, resigned.

UNITED STATES ATTORNEY.

Owen J. H. Summers, of Florida, to be attorney of the United States for the northern district of Florida, vice Joseph N. Stripling, resigned.

COLLECTOR OF CUSTOMS.

Charles H. Page, of Oregon, to be collector of customs for the district of Oregon, in the State of Oregon, to succeed Edward A. Taylor, removed.

HOUSE OF REPRESENTATIVES.

TUESDAY, *August 15, 1893.*

The House met at 11 o'clock a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of the proceedings of yesterday was read and approved.

SWEARING IN OF A MEMBER.

Mr. Pendleton of Texas, having appeared at the bar of the House, was duly qualified according to law.

CONTEST, FIFTH MICHIGAN DISTRICT.

Mr. BURROWS. Mr. Speaker, I rise for the purpose of asking unanimous consent for the present consideration of a resolution giving Mr. Belknap the right to prosecute his claim to a seat in this House before the Committee on Elections. It will take but a few minutes to pass it.

I will say to gentlemen on the other side that I submitted the resolution to the gentleman from Virginia [Mr. O'FERRALL], who told me on yesterday that he was compelled to be absent, but I was authorized to state to the House that the resolution met his full approbation, and that he hoped it would pass.

The SPEAKER. The resolution will be read; after which the Chair will ask if there be objection to its passage.

The resolution was read, as follows:

Whereas in the Fifth district of the State of Michigan two certificates of election were issued—one to Hon. George F. Richardson—after which, upon proceedings in the supreme court of the said State, a new canvass was ordered in certain portions of said district, upon which a new certificate was issued to Hon. Charles E. Belknap; and

Whereas each of said parties claimed to hold the proper certificate entitling him to a seat in this House; and

Whereas either party by commencing a contest would have been deemed to have waived his claim under his certificate; and

Whereas the prima facie legality, and sufficiency of such certificates could not be lawfully or finally determined, except by the action of this House; and

Whereas this House have decided that the said Hon. George F. Richardson's certificate entitles him prima facie to the said seat; and

Whereas by reason of the peculiarity of the said facts a contest could not be commenced in the usual form and in the usual time; and

Whereas said Hon. Charles E. Belknap desires to contest the right to said seat: Therefore,

Be it resolved, That said Hon. Charles E. Belknap is authorized and empowered to file his notice of contest and institute proceedings to contest said election. That in making said contest the general statutes and the rules of contest of this House shall apply, the time fixed by the statutes being hereby extended and the right of contest being declared to have commenced at the date of the passage of the resolution seating said Hon. George F. Richardson.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

Mr. RICHARDSON of Tennessee. Before consent is given I wish to ask the gentleman if he states that this resolution itself was submitted to the gentleman from Virginia [Mr. O'FERRALL]?

Mr. BURROWS. On the day before yesterday, or Saturday, I submitted the resolution to Mr. O'FERRALL, who kept it over Sunday and brought it to the House on yesterday, stating that he had examined it and that I was authorized to state to the House that it met with his approval.

Mr. RICHARDSON of Michigan. Mr. Speaker, of course I have only the knowledge I have now gained from the reading of this resolution. If it is intended to go fully into the merits of the case, for myself I have no objection whatever. I did not know, however, but that it would be a good plan to leave the matter open for awhile, say until to-morrow, until I can consult with Mr. WEADOCK or some others of the delegation, and see whether the resolution provides for an investigation upon the merits of the case.

Mr. BURROWS. I will have no objection to that. Let it be printed in the RECORD and go over until to-morrow.

Mr. MCMILLIN. It goes over until to-morrow with the same right of objection?

The SPEAKER. Of course.

Mr. BURROWS. Very well; let it go over until to-morrow.

PROPERTY UNDER THE DOORKEEPER.

The SPEAKER laid before the House a letter from the Doorkeeper of the House of Representatives, transmitting an inventory of all property under his control on the 7th day of August, 1893; which was referred to the Committee on Accounts.

REPORTS TO CONGRESS.

The SPEAKER also laid before the House a letter from the Clerk of the House of Representatives, transmitting a list of the reports to be made to Congress by public officers; which was laid upon the table.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. CURTIS of New York, indefinitely, on account of illness.

SILVER.

Mr. HUTCHESON. Mr. Speaker, I had begun yesterday to address myself to what I conceived to be the real battle ground to be taken by the friends of silver. I had begun to indicate that the enemies of silver had selected a battle ground and territory upon which we have undertaken to meet them, and upon which territory we stood at a disadvantage. They have undertaken to introduce into this discussion the sole inquiry whether or not a proper ratio between the two metals can be maintained either with or without international agreement. I stand here, Mr. Speaker, to make the announcement that if it were confessed that a ratio can not be maintained, still, upon a much higher principle than a ratio between metals, I stand ready to advocate the cause of silver.

Why do I take this position, Mr. Speaker? It is because the ratio between the money and the commerce of the world so infinitely surpasses the question of ratio between gold and silver that the one is minimized and the other is magnified to its proper importance. I desire, Mr. Speaker, to have the Clerk read the essence of this proposition, contained in the ablest speech upon this subject ever delivered upon either continent, the speech of Mr. JONES of Nevada, before the Brussels conference in December, 1892.

The Clerk read as follows:

But it will be asked, What constitutes a sufficient amount of gold for this purpose? I answer, such an amount as will maintain unchanging the value of the unit of money, or, to state it in another form, such an amount as will maintain at a steady level the general range of prices. If the prices of commodities are to be left out of account—if it be matter of indifference how low those prices fall—then it is of not the slightest consequence how little gold is to be had. No matter how small the amount, it will always be sufficient to exchange at some price all the commodities in the market.

Now, Mr. Speaker, I wish the language to be marked in its entirety. It is not that value of money which will buy commodities at one time or at another time, but it is that power which will maintain for generations the proper price of the commodities for which it is to be exchanged. This case has, like the common law fiction of John Doe *vs.* Richard Roe, been entitled Gold *vs.* Silver. That is not the controversy, Mr. Speaker. The controversy before this House and before this nation is Money *vs.* Credit. I propose to show before this discussion is completed, if men will listen to facts instead of philosophy, instead of assertion, instead of declarations of doctrinaires, instead of the statements and declamations of financiers—I propose to show that credit is the great "Whore of Babylon, the pestilence that walketh in darkness and the destruction that wasteth at noonday. Now, Mr. Speaker, I wish that the gentleman from New York [Mr. WARNER] were here while I expose the freaks of this capricious wizard credit over which he and the opposition so gloat.

To every suggestion upon our part that gold is inadequate to do the business of the country except by so depreciating the price of all commodities and products of labor as to make them unprofitable—they reply that in these modern times credit does all the offices of money and does them much better than money could. Mr. Andrew Carnegie was the first votary to deify credit as the all-sufficing substitute for money.

These gentlemen expressly propose that silver shall disappear from the commerce of the world, and that credit shall take its place. Their reason for urging this proposition I will state farther on, but for the present I wish to analyze credit by definition and exemplify it by its career.

In the conduct of this controversy much has been said regarding gold and silver, and little has been said about the great and real party to the conflict, the priestess of a most unholy worship—credit. The real controversy is, Shall the people multiply money which constitutes actual wealth, possesses material existence, and has substantial staying powers, or shall they trust their industries and prosperity to the mercies of a shadow of money in the form of credit? I am not its enemy, nor would I stifle or repress its legitimate existence and limits within which I recognize its wonderful and beneficent influence.

But a proper definition of what it is, what it should be, and what it does, is the most material task of this controversy.

What is credit? To whom does it belong? What are its offices? How should it be used, and when its limitless use becomes dangerous abuse, are matters worthy of the deepest consideration. Of itself it is without root or branch, without sap or substance, and is a weird, winged spirit of the fancy. It is, in my opinion, the chief element in constituting money and finance the sphinx whose riddle no man can read. If it has any foundation it is the volume of money with which it maintains some mysterious and invisible touch. This substance of which it is the shadow should bear such honest relation and ratio to credit as will make it as safe a factor in the affairs of men as money itself, within the limits of ordinary commercial experience. If this ratio is reasonable and well maintained, it is the light-winged courier which aids the sails of commerce, drives the wheels, turns the spindles, guides the plow, builds palaces, and multiplies industrial force.

But without this circumspect limit and ratio it is the cunning

counterfeit of the money power which, when discovered, gives distrust to all honest dollars whether gold or silver. It is to that power as the jockey to the owner of some splendid race-horse in whose qualities of speed and power of endurance the public put their trust and on which they stake their money, but who rides to win or lose, just as the sordid interest of the owner shall give him secret command to ride or hold.

It is wholly capricious in taste and fearfully irregular in appetite. A year ago, notwithstanding the Sherman bill now so savagely assailed, she was a gay and voracious cormorant greedily devouring all forms of commodity to which she could attach fancy and fictitious values—driving the prices of such commodities at a pace so giddy as to attract universal admiration for this bright spirit which so rapidly and wonderfully "developed" all things which suited her capricious and diseased appetite. And then her hand-maid Speculation went afield in triumphal car sowing hope and projecting enterprises into which honest Industry was led to stake her all.

To-day this same sweet spirit of a year ago, who had encouraged you to vast enterprises on the faith that her appetite would demand still larger store of your industry, comes with hectic flush and halting step, and her taste rejects all the products of your toil and bids them perish on your hands. Ask this gay deceiver what has befallen her, and she replies, with wild eyes, that "I have lost confidence; something" (anything will do for an excuse as occasion may suggest) "scared me since I last saw you to such an extent that I have become very timid." And then she bids you a sad and long farewell with the ventures into which she led you, and which you planted with so much hope, as dead and despised dishes, rejected by this omniverous deity of just one year ago.

Money may be par or depreciated, but it is always substance, not shadow—wealth, not wind—and can not entirely disappear from the face of the earth when industry makes appeal for its support. But credit can inhabit your home in the morning and at noontide bid you final adieu, and you can not tell whither or why it went. It has no staying qualities—goes to the quarter-pole at high speed, but never stays to finish. It has another odious quality to the common people and hurtful to the honest industries of the country—it has a taste for gambling transactions which promise large profits, and can not content itself with the upbuilding of honest enterprise, because its returns of profit are too slow, its methods of operation too prosy, for its aristocratic tastes.

And this, Mr. Speaker, is by no means its least hurtful disposition. It withdraws from actual industrial pursuits vast sums of money to put them into mere gambling ventures that in the swing of a fictitious market it may gather rich and ill-gotten gains, as gamblers do on the turn of a wheel or the throw of a card.

Look over the history of the panics of this generation and you will find that stock-gambling and future-dealing in the products of honest toil have precipitated them all.

And all such transactions are the diseased outgrowth of extravagant credit built up on stilts called margins.

I wish that the gentleman from New York, who comes to this House with a petition to repeal the Sherman law and at the same time to multiply credit forms of money, were in his seat, that I might reply to his advocacy of this latest by-way into which credit seeks to get further Government recognition.

When he tells us that New York is the credit center of this country, I admit it; but, Mr. Speaker, it is for that reason the storm center of this country. There never has been a panic in this land but that it has begun in Wall street. There never has been a panic in this land but that the bear had the bull down upon the floor of Wall street and had destroyed his horns and had its fangs successfully buried in the vitals of the bull. The conflict goes on there: and the country which is in peace and at ease is of a sudden called on to pay for this menagerie.

The gentleman from New York [Mr. WARNER] was kind enough to tell us that Wall street dealt in credits and the commerce of this country. Now, Mr. Speaker, I have been in relation with those banks. I have been in their offices. I have seen the conduct of those institutions; and when you go there to present an industrial enterprise what do you encounter? You present something that is solid against a fiction. You present the industries of the country, and they will touch a button and say, "How is New York Central? Wait a minute, please. How is the last call upon cotton futures? Wait a minute, please." You go out of that bank, Mr. Speaker, and without a dollar for industrial enterprises, because the dollars of these men are piled upon the gambling tables of Wall street, helping credit make a fortune on a turn; and that is the cause of the panic in this country.

How is a panic first indicated? It is indicated by the decline of stocks in Wall street. Let me read to this House the evidence of this fact and show them the philosophy of this case. I read from the New York World, which may be regarded as excellent authority upon this question. Before I do so allow me to introduce a contrast that I wish the members of this House to follow me in. When they tell you that the silver of this country has destroyed values, and that it has receded in price, I propose to show to you that if silver has once receded thirty points or fifty points, credit has descended ten times upon this land and destroyed all the fortunes that the hopes of this country had projected and the industries of this country had builded for years.

The New York World, in undertaking to show how values had declined within a year in New York, attaches a list of bonds on which the declines range from 10 per cent to 55 per cent, reaching hundreds of millions of dollars. Now, mark you, all these bonds are gold bonds of the railroads and other corporations of this country which the Sherman law could in no way affect, because they are by law payable only in gold. These bonds were sold *up* on credit margins and they now sell *down* on cash transactions, because an unrepressed credit, far in excess of the volume of money in this country, had gone at the instance of the speculating holders of money into fictitious values on fictitious contracts. These things fall and with them the industrial world, in no way connected with the reckless gambling.

This is illegitimate credit and these are its fruits.

These are the fruits of a state of business when money is 8 per cent and credit 80 per cent in volume.

But, Mr. Speaker, with this limit of 5 per cent on each hundred dollars it can not sustain the industries of this country or maintain their prices.

My proposition upon this is, that the moment the credit of this country ceases to obtain its exacting recognition, that moment prices retire like the breath of the man who seems in full health but is in the shadow of death. They do not maintain it for a day or for a week, for a year or for a month, but they simply carry the jagged edges up to-day and down to-morrow. You are in the trough in one moment and on the high waves in another, and the wreckers of these high waves catch the fortunes and destroy the industries of this country. Such medium of exchange does not maintain prices, but exaggerates at one time and destroys them at another.

Now, Mr. Speaker, let me illustrate this, as I stated by the present incidence of this panic. We see that the prices of a number of these institutions have fallen 40 and 50 per cent within a week, and that within a year many of them have fallen as much as 70 per cent; and why did they do it? I will give you an illustration. Take the cordage and the whisky trusts. They bought their property at $7,000,000, bonded it at $25,000,000, multiplying credit. You can not multiply money, but the machinations of mankind enable him to multiply credit; therefore these gentlemen have the power to crush; when multiplication is to be counted into division and subtraction they wish the credit system to prevail in this land.

Why, Mr. Speaker, what destroyed £28,000,000,000 for the Barings? Was it silver—over $110,000,000—Mr. Speaker? What struck the Barings down? It was illegitimate credit. What was it that struck Grant and his bank down with $17,000,000? It was illegitimate credit. What was it that destroyed half of the values of this country in 1873? What was it in 1878, in 1884, and in 1890? It was the return messenger of credit. What, then, is this invention of the nineteenth century? It is the bow of promise in the financial sky, which sheds its bright colors on the mere whiff of a wind, condenses into cloud, descends in storm, and ends in deluge. It is the fabled fisherman, who, with lengthy angle and unwinding line, projects but the small bait of a little cash to the unwary tribe of the sea of men and at a moment reverses its cord, fastens its angle in the vitals, and draws its unsuspecting victim from a sea of prosperity to a shore of wreck and death.

It is against the illegitimate multiplication of credit that the country needs protection. It is to anchor it to sufficient substance, so that it can not in fanciful play of fickle confidence burst as a bubble in the hands of the holder, or sink as a balloon from the elevation to which it has carried its votaries to the rocks and hills that underlie its giddy flight. We must either limit its existence or destroy its baneful power. No mother would trust her child to the fond embrace of a reptile, capable by its gambols of giving her offspring great delight, but able when the greed of gluttony or the turn of temper should dictate to rend a child in twain and devour it in its glee. She would at least subject it to the limits of a chain and keep it in the boundary of her control, or drag from its jaws the fangs which might destroy it. So we, in dealing with the people in their relations to this monster, must either confine and prescribe its radius, or we must extract its danger. If we are to give it the wings for limitless flight we must extract from its jaws the fangs and from its feet the claws. If limitless credit is to have unbounded sway, we must by law balk and check its power for destruction of the victims whom it invites upon its cruise of wealth and fortune.

If the opposition will make credit their worship, bow at its shrine, and compel us to become its votaries, then let us by law take away the power to control its debts, and leave them to the force of the spirit which it invokes—voluntary credit. So limited, the monster will keep within his own legitimate lair. As it now is, it is the relentless spirit of the wind, gathering substance where it has sown shadows, and bringing a harvest of blight where it had sown seeds of hope.

But the gold advocates say, with confidence restored foreign nations will buy our securities and gold would return to us; in plain words, it would allow us to get more in debt to foreign nations, to use our credit as a temporary expedient to increase our debt, to add more burdens for the American people to carry.

Now, Mr. Speaker, let me read to this House some few figures as to what credit has done. From 1860 it has multiplied national debts from $10,000,000,000 to $27,800,000,000. It has multiplied State debts up to $288,000,000. It has multiplied the mortgage debts of corporations, $9,000,000,000 to the railroads, and there are supposed to be an equal amount of stock, making $18,000,000,000 of railroad debts. How is this done? Why, the entire money of the world is only $6,000,000,000 or $7,000,000,000 at the outside. Yet these men, who had they commanded every dollar of the world, could have had but $6,000,000,000, by the jugglery of credit have taxed the nations of the world to pay $28,000,000,000 in national debt, commerce $9,000,000,000 in railroad debts, the States of this nation $200,000,000 in State debts, and the private mortgage debts are supposed to be $3,000,000,000.

This is what has created and extended this alarm all over the world. My proposition, Mr. Speaker, is that there is between this mysterious goddess of worship and solid silver, silver recognized at any ratio, the relations which substance sustains to shadow and air; that heart ranks with sap; that the body of the tree ranks with the mere exterior foliage which shed with the storms of the winter.

The gentleman from New York [Mr. WARNER] said that when the worst came to the worst New York would take care of herself. That is true. New York always takes care of herself; and when the country is in a suffering condition she never takes care of anybody but herself.

I do not mean that the gentleman would not, but I mean the bears of New York—and they are not a constant tribe, for you will see the "bull" of one day the "bear" of another. It is said that the Ethiopian can not change his skin, nor the leopard his spots, but the "bear" and the "bull" change with the sunny side of each morning. [Laughter.] These bears and these bulls, as the gentleman said, have this country by the neck. He meant that they were holding the country up by the neck, and I admit it, but they hold it up just as Sisyphus was held above the water; they deny it a drop of water, and when the day of adversity comes they sink it into the deep above which they had held it securely in their grasp, and they take the wreckage as their share of the game.

Now, Mr. Speaker, I have a word to say to the gentleman from Tennessee [Mr. PATTERSON], if he is present. He remarked that we had come to the fork of two roads. I tell him that when he puts that alternative to this House, I may stand where the colored man in the congregation stood. The minister stated that there were two roads, "the one leading to hell fire and the other to damnation," and the negro, catching the mistake, said, "Fo' God! If dat's de case, dis nigger takes straight to de woods." [Laughter.] It may be, Mr. Speaker, that I shall be obliged to take straight to the woods; but if I do I want the Democratic party to be here to hew the way, and I want the gentleman from Tennessee [Mr. PATTERSON] to be present to chop along the line and help his party through the wilderness. [Laughter.] One of these roads is the highway of humanity; the other is the by-path of greedy wealth and avarice.

The gentleman remarked yesterday that the people of Israel worshiped the golden calf and that they did not get into Canaan for forty years. I tell him that he is the hero of his own story; that he is worshiping the golden calf, and, by the eternal gods, it will take him more than forty years to make us accept that worship. He tells us, Mr. Speaker, that gold is the Malakoff of the country. He forgets that the Malakoff, while it maintained for a time its bristling front and resisted civilization, finally surrendered to civilization. He is the Malakoff in this case, and we, the Democratic party, who believe in free silver, will make him lower his colors and surrender to the party of free silver in this country. [Applause.]

I come now, Mr. Speaker, to another proposition. If the gentleman from Kentucky [Mr. MCCREARY], who represented us on the Brussels commission, is present I desire to cite some of his language there, in which he states that the volume of gold in this broad land of ours is not sufficient to sustain the commerce of the world, and that it would be impossible to depend upon gold alone unless we should break down the nation's honest laboring men to serfdom and subject them to pitiless poverty.

If the gentleman is present now I desire to ask him if he recalls that language to-day: if he is prepared to march on the highway to which he stated that policy would lead the people, and to visit upon them the desolation which he has himself depicted. Nay more, Mr. Speaker, in all that Brussels convention there was not one man from England or from Mexico, from civilization's high dome to the hut of the barbarbian, who contended that gold ever could become the nations' and the world's money. The Baron Rothschild predicted that your "drunken" patient—I address myself to the gentleman from Ohio [Mr. HARTER]—that your drunken patient would be sick, not if America continued to buy silver, but unless the nations of the world bought silver. He predicted that unless that was done the country, and the entire country, would be sick. Mr. Allon, of Belgium, stated that that would be the inevitable result. Mr. Tirard, of France, stated that that would be the inevitable result except as to France, and that it could not be so in France because she had the reserve of silver to take care of her domestic transactions, and that prophecy is literally fulfilled.

But, Mr. Speaker, my time has nearly expired, and I want to deliver a word or two to my party. I come, sir, in the spirit of the sweet St. Augustine: "In things necessary, unity; in things

doubtful, liberality; and in all things, charity." God knows I hate to suggest to a Democrat a reproof; I hate to suggest a warning. But we are now in the house of our fathers, in the Democratic party. You and I, sir, have come here committed to pledges which, when we made them, we expected to fulfill, and which we had a right to expect every man whose name had been enrolled upon the Democratic record to stand by us in fulfilling. England never expected every man to do his duty any more, Mr. Speaker, than you and I expected every man to do his duty who mustered in the ranks of the Democratic party.

At the Chicago convention you made an overture to the people of this country; you asked them to accept you, not in the dalliance of a day, to be rejected from a satiated couch, but you asked them to join you in honorable wedlock, and the people accepted your pledges in your platform as the sacred vows made at the altar of God, and you dare not repudiate them. I see the tiger of Tammany [Mr. COCKRAN] harnessed with the lion of the antisnappers [Mr. Cleveland], dragging the Democratic car [laughter], and the popular impression is that their destination is the camp of the gold bugs; but I trust that in the final hour of our peril the pibroch of their returning forces to the aid of their party and the best interests of their country will be distinctly heard in this Hall.

Mr. Speaker, the Declaration of Independence was the consecration of mankind to liberty, and it was the sanctification of government to the protection of individual rights; and this is the creed of true Democracy. In the march of events liberty has been extended to the poor man without equality, though liberty and equality were both guaranteed by the compact. We appeal to you now, Mr. Speaker, in the name of a down-trodden and oppressed people, who are poor, indeed, to give them equality as well. When gentlemen tell this House that in order to sustain international trade they must have gold, I deny the proposition. I will tell you how to sustain your international trade—by the products of your farm. That has always been done until the last year. Why was it not done last year? Because, though Europe was hungry for bread, though its peasantry was almost naked, without clothing or shoes, the governments of that country wanted more money, and their people could not command bread and clothing. It was a money famine.

Mr. Speaker, the Waterloo of the claim of the goldites is presented in the $70,000,000 of gold that left your country. Why, sir, let me illustrate this matter by something that will strike the comprehension of a Congressman; and I know we are exceedingly dull. Suppose gold and silver bear for a moment the relation of corn and wheat. Suppose the world had been fed for a hundred years upon the two crops and that they were barely sufficient. Suppose all at once the nations of the world should make an edict that no more corn should be cultivated in the cornfields, and suppose the cornfields were not capable of producing wheat. What would be the result? The world, which had fared upon corn and wheat, would be obliged to subsist upon wheat alone, which would have to be raised within the limits of the same wheat fields which had existed when corn and wheat were both produced.

Suppose that, in addition, a nation like Austria, which had never used wheat, should put in its demand for 100,000,000 bushels. How would that affect the supply of wheat for the maintenance of the people of the world? It would be a reduction of capacity and product and an increase of demand simultaneously, which would make the fulfillment of demand by supply wholly impossible. That is precisely the case in regard to gold and silver. The world has used two crops—silver and gold. A portion of the world not only undertook to shut off one crop, but a nation which had never fed upon gold, Austria, sought $100,000,000 of gold; and in supplying that crop of gold, which had to be subtracted from the stock of the nations of the world, a famine was created, and we contributed our share in the creation of that famine and suffered in consequence, and this panic follows. I attach at this point the remarks of Mr. Foster Higgins before the New York Chamber of Commerce:

I shall not take up your time with any great references upon this matter, but I do feel that as business men, as thinking men, we should look at the conclusions arrived at by men who have made a study on this subject. Therefore I want you to listen to the words which were then declared:

"Further, we are strongly impressed with the conviction that whatever evils may be expected to flow from the return to bimetallism, the evils both of the present and prospective existing situation are evidently more serious. Failing in the attempt to reëstablish the connecting link between the two metals, it seems probable that the general tendency of the commercial nations of the world will be toward a single gold standard.

"Any step in that direction would, of course, aggravate all the evils of the existing situation, and could not fail to have a most injurious effect upon the progress of the world."

The necessity of the world to have a constant yearly increase in money is apparent, and I want to impress this upon you by a few extracts:

In the year 1000 the entire money of the world, expressed in millions of dollars, was of gold $145,000,000; of silver, $510,000,000; of paper, none. Total, $655,000,000.

In 1700 that had increased to $375,000,000 of gold, $1,125,000,000 of silver, and $5,000,000 of paper. Total, $1,505,000,000, from $655,000,000 in the previous century.

In 1800, $638,000,000 of gold, $1,800,000,000 of silver, and $410,000,000 of paper. Total, $2,848,000,000, as against $1,505,000,000 the previous century.

In 1848 the amount was, gold, $785,000,000; silver, $1,940,000,000; paper, $1,300,000,000. Total, $4,025,000,000, as against $2,840,000,000 forty-eight years previously.

In 1880 the amount in the aggregate had increased $5,900,000,000, and in 1890 the money of the world was $1,150,000,000 of gold, $4,005,000,000 of silver, and $3,855,000,000 of paper, or, as you perceive, one-third each, or a small variation from one-third, and the total was $12,010,000,000, an addition in thirty years of $6,000,000,000, while it had taken two hundred and fifty years before that to bring the amount up to the previous sum of $5,900,000,000.

What lessons are we to draw from this? This is not money representing the transactions of the world. It is 8 per cent of the transactions only. Yet this was the amount the world found necessary to create, $200,000,000 per annum, for thirty years in succession. Why, sir, the explanation is that at that period of time the world's communication became passive, and the intercommunication of the world possessed every development of mankind, and with all this there came the demand for money.

Mr. Speaker, I see that my time has about expired and I propose to leave the discussion of this question to older and abler members, feeling at least that I have undertaken to discharge my duty to my party and to my country. I am inspired by the faith that the Democrats, as their name implies, will stand by the people. This is a government of the plain people of the country, because they are in the majority. Wealth may roll in luxury, but the plain people constitute the majority in this land, and they have the right to rule. If you do not permit them to rule to-day, they will rule you and rule this land, and God grant that every man may feel the righteousness of a popular rule, that flunkeyism may lose its force, wealth its inordinate influence, and right may rule this land of God and liberty. [Applause.]

Mr. BLANCHARD. Mr. Speaker, upon a question which has occupied the attention of mankind for thousands of years, and is still open to debate, I might well be distrustful of my own conclusions, and it is with much hesitation that I submit them to-day to the consideration of this enlightened body.

The gold advocates—those who contend for the disestablishment of silver—hold the affirmative of the proposition under discussion. The *onus probandi* is, therefore, upon them; they must make good by fact and argument their case. Have they done so? Let us see. That the act of the 14th of July, 1890, known as the "Sherman act," ought to be repealed, or at least what is called "the purchasing clause" of it, all are agreed.

But the gold advocates demand that this repeal be unconditional, while the bimetallists insist that it should be accompanied by a substitute for the Sherman act, recognizing the principle of bimetallism in some effective form, and enacting substantially into law the declarations of both the great parties, in their national platforms, on the money question.

The adoption of the pending measure, repealing "the purchasing clause" of the Sherman act, would bring the country, in theory and practice, to the gold basis, and would be everywhere accepted as the announcement by the United States of a settled policy to maintain the monometallic gold standard.

Mr. Speaker, the argument of the advocates of the single gold standard may be summarized briefly as follows: The leading commercial nations of the world have closed their mints to the coinage of silver, and thus have practically demonetized that metal; that in consequence the price of silver everywhere has depreciated; that it is now a debased metal, and no longer fit for use as money, except for purposes of subsidiary coinage: and that the United States, making use of silver as money for general purposes, can not, alone, maintain parity between gold and silver upon a fixed ratio.

To all these averments the bimetallists enter a general denial, except as to the first.

It is admitted that the leading commercial nations of Europe have closed their mints to the further coinage of silver as money for general purposes.

Thus is the issue joined. Let us review the contention of the gold advocates.

Going back along the historical lines of this question, we find that bimetallism—the use of both metals as money, maintained at parity on a ratio fixed by law—obtained in this country from the year 1792 down to 1873. In all this time the ratio varied but little.

We find, further, that in 1873 silver was demonetized. It is charged by many that this was done fraudulently. To this I do not subscribe. That it was done surreptitiously, I believe. It was accomplished in a bill which bore the innocent title of "An act revising and amending the laws relative to the mints and assay offices of the United States."

When that measure passed the House of Representatives it did not contain one word or the remotest suggestion changing the law of free coinage or taking the minting privilege from silver. As it passed the Senate of the United States there was, even with the Senate amendments added, not one line which affected silver adversely as a coin metal of the country. In no

debate on, or explanation of the bill, nor in any amendment offered, either in the House or Senate, had one word ever been said or suggestion made that free coinage should be repealed.

On the contrary, the bill contained the following clauses:

That the charge for minting gold bullion should be 5 per cent, and for silver bullion its actual cost.

Also,

That silver coins other than the trade dollar shall be paid out at the several mints and at the assay office in New York City in exchange for gold coins at par. (CONGRESSIONAL RECORD, page 673, third session Forty-second Congress.)

The bill as it passed the House had been taken up in the Senate and passed with amendments. It was reported to the House with the Senate amendments.

The House nonconcurred in the Senate amendments, and a conference between the two Houses on the bill and Senate amendments followed. Three managers on part of the Senate and three on part of the House were appointed. This was the usual conference committee, and these six gentlemen, within the privacy of a committee room of this Capitol, added the fateful words which struck down the free coinage of silver and brought this country to the monometallic gold basis.

The words, Mr. Speaker, thus added, which accomplished this remarkable result, were only eleven in number and were these:

And no deposit of silver for other coinage shall be received.

The report of the conference committee was as follows:

That the House recede from its disagreement to the ninth amendment of the Senate and agree to the same, with an amendment as follows:

Strike out the words proposed to be inserted, together with the remainder of the section, and in lieu thereof insert the following:

"That any owner of silver bullion may deposit the same at any mint to be formed into bars or into dollars of the weight of 420 grains troy, designated in this act as trade dollars, and no deposit of silver for other coinage shall be received." (See CONGRESSIONAL RECORD, page 1150, third session Forty-second Congress.)

No gentleman in either House who was a member of the conference committee, nor any one else, called attention to this amendment, or stated what its effect would be. The report of a conference committee does not always command close attention. It is rarely supposed that any new matter has been taken up by it. The object of appointing a conference committee is to effect a compromise between the two Houses on matters which have been introduced, explained, and debated, and upon which the two bodies have failed to agree.

In this case neither the House nor the Senate had referred the subject of free coinage to this committee, and consequently no one suspected that their report would touch the question. When the report was read from the Clerk's desk, and the vote was taken adopting the same, it is likely that no one in either House, outside of the committee of conference, knew that the report repealed free coinage.

I venture the assertion, Mr. Speaker, that at no period in the history of any country, in ancient or modern times, was so brief a sentence added to any provision of legislation which has had the momentous effect that these eleven words have had throughout this country and the world. Those words, added by a conference committee, and passed by the two Houses without debate, had more of significance, of importance to the people of the United States than all the enactments of law by that Congress at its two sessions. They were words which revolutionized the monetary system of the Government and affected the welfare of people even in remote lands.

It has always been claimed, Mr. Speaker, that this action was brought about by the "gold" people of the country for the purpose of establishing the monometallic gold standard, making all our debts gold debts, payable in gold coin, and in this way increasing the value of the securities held by those people. A distinguished leader of the Republican party, until recently a Senator of the United States, and one of the most brilliant of the public men of his time, has the following to say relative to the bill referred to. I read from a speech made in the Senate in February, 1878, by Senator John J. Ingalls, of Kansas. He says:

The act was improvidently passed.

The attention of the people was not called to the subject. It was not discussed nor understood. Though it was done at a time when the public mind was intensely interested upon financial subjects, and methods of relief were assiduously sought, the demonetization of silver was never suggested by anyone as likely to ameliorate the pecuniary distress of the nation. But there is strong evidence that the destruction of the legal-tender power of silver was the culmination of a scheme long entertained by the holders of the public debt of this country, devised by them for the purpose of appreciating the value of their investments, regardless of the ruin and desolation which it would bring upon the laboring and productive classes of the nation.

These are strong words from a source that gives great weight to them.

At the time the demonetizing act of 1873 was passed, if the question had been submitted to the American people, if it had been made an issue in any political contest at that time or subsequent, the proposition to eliminate silver from our monetary system would have been voted down by an immense majority.

The enactment of that law was following the example set by England in 1816, and by Germany in 1873.

Germany demonetized silver under the most favorable auspices. The phenomenal success of the German arms in France had just startled the world. France lay bleeding and prostrate at the feet of conquering Germany, and a war indemnity of a billion and sixty millions of dollars in gold had been wrung from her people. The far-seeing policy of Bismarck was about to be consummated; the dream of Germanic consolidation was being accomplished; the Germanic Confederation was giving way to the Empire of Germany; King William of Prussia was now William the First, Emperor of Germany; the moment was opportune for the "gold" people; they took advantage of it; silver had been money in the states and principalities and dukedoms which formed the Germanic Confederation. But these had now been welded into the Germanic Empire; silver was demonetized and the gold of France took its place.

There was reason, sir, for England and Germany to demonetize silver. They were both creditor nations. It is to the interest of the creditor that the obligations he holds be met in the dearest money. Gold is that money. Germany believed that the greatness and power of England was due to her monetary system. It is due, as I believe, to her mines of coal and iron and to the cheapness of her production. But believing as Germany did, she followed the example set by England in 1816, and demonetized silver in 1873.

Then it was, Mr. Speaker, that the United States, a debtor nation, producing 40 per cent of the world's annual output of silver, with conditions essentially different from those prevailing in England and Germany, was seized with the "gold fever," inoculated by the creditor class with the virus brought from England and Germany, and demonetized silver.

But prior to this consummation the first step in the conspiracy had been taken.

This was in the passage, in the interest of the creditor class, of the acts of 1869 and 1870, for "the strengthening of the public credit" and for "the refunding of the public debt."

A large part of the public indebtedness of the United States, incurred in time of war, had been made by the law of its creation and the letter of its contract payable in any legal-tender currency of the United States. But the acts mentioned changed this, and the indebtedness referred to became payable in coin. That meant gold or silver; but with silver struck down, out of the way, demonetized, it left gold as the only "coin" with which to pay the holders of these bonds.

Herein is the secret of the demonetizing act of 1873. The public debt, first payable in any lawful money of the United States, then changed to be made payable in either gold or silver, then conditions produced or created which placed it on a gold basis, to be paid in the dearer money, gold. The additional burden thus imposed upon the producing and taxpaying classes in the United States by these acts of the Republican party is beyond computation.

Forced by the action of Germany and the United States in demonetizing silver, France and the States of the Latin Union in Europe reluctantly closed their mints to the free coinage of silver. And thus it was, Mr. Speaker, that the world was practically brought to the single gold standard.

With the white metal struck down, prostrate in the dust, humiliated by the laws of the leading commercial nations of earth, is it to be wondered at that it depreciated in value? Is it to be wondered at that many now think that if silver is continued in money use, the ratio should be changed from 16 to 1 to 20 or 24 to 1?

Is it fair or just to judge silver from the standpoint of the abyss into which it has been plunged by the deliberate action of the gold adherents?

The "gold" people created the conditions, produced the causes, which had the effect of depreciating silver, and then point to this effect as reason why we should continue in this country the disestablishment of silver.

How preposterous the position!

Mr. Speaker, the gentleman who opened the discussion on the affirmative side of the pending question, the gentleman from Maryland [Mr. RAYNER], took occasion to say in his speech that the contention of the silver people that silver was a money of the Constitution was unfounded in fact. He denied vehemently that there is anything in the Constitution which requires the coinage of gold or silver. To this extent only was he correct: there is no positive, direct declaration in the Constitution that silver shall be coined along with gold. But it is there by the plainest possible implication.

The Constitution declares that Congress shall have power

to coin money, regulate the value thereof, and of foreign coin, and to fix the standard of weights and measures.

Then it is said elsewhere in the Constitution that no State shall

coin money * * * nor make anything but gold and silver coin a tender in payment of debts.

We thus find that the Constitution, while denying to the States the power to coin money, also denies to them the right to make anything a legal tender in payment of debts except gold and silver. This plainly implies that the States may make gold and silver a tender for debts. But they can not coin those metals.

In permitting the States to make gold and silver a tender for debt, it was clearly intended that those metals should be coined by some competent authority into convenient form, of standard weight and fineness, for use as money. Who or what is that authority? Congress; the power to coin is reserved exclusively in Congress.

It is thus plain that silver is a money metal of the Constitution, is named in that instrument; and by irresistible inference and implication it is made the duty of Congress to coin gold and silver.

Mr. LIVINGSTON. Will the gentleman yield for a question?

Mr. BLANCHARD. I will.

Mr. LIVINGSTON. My question is a legal one, and I want to hear you upon it. The Constitution grants to the State of Georgia the right to make silver a legal tender. Suppose Congress demonetizes silver, and yet in face of that demonetizing act the State of Georgia still continues silver as a legal tender and should bring an action in the Federal courts to test her right to make silver still a tender for debt, under the clauses of the Constitution quoted by you would not the Supreme Court of the United States sustain the State?

Mr. BLANCHARD. I am inclined to think so and would like to see the matter tested. But a difficulty suggests itself in this: How far can a State go in declaring, or can it do so at all, a metal a tender for debt that is not endowed with legal-tender qualities by Congress, which alone can coin into money, regulate its value, and determine its weight and measure? Congress may not coin it at all, or if it does coin it, may limit its legal-tender power to a small sum. Would a State have authority to enlarge or increase its legal-tender power, so far as debts enforceable within its limits are concerned? I say these are difficulties suggesting themselves to me which make the question one not free from doubt.

Mr. Speaker, Alexander Hamilton, who was the first Secretary of the Treasury, in his report in 1791 on the Mint, said:

To annul the use of either of the metals as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

Thomas Jefferson, in a letter to Mr. Hamilton in 1792, said:

I concur with you that the unit must stand on both metals.

R. M. T. Hunter, in a report (1852) to the United States Senate, said:

The mischief would be great, indeed, if all the world were to adopt but one of the precious metals as the standard of value. To adopt gold alone would diminish the specie currency more than one-half; and the reduction the other way, should silver be taken as the only standard, would be large enough to prove highly disastrous to the human race.

These are but samples of the unbroken line of opinion, sustaining bimetallism, coming down from the adoption of the Constitution to 1873.

The fathers of the Republic, carrying out the spirit of the Constitution, opened mints for the free coinage of the two metals, and under the bimetallic policy which prevailed the country advanced with astonishing rapidity in population, wealth, greatness, and prestige.

Let me now cite a few opinions from well-known financiers and authors of Europe:

Leon Fanchet, in Researches upon Gold and Silver, written in 1843, says:

If all the nations of Europe adopted the system of Great Britain the price of gold would be raised beyond measure and we should see produced in Europe a result lamentable enough.

Before a French monetary convention, held in 1869, testimony was given by Baron Rothschild, by M. Roulard, governor of the Bank of France, and by others.

Baron Rothschild said:

The simultaneous employment of the two precious metals is satisfactory and gives rise to no complaint. Whether gold or silver dominates for the time being, it is always true that the two metals concur together in forming the monetary circulation of the world, and it is the general mass of the two metals combined which serves as the measure of the value of things. The suppression of silver would amount to a veritable destruction of values without any compensation.

M. Roulard, governor of the Bank of France, said:

We have not to deal with idle theories. The two moneys have actually coexisted since the origin of human society. They coexist because the two together are necessary, by their quantity, to meet the needs of circulation. This necessity of the two metals—has it ceased to exist? Is it established that the quantity of actual and prospective gold is such that we can now renounce the use of silver without disaster?

M. Wolowski said:

The sum total of the precious metals is recouped at fifty millards, one-half gold and one-half silver. If, by a stroke of the pen, they suppress one of these metals in the monetary service, they double the demand for the other metal, to the ruin of all debtors.

Opinions of eminent authorities to the same effect might be cited at great length, but the foregoing will suffice to establish the fact for which I contend, that bimetallism is correct in principle and beneficial in practice.

Mr. Speaker, when the American people realized that silver had actually been demonetized by the act of 1873, that a blow had been struck at one of the money metals, an agitation over the country began at once for the reëstablishment of silver.

It quickly entered politics. The two great parties took it up. They vied with each other in declarations on the subject. Both took silver endearingly to their bosoms, petted it, declaimed against the injustice and wrong done it, and "pledged their sacred word" to do battle valiantly in its cause. Here are the declarations in the national platforms of the two parties. The Democratic national platform of 1880, third clause:

Honest money—the strict maintenance of the public faith—consisting of gold and silver and paper, convertible into coin on demand.

Democratic national platform of 1884:

We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

In 1888 the platform of the party appears to have been silent on the money question, but in 1892 the national Democratic convention at Chicago made the following distinct declaration in its platform:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

On this platform Mr. Cleveland was nominated and elected President of the United States.

The Republican national platform of 1888 said:

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

In its platform of 1892 the same party said:

The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether silver, gold, or paper, shall be at all times equal.

You will observe, sir, that the demand for bimetallism, the use and continuance of both metals as money, rang out from all these platform utterances with no uncertain sound.

The two great parties are absolutely committed to this policy, if words mean anything at all. If platform declarations are not mere "glittering generalities," if what they say are not mere "catch-words" to deceive the people, then, indeed, are all of us here, Democrats, Republicans, and Populists alike, pledged to vote for a measure which will maintain the coinage of gold and silver on terms of equality at a fixed ratio.

Yet, Mr. Speaker, the signs indicate that on this [Democratic] side of the House a large number intend to vote for the pending measure, which repeals the purchasing clause of the Sherman act, stops the coinage and use of silver as money, and provides nothing to take its place.

And I am well aware that the great majority of our friends on the other [Republican] side of the aisle intend also to vote to close the mints to silver.

The platforms of our parties, it seems, were well enough to run on before the people when we wanted office, but now it is found convenient to cast them aside.

Mr. HEPBURN. Mr. Speaker, the gentleman has read here a portion of the last Democratic platform. There is a clause, I think, following what he read, which by some is claimed to be qualifying. I would ask the gentleman, not captiously, to give the House his views with regard to that subsequent portion of the plank of which he has read a part.

Mr. BLANCHARD. Mr. Speaker, I am glad to be interrupted by my friend from Iowa [Mr. HEPBURN], whom I am delighted to see back in the House, with whom I served for years before his temporary retirement, and whom I learned to admire for his ability and his always courteous demeanor as a member of this body. The qualifying words of that plank of the Demo-

cratic national platform—if they be qualifying words, which I do not admit—are these:

—or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in payment of debts.

This language does not commit the Democratic party to bimetallism only on the basis of international agreement. It refers to adjusting the dollar unit of coinage "through international agreement," or "by such safeguards of legislation" as shall maintain the parity of the two metals, and the equal power of every dollar in payment of debts.

Let us agree in this House by our votes that we intend to preserve in our monetary system the principle of bimetallism, and I doubt not the details of a measure to accomplish this in some effective form, while at the same time maintaining the parity of the two metals and the equal debt-paying power of every dollar, will quickly follow.

Mr. Speaker, in the canvass of 1892, before the people who honor me with a seat on this floor, in speaking of the platform of the party I put a plain, common-sense construction on the plank referred to by the gentleman from Iowa, and declared that the Democratic party had always sustained bimetallism; that it always opposed the striking down of silver; that the Republican party alone must be held responsible for the demonetizing act of 1873, and that the Democratic party had not yet had a chance to redeem the pledge it had made to the people to reëstablish silver in its place as a money metal.

The argument was made all over the South and West that the Democratic party had lost control of the Government in March, 1861, and that from that time down to 1892 (when the canvass was being made) it had not been in power to the extent of enabling it to enact its pledges to the people into law; that it was true we had had at one time the lower House of Congress, at another the Senate, at another the House and the Presidency, at still another, for a brief period, the two Houses; that it took the two Houses of Congress and the Presidency, concurrently, to constitute in the hands of the party the law-making power; and that as soon as the Democratic party achieved this result it would carry out its pledges, among them the restoration of bimetallism.

On these lines we appealed to the farming classes of our people, who showed a disposition to go off into the ranks of the People's party, to abide in patience within the lines of the Democratic party, and at least to give the party a chance to make good its platform declarations by assisting it to carry the then approaching elections and secure control of the two Houses of Congress and of the Presidency. We urged that the signs of the times gave promise of the accomplishment of this result. Mr. Speaker, it was upon such pleas that many farmers were persuaded from going over into the ranks of the Populists and were induced to maintain their fealty, their allegiance, their loyalty to the Democratic party.

And now, sir, when, as we then predicted, the Democratic party, as the result of the election, succeeded to power in the Government in all its branches, we are met by a measure presented here by so good a Democrat as my friend from West Virginia [Mr. WILSON] which says to the people to whom I spoke and to whom others spoke, as I have stated, that the Democratic national platform did not mean the maintenance of gold and silver as equally the money of the country, and that the pledge of bimetallism was not made to be kept. He has introduced a bill which in effect assumes that the portion of the national Democratic platform which declares for the repeal of the Sherman act is the only one that has any meaning in it.

I should dislike to go to the people I represent and carry that message to them. I would fear for its effect upon the party in the election for member of this House in 1894. And how true that is of many other districts in the United States!

Mr. Speaker, it is said by some of the gentlemen supporting the Wilson bill that if we enact it into law it carries out the first part of the plank in the Democratic platform relating to the money question, and that hereafter, by additional legislation, we can carry out the remainder. But why divide the proposition? The declaration of the party upon the money question is embraced in one clause and is to be taken as a single proposition. In that clause the party declares for the repeal of the Sherman act, and then for the use of both gold and silver as the standard money of the country, and for the coinage of both metals without discriminating against either. And if we are going to be true to the platform pledge; if we are going to deal honestly with the people; if we meant what we said in the platform; if the party does not intend to be recreant to its pledges, let us now in one bill enact substantially into law the declarations of the clause of the platform referred to.

Mr. Speaker, some of us have served for a good many years on this floor. Those of us who have so served are well acquainted with the methods of legislation here. We know that even when a majority of members in this House favor a given proposition it is oftentimes within the power of a minority to defeat the enactment of the same into law. How many times have we seen this happen? Let this repeal be accomplished, unqualifiedly and unconditionally as asked, and I venture the prediction here and now that neither at this extra session nor at the regular sessions of this Congress will a "t" be crossed or an "i" dotted in the enactment of any further financial legislation. The best opportunity to redeem the pledge of bimetallism made in its platform by the party will have gone forever.

The same sordid, grasping power, the combined power of the gold people of the world, which encompassed the repeal of the purchasing clause of the Sherman act and in this way brought us directly to a gold basis—the single gold standard—will be potent enough to prevent further legislation having the object of the reëstablishment of silver. The predominant trait and chief characteristic, Mr. Speaker, of the Anglo-Saxon race, to which you and I and a great majority of members here belong, is the love of power and the ever restless, relentless, and the oftentimes unscrupulous pursuit of it. This race has never been known to yield voluntarily any atom of power once acquired, nor indeed anything else of value once acquired. Surrender to them now the disestablishment of silver, give to them now the single gold standard, and with it the control of the money power of the world and hardly anything short of revolution will ever again restore silver to its rightful place as a money metal.

Mr. BLAND. Will the gentleman allow me a moment?

Mr. BLANCHARD. I yield to the gentleman.

Mr. BLAND. I think the gentleman's argument may be misunderstood in one particular. He has been assuming that the Wilson bill carries out the Chicago platform in so far as the repeal of the Sherman act is concerned. It does no such thing. The platform demands the wiping out of the Sherman law, while the Wilson bill proposes to repeal only the purchasing clause of that law, leaving the remainder, leaving the gold standard portion of it. I want it made clear that the advocates of the Wilson bill do not attempt to conform to any part of the Chicago platform, even so far as concerns the repeal of the Sherman bill.

Mr. BLANCHARD. My friend from Missouri is correct in his explanation of the scope of the Wilson bill. It does not go to the extent of the repeal of the Sherman law as demanded by the party's platform; it deals only with one clause of that law; it confines itself to repealing what is called "the purchasing clause" of the Sherman act, leaving the remainder untouched, and is, therefore, not a compliance with any part of the Chicago platform.

Mr. BOATNER. Will my colleague allow an interruption for a question?

Mr. BLANCHARD. I will.

Mr. BOATNER. Has any suggestion been made by the other side, or by any of the adherents of the Wilson bill, looking to any legislation providing for free coinage of silver on any basis whatever?

Mr. BLANCHARD. None whatever. Of all who have addressed the House on that side of the pending question, the gentleman from New York [Mr. WARNER] is the only one who even stated that he was willing to vote for any subsequent measure having the object of carrying out the declarations of the platform of the party on this subject.

Mr. BOATNER. But he did not say what he was willing to vote for on that line.

Mr. BLANCHARD. He did not; only expressed a willingness to vote for some subsequent measure.

Mr. Speaker, the gentleman from Tennessee [Mr. PATTERSON], who addressed the House in support of the pending measure with much earnestness and force, declared he could not vote for the coinage of silver on any ratio that might be proposed, for he did not believe the two metals could any longer be kept at parity, and that the inevitable result of attempting bimetallism here, in the absence of an international agreement, would be that the cheaper metal, silver, would drive out of the country the dearer and more valuable metal, gold. The gentleman has not heeded the lesson which the experience of France on this subject teaches.

France for more than a half century has maintained nearly or quite as much silver as gold in circulation at parity on a ratio of 15½ of silver to 1 of gold. She has now in circulation $700,000,000 of silver. She appears to have no difficulty in keeping it at a parity with gold at the ratio mentioned. The presence of so much silver, even at a less ratio than the one adopted by us, does not seem to have had the effect of driving out gold. She has more of actual silver and more of actual gold to-day than any nation on earth. It is estimated that her stock of gold at this time is $900,000,000.

The money circulation of France is equal to $57 or $58 per capita of her population. Ours is only about $23 per capita, and much of this is not in actual circulation, is in the form of reserved funds, etc. France in extent is equal to only about one-seventeenth of our territorial area, and her population is but little more than half as great as ours. She has largely more silver than we have. Our stock of silver for money purposes is placed at about $500,000,000. Is not our ability as great as that of France to keep silver in circulation and on a parity with gold at the same or at a greater ratio? If gold does not run away from the presence of so much silver in France, why should it run away from an equal amount, proportionally to population, in our country?

Mr. Speaker, if we were to coin all the silver produced annually in the whole world, less the percentage used in the arts, it would take us some six or eight years to obtain as much silver coin per capita of our population as France maintains to-day per capita of her population.

And yet the wild cry is raised that we must close our mints to silver, that we must stop its coinage, that the country will be ruined if we do not, and more of that kind of rubbish.

England, since 1816 a monometallic gold standard country, has far less of actual gold than France. If gold is afraid of silver, why does it not run away from France, where there is so much of silver, to England, where there is no silver at all except for subsidiary coin purposes? It is just such questions as this that upset the theory of the gold advocates. A few years ago, in consequence of the withdrawal by the Russian Government of a very large amount of gold on deposit with the Barings, that great English banking house tottered, and apprehension was great it would go down in bankruptcy.

The Bank of England came to its rescue, and in doing so drew so heavily on its gold resources that it was thought prudent to effect a loan of gold. Where did the great Bank of England go for this loan? Did it go to monometallic gold-standard Germany or the United States? No; it went to bimetallic France, and the Bank of France loaned to the Bank of England 75,000,000 francs in gold. Nor was this the first time the Bank of England borrowed gold from France. Twice before, as my information goes, she did the same thing.

Mr. Speaker, what magic power does gold possess that enables it to command the homage of thousands? What subtle influence does it invoke that makes it so potent a factor in the affairs of men? It has no intrinsic value except that which makes it useful in the arts and for ornamentation. In this respect it has no advantage over silver. Its money qualities are not inherent; they are endowed by man. Gold is money because the common consent of mankind makes it so. Silver and gold were chosen over the other metals as mediums of exchange and measures of value because of their limited supply and their greater adaptability for the purpose. In this sense they are precious metals. Gold unendowed with the money quality would be of comparatively little use, and would attract but limited notice from man.

But as money, ah! Mr. Speaker, therein lies its magic power. The subtle influence which quickens the senseless metal with life and energy and force and might—which makes kings and emperors its servants and queens and princesses its handmaids—springs from that quality which enables it to acquire property, purchase talent, learning, and skill, and pay debts.

What it will accomplish as money is epitomized by Addison in the following sentence:

> Gold is a wonderful clearer of the understanding. It dissipates every doubt and scruple in an instant, accommodates itself to the meanest capacities, silences the loud and clamorous, and brings over the most obstinate and inflexible. Phillip of Macedon refuted by it the wisdom of Athens, confounded their statesmen, struck their orators dumb, and at length argued them out of their liberties.

With all its power it is

COWARDLY AND TREACHEROUS.

Senator Ingalls, of Kansas, in a speech in 1878 in the United States Senate, depicted it in graphic language, as follows:

> No enduring fabric of national prosperity can be builded on gold. Gold is the money of monarchs; kings covet it, the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers, and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators, and the idol of the miser and the thief. Being the object of so much adoration, it becomes haughty and sensitive and shrinks at the approach of danger, and whenever it is most needed it always disappears. At the slightest alarm it begins to look for a refuge. It flies from the nation at war to the nation at peace. War makes it a fugitive.
>
> No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friend whom it does not sooner or later betray. Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the chief agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of greater peril it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels. It was the most invincible enemy of the public credit. Gold paid no soldier nor sailor. It refused the national obligation. It was worth most when our fortunes were lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction. But as usual when danger has been averted and the victory secured, gold swaggers to the front and asserts the supremacy. But silver is the money of the people. It is the money of wages and retail. Its tendency is toward diffusion and dissemination. It enters into the minute concerns of traffic, and is exchanged day by day for daily bread. It penetrates the remotest channels of commerce, and its abundance, bulk, and small subdivision prevents its deportation in sufficient amount to disturb or unsettle values. If it retires at the approach of danger, or from the presence of an inferior currency, it still remains at home ready to respond to the first summons for its return.

Mr. Speaker, I believe that the adoption of the single gold standard in this country would be disastrous in the extreme to the agricultural interests of the South and West. We do not find, sir, any demand from those classes of our people for the repeal unconditionally of the Sherman law. That demand comes up principally from the Eastern sections of the country, and from the bankers and boards of trade in the cities throughout the country. I believe that the adoption of the single gold standard would mean falling prices continued in this country, and the ruin and impoverishment of the agricultural and laboring classes.

Since 1873, when silver was demonetized, we have had a period of falling prices. We in the South and West know that since 1873 the agricultural interests of our sections have been in their tendency down, down, down. Before the civil war, under a different system of finance, the agricultural interest of the South and West was one of appreciation—a little better, a little stronger, a little higher every year.

In the South, prior to the war, the very best security that could be offered for a loan of money was a mortgage on our agricultural lands. Now almost any kind of collateral is considered better security than the same lands. Prior to the war agricultural lands commanded ready sale in the market at appreciating prices. Is that true of these same lands now? It is not. All of you from the South and West know it. In many localities lands are a drug on the market, hard to dispose of, and oftentimes sacrificed at ruinous prices. The basis of prosperity in the South and West is our agricultural lands, and any national policy that affects their selling value, or their rental value, or the value of their products, strikes a blow at the very foundation of our welfare.

I believe, Mr. Speaker, that the adoption of the single gold standard would mean a constantly decreasing value of currency to supply the needs of a constantly increasing volume of business; or a volume of business that would constantly increase if the supply of money permitted. It would mean a volume of money diminishing to the needs of the people in proportion as the number of people to use it increased.

In other words, as our population increased our money supply would decrease per capita, and in proportion as the money supply decreased the value of money would appreciate.

The effect of this would be the perpetuation of the era of falling prices, and falling prices mean the destruction of values and the impoverishment of the people.

On the disastrous results to follow from an appreciation of the currency, I have here the declarations of one of the most distinguished men in the Republican party. From a speech made in the Senate in 1869 by Senator SHERMAN, of Ohio, I extract the following:

> But the distress caused by an appreciation of the currency falls mainly on the debtor class; others suffer only by reason of his inability to pay. What does specie payment mean to the debtor? It means the payment of $135 where he has agreed to pay $100——

I will suggest here that we substitute the word "gold" for the word "specie," for this demonitization of silver, this striking down of silver, this closing of the mints of the country to silver means the bringing of debts to a gold basis. So substitute the word "gold" for the word "specie," and it would read——

> What does gold payment mean to a debtor? It means the payment of $135 where he has agreed to pay $100, or, which is the same thing, the payment of $100 where he has agreed to pay $75. Where he has purchased property and paid for one-fourth of it, it means the loss of the property; it means the addition of one-fourth to all currency debts in the United States. A measure to require a debtor now to pay his debt in gold, or currency equivalent to gold, requires him to pay 135 bushels of wheat when he agreed to pay 100; and if this appreciation is extended through a period of three years, it requires him to pay an interest of 12 per cent in addition to the rate he has agreed to pay.

Again, in the same speech, he made use of this language:

> The debtors of this country include the active, enterprising, energetic men in all the various employments of life. It is a serious proposition to change their contracts so as in effect to require them to pay one-third more than they agreed to pay.

The SPEAKER *pro tempore*. The time of the gentleman from Louisiana has expired.

Mr. BLAND. I ask unanimous consent that the gentleman have time to conclude his remarks.

There was no objection, and it was so ordered.

Mr. BLANCHARD. Mr. Speaker, I thank the House for its

indulgence. The Senator from Ohio [Mr. SHERMAN], in the same speech, used also the following language, which is all the more significant since he is to-day known as one of the ablest exponents of the monometallic gold standard in this country:

To every person except a capitalist out of debt, or to the salaried officer, or annuitant, it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, or disaster. To every railroad it is an addition of at least one-third to the burden of the debt; and more than that deduction from the value of its stock. To every bank it means the necessity of paying $150 for one hundred of its notes and deposits, except so far as the bank may transfer this to its debtors. It means the ruin of all dealers whose debts are twice their capital, though one-third less than their property. It means the fall of all agricultural productions without any very great reduction of prices.

This speech is contained in volume 71 of the Congressional Globe, and was delivered January 27, 1869. It was delivered on a bill which related to the public debt and to the currency. He was arguing, in that part of the speech which I have quoted, against the evils to follow from a reduction in volume of the money of the country, and his statements on that subject are of value in this discussion, since if this purpose of the gold people is achieved our mints will be stopped to the coinage of silver. Nor is it proposed in anyway to replace the money which will thus be stricken down, and of which we will thus be deprived, by any other form of money or currency.

Mr. Speaker, the history of falling prices the world over has been the history of ruin and poverty. Falling prices have been productive of more of disaster to the human race than anything else that has ever happened to it, war and pestilence not excepted.

I have before me a report made in 1877 by the United States Monetary Commission to the Senate of the United States. This commission was organized under a joint resolution adopted August 15, 1876. As pertinent to the points under discussion just now, I send up to the Clerk's desk to be read the extract which I have marked.

The Clerk read as follows:

At the Christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with the shrinkage in the volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods unaccompanied and unfollowed by any such mighty disasters. It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes, through which the scanty stock of the precious metals was increased in efficiency. But not less than the energizing influence of Potosi and all the argosies of treasure from the New World were needed to arouse the Old World from its comatose sleep, to quicken the torpid limbs of industry, and to plume the leaden wings of commerce.

It needed the heroic treatment of rising prices to enable society to reunite its shattered links, to shake off the shackles of feudalism, to relight and uplift the almost extinguished torch of civilization. That the disasters of the Dark Ages were caused by decreasing money and falling prices, and that the recovery therefrom and the comparative prosperity which followed the discovery of America were due to an increasing supply of the precious metals and rising prices, will not seem surprising or unreasonable when the noble functions of money are considered. Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish, and, unless relieved, finally perish.

Mr. Speaker, the great premier of Great Britain, Mr. Gladstone, is said to have made in a recent speech this observation in reference to silver as money—

that to return to free coinage in England would be a move directly in the interest of our debtors in America who owe us, because to do so would be to put in their hands just twice the amount of money with which to pay us, and thereby enable them to pay us with just half the value.

If it be true that that declaration was made to the English people by so eminent an authority as Mr. Gladstone, it would, sir, seem to me the part of wisdom for us to pursue just the reverse of the policy which he there urged upon England. Our public debt is payable in coin, and coin means silver and gold.

I have here a list of the acts, beginning with 1861 and coming down to 1870, authorizing the issuance of bonds and greenbacks and the creation of the public debt. It is all payable in coin—gold or silver.

But if we should adopt the pending proposition to close our mints to the coinage of silver it increases upon us the burden of this national debt. And this applies equally to private debts. We add from one-third to one-half more to the burden which the laboring and producing classes of the people have to bear. And, Mr. Speaker, the great majority of the people of the United States belong to the debtor class. They are not asking that silver be stricken down as a money metal; they are not asking that the mints of the country be closed to the coinage of silver; they are not seeking to take upon themselves a greater burden of indebtedness; they are not asking to put the contracts which they made on a gold basis. It is the East; it is the monometallists of New York, of Boston, of Philadelphia, of the money centers; it is the money classes of Europe, who hold American securities, that are demanding this greater burden be placed upon the laboring and agricultural classes in order that there may be an appreciation of their holdings.

Mr. Speaker, there has been a good deal said in this debate about our having come to the forks of the road; and perhaps we have in more ways than one. It looks like this is an attempt on the part of the money classes to overburden the laboring and agricultural classes of the West and South. Take care that we have not come to the forks of the road where the South and the West will part, politically, with the East. You know that this was predicted as early as 1878, by the same distinguished Western Senator whom I quoted awhile ago, Senator Ingalls, who said at that time:

It is the East against the West and South combined. It is the corn and wheat and beef and cotton of the country against its bonds and its gold; its productive industry against its accumulations. It is the men who own the public debt against those who are to pay it, if it is to be paid at all. If the bonds of this Government are ever paid, they will be paid by the labor of the country, and not by its capital. They are exempt from taxation and bear none of the burdens of society.

The alliance between the West and the South upon all matters affecting their material welfare hereafter is inevitable. Their interests are mutual and identical. With the removal of the causes of political dissension that have so long separated them, they must coalesce, and united they will be invincible. The valleys of the Mississippi and Missouri, with their tributaries, form an empire that must have a homogeneous population and a common destiny from the Yellowstone to the Gulf.

These great communities have been alienated by factions that have estranged them only to prey upon them and to maintain political supremacy by their separation. Unfriendly legislation has imposed intolerable burdens upon their energies; invidious discriminations have been made against their products; unjust tariffs have repressed their industries. While vast appropriations have been made to protect the harbors of the Atlantic, and to erect beacons upon every headland to warn the mariner with silent admonition from the "merchant-marring rocks," the Mississippi was left choked with its drifting sands till the daring genius of Eads undertook the gigantic labor of compelling the great stream to dredge its own channel to the sea. The opening of this avenue of commerce marks the epoch of the emancipation of the West and South from their bondage to the capital of the East. In asking the passage of this bill they are asking less than they will ever ask again. When I reflect upon the burdens they have borne, the wrongs they have suffered, I am astonished at their moderation.

Mr. Speaker, if these words were true in 1878, they are tenfold more true to-day. The West and the South do not want this country brought to a monometallic gold standard basis. They want silver used along with gold as the money of the country. They want it because it means more money and higher prices for agricultural products and agricultural lands. It means less of burdens to bear; it means more people living in comfort and happiness.

But it is said the silver dollar is not an honest dollar, and the changes are rung upon this by the gentlemen who take the gold side of this question. Without admitting this to be true, suppose, for the sake of argument, it is conceded. If it be a dishonest dollar, what made it so?

That is a question which these gentlemen who so glibly advocate the gold standard have not answered. I will answer it for them. It is made so by legislation hostile to silver, secured by interested parties from the leading commercial nations of the world. I would ask my gold friends this question: Would the silver dollar be a dishonest dollar to-day but for this hostile legislation? Clearly not.

If an international agreement were secured to coin the silver dollar everywhere at a ratio of 16 to 1, would it not be an honest dollar even in the eyes of those who now so glibly denounce it; would it not be worth a hundred cents in gold everywhere; would it not be the unit of value along with gold everywhere? Undoubtedly. With this policy of bimetallism universally recognized and adopted, would there not follow an enormous increase in the world's wealth; would not prosperity be more general; would not the hard conditions of life be changed for the better; would not more people live in comfort and happiness; would not poverty be less?

It seems to me so. Well, who prevents this international agreement? Who but interested parties, having a selfish motive to subserve, the money classes, whose greed prompts them to invoke the aid of law to add a fourth, or a third, or a half to the value of their securities by diminishing the world's supply of money by the destruction for coin purposes of one of the metals used for money by all people since the dawn of history?

Will the United States lend its giant aid in this attempt at the destruction of one-half of the world's money supply? Will the United States, which produces 40 per cent of the silver of the world, join the crusade against it?

England leads in this attempt to destroy silver as money. It

is to her interest to do so. She is a creditor nation and levies tribute on all the nations of the earth. She wants her debts paid to her in dear money, and gold is this "dear" money with silver stricken down. England produces two-thirds of the manufactured products consumed in the world, and is, besides, the common carrier of the world. In her bottoms are carried more than half of the transportation business of the world. It is thus that she has become the great creditor nation of the earth and aspires to dictate the kind and character and value of the money of the world, if not its weight and fineness.

But we have nothing in common with England in this. She is in many respects our rival. What suits her does not suit us. A policy that she elects to follow as best for her interests, is likely to prove not best for ours. The conditions with us are different. We are not a creditor, but a debtor nation. Our unwise tariff laws have prevented us from becoming a serious competitor with her as a furnisher of manufactured supplies to the world, and the same condition, together with unwise navigation laws, have deprived us of our fair share of the carrying trade of the world. Great Britain is a compact nation, with population crowded comparatively in a small space.

The United States is a country of vast territorial extent; its sixty-odd millions of people scattered over a wide area; our interests are more complex; our climatic conditions widely variant; our productions more diversified.

Our position is more isolated from the leading commercial nations of earth. We can not make use of credit, as understood in commercial transactions, as easily and readily and to the extent that England does. We need more money than she does, a larger volume to spread over our vast country, to move our more diversified crops, to carry life and vigor into our more numerous industries and enterprises.

Our system of banking is different. We can and do make use of more different kinds of money, are capable of a more complex system of finance. We can use silver to advantage in our money system where England might find difficulty in doing so.

If the United States—one of the greatest nations of earth—makes a stand now for silver, because it means an ever-increasing volume of money for all mankind, will it not have the effect of calling a halt the world over in the crusade against silver? Will it not revive the hopes of bimetallists in all lands, strengthening their hands and confirming their purpose? Even in England the signs portend the development of sentiment favorable to bimetallism.

Mr. Balfour, one of the leaders of the Conservative party in the House of Commons, is an avowed bimetallist, and with him stand many able and prominent men in both political and commercial circles. In the great manufacturing center of Manchester public meetings have been held in the interest of the bimetallic standard, and many things point to a healthy growth of popular sentiment in that direction.

Shall we check this movement by striking down bimetallism in this country, its last refuge and stronghold?

But those who advocate the single gold standard assert the people of the United States can not maintain the parity of the metals at a fixed ratio. They forget the example of France. That nation maintained single-handed for sixty years the free and unlimited coinage of silver in Europe, and that, too, at a ratio smaller than the one which obtains here. But let us set the example of opening our mints to the free coinage of silver, and may we not expect other nations to follow our lead? France and the states of the Latin-Union reluctantly closed their mints to the free coinage of silver, being forced to it by the action of Germany and the United States demonetizing that metal in 1873.

Let the United States reëstablish silver, and the bimetallic sentiment of Europe will compel other countries to do the same. Besides, is the United States in the habit of looking around to see what other people are doing, or of asking their advice before acting on a principle or announcing a purpose? We have reached that point in material and commercial greatness when we should lead, and not follow.

Where is the spirit of 1776? At that time we, a mere handful of people, taking counsel of no one, relying only upon the God of justice and truth and the righteousness of our cause, boldly proclaimed the great principle of civil liberty. In the clash of arms that followed we triumphantly vindicated and established that principle.

We are now a great continental republic, the peer in greatness, glory, and power of any nation on earth, possessed of every variety of climate and production, whose people are as one again, loyally devoted to the perpetuity of the Union, fearing no foreign foe, following the pursuits of peace, and solving practically the great problem of self-government.

Can we not afford to proclaim now the great principle of financial liberty; to take the lead in the emancipation of mankind from the thralldom and slavery of the money power, even as we did in Colonial days in the emancipation of mankind from the slavery and tyranny of political power?

If we do not, Mr. Speaker, then, indeed, have we fallen on degenerate days, evincing a loss in national courage, force, and nerve, and we may well ask ourselves the question: Have we entered on a period of national decadence?

"He who would be free himself must strike the blow."

But, Mr. Speaker, if the silver dollar is not an honest dollar what shall we say of the gold dollar? Is it any more honest?

The gold dollar, under favoring conditions, has robbed its brother silver dollar of part of its value and added it to its own. The present gold dollar, then, is not an honest dollar. It is as much above the fair average of value as the silver dollar is below that average. It has as much surplus of value as the silver dollar has of deficiency of value. It is as much too valuable as the silver dollar is less valuable. In the last twenty years gold dollars have increased in value at the expense and loss of silver. "The restoration of bimetallism is to preserve the old yardstick of value against the revolutionists who have added 40 per cent to the length of gold by the legislation of the past twenty years."

The gold dollar—

says a writer of note—

is a dishonest dollar to the extent that the metal in it exceeds the mean value of gold and silver. The silver dollar is a dishonest dollar to the extent that the metal in it is less in value than the mean value of gold and silver.

It will not, therefore, do for our friends of the gold standard to denounce the silver dollar as a dishonest dollar without casting the mote out of their own eye so as to see the dishonesty which is in the gold dollar of to-day—the gold dollar worth more than it should be worth, made so by legislation; the silver dollar worth less than it should be worth, made so by legislation. There is as much dishonesty in the one as in the other, but the dishonesty in the gold dollar makes itself felt the more because that dollar is so much harder to get by the agricultural and laboring classes of the country by reason of this very excess of value.

Mr. Speaker, on a gold basis we continue of necessity borrowers of money from Europe. The continued coinage and use of silver as money will obviate this necessity and rescue us from paying tribute to Europe in the form of interest.

Under the Bland-Allison act of 1878, the Government undertook to go into the markets of the world and buy silver to coin, not exceeding four millions a month and not less than two millions a month.

This implied another undertaking on the part of the Government, and that was to get this silver money into circulation after coinage.

Therein, Mr. Speaker, lies the trouble; and it is greater, even, under the Sherman act of 1890, for the Treasury requirement of silver under the latter was greater per month than under the Bland-Allison act.

To itself attempt to put money into circulation Government is essaying what, strictly speaking, is not a legitimate function of government. Especially is this true of normal times. Government defines the unit of value, says what shall constitute money, fixes its weight and fineness, puts its stamp upon it to denote weight and fineness, and establishes mints where money is coined for those who have metals from which money is permitted by law to be coined, charging the expense of mintage.

But to get it into circulation is the business of the people who own it. Government, by taxation, collects enough money from the people to meet its expenses, and then puts it back into the channels of circulation when it pays it out to the people it owes. But beyond this Government can not well go in circulating money. It is not the business of Government to enter the markets of the world and become a trader, buying stocks and goods and lands and the products of land, and in that way get its money into circulation.

But open the mints of the country to the free coinage of silver as well as gold. Let those who have these metals go to the mints and have them coined into money, and then enter the channels of trade and barter and commerce and get it into circulation. They will be quick to do it. The man who has his silver coined into money for him at the mint will not hoard it in his treasury, his bank, his vault, his strong box, as the Government has been compelled to do, or has done, in its treasury vaults. Oh, no! He will go out into the markets and exchange it for lands, for mules, for horses, for cattle, for wheat, for corn, for cotton, for houses, for merchandise, for everything he may need or fancy, and that is the only legitimate way of getting and keeping money in circulation.

The Bland-Allison act of 1878 was repealed by the Sherman act of 1890—a worse law. They both forced upon the Government the undertaking of circulating silver. That is not what is

wanted. Let both these laws be wiped out. Instead, open the mints to everybody's silver. Then the Government will have no silver to purchase as now; then it will own no silver except that which comes to it through taxation; then silver will be treated just as gold is now. The Government has no gold except that which comes to it through taxation; it buys no gold for coinage, it opens its mints to everybody's gold, and how quickly it is gotten into circulation!

SILVER THE POOR MAN'S MONEY.

Mr. Speaker, silver is the poor man's money—yes, exactly that; the poor man's money—not in the sense that the poor man should receive his dues in money less valuable than that which is demanded by the rich, or that there should be one kind of money for the rich and another kind for the poor, but the poor man's money in the sense that it is money not so hard to get as the gold money. It means more for the wage-earner for the day's work than if gold alone were money.

But, more than that, it means the more ready employment of labor; and in that sense more than any other it is the poor man's money. There are to-day, Mr. Speaker, thousands upon thousands of our fellow citizens all over this country, especially in the Western States, where the silver mines are—laboring people—who are deprived of employment because of the scanty supply of money in circulation; because the mints are closed to free silver; because the mines are shut down.

The gold standard the world over means contraction, scarcity, shrinkage. It means dear money, money hard to get; so hard to get that, when gotten, it is hoarded. It means diminution in quantity, shrinkage in volume, stagnation in business, paralysis of enterprise, stoppage of industry. It stays the hand of thrift, palsies the arm of energy, and languishes the heart of hope. It make all debts gold debts. It means a greater demand for gold, double work for the volume of gold money to do, and accordingly an undue appreciation of its value. It means the elevation of the gold dollar as a unit of value, and the corresponding decrease in the value of everything else by comparison.

Bimetallism, the free coinage of gold and silver, means more money, an expanding volume. It means a quickening of enterprise, enlarged business opportunities, multiplied industries. It means money not so hard to get, and when gotten invested, not hoarded. It means a market—and I call the attention of our Western and Southern friends to this—it means a market for what we have to sell. Gentlemen in this House know to-day that we have not a market for what we have to sell. Our best agricultural lands are oftentimes a drug on the market; and this is becoming more and more the case under the policy which has obtained since 1873.

The bimetallic standard means a fuller market for what we have to sell, because there is more money. It means better prices for our agricultural lands of the South and West, for our timber, our cattle, our corn, our wheat, our beef, our cotton, our sugar, our rice. It means easier money to the consumer who buys from the retail merchant, and larger transactions by the retail merchant with the wholesale dealer and stock-jobber. It means a revival of trade in both the retail and wholesale lines. It means competition, and the resulting higher compensation, for the services of the bookkeeper, the cashier, the accountant, the salesman.

This comes about by the multiplying of business concerns and houses needing the services of such employés. It means money to pay the doctor, the lawyer, the preacher, the mechanic; to erect and sustain schoolhouses and churches. It means cheap money—cheap in the sense of a low rate of interest—with which to raise, as now, 6 or 7 cent cotton and half-dollar-a-bushel wheat. It means money to meet obligations with, to pay debts. It is fair alike to both creditor and debtor—one gets his just equivalent; the other is not overburdened or crushed.

Mr. Speaker, under the conditions which now obtain, the agricultural classes of the South have to pay, the best of them, 8, 10, 12, and 15 per cent for money to raise 6-cent cotton. And when those who are not able to borrow money directly, go to the stores and get credit for their supplies, they pay often for them what would be equivalent to interest at the rate of from 25 to 100 per cent. Every man here from the South knows this to be true, and I believe it to be true also of the West. And these conditions will be made harder if we are brought absolutely to the single gold-standard basis, as is insisted upon by so many here.

Mr. Speaker, the body politic is sick. "Uncle Sam" is suffering from serious indisposition. Some gentlemen here act as though they believed him to be drunk. They would apply the Keeley gold cure. [Laughter.] They propose a hypodermic injection of that mixture, and insist that it is a panacea for all the ills the country is suffering from. Fifty years ago there obtained in this country a school of medicine which insisted upon bleeding a patient for almost every indisposition. The lancet was applied, and a part of the blood which circulated in his veins drawn off under the pretext and belief that this would contribute to his cure. But as science developed, as experience widened, this old idea was discarded as not only useless but harmful.

The foremost practitioners in the profession now rarely, if ever, resort to bleeding. It is hardly ever heard of. But it would seem that there are quacks on this floor who would return to this discarded practice. "Uncle Sam" being sick, they would bleed him. If they have diagnosed his case with skill, they could not fail to discover he was suffering from a deficient circulation already. Yet they would bleed him anyhow. The lancet must be applied, and the circulation of blood, already scanty, must be lessened.

Mr. Speaker, the money in circulation is the lifeblood of the country. The cry on all hands now is for money, more money. There is a deficiency of it. Yet these lancet-using quacks of the gold-standard theory would cure "Uncle Sam" by bleeding him, by diminishing the already scanty supply of money, by stopping the further use of silver as money.

Out with such charlatanry; such malpractice. Let us adopt the reverse practice: let us infuse more blood into the sick patient; let us maintain a full circulation of this lifeblood—money—in the veins of the body politic; let us maintain what we have always maintained, what was the money of our fathers, what is the money of the Constitution—bimetallism.

Many gentlemen who advocate the gold side of this question admit that on principle bimetallism is correct. But, while they say this, they add that this is not the time to adopt it; that the conditions now confronting us do not admit of our maintaining a bimetallic standard in this country. Their argument is one of convenience. It is the argument of expediency. It is not the argument of principle, and the people of the United States have long since discovered that we have fared best whenever we planted ourselves squarely on principle as the basis of governmental action. We have ever done so as a nation.

In Colonial times, when resisting the encroachments of the mother country, we planted ourselves on the enduring principle of civil liberty, and won. When secession spread over a section of the country and a number of the States separated from the Union, the United States again acted on the principle that the Union must and shall be preserved, went to work on that line and succeeded. They did not in the face of that great crisis give heed to the argument of convenience or expediency.

Again, when in 1812 the right of search of American vessels was insisted upon by Great Britain, America planted itself on the sound principle of exemption from foreign espionage, and though a weak, struggling nationality at that time, the United States went to war to sustain it and again won. And so the American people have ever been greatest and most successful when struggling to establish a principle or to maintain one. A strong, vigorous, aggressive nation always suffers in loss of national character and prestige when, abandoning principle, it takes to expediency.

If bimetallism be correct, if sound in principle, we should plant ourselves on it and make the fight squarely for it in face of the world.

Mr. Speaker, some thousands of years ago, in their exodus from Egypt and the house of bondage, the Israelites of old crossed the Red Sea and wandered forty years in the wilderness on their way to the promised land. Tiring of the rule of God, who communicated His directions to them through His servants, Moses and Aaron, and promulgated His Divine commands amid the thunders of Sinai, rebellious of heart they turned away, made a calf of gold, erected it as a god in the wilderness, and bowed and prostrated themselves before it.

History repeats itself. The people of the United States, wandering in the wilderness of financial doubt and distress, a portion of them have veered away from the teaching of the Fathers of the Republic and from the admonition and spirit of the Constitution, and, under the lead of false prophets, have erected a golden money calf and propose to prostrate themselves before it. Holy Writ tells us that retribution, swift and terrible, followed in the wake of the transgression of the descendants of Abraham, Isaac, and Jacob. Let us beware that retribution, equally terrible if not so swift, taking the form of financial thraldom and slavery, of ruined homes and pauperized millions, does not follow the consummation of this attempt at departure from the precept and example of the founders of the nation. [Applause.]

Mr. GROSEVNOR. Mr. Speaker, the President of the United States has seen fit to call upon Congress to convene in extra session, and thereby to discharge a duty which, under certain circumstances, may properly devolve upon Congress under the Constitution; and in doing this the President made a statement of the reasons why, in his judgment, it was necessary in midsummer, in this torrid season, to call the members of the Fifty-third Congress from their homes in all the localities of the country and to compel them, in the discharge of their duty, to come to Wash-

ington and discuss and decide what is necessary to save the country from an imminent impending condition.

In making this call it is to be greatly regretted that the President did not himself occupy the same nonpartisan stand that he has demanded Congress should and ought to occupy in this great emergency. He had a grand opportunity to set an example, which we should have all wisely and gladly emulated; but he has not done it.

It was unfortunate, as will be pointed out a little further on, that the Executive of the country, looking forward as he must have looked, to the condition which we see developing in this House and in the Senate and in the country, a condition which portended violent opposition to his views and determined opposition to his plan of action, did not call upon the country in the exercise and the development of the same spirit in which he has invoked Congress to assemble and act, but that on the contrary he has seen fit to make the first appeal to partisanship, and to unjustly proclaim to the people of the country a condition of things in which his own party will not bear him out.

I refer to his declaration that the peril of the country, the condition of the country, grows out of a certain matter of legislation the responsibility for which he is pleased to lay at the door of the Republican party. And, Mr. Speaker, if it should so happen that in the course of this debate there should be something of partisan politics brought in here, the justification for it is found in the declaration of the President himself. In his proclamation calling this extraordinary session he uses the following language:

> And whereas the present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress—

therefore he calls upon Congress to come forward in special session and do what? Repeal that law. And in his message he has seen fit to further and more certainly fan the flame of partisan politics, and to assuredly bring politics into this Chamber by this language:

> I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government. This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce after a long struggle between the advocates of free-silver coinage and those intending to be more conservative.

And now, Mr. Speaker, if, during the course of this debate there shall be something of partisan politics brought in here, the origin of it is in this exceedingly parliamentary and diplomatic language of the President of the United States, which was understood from Maine to California to be a declaration that the Republican party, through its legislation, was responsible for a condition which brought about a necessity for this special session of Congress. If this be so, Mr. Speaker, it is greatly to be regretted that the self-constituted leaders of the Administration wing of the Democratic party, if they be self-constituted, or the authorized leaders of the Administration party, if they be so authorized, should not have seen fit to do that which common prudence would have suggested to wise men, in order that they might avail themselves of all the elements on this floor who are in favor of the President's theory of this question.

But I regret to say—and I speak not in anger, but in sorrow—that these gentleman, whoever they are, for their names are beneath the shadow, have seen fit to assume two conditions of things: first, admitting that without about one hundred votes of the Republican party on this floor the Administration will be driven to the wall and defeated, they nevertheless assume that there are but two parties on this floor—the one, the Democratic party, in favor of free silver, and the other, the Administration, or, as the free-silver party term it, the Wall street party of the President and of the Administration.

And so the negotiation has been brought about and we are precipitated under the iron-clad force of the previous question—a condition of parliamentary procedure that has no written authority to sustain it, and which is but the declaration of the Speaker of this House—following, I will admit, former authority upon that question—into a condition so that the free-silver wing of the Democratic party—and I am afraid it is going to become the free-silver body of the Democratic party—shall have a certain series of rights, immunities, and privileges, and that the "gold-bug" wing—I fear it will become the gold-bug tail of the Democratic party—shall dictate all else, and that the 126 members of the Republican party—who are to furnish 100 votes, without which the Administration is to be beaten in a contest that will be so disgraceful to it that under other forms of government it would relinquish power and go to the people for an affirmation of the judgment, or a vindication of the position of the Government—are to march in the columns of the triumphant Democracy as the trophies of the battlefield. Whether the gentleman from Missouri [Mr. BLAND], if this Administration measure is passed and adopted, will be on the right of the line of the victims of the overwhelming defeat, or whether the Republican minority will occupy the right of the line of the victims chained to the chariot wheels of this triumphant Wall street Democracy, I know not; but our position is to be that of the hewers of wood and drawers of water, and we are not to be allowed to suggest in what form we will take our water, or in what quantity we will hew our wood. [Laughter.]

Our wishes were not consulted in ordering this long debate and this complicated plan of campaign. We were not permitted to state our wishes as to the debate, or the form of the question. We are not to be allowed to suggest even one amendment. The leaders on this side appealed for even fifteen minutes of debate in order that the country might know our position, but we were denied even so simple a request as that.

The Republicans on this floor have some views on the question here involved, as they have on all important questions of politics. They are charged in the proclamation of the President, and in the message of the President, with being the guilty originators of all this trouble, and it is a most singularly audacious position that the friends of the passage of this bill have assumed on this floor. The Democratic party here, the head of it or the tail of it, I know not which [laughter], come here and modestly suggest that the result of this legislation is to prove to the country that we got the country into all this trouble, and then they call upon us to help gain a great victory for them, and when we are through with it they will go to the country and declare that the Democratic party has rescued the country from the pernicious legislation of the Republican party, and while the process is going on they demand of us that there shall be no partisan politics here.

They demand that the Republican party and its representatives, with elections pending in a large number of important States in the Union, shall sit silently here and from day to day hear the simple, modest, very mild, and gentle assumption made that the Republican party has caused all this trouble in the country, and, lest we should provoke partisan discussion, we are to be silent and this volume of denunciation is to go through the press to the country, not even demurred to by the Republicans on this floor, not even a general denial of the fairness and truthfulness of the statement to be made. I, for one, will not submit to this.

The other day, in the State in which I live, in whose representation upon this floor I bear a part, the following was put forth to the people of that State as the issue upon which the campaign in Ohio in the coming election, on the 7th of November, is to be fought out; and the Democratic press from Maine to California insist that the Republicans must sit and take that and hear that; and if they deny the statement or go into history to show what the facts are they are to be denounced as unpatriotic and trying to have politics drawn in. And it would be a good thing for the Democratic party in this country, the two Democratic parties in this country, both ends of the Democratic party for that matter, to play the end against the middle of the Democratic party [laughter], in that way to have judgment by default upon their utterances here.

I clipped this extract from a leading Democratic paper of Ohio to show exactly what the spirit is; and it is no better in Ohio and no worse than in New York and New England. The spirit is exactly the same. It is the spirit of crimination and recrimination through the public press, and in the action of the political parties. Speaking of the Democratic platform in Ohio, this paper says:

> The platform is short but thoroughly Democratic, and tells in a few plain, direct words, what it is Democracy contends for. The first two planks are especially worthy of deep Democratic consideration. They are as follows—

I commend this plank to both ends of the Democratic party on this floor, and I will have a few words to say about the construction to be given to that plank—

> We hereby approve the platform of the Democratic party adopted by the national convention at Chicago and especially those portions of it referring to the tariff and to currency legislation. We congratulate the country upon the early prospect of measures of relief as outlined by the President's late message to Congress, and we have confidence that the Democratic Congress will devise laws to furnish such relief.

I pause here to know what relief is outlined in that famous message. [Laughter.]

A MEMBER. I give it up.

Mr. GROSVENOR. I read the second plank:

> Second. The financial situation is the unfortunate legacy of Republican administration. It is the natural result of the McKinley tariff, the Sherman silver law, extravagance of the revenue of the party lately in power, and the creation and fostering of trusts and corrupt combinations by that party, all combining to shake credit, to create distrust in the money of the country, and to paralyze its business.

I stop here to inquire of some authorized agent of the Administration—but I want it to be understood that if any Democrat should deign to reply that he must accompany his opening statement with the basis of his authority; I can not allow any deviation from the rule of law that the agency shall not be proved

by the declarations of the agent; the principal must be heard—I should like to have some authorized representative of the Executive of this Government tell me what it is that the Administration proposes as a remedy for the evils which have made it necessary to precipitate this Congress into the middle of this dog-day weather.

He wants Congress to repeal the Sherman act, so called. He wants the truce put an end to; he wants the white flag of 1890 pulled down; and, of course, we all understand that when a truce is put an end to, war goes on. What war? I make this single proposition: That the message of no President of this country convening an extra session of Congress ought to weigh a feather in the estimation of intelligent gentlemen which simply inveighs against an existing evil and does not point out to Congress the suggestion of a remedy. But it is said it is the duty of Congress to provide a remedy; that is to say, that it is in the discretion of Congress to meet this emergency without any suggestion from the Executive.

Very well. Carry that rule backward along the line and it results in this: The existing conditions in this country were to be made known to the people of the country by the Executive, and Congress was then to be called together. Now, if it was not incumbent upon the President to suggest some remedy for the evil, then it was his duty to call Congress together and say nothing about the repeal of the Sherman act; because, for aught he knew, and certainly upon his own suggestion and that of his friends, it was within the discretion of Congress to decide for themselves whether they would repeal that act or not.

If the President dared not trust his party to follow his leadership in the direction of a measure of reform and relief, certainly he ought to have trusted Congress to decide for themselves whether they would repeal the Sherman law or not. Instead of that he makes the issue that the Democratic party demands the the repeal of the Sherman law, but he makes no suggestion as to what should be put in its place.

Mr. Speaker, for the purpose of approaching another branch of this subject and to answer the suggestion that the McKinley law has had something to do with all this—and I think it has had a great deal to do with it—I want to read brief extracts from two Presidential messages. One of them is from the message of the last Democratic President of the United States before the war, who had a Democratic Congress behind him. The present Executive is a man of original ability. Instigated in his use of language by the conditions that surround him, he does not have to copy from somebody else, and yet we find him using substantially the same language that his Democratic predecessor used thirty-five years ago, when he, too, had both branches of Congress.

In 1857 Mr. Buchanan, under the conditions which I have described, sent a message to Congress containing the following language:

> With unsurpassed plenty in all the productions and all the elements of natural wealth, our manufacturers have suspended; our public works are retarded; our private enterprises of different kinds are abandoned; and thousands of useful laborers are thrown out of employment and reduced to want. We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country, in its monetary interests, is in a deplorable condition.

And thereupon Mr. Buchanan asked the Congress of the United States to pass a high protective tariff law.

The panic of 1857 was not so widespread as that of 1893, and yet the paralysis to business was in proportion to the business of the country very similar, and a Democratic President, without condemnation, so far as I ever heard, from the Democratic party, called upon Congress and insisted that the repeal of the protective tariff law of 1842, which had taken place in 1856, was the cause of the breaking up of the industries of the country, and the far-famed panic of 1857.

Mr. Cleveland in his message to this Congress, dated on the 8th of the present month, said:

> With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investments, and with satisfactory assurance to business enterprises, suddenly financial distrust and fear have sprung up on every side.

And then, for quantity, he goes on and tells the same tale of woe that Mr. Buchanan in 1857 was compelled to tell as the result of the repeal of the protective tariff law of 1842.

Mr. Speaker, the President might have gone a good deal farther. He might have said that there was a condition not only similar in many of its features to that described by his Democratic predecessor in 1857, but also that there were many other striking features of the situation that had not been described by that predecessor. He might have stated that the unemployed men in this country amounted in number probably to millions, I do not know how many; that there is not a paying, remunerative industrial institution in this country to-day; that there are more idle men in the United States at this time than there have been during the whole period from 1861 down to the present time. Labor is for the most part unemployed, and that which is employed is running upon short time and at reduced wages.

The miners of my district, nine-tenths of them, are without remunerative employment, and the great industrial concerns of the country are standing idle, hopelessly looking to a Democratic Congress for relief. Railroad securities, bonds, stocks, and representatives of the interests of the people, in all the manufacturing and industrial institutions of the country, have depreciated in value beyond all former precedent; the real estate of the country can not be sold at any price; the wage-earner is looking forward to a winter in which starvation will stare him in the face upon every hand; the iron furnaces are silent; railroads and other corporations are going into the hands of receivers; business in every direction is paralyzed; prosperity on every hand has fled from the country; ruin stares every business man in the face; there is a widespread destruction of values; and the conditions are such that the business men of the country are looking on the scene of distress and destruction with little hope of the future.

And, Mr. Speaker, we look backward along the line, under this challenge of the President, under this challenge of the Democratic party, to ask what has done all this. It is pertinent to this debate, and I am not here to apologize for bringing it in. The President says that the Sherman law ought to be repealed because of the condition of the country, and it is pertinent to study all these conditions and all the events of past years to see whether or not the Sherman law should be made the scapegoat to carry into the wilderness all these burdens. I want to submit a few propositions, based upon a text of Scripture, and I introduce my subject without reading the text first. [Laughter.]

I am one of those who believe that a very small, meager, infinitesimal percentage of the troubles under which we are laboring are to be justly traced to the existence upon the statute book of the Sherman act, and I believe that the attitude of the Democratic party which supports the Administration to-day is the result of an acute, wise, far-seeing, shrewd, acceptance of the situation, in view of the dangers with which they were threatened the very moment the news flashed over the wires that Cleveland was elected President, and that both branches of the Congress was to be Democratic. From that time to this there has been a steady purpose upon the part of a certain portion of the Democratic party to select a scapegoat upon which to load the burdens that were sure to fall upon the people of this country as a result of Democratic success at the polls. I call the attention of the House to the 16th chapter of Leviticus, which is particularly apropos to this situation. The fifth verse of that chapter reads as follows:

> And he [Aaron] shall take of the congregation of the children of Israel two kids of the goats for a sin offering, and one ram for a burnt offering.
>
> * * * * * * *
>
> 7. And he shall take the two goats, and present them before the Lord *at* the door of the tabernacle of the congregation.
> 8. And Aaron shall cast lots upon the two goats; one lot for the Lord, and the other lot for the scapegoat.
> 9. And Aaron shall bring the goat upon which the Lord's lot fell, and offer him *for* a sin offering.
> 10. But the goat, on which the lot fell to be the scapegoat, shall be presented alive before the Lord, to make an atonement with him, *and* to let him go for a scapegoat into the wilderness.
>
> * * * * * * *
>
> 21. And Aaron shall lay both his hands upon the head of the live goat, and confess over him all the iniquities of the children of Israel, and all their transgressions, in all their sins, putting them upon the head of the goat, and shall send *him* away by the hand of a fit man unto the wilderness.
> 22. And the goat shall bear upon him all their iniquities unto a land not inhabited: and he shall let go the goat in the wilderness.
>
> * * * * * * *
>
> 26. And he that let go the goat for the scapegoat shall wash his clothes, and bathe his flesh in water, and afterward come into camp.

[Laughter.]

Mr. Speaker, when the timber began to fall and disaster began to ensue, following the Presidential election, and the inevitable seemed to be coming, I think I can see the members of the present Administration assembled with the President. He had with him the regenerated free-silver representatives in the Cabinet, disenthralled from their allegiance to free silver, and they consulted together at Buzzard's Bay, or somewhere else, about how to proceed to turn aside the public judgment of the country from the real cause of the coming crash, and they concluded that a scapegoat was necessary; and the member of the Cabinet representing Aaron probably brought before the President two kids, one of them the McKinley act and the other the Sherman silver-purchasing act, and I fancy a deep and prolonged consultation was held as to which one of these goats should be consecrated to the Lord and which one should be dispatched into the wilderness.

After due consideration it was decided that, inasmuch as it would probably be impossible to execute the Chicago platform, as amended by the distinguished resident of my own district—

resident in Ohio—and inasmuch as all New York and all London would join in pointing out the Sherman silver act as the proper scapegoat, it was decided that the silver act should become the scapegoat; and they thereupon dedicated the McKinley law, temporarily at least, to the Lord, and decided to send the Sherman law out into the wilderness. And now the scapegoat was backed up in the neighborhood of the temple, and over its head the high priest confessed all the sins and iniquities of the people; he confessed without qualification that all of the evils pressing upon the business interests of the country were caused by the Sherman silver act, and was the willful and malicious act and purpose of the Republican party.

The Republican party having no representative at this procedure it was an easy matter, and the confession was broad and sweeping, and thereupon it was decided that a "fit man" should be detailed to send that goat "into the wilderness," and I fancy that certain movements going on about this Capitol justify me in saying that the "fit man" selected was the distinguished Secretary of the Treasury, and that he has piloted the goat "into the wilderness," and doubtless on his return, if victory shall crown his enterprise, he will perform the duty made obligatory upon him by the 26th verse of the chapter which I have read. [Laughter.]

I will not pursue this illustration any further, but will simply say that the whole trouble has arisen because the selection, by whatever means it was brought about, destined the tariff law to be dedicated for a short time further to the service of the Lord and the Sherman law was to be the scapegoat. And from that day to this, through all the channels and communications by which the Democratic party console themselves, and encourage the hope that the time has not come when they shall be punished for their sins, and through all the channels in which they rally the people of this country to the support of their party, the people have been taught that the Sherman law is the root of all this evil.

Why, Mr. Speaker, this law went into effect in 1890, on the 14th of July. It was enforced honestly and persistently by the Administration. Four and one-half million ounces of silver were purchased every month. At the end of the coinage period silver certificates were still issued upon the bullion deposited in the Treasury, and nobody ever heard of any injury resulting. I desire at this point to insert in my speech the plank adopted by the Democratic party at Chicago on this subject.

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

The Democratic party see a thing generally after they pass it—sometimes as they approach it; and if it is wise in them to make a denunciation of a measure passed by the Republican party they never hesitate. That law had been in effect for almost two years when the Chicago convention met. It had added to the currency of this country about $40,000,000 per annum. When the Democratic party, with all its wisdom, assembled at Chicago it declared, in a voice that had to be interpreted (as it always does), its opposition to the Sherman silver law. I assume they said about everything that they knew of it at that time.

It was then two years old. Under it there had been four and a half million ounces of silver bought every month. A hundred million ounces or more in the aggregate had been bought. And what did they say? They did not say that the Sherman law had harmed the people; they did not say that it had driven gold out of the country. There was no cry coming up from Wall street that the honor of the American people was being swamped under the purchase of silver—not a word of that kind. They never said that this law was an unwise law, an injurious law, a harmful law—not at all. I assume they embodied in that national platform all there was known of the delinquencies of the culprit up to that time.

I imagine they did not try it for petit larceny when it had been guilty of highway robbery. They said this law was a "cowardly makeshift," and demanded its repeal; and during the whole of the campaign which followed—and from that day to this—the question, what were the objectionable features which caused this law to be thus denominated and denounced? has been the subject of discussion in the Eastern and Middle States, as it has been the ground of the comforting suggestions that have been made to the free-silver men of the West. What did the Democratic party mean when they said that this law was a "cowardly makeshift?" Why, the man of Wall street says the Sherman act is a concession to the silver interests of the country, and is "cowardly;" therefore the people are asked to vote the Democratic ticket.

In the Northwest, where combinations were formed, this question was fully discussed. And I beg to remind my Populist friends that they ought not to feel surprised or dissatisfied. They voted for Cleveland, either directly or indirectly, every mother's son of them. They did it with their eyes open; they knew what they were doing; they knew the grand conspiracy and combination in which they were at work; and when they assisted in the election of Cleveland they knew of the existence of the Warner letter of 1885. They knew there was no more determined antagonist of bimetallism upon the face of the earth than Grover Cleveland. And they voted for him in preference to the gentleman from Indiana, who my accomplished friend from Ohio says stood ready to approve a free-silver law if Congress had passed one.

In the Northwest, and everywhere where the free-silver sentiment prevailed, voters came up and asked, "What is the meaning of this platform; it speaks of a 'cowardly makeshift'; what is that about?" The reply was, "It is cowardly on the part of the Republican party to pass a law to buy 4,500,000 ounces of silver monthly when they ought to have adopted free and unlimited coinage of silver." And without exception from one end of the Northwest to the other, and down in the South, the free-silver men either voted directly for Cleveland upon that construction of the platform, or they voted indirectly for him by defeating the electors for Harrison. And now they come up here and wonder that the man who in 1885 could not wait to be inaugurated President before issuing his fulmination against the free-silver sentiment of the country should now fail to carry into execution a platform on which they themselves say they have put their own construction.

And now comes the very eloquent gentleman from New York, who, as I gathered his language on Saturday, said that while the platform meant a certain thing—while it meant bimetallism under certain conditions which would protect the value of the coin, it was known then and is known know, and always was known, that no power on earth could execute that platform.

Mr. Speaker, why was there not an injurious drain of gold from Wall street during those two years and upward? I admit that a vast quantity of gold went out of the country; but the country was not harmed thereby; and I want some gentleman who is wiser than myself (and there are plenty of them on the other side who are denouncing the Sherman silver law as iniquitous and against all principle) to answer me this question.

The condition of this country when we came together was a condition which had been growing from a period which I will mention a little later and had been becoming rapidly worse; and I ask this question in all good faith: If it was the drain of gold from this country caused by the passage of the Sherman act that brought about the evil condition of the country—the failure of the banks, the closing of industries, the ruin of fortunes—all happening within a very few months, why is it that now, when nearly $29,000,000 of gold has either landed on our shores or is coming, there is not a particle of perceptible cessation to the terrible condition that oppresses the country.

We have lost in gold $58,000,000 during the current year, and have drawn back $29,000,000, leaving $29,000,000 only lost of currency in the form of gold, while we have added $10,000,000 in the circulation of the national banks, and have just before us a prospective large increase in the same sort of currency; and yet there is no practical change in the conditions. Is it possible that when a patient is bleeding to death under the administration of Wall street finance, the stoppage of the flow of blood and the flow of the current back into the system is not to have any beneficial or appreciable effect whatever?

Mr. Speaker, the difficulty lies in another direction entirely. The difficulty lies in the fact that for thirty years in this country—and I am now going to discuss this question from a nonpartisan standpoint [laughter]—for thirty years in our history we have builded the institutions of the country upon a protective-tariff system. There was not a condition on the 8th day of last November in this country that was not due to the protective-tariff system. Right or wrong, wise or foolish, the industrial system of this country was the product of the protective tariff.

Everything had been constructed on that basis. Our manufacturers manufactured the articles for consumption. They used the raw material of our country, the product of our own labor. They borrowed the money of the banks and employed their labor with a view to prices and conditions that had been established by this system, and with which they were familiar. The merchant imported his goods from abroad, and bought from the domestic manufacturer on the basis of this structure of mercan-

tile growth and greatness which has resulted from that system. He bought his goods at a price that he understood, for a market that he understood. The laborer contracted his labor upon the basis of a demand fixed upon the value of the product which he was to produce. The farmer raised his produce with a view to the demand and necessity, and the capacity to buy of the laborer and the manufacturer.

But suddenly there came into existence, at the end of almost the third of the century, a political party that declared to the country by the action of the Chicago convention, by striking out of that platform three great leading propositions by a majority vote; first, that the Democratic party in this country cared nothing about capital invested in manufacturing industries, and would pay no attention to them in the adjustment of the tariff; second, that it declared the question of wages should not be considered in the readjustment of this new condition of things; and, third, that the stocks on hand and the business of the country should not be considered by the Democratic party in the adoption of what? Why the new policy of the Democratic party.

The Chicago platform as it came from the committee on resolutions contained the following declaration:

In making reduction in taxes it is not proposed to injure any domestic industries, but rather to promote their healthy growth. From the foundation of this Government taxes collected at the custom-house have been the chief source of Federal revenue. Such they must continue to be. Moreover, many industries have come to rely upon legislation for successful continuance, so that any change of law must be at every step regardful of the labor and capital thus involved. The process of reform must be subject to the execution of this plain dictate of justice.

When the resolutions were presented to the convention Mr. Neal made an out and out free-trade speech, and moved the above paragraph be stricken from the platform and the following plank substituted, which was done by a vote of 564 to 342:

We denounce Republican protection as a fraud, a robbery of the great majority of the American people for the benefit of the few. We declare it to be a fundamental principle of the Democratic party that the Federal Government has no constitutional power to impose and collect tariff duties, except for the purpose of revenue only.

The plank of the Democratic party that was put there by a large majority of the convention, and which Mr. Cleveland accepted, and the Democratic party accepted, and on which they carried him to a triumphant election, was that all forms of Republican protection were robbery and that it is a fundamental doctrine of the Democratic party that the Constitution confers no power on Congress to levy duties for any other purpose except for revenue and for revenue only.

That party, Mr. Speaker, came into power on the 8th day of November on that platform; that is to say, that the country had notice that on a given day the Executive Departments and the Senate and House of Representatives would be turned over to that party which had declared war on the system upon which our whole industrial fabric had been erected.

Now, sir, it is well for a student of history to go back to last November and take a survey of the situation. I undertake to say, and challenge contradiction, that on that fateful day, when the Democratic party carried this country on this platform, this country was in a condition more prosperous than it ever was before on any preceding date in its whole history, or than was any other country in all the range of human knowledge. There were fewer idle men to be found, and I challenge contradiction of that statement. Labor commanded a higher price than it ever before commanded. There was not an idle dollar in the country, and Wall street itself was more prosperous than even it had ever been before since it was known in business transactions. There was no hoarding of money in the banks. There was nobody who had not full and complete confidence in the system, confidence in the men who had administered the system, and confidence in Providence, that in its wisdom the same party which had done all this would be allowed to continue to administer it.

Prices were remunerative if not high. As compared with present prices they were remunerative. Our foreign trade had grown until it exceeded the wildest dreams of the greatest friends of foreign traffic that had ever been known. We had it run up to more than $2,000,000,000 per annum, trade was being increased and business was being inaugurated everywhere. New lines of steamships were putting out from Pensacola and other points on your Southern coast. Institution after institution was being organized. Railroads were being pushed into the unoccupied territory. Iron furnaces throughout the country were in full blast, and their cheerful light was going up to heaven notifying the people of the United States of existing prosperity and warning them against change of conditions.

Under the operations of the McKinley law, which went into effect in October, 1890, foreign capital had been attracted to our shores and invested in manufacturing industries; a new impetus had been given to the industrial enterprise of our own country, and far and near the signs of speedy and rapid development and growth were heard and seen on every hand; the day of enormous prosperity was approaching, and there was hope and confidence everywhere displayed. Too much hope and too much confidence and too much assurance of the fate of our industries and the prosperity of our country did not depend on the election or the non-election of a political party.

What happened? Bear in mind, now, that this silver law which you are attacking had been in full force and operation for two years and four months. It was not twenty-four hours—the records show it and no man can successfully deny it—it was not twenty-four hours from the moment that the intelligence went over the wires that a complete revolution was ordered in this country until the present condition was inaugurated, and from that day to this the headway and pathway of this Government may well have been described by the maxim, "It is a swift road to hell." [Laughter.]

One by one the furnaces went out, one by one the mines closed up, one after another the factories shortened their time. Why did they do that? Was it a mere senseless stampede? Was it a Wall-street panic? Was it an unintelligent curtailment of the business of the country? I say not. Where is there an intelligent man to-day, if he were a manufacturer, with this threat of the presence of the Democratic party in power; the menace of its presence, the threat of its mere existence under that platform, and confiding as human nature does in the belief that a great political party will do what it says it will do—a violent presumption, I will admit, in the present instance [laughter]—what one of you at the head of an industrial institution would carry on your business?

Let me ask you now to put this question to your constituents: What one of you at the head of an institution that manufactured something, anything, any one of the great institutions of the country employing laboring men, would make anything if you did not have a contract for its reception, and payment on reception? And you would not even dare do that for fear the party who contracted to buy would find himself unable to comply with the contract at the end. What one of you who was a merchant would dare to buy anything to-day; and if so, what? The merchants of the country are buying just what they are compelled to buy from day to day. The manufacturer is making to-day just what he has orders for, from undoubtedly solvent persons who have ordered the goods; and this has worked a revolution from one end of the country to the other.

Bear in mind, now, I am not discussing the tariff question. I am not here to have that controversy now. We shall have a great deal of that, or the Democratic party will go to protest for default of its promises, for the "robber" is at our throat yet, and you are passing away a great deal of valuable time while the robber is taking your substance from you, according to your views of the case. But I am simply pointing out how true it is that it is an entire revolution in this great industrial system, and that it is not by any means the product of this Sherman law.

Mr. Speaker, it is said by the distinguished gentleman from Missouri [Mr. BLAND] that the volume of money is affected by the opening of every new industrial enterprise. As I understood his language the other day, he said that the erection of every new industrial institution made an additional call for an increase in the volume of the currency. If that be true, and if there was a fairly adequate volume of currency last November, there ought to be an almighty surplus in the country now; for I take it that the logic of that argument goes both ways, and that if the opening of a new industrial pursuit makes a demand for money, the closing of one will likewise congest the money somewhere: and therefore, rather than be trying to make more money, we ought to be operating upon the industrial organizations of the country.

Mr. Speaker, I hope that the Democratic party will be patriotic——

Mr. BOUTELLE. The gentleman is the possessor of a very sanguine temperament.

Mr. GROSVENOR. The Republican party will always be patriotic; and we have the strongest assurance that the Democratic party will be in the present instance, or they would not dare to launch an Administration measure upon the country and challenge defeat, or battle for success, basing their hopes upon the Republican minority of this House, when that Republican minority have been treated as we have been treated here.

And now, Mr. Speaker, I have a suggestion to make looking to the restoration of confidence in this country. The imperfect organization of the House has been such that I have not had an opportunity to present to the country my remedy, but as a part of my speech, in my time, I ask to have read at the desk of the Clerk a joint resolution which, in my judgment, would have done more than any tampering with the currency of this country to have restored confidence if it could have been introduced and then triumphantly enacted.

The Clerk read as follows:

[Fifty-third Congress, House of Representatives.]

Joint resolution declaring the intention of Congress in the matter of legislation touching the condition of the country.

Whereas the causes that have led to the present deplorable condition of the business of the country are not known so definitely as to present an agreement of opinion, it is nevertheless universally agreed that one of the elements, which has become a potent factor, is the fear everywhere felt that Congress will change the tariff duties upon articles imported from abroad coming in direct competition with American products, and thus unfavorably affect home production; and

Whereas the declaration of the platform of the Democratic convention fo 1892 has caused fear in the country that the provisions of that platform would be carried into execution by Congress, and such fear has caused great reduction of production in all classes of manufacture, thereby throwing out of employment large numbers of workingmen and causing a reduction in the wages of all who remain employed, whereby many workingmen have become dependent upon charity for subsistence; and

Whereas if this condition is not immediately checked and confidence be speedily restored, at least in some important measure, wider spread demoralization in all branches of business will follow, with all the horrors of destitution, idleness, bankruptcy, and all the incidents of such conditions: Now, therefore, as one measure of relief, be it—

Resolved, That it is not the intention of the Fifty-third Congress to make radical or important changes in the principles of tariff taxation, and it is hereby solemnly declared that Congress will not undertake a sweeping revision of the tariff laws, nor will it remove from American products, either of the farm, the mine, or the shop, that protection which now stands between the American producer and the foreign producer; and especially is it hereby declared that Congress will not remove from the products of agricultural industries the full measure of protection now afforded by law, to the end that wages may be maintained at present rates and the producer be rewarded for his labor and capital by adequate prices.

This declaration is demanded by the business interests of the whole country. This declaration by Congress would loosen the crippled wheels of industry. The cry comes up from all over the country, "Let alone the tariff; let the McKinley law stand where it is." The cry comes—

From forges where no fires burn,
From mills where wheels no longer turn,
From looms o'er which no shuttles leap,
From merchants' shops—which sheriffs keep—
From banks gone up, from stocks gone down,
From God-made country, man-made town,
From Wall street men, from sons of toil,
From the bronzed tillers of the soil,
From North, from South, from East, from West,
Business is crying with a zest—
"Don't monkey with the tariff."

Mr. BOUTELLE. Have that passed by unanimous consent.

Mr. GROSVENOR. Under the rules, Mr. Speaker, I am not permitted to ask unanimous consent to adopt this resolution, and I doubt that it ever would be adopted, but would be sent to some committee and be forever forgotten. If it could be passed and this body adjourn without day, the evils which now confront the country would speedily end.

But now, Mr. Speaker, coming to the question more immediately involved in this debate: Asserting, as I have already asserted, that one of the necessary incidents to a cure is to ascertain the causes of the disease, the comments which I have made are directly in line with the real heart of this discussion. All along through this debate it has been said that a great many conspiracies and crimes have been committed by the Republican party in the matter of the demonetization of silver; and the eloquent gentleman from Louisiana [Mr. BLANCHARD] has used the same words, which has become a sort of stale utterance by our free silver friends in a great portion of the Union, that the coinage act of 1873 was the result of "conspiracy, fraud, and stealth."

I do not see how it is very pertinent in a debate like the present one to discuss that question. I can not understand how it is important as a step towards relief to ascertain who the man was, or who the men were who were guilty of this great crime. In most States of the Union we have a statute of limitation for great crimes; and I believe under the laws of the United States felonies are barred by a special statute of limitation. But twenty years does not seem to bar the repetition of this stale and untruthful allegation.

Why, Mr. Speaker, there never was such a reflection upon the intelligence of the American Congress uttered by mortal man as to proclaim to the people of this Union that the Congress of the United States dropped out of the coinage of the country the leading item of silver coinage and nobody knew it. I will briefly recapitulate the history of this transaction, and do it only because I want to treat gentlemen who come here, who seem to think that this is an important factor in this debate, with consideration for their zeal, if not for their judgment.

The SPEAKER *pro tempore* (Mr. MCMILLIN in the chair). The time of the gentleman has expired.

Mr. HARTER. I move that the time of my colleague be extended indefinitely, to allow him to conclude his remarks.

There was no objection.

Mr. GROSVENOR. Mr. Speaker, in 1870 the Secretary of the Treasury [Governor Boutwell, of Massachusetts,] sent to the Senate of the United States a bill, with a report strongly advocating the passage of that bill, and that bill contained three proposed changes in the coinage of the United States. It was proposed to omit the dollar, the 5-cent piece, and the 3-cent piece. That bill was pending in the Senate of the United States for nearly three years. Whole columns of debate ensued. Document after document from the Director of the Mint, and the leading experts upon the coinage of the country were sent to the Senate, all of them but one, perhaps, advocating the dropping of the dollar, and one of them in strong language advocating the retention of the dollar.

I shall put into my remarks a fuller and more detailed history of this transaction which I myself prepared for the purpose of a discussion on this subject which I have the honor to be engaged in with the distinguished member of this House from Colorado [Mr. BELL], and soon to appear in a newspaper in Ohio.

Away along in 1873 the bill finally came up for its passage and on its passage Senator SHERMAN of Ohio and Senator MORRILL of Vermont voted against the bill, and every Pacific coast Senator, headed by the distinguished Senator from Nevada [Mr. STEWART], voted "aye" upon the passage of the bill.

That bill was not, as the gentleman from Louisiana [Mr. BLANCHARD] supposes, a bill without a dollar in it. It was the original simon-pure bill of the Secretary of the Treasury, unaltered, without a Senate amendment being put into it; the bill which had been spread upon the record of the Senate for three years, and which had been discussed in untold pages of discussion; and yet gentlemen stand up and say it was done surreptitiously. Twenty years afterwards there are found in this country men who voted aye upon that bill who declare that they did not know what the bill was about.

There had been no recoinage act, as I understand it, from 1831 (possibly I am not right in the date), and the Secretary of the Treasury thought the changed conditions had rendered it important, and so it was that he recommended this bill. The bill came over to this House, and on the motion of Judge Kelley, of Pennsylvania, the dollar was added to that bill—not the old dollar, not the silver dollar, in keeping with the coinage of the country, but a token dollar, worth four times what the quarter was, ten times what the dime was worth, with 386 and not 412 grains of silver that there had been originally in the silver dollar.

That bill, after a long discussion, and after the whole subject had been considered in this House, went over to the Senate, with the addition of this dollar to the coinage; and then a committee of conference of both Houses adjusted the bill to the original condition, and both Houses of Congress indorsed it. The paper to which I have referred is as follows:

I enter upon the discussion of the questions submitted in this debate protesting that the first question is totally irrelevant to the great issue before the American people, and its decision is absolutely unimportant. The resolution is as follows: First, *Resolved*, That silver was demonetized in 1873 through conspiracy and fraud, for selfish ends.

What can be gained by a discussion of this question? Did Adam procure Eve to purloin the apple and eat it, and thereby entail moral, physical, and spiritual woe upon the human family, or did Eve, with her seductive arts, get Adam and his descendants into this scrape? We are here, and the subject of our environment and who caused it is a matter of no importance.

It is said that something that happened to silver by reason of the action of Congress, in a former period of our history, has entailed financial woe and misery upon us as a people. It has projected bankruptcy and hard times all along the line, and if this be so, it is pertinent to consider a remedy; but it is irrelevant and, in my judgment, absurd, to discuss the origin of, or partition a responsibility. If a man finds his house on fire and his goods being destroyed, he will not prove his distinguished greatness by suspending his efforts to extinguish the fire and save his goods until he can ascertain whether it was the hired girl in the kitchen upsetting a can of gasoline or a flash of lightning from a passing thunder storm which set fire to his property. It would not be a very intelligent physician, in the estimation of men of common sense, on finding a patient suffering with fever, who should refuse to administer remedies and save the patient from impending death until he could investigate the sewerage and plumbing of the residence, and ascertain the original cause of the fever.

What has the question of responsibility for the act of Congress which it is said demonetized silver, to do with the condition of the country to-day? It was either a good thing or a bad thing, and who did it is totally unimportant. There is a large class of our fellow-citizens who differ radically with Mr. BELL as to the whole question, in gross and in detail, of who was responsible; but if it was settled, and settled beyond a reasonable doubt, it would not make a hair black or white in the pending issue before the country. The question is not, Who did it? The question is, What is the condition of the country to-day, and what is wise, best, and effective to relieve the country from the present situation? But this is one of the resolutions which we are called upon to discuss, and I stand ready to discuss it. I do it as a matter of courtesy to my opponent, and in recognition of the terms of the debate; but I protest without qualification that there is no possible good that can come of it.

Now, it will be insisted in this paper that there is not a shadow of proof on earth available to any mortal sustaining any one of the allegations of Mr. BELL. He says, first: "That a certain class was particularly interested in securing the demonetization of one of the money metals." Replying to this, it may well be said that, if it is true as stated, it is a matter of supreme indifference. Selfishness and self-interest are the motives from which a great many valuable things have sprung. Every invention that the wit of man has conceived has sprung from self-interest. The establishment of our early independence of Great Britain was a matter of self-interest to our people. There was a class during the Revolution interested in declaring and maintaining our independence. The suppression of the rebellion and the restoration of the Union found a mighty class interested on the loyal side. Every

good thing done by man has emanated from a class particularly interested in securing the result.

But it is further said, second: "The same class raised a vast sum for this purpose, and had their agents present in conference with the Coinage Committee." This statement is demurrable. The raising of a vast sum is not a crime in this country, nor immoral, although just at this time rather difficult of performance. He does not state in this subdivision that any improper use was made of the money, but in his third subdivision he says "that the agent expended the fund raised for this purpose." If it is herein intended to be charged that any man in Congress was corrupted to vote for the passage of the so-called demonetization bill, the statement is absolutely, without qualification, wickedly and maliciously false. If it is intended to cast suspicion by innuendoes and ask the reader to draw an unfavorable inference, then the act of writing and publishing this statement is not courageous, manly, fair, nor justifiable. I challenge Mr. BELL to the proof of his charge, and if he fail I demand that he withdraw it.

His fourth proposition, that silver was demonetized by a committee and not by Congress; that the purpose to demonetize was shielded from the people, is ridiculous, untrue, and a mere fable. It is a fiction that has been so often published and so often harped upon that some people have actually come apparently to believe it.

His fifth proposition is worthy of discussion, and is the only one worthy of a moment's consideration, and I propose now to show that the act of 1873 was a legislative act, done aboveboard, without anything clandestine; done after a full and elaborate discussion, upon the recommendation of the Secretary of the Treasury, and done by the procurement and support of the present advocates of free and unlimited coinage of silver. And this will be done by reference to the record and by proofs that no man can gainsay. It will be met by declamatory statements and loud, senseless, and unsupported shouts. The record will not be denied or modified, but the charges will be repeated, as they have been heretofore, in the face of all the evidence and all the facts.

On the 9th day of June, 1890, in the Senate of the United States, Mr. SHERMAN arose to denounce as infamously false the charge that the bill to demonetize silver, as it is called, was passed "surreptitiously, done by stealth, unlawfully." His speech may be found beginning on the 6039th page of the CONGRESSIONAL RECORD for June 9, 1890, and I will only quote certain authorities presented by him on that occasion, and refer the fair-minded reader to the documents at large as they are referred to by him. And it may here be stated that it is a confession of weakness or stupidity on the part of any member of the Congress of 1871 to 1873 who now states that the American people and the American Congress had no knowledge of the passage of that bill.

The bill about which so much of false statement has been made was sent to Congress by the Secretary of the Treasury on the 25th of April, 1870. It came from the Treasury Department, and the fifteenth section of the bill read as follows: "Sec. 15. And be it further enacted, That of the silver coins the weight of the half dollar piece of 50 cents shall be 192 grains, and that of the quarter dollar and dime shall be respectively one-half and one-fifth of the weight of said half dollar; that the silver coins issued in conformity with the above section shall be a legal tender in any one payment of debts for sums less than one dollar." And the eighteenth section of that act provides as follows: "Sec. 18. And be it further enacted, That no coin, either of gold or of silver, or minor coinage shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth." Thus it was especially provided what coins should be issued, and all other coins were forbidden, and this same act, when passed, repealed all other coinage acts. There was an express provision that no other coins except those mentioned should be issued from the mint. The names of the coins, designs, their weights and measures were fixed and all others were absolutely prohibited by the face of the law of 1873, and on the face of the bill.

Mr. Boutwell, Secretary of the Treasury, accompanied that bill, when it was sent to the House, by one hundred printed pages. The report fully stated the object of the bill and the reasons for the changes, and there were accompanying the bill reports from Robert Patterson, F. Peale, H. R. Linderman, James Ross Snowden, G. F. Dunning, E. B. Elliott, all scientific experts, and the principal officers of the mints and assay offices. The necessities for the revision provided for in this law had been set forth by Secretary Chase and his assistant, Mr. Harrington, by Mr. McCulloch and his assistant, Mr. Chandler. There had been no codification of the mint law for thirty-five years. The sections of the bill which discontinued the coinage of the dollar were elaborately discussed in these reports by all the experts.

Robert Patterson pointed out the propriety of the abolishment of the silver dollar, the half dime, and the three-cent piece, and I quote from his report as follows: "Gold became the standard, of which the gold dollar is the unit. Silver is subsidiary, embracing coins from the dime to the half dollar." The heading of this paragraph was as follows: "Silver dollar, half dime, and three-cent piece discontinued, and coins less than dime of copper, nickel, legal-tender one-cent piece of one gram in weight." In this report was a letter from E. D. Elliott, late actuary of the Treasury Department, headed in capital letters as follows: "The Standard Silver Dollar—Its Discontinuance as a Standard." The bill proposes the discontinuance of the silver dollar, and the report which accompanies the bill suggests the substitution for the existing standard silver dollar of a trade coin of intrinsic value equivalent to the Mexican silver peso or dollar.

The Director of the Mint headed his report as follows: "Discontinuance of Silver Dollar."

Hon. James Ross Snowden headed his report as follows: "The Present Silver Dollar Should not be Discontinued."

This showed that there were two sides to the question. It should be remembered that at this time the silver dollar of our coinage was worth more than the gold dollar, for at the time of the introduction of the bill, to wit, the 25th of April, 1870, the silver dollar was worth $1.0312 in gold in the markets of the world. There was, as I have said, the 100-page document sent by Secretary Boutwell, and the statement of these experts, and there was a letter from the Deputy Comptroller of the Currency who had charge of the Mint, recommending the passage of the bill, with a copy of the bill; and copies of the bill were sent broadcast, omitting entirely the silver dollar, and calling especial attention to that omission in every possible way. With all this before Congress and before the country, the bill was reported to the Senate by the Committee on Finance on the 19th of December, 1870. The members of the Finance Committee at the time of the passage of the bill, and who had charge of the bill, were JOHN SHERMAN, JUSTIN MORRILL, George H. Williams, Alexander G. Cattell, Willard Warner, Reuben Fenton, and Thomas F. Bayard.

The Committee on Coinage in the House having charge of the bill consisted of William D. Kelley, Samuel Hooper, John Hill, Noah Davis, Peter W. Strader, and John A. Griswold. It takes a man with some nerve to charge these men with surreptitiously and fraudulently procuring the passage of the bill. The man who does it ought to have a very large accumulation of good reputation standing behind him to justify him in such a charge.

On the 9th and 10th days of January, 1871, the bill was debated in the Senate, mainly upon other questions than upon the omission of the silver dollar, it is true. Everybody understood the dollar was omitted, and everybody agreed to it. The bill was read in full and a number of amendments made, and finally the bill passed by a vote of 36 yeas and 14 nays, on the 10th of January, 1871. MORRILL and SHERMAN voted against the bill. Casserly, Cole, Corbett, Nye, STEWART, and Williams, being every Senator from the Pacific coast, voted for the bill; and ever since Senator STEWART gave that vote to demonetize silver he has been howling like a maniac that the bill was a fraud, its passage a crime, and its authors scoundrels. It is not the first time that a man has cried "Stop thief!" to divert attention from his own record. He voted for the bill that omitted the silver dollar from our coinage, and that forbade the silver dollar being coined.

The bill was debated elaborately in all its details, and if any man present in the Senate when that bill was passed, and who voted for it, or who voted against it, now says he did not know what it contained, he ought to be compelled to resign his seat in the Senate and apply himself to some position the duties of which he is competent to discharge. The bill went to the House of Representatives, and efforts to amend were made by several gentlemen restoring the old dollar, but with fewer grains of silver. Mr. Kelley did insert into the bill a subsidiary dollar with 385 grains, being 26½ fewer grains than the old silver dollar, but this amendment was not finally agreed to, after full and elaborate discussion. The bill finally became a law on the 8th of February, 1873, nearly three years after it was introduced into Congress.

In the debate in the House Mr. Hooper of Massachusetts, a most distinguished financier, pointed out that it was not only proposed to drop the old dollar, but to substitute a dollar containing 26½ grains less than the old dollar; but when the House bill went to the Senate it contained this 384-grain dollar, but the Senate rejected the amendment, and a conference was ordered, and the trade-dollar provision was put into the bill in place of the 384-grain dollar. The conference report was signed by JOHN SHERMAN, John Scott, and Thomas F. Bayard, members of the Senate, and Samuel Hooper and William L. Stoughton, members of the House. It was read in the Senate February 6, 1873, and in the House the next day, and was agreed to.

Now, it will be seen that it is idle for any honest man to pretend that it was not known what the conference report contained, because the Senators knew that the bill as passed by them omitted the silver dollar, and STEWART and others voted for it, and SHERMAN and MORRILL voted against it. The House knew that the dollar was omitted, for it amended the bill in that respect, and inserted a subsidiary dollar of smaller weight. Both bodies knew that there was a conference report upon the matters of difference between the two Houses. The Senate knew that the necessity for that conference had arisin because the Senate had rejected the House amendment. So everybody had notice, and it is a baby and cowardly and mean act to now set up that they had no knowledge of the facts as they existed. This charge of clandestine work in connection with the passage of this bill is old, stale, and putrid. It has no place now in the financial history of the United States better than that assigned by John Randolph to the dead mackerel—"it is fit to shine and stink, and stink and shine."

The late lamented Senator Beck, of Kentucky, as late as March, 1888, was misled into making this charge, and upon proof he magnanimously withdrew his statement, and acknowledged that he had been misguided.

But in 1876, in the House of Representatives following the act of 1873, somebody made the charge which Mr. BELL has the misfortune now to repeat, and thereupon Mr. Abram S. Hewitt, of New York, a Democrat, who had given the subject a most careful and exhaustive study, in a speech in the House of Representatives on the 5th of August, 1876, said as follows: "The gentleman from Missouri [Mr. BLAND], on the 3d instant, stated that the coinage act of 1873 'was passed surreptitiously and without discussion, and was one of the grossest measures of injustice ever inflicted on any people.' The honorable Senator from Nevada [Mr. JONES] and the honorable gentleman from Indiana [Mr. HOLMAN] have made similar statements, and these statements have been reiterated by the press of the country and repeated again to-day by the gentleman from Missouri [Mr. BLAND] and the gentleman from Illinois [Mr. Fort]. In answer to these charges I propose, at the risk of being tedious, but in order to refute them once for all, to give, in a note at the foot of my remarks, the history of the coinage act of 1873, as shown by the records of the Treasury Department and of Congress."

In that speech Mr. Hewitt cites the letter of Mr. Boutwell, dated at the Treasury Department, April 25, 1870, and gives the substance of all the reports to which I have already alluded, and then gave in his speech a complete history of the discussion in both Houses of Congress upon the bill, showing conclusively that every member of the House and Senate and all the officers of the Treasury Department either had full personal knowledge of the character of the bill or had opportunity to know. Thus having exhaustively broken down the whole claim of BLAND'S, he closes his speech with the following fact: "I have felt it necessary to make this weary statement in order to prove that the legislation of 1873 was not surreptitiously enacted, traveling over ground that has been occupied in part by other members who have addressed the House, and in part by the daily press, because there is nothing so unpalatable to the American people as 'tricks' in legislation, of which the Committee on Mines and Mining will be fully conscious when it comes to be generally understood how far they have exceeded the legitimate line of their duty in bringing forward this bill, which could never have been reported from the Committee on Banking and Currency, to which it properly belonged."

Thus it is shown beyond a reasonable doubt that the passage of the coinage act of 1873 was deliberate, above board, and perfectly understood by the men whose duty it was to understand it and to know all about it. A faint, feeble, and shadowy attempt is made to quote Mr. Bright, of Tennessee, who is alleged to have said "that it passed by fraud in the House, never being printed in advance, being a substitute for the printed bill, never having been read at the Clerk's desk. It was passed without discussion, the debate being cut off by operation of the previous question." Now, the record shows that it passed the Senate with the dollar out. The record shows that after a battle in the House the Senate bill passed amended with another dollar in it, and then the matter came again to the House and Senate through the medium of a conference report. Now, Mr. BELL, at the end of two years, will know how silly his position is, and how weak and contemptible is the position of the person who is attempting to cover up his own blunders and misrepresentations to his own constituents by pleading the baby act in regard to this measure.

Accompanying the conference report was a statement made by the conferees, Mr. Hooper and Gen. Stoughton, than whom there never lived more honorable men. Stoughton lost a leg on the battle field, but never lost his honor or integrity as a man or Representative in Congress. The statements of the conferees show wherein they had made concessions to the Senate. In other words, they said, "we have agreed to do so and so and so and so," and among the rest that the House receded from its amendment to the bill providing for a silver dollar, and that the Senate agreed to the same. This report exhibited at once to the House what was pending and what concessions had been made by the House conferees. Thus it was that the coinage act was amended, and years afterwards, when the scheme of the free-silver men was inaugurated, the men who had voted, as Stewart did, to pass the original bill in the Senate with the dollar left out, began to throw filth and dirt and slime and vile epithets and personal detractions against the men who first fought

the measure and afterwards yielded to the weight of opinion in Congress. The statement that the engrossing clerk made an entry in that bill which had not been agreed to in the bodies has been announced as false and ridiculous so often that the author of the statement has even himself ceased to state it.

An apology is due for the space occupied for this defense. It is a very grave charge that has been made, one which involved the integrity, honor, knowledge, wisdom, acumen, and foresight of the Congress of the United States. It was false in its conception, ignorantly false, perhaps. Ignorantly false then and maliciously false now.

I submit, Mr. Speaker, that no member of Congress has the right, in the face of such a history as that, to say that he did not know what was in that bill. Years afterwards, when it was discovered that some people thought they had been injured by the passage of the bill, gentlemen who had promoted its passage, gentlemen who had urged no objection to it, took cover by declaring that it was a "trick" and a "conspiracy," and that they had had no notice of it. And once for all I now proclaim that henceforth I shall as readily be drawn into a discussion as to who it was that performed the seduction act in the Garden of Eden, whether it was Adam who gave the apple to Eve or whether it was Eve who gave to Adam, as into a discussion of the question of how silver became demonetized in this country. [Laughter.]

It is a question of no earthly importance now. Our Democratic friends say the house is on fire, and it is not important to determine whether the servant in the cellar upset the benzine can or lightning struck the cupola. [Laughter.] The important thing is to put out the fire. The whole body politic of this country has become saturated with the idea that it is the Sherman silver law that has caused our difficulties. That was a law, in the first place, not based upon sound financial principles. It was an obstruction placed under the destructive car that was being driven over the credit of this country by almost the entire body of the Democratic members of the Senate and the House of Representatives.

The Senate had passed a free-silver bill; the House of Representatives was an uncertain quantity upon that question, as it is now, and fear was everywhere manifested that a free-silver law was to be passed by that Congress. Whether my friend from Ohio [Mr. HARTER] is right, as he thinks, when he says that President Harrison would have approved that bill, or whether he is eternally wrong, as I know, is a matter of no particular importance.

It would have been an unwise act on the part of the majority of the House of Representatives to have permitted such a bill to be passed if, by any honorable means, its passage could be prevented. It was unwise from a political standpoint; it was unwise from a patriotic standpoint, and, in my humble judgment, it was unwise from a financial standpoint. So it was that the Republicans on this floor, to prevent a headstrong, reckless act of the Democratic party, obstructed their forward movement by the passage of a law which was understood at the time to be a makeshift.

It was very much such a "makeshift" as the launching of a lifeboat in a storm when the vessel is about to be wrecked. It was very much such a "makeshift" as the forlorn hope that seeks to explode the enemy's magazine as a desperate, last resort. So it was that the Sherman law was enacted, and the Democratic party stood at that time, as they have always stood as a body in this country, in favor of what we are now told by Wall street is dishonest money. Why, sir, it sounds to me like the echo of an old-fashioned love feast to hear a Democrat announcing himself in favor of honest money!

Away back in 1868, when the "young eagle of the West," Pendleton, came to New York with his followers by the thousand, with greenbacks pinned all over them, flaunting the banner of irredeemable paper money, without the remotest hope that there would ever be any redemption for it, the Democratic party of New York stood paralyzed under the power and domination of that influence, and into the platform on which Seymour and Blair were nominated they refused to put an honest-money plank, but simply declared that they were "in favor of the payment of the public debt with the currency of the country;" and, sir, from that time to this, out from the Democratic and around the Democratic party—as a political excrescence, if you please; as a legitimate outgrowth, if you please—has come every scheme of dishonest money, every scheme of two values for money, every scheme of one money for the laborer and another for the bondholder.

When was it that the Republican party hesitated to declare itself in favor of a proposition looking to the making of the money of this country honest? And yet we find Democrats, constituting themselves leaders of the minority upon the majority side of this House, calling upon the Republican party to stand by honest money. Why, God bless you, we were born honest. [Laughter.]

Way back in 1870-odd, when emerging from the war, we found ourselves with a dishonest paper dollar, with scarcely the hope in the minds of the bravest men that specie resumption could ever be reached, the Republican party, in 1875, proclaimed to the people of the country the unalterable purpose of their party to redeem every dollar of the paper money of the country in gold and silver. The Democratic party opposed resumption. The Democratic party everywhere denounced it as an impossibility; and when, pending the period between the passage of the resumption act, which was a Republican act, and its execution on January 1, 1879, by John Sherman, Secretary of the Treasury, the Democratic party everywhere, in the press and on the stump, took advantage of the pressure of hard times to proclaim the impossibility of resumption.

The breaking of a bank, the failure of a commercial institution, was heralded from one end of the country to the other, as having been "Shermanized." They danced with ghoulish glee around the prostrate industries everywhere, and when resumption came and every dollar of our paper money became worth its par in gold, the Democratic party laid every possible obstacle in the way of its full fruition. The name of JOHN SHERMAN stood then, as it stands now, the synonym for sound currency, honest money, and unfailing public and private credit; and to no man in this country do the business interests owe so much, and yet no man has been misrepresented and abused by the Democratic party upon this very question in a greater degree than he.

The Republican party does not need to be admonished by gentlemen from New York to be honest.

We have been honest all our lives. For thirty years we have fought the battle of honest money. We have sometimes won and sometimes lost. Standing here as the representative of a sentiment on this side of the House, I am glad that the Republican party has lived. One of its greatest honors, one of its chiefest glories, one of its grandest triumphs is that it has at last brought even a small proportion of the Representatives on the other side of this floor to a consideration of this great question and to a repudiation of the sins of their party and the announcement that they are in favor of honesty at last. We have not lived in vain, my countrymen. [Laughter.] The Democratic party, or rather one end of it, is camping to-night where we camped thirty years ago. To-morrow night, or two weeks from to-morrow night, I trust the whole party will be in line with the platform and principles and declarations of the Republican party—the glorious structure upon which that party has been built.

The Democratic party is responsible now for what is to come. The gentleman from Louisiana [Mr. BLANCHARD] said, and he said it with a sort of prophetic utterance, in form so portentous and in voice so solemn that it made a thrill of horror run through me, that if they repeal the Sherman act the Democratic party will never do anything again that is honest and right on this question. If I could only believe that—if I could only realize that his party as such will continue its headlong course to destruction, I would have no hesitation in bringing about the cause of the disruption; for out of the chaos of Democracy would come an element that would fortify the Republicans of the country so that they could march forward to victory in the future.

What sort of an opinion has my friend from Louisiana of his party? Does he believe that they will procure the repeal of the Sherman act by fraud and false pretenses—by dishonestly assuring the people of the country that they are going to take care of this question of bimetallism? We shall never charge them anything on account of any fraud in that line, for we are acting upon our own principles and not upon their promises. We are in favor of the repeal of the Sherman law because it has had the effect in this country, among other reasons, to cause the people of the country to look at it as a scapegoat, when in our judgment it has nothing or scarcely anything to do in fact with the existing condition of things in the country. And because I believe that the Democratic party ought to have in the fullest measure uncontrolled jurisdiction of this mighty question, and because it is the opinion of the Democratic Administration that this law stands in the way of the prosperity of the country, and because of the reasons which I have assigned for the original passage of the Sherman act, I stand ready to vote for its repeal ultimately, if compelled to do so, without conditions.

In this connection, and in further support and explanation of my vote, I here incorporate in this discussion the remaining portion of the paper to which I have heretofore referred, and which was a part of the newspaper debate about which I spoke. The question was submitted to us in the form of a resolution, and that resolution and my argument thereon is as follows:

Now, then, the second resolution is as follows: "*Resolved*, That the United States should immediately pass a law for the free and unlimited coinage of silver on a parity of 16 of silver to 1 of gold." I propose to present a few very simple suggestions in regard to this question, and address those suggestions to the farmer, mechanic, laboring man, business man, and others of the United States not directly interested in the sale of the commodity known as silver ore, and which is mined in enormous quantities from the mines of the State of Colorado and the little spot of earth called Nevada, upon which exist about as many men, women, and children as are in one-third of the city of Toledo, but who are represented in Congress by two

Senators and one Representative, all of them not only owners of silver mines, but one of them one of the largest silver operators in the world, but representative of the special natural monopoly known as silver mines.

The mints of the United States are the property of the people of the United States. They were builded with the money of the people. They are maintained for the purpose of benefiting the people. The cost of their construction, their management, and all other expenses are paid out of the pockets of the people of the United States, and the money therefor is derived by taxation. The existing plan of operation is to meet the wants of the Treasury, and the people, by permitting the owners of silver to sell it to the United States Government at what it is worth per ounce, and have it either coined into silver dollars or deposited in the Treasury, and certificates representing silver upon their face, but redeemable in gold, issued against the bullion. In this way, whatever profit there is in the manufacture of the silver dollar goes indirectly into the pockets of the people to compensate them in a degree for the cost of the mints and their operation.

For the purposes of the Government it becomes necessary to buy of the productions of the people, horses, cattle, woolen goods, cotton goods, powder, shot, shell, guns, stationery, pork, bacon, beef, flour, salt, and more or less of substantially all the products of the people. In purchasing these commodities the people of the country are requested to offer amounts required, and the prices for which they are to sell them. The manufacturer and the farmer and all the producers of the country come in competition, and the commodities of the lowest and best bidder are accepted by the Government. It is now coolly proposed by the owners of these mines that their commodity shall be treated differently; that the product of their mines shall not stand on an equal footing with the iron mines of Michigan or Alabama, or the coal mines of Ohio or West Virginia, but that they shall be permitted to carry anywhere from 56 to 70 cents' worth of crude silver to the mint and take out either a silver dollar backed by this Government, and as good as gold, or take the note of this Government, the note of the farmer, mechanic, and laboring man of this country for a dollar, and speculate to the extent of from 30 to 44 cents on the dollar.

Prices of everything else that we produce are to be regulated by the great law of supply and demand, but the price of silver is to be regulated by a cast-iron measure, and that measure so adjusted as to pay an enormous profit into the pockets of these producers. This is a bird's-eye view of this question. It is the sublimation of impudence. The utterances now going out from the silver States, when they are not threats of blood, carnage, civil war, and anarchy, are statements that the silver-mine owners of Nevada, Colorado, and other localities can not produce silver profitably at 70 cents per ounce. Well, Mr. Editor, neither does the farmer of Ohio produce wheat, oats, horses, cattle, or wool profitably. Shall the Government step in and aid the one and refuse the other? The laboring men of the country are not being compensated as a whole very liberally. Shall the Government interfere and raise their wages? Upon what meat does this Cæsar of natural monopoly feed that he has grown so great in his demands upon this Government, and upon the people of this Government, and upon the taxes paid by the people of this country?

Mr. BELL states that a large portion of our national and other indebtedness was created when silver was money, and asserts that common honesty requires these debts to be paid in silver money At a hasty glance, there seems to be much force in this suggestion, but when we consider that when these debts were contracted silver was worth nearly 50 pence per ounce in the markets of the world, and that it has now managed to fall to about 38 pence per ounce, what does he say to this proposition from the standpoint of honest dealing among honest men? The claim that gold has appreciated and that silver has not depreciated will not bear careful scrutiny, when it is considered we are buying silver at the Treasury Department now and paying for it in silver certificates representing silver dollars, and at par with gold. Nor is it true that the free and unlimited coinage of silver would appreciate the actual value of silver in the markets of the world. It would appreciate silver in the hands of the silver-mine owners and nobody else. It was admitted on all hands, when the Sherman silver bill went into effect, that it was a mighty gain for the silver owners, for it provided a constant market for substantially the entire silver product of the United States. And silver rapidly advanced until, I recollect, an ounce of silver sold for $1.20, within 9 cents of par with gold; then it was claimed on all hands that "fair treatment will bring silver up to an equality, and we shall have no disparity in these coins between gold and silver." But the mine owners began to develop unheard-of reserves of silver wealth, and notwithstanding the Government has furnished a constant market for the American product, silver is a drug on the market at a little above 70 cents per ounce. Why? Simply because silver is a metal and commodity.

At the time of the passage of the Sherman bill the silver production of the world was, in 1889, 125,000,000 ounces, and because of this increased demand the production of 1892 was 152,000,000 ounces. It had been but ninety million in 1885. And the price fell from 42 pence per ounce in 1885 to 38 pence at the end of 1892. So we find that the product of the world rose to an enormous per cent per ounce, and the price dropped as above stated. And everybody knows that the production of silver can be increased indefinitely. The clear-headed men of Colorado, not tainted by anarchy, with no "blood on their bridle reins," and who are not doing any act to encourage and stimulate mobs and threats of violence, know very well that with the present condition of the Colorado mines, silver to an indefinite amount, with such gold product as is found mixed with it, can be produced at a much greater profit to the mine owners than is paid in the markets of the country for the wheat and other products of the farmer. If the prices of silver under the enormous impetus of the Sherman act had remained then at the prices it was bringing when the bill passed, there would have been some ground for the friends of silver to stand upon. But it did not. It fell in the market, and dragged down all the commodities of the country.

The gentleman says there is no country in the world which can come so near existing with a Chinese wall around it as can the American continent, and then closes his argument by a strong inferential appeal to protective legislation by the Government. He should remember that the doctrine upon which he and his party stand is that legislation by the Government to favor one interest above another is unfair. He must remember that it is no more justly the province of our Government to legislate to create value in Colorado metal than to create value in Ohio wool. And it is a poor and contemptible government that will listen to the appeals of men who are simply proclaiming that their profits are not sufficient to justify the production of a commodity, and at the same time refuse to protect the markets of their own country for the benefit of the labor and capital thereof.

But I warn the Democratic party of the country that they must come together upon some issue. The people of this country are aroused on this question as they never were before; they are determined that no party in power shall longer exist if it is divided on this great question. You must have something upon which you can stand. You must have some platform upon which you can agree; you must never again (and I trust I shall be gratified in this respect) issue a platform that can be declared to be one thing in New York and a vitally different thing in another section of the country. I never had any doubt what the legal construction of the Chicago platform was.

I never had any doubt that it was a declaration in favor of free and unlimited coinage of silver. To my mind it was always clear that no intelligent man reading that platform, giving to the English language its due force and allowing to all parts of the declaration their just construction, could avoid the conclusion that it was a declaration in favor of the free and unlimited coinage of silver. It was so discussed in my part of the country; it was so understood out there; and it seems now that it was so understood by gentlemen who were willing to trust the Democratic party; and it is even now so understood by some of the members of one end of the party on the other side of this House.

The people of this country can rely upon the Republicans in Congress to do their duty. We can not afford to vote to put the Administration of Mr. Cleveland "in a hole." We can not afford to be influenced in our vote upon this momentous question by any desire for partisan advantage or any hope of the disruption of the Democratic party. The criterion of our vote, the basis of our judgment, must be whatever intelligence we have on this subject, and we will be instigated and inspired by our never ceasing love of country and patriotic devotion to that which is her best interest. [Loud applause.]

Mr. HALL of Missouri. Mr. Speaker, in the remarks which I shall make I shall not be led off by the gentleman who has just taken his seat [Mr. GROSVENOR]. We agree with him that the house is on fire; but whether we should flee from the house at the present time, or hunt up the Republican who set it on fire before he escapes, is a matter which we will determine for ourselves so long as we hold a majority on this floor.

There was one revelation which I was glad to hear from the gentleman's lips; and I assure the House that to us of the West it was a revelation. At any rate, it is an assertion that we have not frequently heard in our part of the country—the assertion that the Republican party was born honest. We are pleased to believe that this is true, because all parties ought to have some honest period in their existence.

Mr. Speaker, I desire to bring my discussion at once to the question of the cause of the present depressed condition of our country, and to so state this cause that my meaning may not be misunderstood. I have here a copy of an open letter written by a gentleman, Mr. John B. Henderson, who once served in the Senate of the United States from our State, and who is now setting himself up as an adviser of our Democratic Secretary of the Treasury, a gentleman who in the first instance served from the State of Missouri as a Democratic Senator and then succeeded himself as a Republican Senator. This letter, which the Associated Press took up and published from one end of the country to the other, and that the advocates of a single gold standard have circulated thousands of throughout this country, is now public property, and I propose here, on account of the high positions he has held in the Republican party and his offering himself at this time to guide and direct us in our legislation, to subject his positions to some scrutiny.

I ask the indulgence of the House to read this myself from my desk, rather than send it to the Clerk's desk to be read. It is in the following language:

To Hon. JOHN G. CARLISLE,
Secretary of the Treasury:

DEAR SIR: I promised to give you in writing the substance of my statements made to you in conversation touching the monetary condition of the country.

I then expressed the belief that the present stringency is produced, not by any lack or insufficiency of our currency, but by the loss of confidence produced among business men because of the bad quality or inferior character of a large part of that currency.

1. There is no error of more common prevalence than that the abundance of money issues necessarily adds to the commercial or business energy of a people. Of course, a certain amount of money tokens are absolutely essential with which to effect the smaller exchanges of commodities. These money tokens do not create exchanges, but the exchanges create a necessity for the tokens. Money tokens do not grow wheat and corn, nor manufacture cloth, nor operate railroads, nor sail ships. Labor and skill do these things; and, among a people entirely civilized, over ninety-five per cent of the exchanges necessary in these operations are consummated through the medium of bank checks. Experience demonstrates that this mode of exchange is more convenient, safer, and less expensive; and experience also demonstrates that these bank facilities become enlarged or contracted as money tokens become scarce or abundant. This is a business law as inexorable as the laws of nature. Hence there is less danger in limiting the bulk of circulating money than people generally imagine.

The bank check is better for another reason, to wit: that having performed its office, it ceases to circulate; it is removed from the volume of circulating money and is forever canceled. If the exigencies of business demand another check, it is issued anew, and that, in like manner, is destroyed when its object has been accomplished. We shall never have a perfect currency until every note used for circulation shall be destroyed on its return to the authority issuing it, and no new note issued except for value and only at the call of business demands. England has come to this, and America with England's experience will do likewise.

I desire now, Mr. Speaker, to bring up for consideration the

real causes which have led to our present condition. I lay down as a major premise in a syllogism, that I shall try to make, this statement: The volume of the circulating medium in any government fixes the price of its commodities. I did not say value, but price; for value is determined by supply and demand coupled with the labor cost of production.

My first authority on that subject is from John Stuart Mill, book 3, chapter 5, section 4, and I will state that in the edition I hold in my hand it is found on page 299:

That an increase of the quantity of money raises prices, and a diminution lowers them, is the most elementary proposition in the theory of currency, and without it we should have no key to any of the others.

Also, Walker in The Science of Wealth, pages 132 and 133:

A general rise of prices follows the introduction of a credit currency, because it is always issued in excess of the natural volume of money; and consequently, as prices must, in the average, conform to the quantity of currency, they will as it is increased. It is quite idle to attempt to evade the operation of this law.

The same statement in substance is made by four other writers, which I have on my desk, among the number Adam Smith, in his "Wealth of Nations." But I need hardly quote authorities on so plain a proposition, and only do so because I make this proposition the basis of an argument.

I desire it to be remembered, therefore, that the major premise in the argument I shall make is, "The volume of the circulating medium fixes the price of all the property of a country," supply and demand remaining fixed. I do not say, Mr. Speaker, fixes the value. Value is one thing, price is another. Any man, as Prof. Taussig of Harvard expresses it, must be the merest tyro in political economy who does not keep before his mind a clear distinction between price and value.

Next, I assert that the circulating medium of our Government consists of credit and money alike—credit performing the same functions in fixing prices as money itself does. This to me seems to be a cardinal proposition, and one that must be thoroughly established ere we can go far towards understanding the question at issue—the cause of the present financial crisis. I read from John Stuart Mill, page 327, in this edition:

But a more intricate portion of the theory of credit is its influence on prices; the chief cause of most of the mercantile phenomena which perplex observers. In a state of commerce in which much credit is habitually given, general prices at any moment depend much more upon the state of credit than upon the quantity of money. For credit, though it is not productive power, is purchasing power, and a person who, having credit, avails himself of it in the purchase of goods, creates just as much demand for the goods, and tends quite as much to raise their price, as if he made an equal amount of purchases with ready money.

The same authority on page 336 uses this language:

Money acts upon prices in no other way than by being tendered in exchange for commodities. The demand which influences the prices of commodities consists of the money offered for them.

Again, on page 337, he uses the same language, and continues in these words:

Suppose that, in the expectation that some commodity will rise in price, he determines not only to invest in it all his ready money, but to take up on credit, from the producers or importers, as much of it as their opinion of his resources will enable him to obtain. Everyone must see that by thus acting he produces a greater effect on price than if he limited his purchases to the money he has actually in hand. He creates a demand for the article to the full amount of his money and credit taken together, and raises the price proportionally to both.

The same author, on page 340, continues:

Credit, in short, has exactly the same purchasing power with money; and as money tells upon prices, not simply in proportion to its amount, but to its amount multiplied by the number of times it changes hands, so also does credit; and credit transferable from hand to hand is in that proportion more potent than credit which only performs one purchase.

I could read from this same authority a dozen or more different assertions on the same subject, but I will content myself with reading from Perry on Political Economy, the Professor at Williams College, in which I find this language, pp. 357, 358, and 359:

The cause of commercial crises is, in general, an undue expansion of credit.

Now, money acts upon prices only by being offered in exchange for commodities; but we have seen that commodities may be purchased by credit as well as by money; when, therefore, credit is offered and received for commodities, it has the same influence upon prices as when money is offered and received for them. The form which the credit assumes to effect the purchase is a matter of indifference, whether bank notes, checks, bills of exchange, or book credits; what acts upon the prices is credit, in whatever shape given, or whether it gives rise to transferable paper or not.

It follows from this that whenever there is an extension of credit for the purpose of purchasing there will be a corresponding rise of prices.

He who employs his cash and his credit in purchasing creates a demand for the article to the full amount of his money and credit taken together and raises the price proportionately to both.

Now, Mr. Speaker, I do no violence to the principles of political economy or to any of the lexicographers of this country or England if I lay down this definition of circulating medium, that circulating medium is anything offered in purchase of property, real, personal, or mixed, and that it consists both of the credit and the money by which all goods are purchased. I ask the members of this House to retain this thought clearly in their minds, as very important consequences flow from this proposition, if I am correct in my reasoning.

I will now reiterate: First, the volume of the circulating medium of a country fixes the price (supply and demand being the same); second, any contraction in the volume of the circulating medium contracts prices, and any expansion of the volume of the circulating medium expands prices.

Bearing that in mind, I ask you to tell us to-day the cause of the present financial crisis in the United States. There is but one solution of it, and that is that there has been a violent and tremendous contraction of the volume of the circulating medium. I did not say a contraction of the currency, but I said a contraction of the circulating medium that fixes prices; that being composed of both money and credit.

The next and a most important question arises, What is the ratio between the money and the credit in our circulating medium? John Stewart Mill and our national Comptroller of the Currency say 19 to 1; that is, of every $20 of business done $19 of it is credit and $1 is cash, or as Mr. John B. Henderson puts it, 95 per cent of the business of this country, or nineteen-twentieths of it, is performed by credit. Bearing the foregoing statements in mind, what will result if you frighten the business world? Cause the business world to become panicky, and what do we see? We see a contraction. A contraction of what? Of the one-twentieth—of the five one-hundredths? No, Mr. Speaker, we see the contraction of the credit, the nineteen-twentieths or the ninety-five one-hundredths of our entire circulating medium. What do we mean when we say that there is no credit in this country at the present time? What do we mean when we say you can not borrow money even on the best of security? We mean, Mr. Speaker and members, that nineteen-twentieths of the circulating medium of our country is gone, and that tremendous, violent, and crushing contraction has been operating under that inflexible law that I proved heretofore, "Any contraction in the volume of the circulating medium contracts prices," and this terrible contraction has operated upon every dollar's worth of property of all kinds in the United States and brought the price of it down with a crash. How much money is in circulation at this time in the United States? I will change my wording: How much circulating medium that fixes prices is in circulation in the United States to-day? Bankers in Washington City tell me, the metropolitan press say, the business world all tell us, there is no money in circulation and that there is no credit in circulation. What has followed from it? A violent contraction of that which makes prices, which contraction brings a reduction in the price of every dollar's worth of property in the United States.

Now, Mr. Speaker, what system of finances does the Hon. Jno. B. Henderson advocate? He holds up this credit system as a blessing to our people, and asks us to imitate England in going entirely to a system of this kind of circulation and he tries to explain this financial panic by laying it upon the international balance of trade. I will touch upon the question of balance of trade later on. Let us now see some of the other instances of the terrible effect of this credit system.

In 1890, Baring Brothers, in London, dealing in Argentine securities in South America failed for something like $340,000,000. Wheat went down 5 cents a bushel on every farm in Missouri within a week. What caused it? Was there less money in the United States after the failure of Baring Brothers, who dealt in Argentine securities, than there was before the failure? Not one dollar less. There was just as much money, but there was not as much credit. There was a contraction of the nineteen-twentieths of the circulating medium of our country, a contraction of the credit, which brought down the price of every dollar's worth of property in the United States.

I could give many other illustrations, but I need not take my time to do so now. I wish to say that our present financial system, based upon the fact that the circulating medium of our Government can be contracted whenever a failure occurs, not only in the United States, but in any commercial nation with whom we have dealings, puts us and every dollar's worth of property of the people of the United States absolutely at the mercy of men dealing in large financial transactions in the United States, or in any other nation with whom we hold large commercial relations.

Now, Mr. Speaker, in that connection I ask my brother members of Congress to bear that idea in mind for a moment, that the present financial system of our Government is a system that expands and contracts according to the reverse ratio of what it should expand and contract. When times are panicky and we need money the most, then the circulating medium contracts most violently, and you can not get money or credit anywhere. At the time when we may not need money so much, then we find that the money and credit will expand. Where, now, is the money that should go out into the great wheat belts of our country, out in the great cotton belt of our country to handle these crops? Locked up from fright. Money can not be obtained now to handle farm produce at any price, cost, or sacrifice.

Mr. Speaker, do you see any advantage that any one man has over another at such times as this?

Suppose A holds a note for $300 upon some poor fellow, say B, which note is secured by a deed of trust upon B's home worth $1,500, and that note falls due at this time of financial crisis, and A steps up and smilingly asks B for the money: B has not it, but was relying fully upon getting his note renewed or borrowing from some one else and paying A off, knowing full well that his home was worth five times the debt. He can not borrow a cent of money, even on a Government bond, if he had one. What becomes of his little home? Gone! and with it the little savings of a lifetime of hard work. Who is enriched? The creditor by this most cruel and outrageous system that is so highly indorsed by Mr. John B. Henderson.

Do you think I have drawn a fancy sketch? No, Mr. Speaker, thousands of poor men will, in this terrible rich man's panic, see his little all swept from him, and his wife and little ones made destitute in his declining years. Yet this is the system of so much merit, in the eyes of our millionaire ex-United States Senator.

This can then be said to be the objection to the present financial system of the United States: that it is based almost absolutely on a credit system, that expands and contracts in the interest of the moneyed men, who are making the price of every dollar's worth of property absolutely at the mercy of that class of people, and to subserve their wishes and greed.

What would be the remedy? The remedy would be to give us a volume of circulating medium that would not be based upon the credit of individuals or banks, one that is not capable of contraction when we need expansion, but let us have a flexible volume of currency so that when it is needed to expand it can be expanded and give us a volume of currency that will meet the changing elements of contraction and expansion.

Understand me not to be making an argument in favor of the bill that we are told will be introduced by the gentleman from Ohio [Mr. JOHNSON]. I am not making an argument in favor of that bill. It may have objections that would cause me not to vote for it, but I wish to say that the present system that we are laboring under is the cause of the present financial distress of the Government. It is true that any alarm now, no matter how small, may affect the condition. The country is in the midst of plenty, and this plenty should make a prosperous condition of things. We have abundant crops and everything was smiling on all sides, and yet we find a financial crisis come upon this Government caused by the desire of some probably to reduce us to a gold standard or force the issuance of new bonds. These men started a panic which has gotten entirely out of their control, and it has run over and trampled upon some of its originators. Now, Mr. Speaker, in my opinion, that is the cause of this depressed condition, this terrible financial panic now upon us.

I was asked to state the other day what I thought was the strongest point in favor of the free coinage of silver. I have now reached the part of my address where it is proper for me to state that argument, which comes in and dovetails with the other argument I have just made.

I notice in Mr. John B. Henderson's letter to the Secretary of the Treasury that he summarizes the volume of the circulating medium, and gives what he says is the entire circulation from 1873 to 1893, to June 1. In this statement he alleges as true the statements gotten up by Mr. Foster, of Ohio, when he was Secretary of the Treasury, in which he gives the volume of money from 1860 to 1891. I desire to say, with all due deference to the gentleman who gave out this statement, that these statements are not true: and I intend to attempt to prove my assertion of their falsity.

We are told by Mr. Foster that the volume of the circulating medium in 1860 was $13.85 and so on up to 1865, when he alleges that the volume of money in circulation was $20.57 per capita.

Now, Mr. Speaker, I will show this House how he reaches this conclusion. It is obtained, so Mr. Foster says in his report, by giving the whole amount of money ever issued and coined by the United States, then deduct from that the volume in the Treasury of the United States, then the balance, so he says, is in circulation; and therefore, dividing this balance by the population of the United States at that time (which he puts at 34,748,000) gives us the per capita volume of money in actual circulation at that time. He therefore asserts that all of the money not in the United States Treasury is in actual circulation among the people.

I desire to say in my reading of political economy I was always taught that money held in reserve is not in circulation and does not affect the price, and it does seem to me that any tyro in political economy ought to know this. This is what all the authors on that subject say. I will take occasion to read from one or two authorities on the question and ask your indulgence while I do so.

I will read an extract from the work of John Stuart Mill, who is, I believe, a recognized authority upon this subject:

> Money held in reserve by any institution is not in circulation, and does not affect prices.

And again, on page 300:

> Whatever may be the quantity of money in the country, only that part of it will affect prices which goes into the market of commodities, and is there actually exchanged against goods.

The same proposition is laid down by Mr. Perry, page 358:

> Now, money acts upon prices only by being offered in exchange for commodities.

Mr. Jones, in his work upon Political Economy, announces the same proposition as does Adam Smith. It is hardly necessary to state that the only way money can be in circulation is by being offered for goods.

We must, therefore, if we want to honestly find out the amount of money in circulation, deduct not only the amount held in reserve in the United States Treasury, but all the rest of the money held in reserve by all the institutions of all kinds in this country that have treasuries and hold any reserve in them, and deduct this entire amount from the entire amount coined and issued and then deduct from the remainder the amount of lost money and money shipped and carried to foreign countries.

Every national bank in the United States is required by law to hold a reserve. Every eleemosynary institution in the United States holds a reserve. Every State bank holds a reserve. There is not even a Masonic or an Odd Fellows lodge, or any association or society of that kind in this country that does not hold some reserve in its treasury. Every insurance company holds a reserve, every school district, every municipality holds a reserve.

Now, as I have said, all the writers agree, and common sense teaches, that money held in reserve is not in circulation and does not affect prices. And yet, Mr. Speaker, we find Mr. Secretary Foster, in a long series of statements, and Mr. John B. Henderson following him, alleging that the way to ascertain the volume of the circulation per capita is to deduct from the entire amount of money issued the amount held in the Treasury and divide the balance by the population, and that process, they say, will give you the per capita circulation. That is not true, sir, and I defy the Secretary of the Treasury, or any of his friends on this floor, to find any authority for it. No such proposition is laid down by the writers on this subject, nor allowed by common experience.

I come now to the question of the volume in circulation in 1865. The volume given by the report of the Secretary of the Treasury in 1865, from statistical abstract No. 9, is $1,180,197,147.76. That, divided by the population of the United States at the time (I mean the number of people among whom it was distributed and circulated, which does not include the people of the States that were then in a state of war against the United States, for the United States money was not in circulation in the Southern States then)—I speak not of the volume circulating among the whole 35,000,000, but of the volume circulating among the 24,000,000 of people that used the United States money—and I find that it was $50 per capita, and this estimate does not include the 7-30 notes, of which there were $829,992,500 issued July 17, 1861, June 30, 1863, and March 3, 1865, although these 7-30 notes were legal tender, and more than $180,000,000 of them were of the denominations from $100 to $10.

And Mr. McCulloch says in his report for 1865:

> Many of which were of small denominations, went into the circulation as money, and all of which tended to swell the inflation.

Now, if you add those 7-30 notes, the volume of money, according to the statement of Mr. McCulloch, was at that time $80 per capita. But take out those notes and the volume in circulation at that time was, according to the report of the Secretary of the Treasury, $50 per capita. Another conclusive and convincing argument on this question is to be found in the high prices and flush times that followed the war, which to any student of political economy is conclusive evidence of a large volume of money in ciculation.

What follows from this, Mr. Speaker?

The rights of the debtor. I have felt at times during this discussion—when gentlemen representing the single gold standard have charged that our people out West wanted to repudiate their debts—like rising from my seat and denouncing this falsehood as an infamous slander and libel upon the people of my State. There is but one class of men who are trying to swindle and defraud in this transaction, and that is the creditor who demands that a debt contracted when we had both gold and silver freely coined should be paid in gold, or on a single gold standard. The volume of the currency and the value of the money at the time of contracting a debt becomes, in morals and honesty, a part of the contract.

I desire to say for my people that we have fought against all wildcat schemes of inflation and repudiation, and ever will fight

against them. All that we ask, and this we demand as a right, is the golden rule of finance, that the debtor shall have the right to pay his debt with the same volume of circulating medium and of the same value of money as when the debt was contracted. This, Mr. Speaker, is my golden rule of finance. We ask for nothing more, and nobody but a coward will dare to take less.

I desire now, Mr. Speaker, to read an extract from the work of Prof. Richard T. Ely, and I hardly think that the graduates of the Eastern colleges will venture to question his authority, especially the graduates of Johns Hopkins University, as he is, or has been, professor of political economy in that institution. In his work on that subject, page 191, he says:

Nothing produces more intense suffering than a decrease in the amount of money, and this is on account of the connection between past, present, and future in our economic life. He who treats every economic question as if every day were a period of time apart by itself, has scarcely taken the first step toward the comprehension of economic society.

Obligations have been incurred in the past, and these are payable in the present or in the future. Now, to decrease the amount of money raises the value of every debt and adds to the burden of every debtor, public and private. It increases the value of notes, mortgages, railway bonds, and local, State, and Federal bonds. It enriches the few at the expense of the many.

An increase in the amount of money does not have the reverse effect if it is small, because, on account of the growth of wealth, the continually diminishing use of barter and the extension of trade into countries formerly outside of international commerce, the opening up of new countries in Africa, Australia, and elsewhere which need a supply of money, the value of money tends to augment unless there is a growth in the supply. If the amount remains stationary the creditors are enriched at the expense of the debtors. When arbitrarily the amount of money is decreased it amounts to virtual robbery of the debtor class.

Amasa Walker, professor of political economy in Amherst College, in his work called the Science of Wealth, p. 134, says:

Contracts made to pay money during the existence of a credit currency, but which mature and are discharged under a value currency, will subject the debtor to the loss of all the difference in the value of the two currencies.

I hardly need read any other authorities on this subject; but as that great political economist, Vethake, has been quoted by one gentleman on the floor here, I desire to read from the same authority. I read from page 151:

To avoid being misunderstood, I wish my readers to note particularly that what has just been stated has had no reference to the inconveniences and losses necessarily experienced by creditors whenever the circulating medium is undergoing the process of being augmented or expanded, or to those far greater inconveniences and losses to which debtors are subjected on the occurrence of every diminution or contraction of that medium. These "evils of change" can only be obviated by rendering the change in every case as *gradual* as possible.

We are not trying to have the volume increased; we are simply demanding that the volume shall not be cut down one-half. We are making the honest debtors' fight.

The word "gradual" is italicized by the writer, not by myself. How gradual would it be if the bill of the gentleman from West Virginia goes through? Untold misery would answer.

On page 173 the same writer says:

On the contrary, when the circulating medium is unexpectedly contracted opposite consequences will ensue. Creditors will then derive benefit at the expense of those who are indebted to them.

Mr. Speaker, it will not be improper for me to use on this question a homely illustration; it may be in keeping with the surroundings. I have used this before to make this point clear. Suppose I should to-day borrow from my friend from Tennessee [Mr. COX] a thousand bushels of wheat and give him my note reading in this way: "One year after date, for value received, I promise to pay to N. N. Cox one thousand bushels of wheat." There is not a word said about money. Now, Mr. Cox goes to the Agricultural Report, saying, "That fellow Hall, of Missouri, owes me a thousand bushels of wheat, and I want to know how much wheat was raised this year from the crop of which I have loaned him a thousand bushels." He looks over the report and he sees that there have been raised 40 bushels for every man, woman, and child in the wheat-consuming world. He then says, "What is my interest what the crop shall be next year? Hall has to pay me back the thousand bushels; and if there should be only half as large a crop next year as this year, wheat will be only half as plentiful and therefore twice as valuable; still he must pay me my thousand bushels of wheat, because it is so designated in the contract." We find him then wishing for a crop of say only one-half the size of last year, or 20 bushels per capita.

On the other hand, I go to the agricultural report to find out the crop of this year, and finding it to be 40 bushels per capita I at once recognize it as my interest that there should be a large crop raised next year; for if the crop should be 80 bushels per capita I shall be enabled to pay Mr. Cox 1,000 bushels of wheat which will be worth half the 1,000 bushels that I received from him. In that way I shall be able to discharge my debt very easily. I wish for 80 bushels per capita.

Now, suppose we should call in some straightforward, honest man, having no interest in our transaction, and ask him, "Which of us is right," what would be his reply? It would be, "Each of you is trying to rob the other." Now, my friends, I assert to-day that the Democratic party is in the position of an arbiter called in to determine this question between the debtor and the creditor. Our party stands as did the Girondists in the French revolution, halfway between Sans Culottes and the royalists—halfway between the men who would flood this country with fiat money and the men who would drive us to a gold standard.

In this situation the Democratic party says, "Gentlemen, that debt should be paid in the currency of the same kind, value, and volume as that which existed when the debt was contracted"—not in a currency which has been subjected to any increase or decrease. Mr. Speaker, that position is backed by every authority on political economy that has been published in the English language; not only that, it is in accord with the plainest tenets of morality and Christianity.

But, Mr. Speaker, I wish to read a little further in this connection. I did not know that so able a man as the gentleman from whose article I have been reading—ex-Senator Henderson of Missouri—would resort to things that I have seen resorted to by our little two-by-four Republican speakers on the stump in Missouri; but I suppose they all imbibe their inspiration from the same fountain. His statement is as follows:

3. Between 1863 and 1873, both inclusive, the balance of foreign trade against us was $1,086,440,587—that is, we imported into this country during these eleven years, over and above our exports of merchandise, this enormous sum of over $1,000,000,000. The balance against us was equal to 13¼ per cent per annum on our total commerce. It began in 1863 by an excess of imports over exports of $39,000,000, and ended by an excess in 1872 of 182,000,000 and in 1873 of 119,000,000. This long and steady drainage, lasting, without a single intermission, for eleven years, brought its legitimate fruit—a loss of a large part of the nation's wealth, and with it the country's entire stock of gold. The only currency left us was the greenback and the national bank note, which latter, being redeemable in lawful money of the United States, could not acquire any higher value than the greenback itself.

Take the period of unbridled State bank issues of paper money between 1848 and 1857, both inclusive, and we find a similar result. In a total foreign commerce in these ten years of only 4,367,000,000 the excess of our imports of merchandise over exports was almost $347,000,000, making an average loss of about 8 per cent per annum. This drainage of wealth resulted in the panic of 1857, whose severity continued until the depreciated State bank circulation was destroyed and substituted by the greenback currency, which, at first, enjoyed the confidence of the people.

When we reflect that from 1863 to 1873 our exports of gold and silver coin and bullion exceeded our imports nearly $674,000,000, it is not at all remarkable that the panic, beginning in the latter year, continued so long and produced so much suffering.

Mr. Henderson in his article attributes the panic of 1873 to the fact that the balance of trade was against us from 1863 to 1873. That reminds me of the hackneyed and worn-out joke in regard to the doctor who, whenever he could not cure a patient in any other way, would throw him into fits, because, as he would say, "I am the devil on fits." Every time I have seen a Republican cornered I have seen him try to turn his case into a question of "balance of trade," and then say that we are safe on that particular point, for so few people understand it.

But, Mr. Speaker, let us examine this matter of international balances of trade for a moment. What do the authorities say about it? I think, in the first place, we ought to apply to them because we recognize them as authority. I will first read from Adam Smith in his Wealth of Nations. I read from Part II of Book 3. I have the edition, I will state, gotten out by Dugald Steward:

In the foregoing part of this chapter I have endeavored to show, even upon the principles of the commercial system, how unnecessary it is to lay extraordinary restraints upon the importation of goods from those countries with which the balance of trade is supposed to be disadvantageous.

Nothing, however, can be more absurd than this whole doctrine of the balance of trade, upon which not only these restraints, but almost all the other regulations of commerce, are founded. When two places trade with one another, this doctrine supposes that, if the balance be even, neither of them either loses or gains; but if it leans in any degree to one side, that one of them loses and the other gains in proportion to its declension from the exact equilibrium. Both suppositions are false. A trade which is forced by means of bounties and monopolies may be, and commonly is, disadvantageous to the country in whose favor it is meant to be established, as I shall endeavor to show hereafter. But that trade which, without force or constraint, is naturally and regularly carried on between any two places, is always advantageous, though not always equally so, to both.

I come now to an objection to an unrestrained trade with foreign nations, the discussion of which has occupied no small portion of the attention of the political economists of the last century; and, even at the present day, we hear it occasionally put forth by some among the more zealous advocates of restrictive regulations in respect to commerce. It is this: that only that foreign trade is a beneficial one where the exports exceed the imports in value, occasioning thereby a flow of specie into a country in payment of the excess or balance. Hence the expression, "the balance of trade," this being held to be favorable when the exports are in excess, and unfavorable when the imports are so.

This whole doctrine was founded on the mistaken notion that the wealth and prosperity of a country depended essentially on the quantity of the precious metals which it possessed; and it, indeed, almost implied the absurdity that those metals alone constituted what should properly be denominated wealth. From this doctrine, too, the important consequences were deduced that government should, in the first place, do everything in its power to increase the whole amount of exports and to diminish the whole amount of imports, and, secondly, that it should positively discourage all persons subjected to its control from trading with any foreign country from which a greater value is imported than is exported to it.

In reading the article of Mr. Henderson's I feel as if I were reading the writings of that school of economists whose sophistries were exploded in the last century.

This whole doctrine, Mr. Speaker, was founded on a miscon-

ception—that is, that the wealth and prosperity of the country depend on this question of exchange of the precious metals. I refer without reading to the following authorities: Mills, Book III, ch. 15; Jones, P. E., pp. 545 *et seq.*

But suppose we use another homely figure. Suppose we get away from this learned nomenclature about international balances of trade and all that, and get down to the plain question of what it means. Suppose two farmers, A and B, have adjoining farms. A has a surplus of 100 bushels of wheat and B is the owner of a surplus of 200 bushels of corn; wheat is worth $1 dollar a bushel and corn is worth 40 cents a bushel. B says to A, "I want to get 100 bushels of wheat to sow this fall?" A says: "Very well; I want to get 200 bushels of corn for the purpose of feeding hogs and corn planting next spring." B then says: "I will trade you my 200 bushels of corn, worth 40 cents a bushel, and give $20 in addition for your 100 bushels of wheat, worth $1 a bushel."

There is a trade made. Mr. Henderson asserts, with a great many other Republican writers who are afflicted with this disease called "balance of trade," that B is $20 poorer, because he gave 200 bushels of corn, worth 40 cents, and in addition $20 in money, and that A is $20 richer, because he gets $20 and 200 bushels of corn for his 100 bushels of wheat, worth $1 a bushel. I say this is not correct, but that both men are better off, if they are good traders and know their business. Both are wealthier and both are in a better condition to prosecute their business. This is a homely phrase, I admit, but by such methods we can make clear and plain questions of this character.

When men get mystified by talking of "international balances of trade" an ordinary man is misled and is probably not able to form any idea as to the nature of balance of trade; but yet this transaction that is carried out between two nations is precisely the same thing in principle as the illustration I have just given, and the plain man can understand "inter-farm balances of trade" or "inter-neighborhood balances of trade" when he may not understand "international balance of trade."

Now, to talk of the great financial crisis that the country is laboring under being brought about by international balance of trade is to me an absurd proposition and does not explain the present condition or the condition that existed in 1873. The condition now is, and the condition then was, that the volume of the circulating medium of our Government, as to nineteen-twentieths of it, is unsubstantial, visionary, fleeting, mythical, vaporish credit, instead of the money itself.

Of all the systems that I have had the time to examine, I am inclined toward the French system. Do not understand me as standing here advocating a great national bank like the Bank of France; but a bank that can deposit $360,000,000 in gold and issue upon that 4,000,000,000 francs, and then, when a panic is threatened, in a period of nine days increase the volume of the currency 1,000,000,000 francs, and send it out to the uttermost parts of France to there meet the increased demands for money with an increased supply, is better than a system like ours, where we meet an increased demand with a shrinking and contracting supply. Before finally leaving this point I want to bring clearly home to the minds of the members of this House that as nineteen-twentieths of the business of our country is being done on a credit system, the contraction of $1 of cash money now means the contraction of $20 of the circulating medium from our people.

Mr. Speaker, I wish to refer briefly, in a few remarks at least, to this gentleman who has assumed the rôle of advising a Democratic Secretary of the Treasury how to run the finances. He is a very wealthy man, and he made his wealth by his knowledge of the law while he was in the State of Missouri. He is now estimated to be worth his millions, and he made that money, as I said, by his knowledge of the law. That knowledge of the law consisted in knowing that bonds that were then being sold or hawked around at 20 or 30 cents on the dollar could be bought up by him and that the Supreme Court of the United States would affirm the validity of those municipal bonds. He therefore invested in them, and he has become a very wealthy man, and now lives in this city. He desires to take a step further, and asks that these bonds that he bought at 20 or 30 cents on the dollar be now made payable to the bondholders upon a gold basis. My friends, it is not fair nor just, either to him or to the debtors. So much for that man.

Now, my friends, come down to this proposition as to what is just and right. Stand as did the Girondists of France—halfway between the two extremes. Is not that right? It is certainly right that the volume of the money of this country should remain unchanged until these debts are paid. I am not going into the wider realms of other nations and the debts existing in other countries, and say that the United States should erect herself as a guard to keep silver from being stricken down in order to protect the debtors of other nations. Those debtors are not our constituents. They live in foreign countries, and we have about all we can do, after thirty years of Republican rule, to attend to the people of the United States.

It is reported by the United States census that has just come out that the municipal bonded indebtedness of the various nations of the world, including their national debt, is the enormous sum of $27,000,000,000. The bonded debt of the United States, when we have added the national bonded debt to our city, State, county, and quasi-municipal bonded indebtedness, is over $2,000,000,000. This debt was contracted when we had the free and unlimited coinage of silver. This debt was contracted at a time when we had 412½ grains of standard silver in the dollar; and we simply ask the right to pay that debt in the same kind, and value, and volume of money: not to repudiate it, but to pay it in that kind and character of money. That is not a tithe of the entire debt of the United States as it is variously estimated. But, my friends, let us put it upon a safe basis.

I make this assertion, and the census shows, that this debt is constantly increasing instead of decreasing, and, therefore, I say to my single gold standard friends, "You can not answer this objection by saying that the creditor of to-day is the debtor of to-morrow." Because this debt has been constantly renewed one year after another, and it shows a constant increase, until to-day the great West, Northwest, and South and Southwest owe the northeastern part of the United States and Europe over $8,000,000,000. This debt we must pay. A great deal of that debt consists of the bonds upon railroads secured by blanket mortgages.

These railway bonds, as some man remarked to me a few moments ago, are payable in gold, "and therefore," he said, "you can give no relief to the debtor by having the free coinage of silver." My friend, do you think that for one moment? If you do, just stop right there and think a little bit. Just take yourself into your room and sit down and give the matter five minutes' thought. You will see that even if these bonds are payable in gold, the debtor is in a far better fix when we have the free coinage of silver than he would be when you destroy silver, because when you destroy silver you increase the value of the gold by increasing the demand for it, and when you do that you will appreciate and increase the value of that debt, and force the poor man to pay that bonded debt in a circulating medium upon a gold basis instead of one upon a silver basis.

Now, let us go a little farther. There is a debt of $8,000,000,000 owed by the people of the South, Southwest, West, and Northwest to the people of the East. You say, "A part of that is a railway bonded indebtedness which we have not to pay." My friends, think for one moment, and not one of you will deny this proposition: Every dollar of railway bonded indebtedness of the people of the United States has to be paid by the people of the United States, by the taxpayers and consumers, just as absolutely as if it was their individual notes, every time a merchant ships a pound of freight over a road.

The passenger and freight rate is fixed by the board of railway commissioners of the State, if there is such a board, or by the tariff rates fixed by the railway companies themselves, which rate enables them to meet the interest on their bonded debt, to create a sinking fund, and then to pay dividends upon their stock, and to pay the running expenses of the road.

Therefore every passenger and freight rate in the United States is a rate that recognizes that the man who buys those goods ultimately and consumes them pays every dollar of that debt. Therefore there is a debt, variously estimated at from three to three and a half billions of dollars, that rests upon the people of the United States, and we must pay it; and it is mainly paid by the people of the West and the South and the Northwest, the regions of corn and cotton and wheat. We must pay it to the people of the northeastern part of the United States and Europe.

My friends, when you gentlemen carry this out and force us to pay on a gold basis, I tell you that we will only do it at the end of the last fight we can make in this House; but if you wish to be fair you will aid us in keeping the volume the same: if you want to be unfair you will try to force us to pay a debt of $8,000,000,000 contracted upon a volume of currency that could not be less than $30 per capita in a volume of currency of about $15 per capita.

I am very sorry to say that our Secretary of the Treasury [Mr. Carlisle] has not been in office long enough to entirely wipe out the Republican methods in making the report of the Secretary of the Treasury, and therefore we have the same old blank form for his monthly reports.

I suppose that Mr. Foster, of Ohio, had a great many of these blanks struck off and the Democratic economy of Mr. Carlisle will not allow him to waste anything. Therefore he uses the old ones. The old one gives us what they say is the volume of the circulating medium of our Government per capita, and in giving that they say, "Take the actual amount of all the money coined

and issued by the United States and deduct from it the volume held in the Treasury of the United States," and they assert that every dollar of the balance is in circulation; and then by dividing by the population of the United States the per capita in circulation is found.

With due deference to the report of the Secretary of the Treasury, be he Democrat or Republican, that statement is not true, and is not sustained by any writer on political economy, I care not where you get them; because they all hold, as I stated before, "that money held in reserve is not in circulation, and can not affect prices," whereas money is now all held in reservation and hence not in circulation, and that has affected the price of every dollar's worth of property, real and personal, in the United States, as given by the gentleman from Massachusetts [Mr. MORSE], who has probably looked it up, to the amount of $1,500,000,000. Every shrinkage in value which causes a contraction of the volume of the currency in circulation strikes down prices and brings it down until you will have bankruptcy and ruin in its trail.

I make this assertion, and I believe I will be able to substantiate it by the advocates of silver upon the floor, that if the Sherman law is unconditionally repealed and we are forced to a gold basis and the free coinage of silver is stopped, all these debts of the United States that were contracted at an average volume of currency, say of $30 per capita, must be paid by the people of the United States with a volume of currency of $15 per capita. If you drive us to a gold basis it will cause the people of the United States to pay their debts in a volume of currency at least twice as valuable as that when the debt was contracted.

It is not fair, it is not honest, and you can not defend it on any principles of political economy or on the greater and higher plane of morality.

I did not intend to make any other remarks, but we are told what is the cause of the commercial crisis in the statement by the gentleman from Massachusetts [Mr. MORSE], and I am forced to pay a little attention to him. He tells us that the financial distress of the United States is due to the agitation of this question of free trade, or threat to come to a free-trade basis, and says in his remarks:

> The effect of this is to paralyze business, throw thousands of workmen out of work, to destroy our home market, the principal market for agricultural products, by driving thousands of men who were former consumers into the business of last resort—agriculture.

Although a young man, I can recollect the time very well, Mr. Speaker, when agriculture was not "the business of last resort." I can recollect the time when the farmers were not only the bone and sinew of the country, but the pride and culture as well.

Then it was that the farmer was the money-loaner, the bank-stock holder, the creditor, the patron of all great enterprises. The culture, the refinement of the land was then on the farms. The farmers then built and owned the fine houses of our country. His children filled the great universities of learning, and carried away their highest honors. But, Mr. Speaker, that was in the glorious old days of uninterrupted Democratic rule.

Then it was thought as fine a position as a man could place his son in was to buy him 160 acres of land and set him down upon a farm to live. In those days, when such a man was asked his occupation, he proudly raised his head and said, "I am a farmer." Agriculture was not then called "an occupation of last resort."

I do not know whether the gentleman from Massachusetts would place it above or below "tramping," for he calls it "a business of last resort." But there has been a time in the history of all great governments when the farmers were indeed the last resort to save their country. They were the people of "last resort" during the days of the Roman nation, when old Cincinnatus was called from the plow. They were the people of last resort to save this country from England when Putnam and Washington, and men of that stamp, were called from their farms to their country's rescue. They were the people of last resort when both sides, North and South, enrolled three-fourths of the bravest soldiers that ever fought upon any battle field from the farms of this land. The farmers have always been the people of last resort to save their country in an hour of peril.

When the voice of liberty, stifled, smothered, and choked by tyranny and oppression, has appealed to the farmers for aid, it has never appealed in vain. Their rough hands and sun-burned faces have ever been seen in the front line battling for the rights and liberties of their country.

Often, in reading of the unselfish devotion of these men of the plow to the cause of liberty, I have wondered whether the gratitude of nations was but a mockery and a sham to lure the brave to destruction, and whether their glorious, blood-stained sacrifices of the past would be soon buried in the grave of forgetfulness. God forbid.

And if there is anything of truth in the predictions contained in the letters written by the great English historian, Macaulay, to H. S. Randal, of Philadelphia, in 1857, in which he predicts the downfall of our Government by anarchy, the great farming class will again be the "last resort" to save American liberty from the red flag and hissing bombs.

And yet, sir, we find this gentleman from Massachusetts, [Mr. MORSE] who represents a Congressional district of that State and the large Rising Sun Stove Polish Company, somewhere in Massachusetts [laughter], coming forward here and making the assertion that our people are now so desperately poverty-stricken that they are driven into agriculture, "that occupation of last resort." If agriculture is being degraded, what party did it? Four years ago last winter I went into a theater in St. Louis, and knowing that there were no great actors or actresses in town, I did not look at the name of the play until I had gotten my seat, and then I found that its title was "Only a Farmer's Daughter." [Laughter.] I sat it through to find out the drift, and what do you suppose it was? Why, it was a play to try to teach the American people that honesty and virtue could be found even among the daughters of American farmers! [Laughter.]

That play was in line with the remark of the gentleman from Massachusetts, and I charge that it is his party that has brought upon us the occasion for such remarks and that has put such plays upon the stage. Dickens wrote Little Dorrit, Bleak House, Dombey and Son, and Oliver Twist, and the other great works that have secured him a world-wide fame, to show that you could find honesty and virtue even in the slums of London.

But here we find a man writing a play which fills crowded houses one hundred nights in New York, sixty nights in Chicago, twenty nights in St. Louis, the purpose of it being to prove that after thirty years of Republican rule you can still find honesty and virtue among the daughters of American farmers! [Laughter and applause.]

[Here the hammer fell.]

On motion of Mr. COX of Tennessee, the time of Mr. HALL was indefinitely extended.

Mr. HALL of Missouri. Mr. Speaker, as the time allotted to me has expired, I will come rapidly to a conclusion. I desire simply to say two or three words more, and to make a statement as a member of the farming class who is not ashamed to admit his calling. I wish to say that the great agricultural Samson of this country has lain asleep with his head in the lap of the Delilah of Republican protection for thirty years, but he has waked up, and he has waked up ere his locks are shorn. He is awake and recognizes his enemies. He recognizes the party that has brought him to the condition in which he finds himself to-day, and he sees that that condition has been brought about through the process of closing the foreign markets of the world to his products through retaliatory and hostile commercial legislation, thus cutting down the prices of everything that he had to sell fully 40 per cent and decreasing the demand for his products by $750,000,000 annually. He sees, on the other hand, that it has increased the price of all the necessaries of life that he and his family require fully 50 per cent beyond what they would otherwise be, and that by this negro fox-trap plan of "catchin' him goin' and catchin' him comin'" it has brought him down until his business is called the "last resort." I now serve notice on this House, and especially the "Rising Sun Stove Polish statesman," that as long as I am a member of this body no one on this floor shall ever speak disrespectfully of the farmer without hearing from me on all such occasions. I will have my tongue cleave to the roof of my mouth ere I will have one word uttered against this noble band of patriots, defenders of liberty, and feeders of all.

Mr. Speaker, I wish to say to the gentleman from Massachusetts [Mr. MORSE] that the farmers have opened their eyes wide enough to be able to know their friends, and that they will never hereafter be caught putting in a vote for any Republican, although he may be polished with every ounce or every pound of the sunrise stove polish that ever came from the factory of the gentleman from Massachusetts. [Laughter and applause.]

Mr. SNODGRASS. Mr. Speaker, I approach the discussion of this question with some embarrassment. I can not support the bill presented by my friend from West Virginia [Mr. WILSON] for several reasons. The gentleman who introduced this bill has a national reputation. In my country in the past his name whenever mentioned has provoked an outburst of applause. He has acted in harmony with the principles of the Democratic party. I was astonished, therefore, when the bill to repeal the purchasing clause in the Sherman act came from that distinguished gentleman, for that bill, in my judgment, is in nowise compatible with the platform on which the gentleman himself as well as the President of the United States was elected. That platform declared in one sentence that the Sherman law (not the purchasing clause of it) was a "makeshift" and should be repealed.

Gentlemen come here now and want to take up the Democratic platform by sentences, and the first bill offered is in violation of

the first sentence of the declaration of that platform in regard to the financial condition of the country. Instead of complying with the written instruction of their party upon this question, gentlemen propose to repeal the purchasing clause of the Sherman act and to leave the balance of that law in full force and effect, thereby placing this country upon a single gold standard. I say, therefore, that even if I could consent to take up the declaration of the platform by sentences, I could not vote for this bill, because it is not in compliance with the platform of the Democratic party.

In the second place, I remark that the sentence in question is embraced in the seventh section of the platform; and that section, in its declaration upon this great question, must be taken as a whole. It declares that the infamous Sherman law must be repealed, but it declares also that we should have the coinage of gold and silver upon the same terms. This declaration in favor of the coinage of silver upon the same terms as gold carries with it, necessarily, the repeal of the Sherman law.

More than that, I could not vote for the gentleman's bill because it is in violation of the history and the record of the Democratic party in regard to the demonetization of silver. The Democratic platform—the same upon which gentlemen here ran—declared that the act of the Republican party in 1873 in demonetizing silver was a crime against the American people. If you repeal the purchasing clause of the Sherman law and go no farther, then where will you be? You will be in the same category with the Republican party—guilty of the same line of action which you have charged was a crime in the Republican party in 1873.

Mr. Speaker, I favor the substitute offered by the gentleman from Missouri [Mr. BLAND], because it carries out the pledges and promises of the Democratic party. It proposes to repeal the Sherman law, and in the same measure it proposes to give the people the free and unlimited coinage of silver—a thing that they have been struggling and clamoring and fighting for since 1873.

Mr. Speaker, in midsummer, and at an unusual time, we are called together by proclamation from the President to consider important legislation.

What is it that gave rise to the demands for an extra session of Congress? The reasons are plain and simple. From one end of the country to the other the people are crying for relief. There is, by estimation, in this country to-day two millions of people who are without employment, and many of them without bread. Merchants are failing, banks are breaking, and utter insolvency is threatening most of our people. In the midst of the most bountiful season with which Providence has favored us, and when the barns and granaries of the farmers are loaded to overflowing, we find them without a market for their products, and their wheat will not bring more than 50 cents per bushel.

These are the considerations we are to deal with, and every member in this House should approach the discussion with a fairness and patriotism that will result in a measure for relief to the people. The cry of the people is for more money, and to him who would say the circulation per capita is greater now than in the past, I would reply, that while in the abstract this may be true, this wealth is, by reason of unjust and class legislation and legislation against the interest and welfare of the common people, so unjustly distributed as to make it of no avail in relieving the prevailing distress.

While New York and many of the Eastern States have a per capita circulation of between $150 and $200, the people of my State, who are as thrifty, industrious, and patriotic as any that live, have only a per capita circulation of $6, and it is a sad and solemn confession on my part, but it is true, nevertheless, that my people have a mortgage debt of $23 per capita, nearly four times the amount of money in circulation in the State, and they are better off than the people of any other State thus far tabulated except Arkansas, which has a mortgage debt of $13 per capita; all the other States ranging higher up to Republican Kansas, which has a mortgage debt of $170 per capita. While this is true, our friends propose by this bill to reduce the ability of the people to pay almost one-half by striking down nearly one-half the money of the country and thereby increasing their indebtedness in a like ratio, and have the audacity to argue that this is the mode by which to restore confidence and bring about general prosperity.

To illustrate this: Suppose a man owed a debt of $5,000 and had $5,000 with which to pay it, and the Government should deprive him of $2,500—one-half of it—which the demonetization of silver practically does, would this have the effect to strengthen the confidence of the creditor or the ability of the debtor to pay? Certainly not. It may be sufficient to satisfy the creditor class of England and America to thus strike silver down, but to the debtor class—the men who toil and labor and who pay all the debts, both public and private—they will not be deluded or deceived by such subtle and unreasonable conclusions.

On this great question affecting the interest and happiness of all the people I do not propose to make any one man, though he be the first in power in this Government, my platform. I prefer to take the aggregate wisdom of the Democratic party as expressed in the Chicago platform, upon which the President and all Democrats on this floor were elected.

And here it may not be out of place to remind the Democratic contingent, who are standing here shoulder to shoulder with the Republican party that has brought all this evil and affliction upon the American people, that in 1884, when Grover Cleveland first ran for the Presidency, he did so upon a free-coinage platform, and he was elected by the American people; in 1888, when the platform was silent on that subject, he was defeated; and in 1892, upon a free-coinage platform, he was again elected.

It is my purpose, by my action here, to carry out every pledge made in that platform to the people, one of which was to remonetize silver and give the people coinage of silver on the same terms on which gold is coined; and I never intend to be accused, Judas like, of betraying the people whom I have sworn to serve. I do not now, nor have I ever, indorsed the Sherman act of July, 1890, and am anxious to see it repealed, if the substitute of Mr. BLAND can be adopted by this House, and which is in accord with the platform. But if the purchasing clause is repealed it would leave the balance of the act in full force, and would not be a compliance with the sentence of the platform demanding its repeal.

The platform declared that the demonetization of silver in 1873 by the Republican party was a crime, to which I cheerfully assent. Now, to repeal the purchasing clause of the Sherman law without going further and complying with the balance of the platform in giving the people a bimetallic standard would be to make us guilty of the identical thing we charged as a crime in the Republicans in 1873. Upon this question, in urging the people of my district to stand by the Democratic ticket, in a speech delivered in August last, I used this language:

By the coinage plank of its platform, adopted at Chicago, the Democratic party pledged itself to coin silver on the same terms on which gold is coined; to maintain the parity of silver, gold, and paper money issued by the United States, and to abolish the existing premium on gold by the repeal of the bullion storage act through which silver bullion is demonetized and the coinage of silver discontinued. The Democratic theory of bimetallism and of the free coinage of the precious metals is clearly elucidated in this clause of the Chicago platform:

"SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic, and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar, at all times, in the markets and in the payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency."

This declaration of free coinage principle, without which the bimetallic standard can not be maintained, meets the demands of the bimetallist, and at the same time cuts away the ground from under the feet of the advocates of the single gold standard, who have declared that the silver dollar is dishonest money because by their legislation silver has been demonetized and gold forced to a premium—an altogether artificial and unnatural premium. The Democratic party will not only restore the equality of silver with gold in coinage, but will maintain the silver, the gold, and the paper dollars at par with each other. It has declared a policy that will be satisfactory to all Democrats West and East, and with this declaration of policy it invites the support of all who are opposed to the single gold standard, to the unnatural premium on gold, and to the enforced contraction of the currency. This declaration of our platform has been misconstrued by the enemies of Democracy who charge that it is not for free coinage.

That this construction is false is too apparent for argument. The platform declares for both metals, giving both an equal right to the mints and coinage. But they say because it says they shall be on a parity and of the same intrinsic value that therefore it is a declaration against free silver. This is not true. All that free silver men have ever asked is that it should have the same right of coinage and that when this was given it that it would be of the same intrinsic value of gold or be worth a premium, as it was in 1873, when it was struck down as a money by the Republican party. The ratio will be fixed by Congress, it will not be laid down and measured by the gold bugs of Wall street. Then who can suppose that Congress will make any improper ratio? If the ratio should be slightly increased it would not hurt the people of the South. We have no silver mines. What we want is both metals as money, each the equal of the other, and the right to pay our debts, public and private, with both.

That was my understanding of the platform at that time; it is the way the people understood it, it is the way they voted on it; it is the way I understand it now, and I respectfully insist that it is the only sensible and reasonable construction that can be placed upon the platform.

No man is more willing and anxious to carry out the platform than I am, but I will never cast my vote for a measure that in my opinion absolutely demonetizes silver and establishes a single gold standard and enriches the creditor classes of the world

and impoverishes and enslaves the debtor classes, and to vote for the simple repeal of the Sherman act with nothing more does this, and violates the purpose and obvious intent of the platform. Silver is named in the Constitution along with gold, and the two metals form the money basis of this country. In reply to what the gentleman from Maryland [Mr. RAYNER] said the other day, I quote the language of Webster, the great constitutional expounder. He said:

Gold and silver at rates fixed by Congress constitute the legal standard of value in this country, and neither Congress nor any State has authority to establish any other standard or to displace that standard.

Silver has been used as money for over three thousand years, and the record of the Democratic party, from the date of its birth, has been to recognize silver equal with gold as the basis of all circulating medium in this country; and it is left to this Congress to say whether or not that record shall be broken by the Democratic party, and that, too, over its solemn promises made from one end of the country to the other, and without which the Government in all its branches would not have been turned over to it by the people.

I warn you here and now that, if these pledges are violated, the man guilty of doing the same will be relegated to private life, and he ought to be. No man in the South or West who subscribes to this doctrine should be ever elected again to any public trust.

Mr. Speaker, I was astonished when my colleague [Mr. PATTERSON] announced yesterday to this House that he would not support the free and unlimited coinage of silver upon any ratio, and that he was a single gold, standard man. Why, sir, he has been one of the oracles of the Democracy in my State; he has been, or has assumed to be, the leader of our party there for years. He has been in accord with the Democratic party upon the great cardinal principles and policies of that party; and when he was a candidate for governor in our State I felt as if it were an honor to give him my earnest, enthusiastic, and hearty support. But it seems that the gentleman has turned a somersault, and in doing so he has fallen from his place alongside of the suffering and distressed people of this country into the arms of the rich barons of England and the "gold bugs" of Wall street. [Laughter.] A feeling of sadness passes over my soul when I look at the downfall. I want to shed a tear over his political grave.

Mr. Speaker, I do not challenge the right or prerogative of any man to change his position upon a public question; but I do think that whenever a man educates his people and secures a seat on this floor by representations that he stands upon the platform of the party—if a change so suddenly comes over the spirit of his dream he ought to go back to his people with that change and say, "I am now upon a different platform; how do you like me?"

I have before me a variety of speeches made by my colleague to the people of Tennessee, and they were made under the same conditions that exist to-day—speeches in which he held out to them as a panacea for all evils, all oppressions, all afflictions, the free and unlimited coinage of silver. Not only that, but at the last session of Congress my friend made a speech in this House in which he said what I will ask the Clerk to read.

The Clerk read as follows:

It is believed by many patriotic men, for whose opinions I have great respect, that the demonetization of silver is the iliad of all our woes. While I agree with them that the demonetization of silver was a crime against the people and contributed to their financial distress, and I shall vote with the friends of silver to restore it to its time-honored place as a money metal when and wherever the opportunity is presented, I do not concur in the opinion that its remonetization will bring the measure of relief which is claimed for it. I am satisfied that a law restoring the free and unlimited coinage of silver would not materially increase the volume of the currency. I do not believe it would materially affect one way or the other the financial and monetary condition of the country. I think it is very clear that we need a larger volume of sound currency than we now have, but I fail to see how the volume of the currency produces the evils which I have described.

* * * * * * * *

Now, let us trace its legislative history since the close of the war and see how perfectly it has conformed to the bidding of its masters. In respect to the currency, it began by the demonetization of silver. At the time silver was disgraced and barred as a money metal it was at a premium and was not in circulation. Coin at this juncture was unknown to the people, and consequently the blow at silver was not then felt: and the people, even the wisest of the people in official life, did not realize or even know what had been done. No one but the conspirators dreamed of the far-reaching effects of this secret stab at silver, which had been recognized as a money metal from the earliest dawn of history. Then followed the process of rapid approach to the resumption of specie payment, which occurred in 1879. The currency during that period appreciated in value and all property correspondingly depreciated, leaving a vortex in which was swallowed up in large measure the prosperity of the people.

In respect to the bonded indebtedness, a policy of favoritism was likewise pursued. Originally payable in any money declared by law a legal tender, it was, at the expense of silver and Treasury notes, converted into bonds payable in gold and bearing interest payable in the same coin. In this way did the Republican party give stability to the currency and glory to the country at the expense of the toiling millions and in the interest of the favored few.

Mr. SNODGRASS. Mr. Speaker, with no change of circumstances, no change of conditions except the tentative action on the part of India, the gentleman made all these speeches to which I have alluded, and voted to promote the free and unlimited coinage of silver. But I suppose it may be proper, as a matter of justice to the gentleman whose seat I see is now vacated, to say that he voted both ways on this great question in the last House.

I propose to read a paragraph from the speech made in Gallatin, Tenn., on July 28, 1891, in which my colleague says:

Democracy attributes these inequalities in the condition of the people to several causes: to a long-continued protective tariff system, to the opportunities given the favored and protected classes to build up and maintain within the tariff walls trusts and combines, which prevent fair competition; and the cutting off of the agricultural masses from the markets of the world. Our exports consist almost altogether in agricultural products. * * * Fourth, to the demonetization of silver, whereby the owners of accumulated wealth in this country, as well as in England, the greatest of commercial nations, have been enabled to realize at the expense of the people the difference between the value of gold and silver.

This is from the Nashville American.

Mr. BOATNER. Will the gentleman yield for a question?

Mr. SNODGRASS. Yes.

Mr. BOATNER. Has your colleague not admitted that his mental condition is different now from what it was at the time he made that speech?

Mr. SNODGRASS. Yes, sir; and to that I propose to address myself later on.

Now, Mr. Speaker, I am perfectly honest in saying that I am curious to know what has produced this sudden change of sentiment on the part of my colleague. What new light has fallen upon him? What new revelation has broken in on the vision of the gentleman from Tennessee? He has failed to state a single fact or a single reason that satisfies my mind as to the cause of this new conversion. So far as I am concerned, no power can cajole me; even letters from prominent men can not drive me from the advocacy and support of the pledges and promises I made to the people who honored me by giving me a seat in this body.

But my colleague said on yesterday—and he is generally a very accurate man, because he is a warm-hearted, able, enthusiastic man, for whose integrity and for whose manhood and courage I have the greatest admiration; but as we differ diametrically on this question I assume that I have the right to criticise his action on this floor. He said on yesterday:

Smart men change, but fools never.

Mr. Speaker, he ought to know, because he has broken the record more times than any one man I know of in that regard. [Laughter.] But he wound up his statement—and that is the point to which I wish to direct your attention and what I objected to, because I had hoped that at last he would go back to his "first love," and vote for the people and their interests; but he has cut off this hope in the concluding portion of his speech, after stating that he was now fixed and intended to stick there, and the effect of this is that there was no chance for smart men to change now and fools never will. I refer to this conversion and his record to show, not that he has no right to change, for that is a personal matter; not that he is not honest in these changes, not that he does not believe he is subserving the best interests of his people, but simply to show that he was once right and stood for the honest money of the Constitution, gold and silver.

Why, Mr. Speaker, he even tells us that 90 per cent of the people do not understand this question, but adds that the capitalists and bankers do. I tell my colleague that he is mistaken. A little later on he will believe that they do understand the question, and also will understand the record the honorable gentleman has made upon the question. But I will tell you, Mr. Speaker, the fact that he damns a record that has cost him thirty years of labor to make, and eats his words by the thousand, will not excuse him, though he eat two suppers and smoke two cigars every evening from now until this Congress adjourns.

But, sir, I have got another document that I want to send up to the Clerk's desk to have read. The truth is, I am as much astounded at the changes in this regard on the part of my colleague upon the silver question as Lincoln was after the first battle of Bull Run, when he had to pay 50 cents for a drink of whisky; prices are going so high, changes are so common, that no man knows what is to be the result, and nothing seems to be what it used to be. I send some extracts from editorials of the honorable Secretary of the Interior, Hoke Smith, which I desire to have read and placed in my remarks.

The Clerk read as follows:

Such stuff (The Constitution's statement that the President's message does not conform to the Democratic platform) might be expected from the silver-mine owners or their paid lobby at the capital, but when it comes from a Democratic paper it is a symptom of arrogant imbecility.—*Evening Journal.*

What about such "stuff" as this, taken from the Journal no longer than last year, at the time when the Secretary of the Interior "wrote the campaign editorials"?

The repeal of the Sherman law will bring about a contraction of the currency that will be deplorable.—*Journal*, January 4, 1892.

Mr. Cleveland is in favor of letting alone the present silver act, which provides for the coinage of 54,000,000 silver dollars a year.

Governor Hill would have us repeal that law and return to the Bland act, which would give us only $24,000,000 of silver coinage a year. Mr. Cleveland is a better friend to silver by $34,000,000 a year than is Governor Hill.—*Journal*, January 2, 1892.

The Constitution of the United States prohibits any State from making anything else than gold and silver a legal tender. It also empowers Congress to coin money and fix its value, and Congress has fixed the value of the standard dollar at 100 cents, not 67 cents. It correlatively follows that any State has the constitutional right to make silver coinage a legal tender at the value given to it by Congress in payment of all debts which are not expressly contracted to be paid in other money.—*Journal*, April 2, 1892.

This is the act (the Sherman law) which Governor Hill denounces and the repeal of which he says the Democratic party should demand. Its repeal would, of course, throw us back on the Bland bill, which would provide for the purchase of not less than $2,000,000 nor more than $4,000,000 worth of silver bullion a month—an act which, at its best, would decrease the currency at least $14,000,000 a year less than the Sherman act, and at its worst would cut down the increase of circulation by at least $34,000,000 a year.

That's the sort of free-silver champion Governor Hill is.—*Journal*, June 7, 1892.

And this may bring up the pertinent inquiry as to what kind of a free-silver champion the President is. This man who stood near the President in the campaign said these words to the Democratic voters of Georgia. This man who stands near to President Cleveland, now the present Secretary of the Interior, is the same man who gave voice to the sentiments which I have had read from the Clerk's desk. I want to ask the gentlemen here who feel that they are justified in shutting their eyes and violating the solemn promises and pledges of the Democratic party, when they come to speak for themselves, what they understand to be the position of the President upon this all-absorbing question?

My position on this question is not new, but it is precisely the same as that taken by the Democratic party always.

I indorse the patriotic utterances of Secretary Carlisle, made on this floor in 1878, and I quote them for their merit, with the simple comment that out of no changed views of his on this subject can be evolved an answer to what he then said.

He spoke as follows:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation, of the metallic money in the world.

These words he spoke when he came directly from and was in touch with the people who sent him to Congress. The calamities prophesied by the honorable Secretary in 1878 may be quoted with approval by every Democrat in 1893, for there has been no change of front in our party on this question, and a simple repeal of the Sherman law with nothing more will give just grounds for such prophecy. What the people need in Congress is men of convictions, with the courage to declare them, and who do not pander to other influences nor listen to the appeal of hired lobbyists, who infest this Capitol, and whose voices have been potent in influencing legislation on this subject in the past; for we had as well understand at the start that this is a fight between the the creditor and debtor classes of this and other countries, and either the people or the plutocrats must triumph in the result.

The former are numbered by the million, while the latter are only numbered by the thousand. This warfare has been going on for ages, and the Shylocks are now demanding the last pound of flesh, while the people piteously appeal to this Congress for relief; and upon a vote on this question in this House the records will show who are the friends of the people and who are the friends of the classes, and who it is that have broken their pledges and violated their most solemn trust, and the men who do this will be branded as traitors to their people and false to their best interests and betrayers of a solemn promise.

Mr. Speaker, we were told on this floor at the last session and during the last campaign by men who claimed to be Democrats that the financial question was of only secondary importance; was only a speck on the political horizon as compared with the great and only constitutional question, that of tariff reform; that it was as a molehill compared to a mountain, and that the only thing that could bring relief to the people was tariff legislation, and that the financial question should be relegated to the baggage wagon. These same parties now stand up and tell us that the tariff is secondary and that the all-important question is the money question. Ah! gentlemen, this will not do. The leopard can not change his spots nor Democracy its principles; what they then said was true, and it is true to-day.

I repeat, that the financial question is no more to be compared with the illegal taxes and the tribute that is being wrung from the American people than a molehill is to a mountain.

I favor the taking up of every question that affects the people and disposing of it, and we can no more give relief to them by piecemeal than the good doctor can give relief to his patient who has divers afflictions by the cure of one of them, and I am in favor of staying here until the needed relief is brought about if it takes until my term of office expires. We have promised the people relief, and our promises were not made to be broken. The people of this country have suffered for thirty years from broken promises and deception, and now that the Democratic party, which has always been regarded as the party of the people, has come into power, each and every promise that we made should be scrupulously complied with, and this we will not do if we vote for the unconditional repeal of the purchasing clause of the Sherman act.

In the same paragraph of the Chicago platform which provides for the repeal of the Sherman law the Democratic party made another pledge that is coupled with it, and which can not be separated from it, which was that we recognized gold and silver as the standard money of this country, and that we should have the coinage of both without discriminating against either, and this clause was inserted "for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency." Can it be said that this was inserted as a vote-catcher? Certainly no Democrat will admit this. I insist that under the platform these two things must be taken together, because the coinage of silver on the same terms as gold carries with it necessarily the repeal of the Sherman law.

Suppose the platform had stopped with the single declaration in favor of the repeal of the Sherman law and had made no provision for the free coinage of silver; who in this House will say that Grover Cleveland and the Democratic ticket would have swept the country as they did? It was the West and South that elected Grover Cleveland, and without this declaration he could never have procured their support. Mr. Speaker, the men who desire to demonetize silver and put this country on a single gold standard seek to avoid the force of this by asking us to wait until the people are ruined and until it suits the money barons of England and other foreign countries to have an international agreement as to the ratio between the two metals and the coinage of silver.

This dodge was never heard of until after the crime of demonetization of 1873 had been effected, and its insistence in an American Congress is enough to bring the blush of shame to the face of every American patriot. And whenever the people seem to be in the position to get this relief the emissaries of Wall street and London and Liverpool come here and cry "international agreement." They say we must not move until the British lion has lowered his growl on British soil. Timid, cowards, sneaks? No; but avaricious, determined to appreciate the debts of the people and to depreciate their ability to pay.

This is but a subterfuge of fraud as black and corrupt as the midnight shades of the damned, and a snare to prevent the people from securing their rights. We are told by the gentleman from Indiana [Mr. BROWN] that they want to keep every promise made in the platform. Oh, what a sweet morsel that is to roll under their tongues—but that we must take it up by sentences! How long would that take?

How long would it take you to get through with the tariff bill in that way? I say, how long would it take? What committee could ever make reports upon the different sentences of that platform? Logic profound! Satisfactory to the gentleman, I suppose, who used it. Empty! We are not to be deceived by this. If they are in earnest about carrying out the platform, why not do both at the same time and in the same bill? Why make two bites of a cherry?

We understand these tactics. We have had a long, painful, terrible lesson in these side-track issues, commencing with the Bland bill and the Sherman act. Mark it down, this is a fight from now until the time when the common people are restored to their rights. Once they succeed in the repeal of the Sherman law and demonetize silver, then they would resort to any and all measures to defeat its being made one of the money metals of this country.

Let us carry out the platform, gentlemen, in toto, and not take it up by piecemeal. The great mass of people composing the Democratic party understand this question, and they understand the promises the party made to them in convention, and I here quote the concluding portion of a letter just received from a plain old farmer in my district, and it appeals to me more strongly than

the resolution of any board of trade or the quacking of paid lobbyists. He says:

I hope that our party will be able to restore confidence and remove the great depression that seems to be almost universal, and that it will through its representatives give us free and unlimited coinage of silver, and in every respect redeem all the pledges it made to the people.

Another says:

Stand by the people and give us free silver.

Mr. Speaker, when the humblest man in the humblest cabin home in the mountains of East Tennessee left his home on the 8th of last November to go to the polls and vote the Democratic ticket he understood that free silver was promised him by the Democratic party, and I declare here and now that it was promised him, and when we fail to give it to him we are recreant to the promises made. When silver was demonetized it was worth $1.29 per ounce. To-day it is worth 75 cents per ounce. Will our single-standard friends tell us why this is? As a circulating medium the value of silver has not changed, and the ratio between gold and silver is the same now that it was in 1873, when it was demonetized. The answer is this: By bribery and legislation bought with a price, silver has been discredited, is why it is worth little more than half to-day what it was twenty years ago.

An act of Congress that would not allow the people to use the raw material that goes to make cloth, flour, machinery, or anything that we manufacture, would be no worse than the present law that forbids the use of silver. Silver bullion is not worth as much as gold bullion, but a silver dollar will buy as much and is worth as much as a gold dollar; then why not carry out the Chicago platform and by equal rights, which the free coinage of both metals will give, bring the price of the bullion of the two metals closer together? If this is done, and silver is coined free, it is bound to come up to the dollar value.

I deny that we must wait for other countries to move in this matter, or that there must be an international agreement for free coinage before we can adopt it. This is a mere pretext on the part of the gold men for delay. England, a large proportion of whose people live upon fixed incomes and are benefited by low prices, in order to maintain low prices established the single gold standard without coöperation with any other country. Germany consulted no foreign power in 1857 when she abandoned gold, nor in 1873, when she threw silver overboard. France threw her mints open to the coinage of both metals in 1803, and acted independently of all other countries.

Then, why is it that we, producing annually more than 40 per cent of the silver of the world, can not stand alone in this matter and act independently when we have a balance of trade in our favor of over two hundred millions with Great Britain and the money of the world coming to us. Yet we are told that the greatest Government the world ever saw must stand awed and cowed before England or any other foreign power before she can establish a monetary basis and system of her own. The sun shines upon no country that is the equal of ours. We have a soil as rich as can be found anywhere, and a climate so varied that it will nurture the growth of anything that comes out of the ground. We have every mineral in abundance of which any country can boast, and with this kept in view there is no reason to suppose—in fact it would be folly to assert—that the balance of trade will not continue in our favor.

The true reason for this combination against silver can be plainly seen. The men who own the gold want a monopoly in its ownership, and they know that if silver is not permitted to compete with it their gold is worth more. The men who own the bonds and debts that the people of this country owe know that if the single gold standard is resorted to it will appreciate their bonds and in like ratio deprive the people of the ability to pay. The wheat-raiser knows that a failure of the corn crop will increase the price of his wheat. A few years since the price of breadstuffs in Germany was greatly enhanced by the passage of a Russian law that prohibited the exportation of Russian rye. Drive out silver and of course gold is worth more.

In speaking of the demonetization act of 1873 in this country, the president of a bank in France used this language:

If by a stroke of the pen they suppress one of these metals in the monetary service, they double the demand for the other metal to the ruin of all debtors.

For twenty years the people have said that they wanted an administration in sympathy with them and with their money, and one that would not do the will of the gold monopolist, as the Republican party had done. I have been taught to believe that a Democratic administration was what they clamored for, and that it was pledged to give the people relief on this subject, regardless of class or section.

I was born and reared a Democrat, and for twenty-five years have consistently voted and worked for that ticket; but if it be Democracy to vote for a measure that can have but one result, the destruction and disgrace of one of the money metals of the country, then I must confess that I have up to this date misapprehended what Democracy meant. But I deny that the Democratic party, as a party, will ever subscribe to such doctrines. It would be to turn completely around on this question. I am no stickler on the ratio between the two metals, and as far as I am individually concerned, I believe that the ratio as at present established is about right; but in a spirit of compromise I am willing to see the ratio increased to whatever is fair and just.

Mr. Speaker, if we stop with the simple repeal of the Sherman law and go no further, it will bring no relief to the people, but instead will bring such ruin and destruction as was perhaps never witnessed in any country.

The war between the creditor and debtor class has been waged vigorously for the last thirty years. Up to this time the debts, both public and private, were made, and were payable in either greenbacks, gold, or silver. The first step taken in this great conspiracy of the creditor class against the masses of the people was to deny them the right of paying the public debt in greenbacks, thus appreciating the public debt, and depreciating the ability of the people to pay.

The second step was to demonetize silver in 1873, and make all their indebtedness payable in gold, by which the people were robbed of millions of dollars and the creditor class enriched a corresponding amount. From 1873 down to the present time the great body of the American people have been struggling for the restoration of silver as money. In 1878, as a compromise measure, and instead of giving the people what they needed and demanded, they were put off with what is known as the Bland act.

In 1890 another step looking towards the further demonetization of silver, the infamous Sherman act, became a law, and in 1893 the enemies of silver are proposing to absolutely destroy silver as money by the repeal of the purchasing clause in said Sherman act. If they succeed in this the next step in the programme or play upon the boards will be to issue Government bonds payable in gold and put them on the market for sale, and with the gold they receive for the same retire all silver and greenbacks from circulation as money. This would fasten upon the people a bonded indebtedness of $800,000,000 payable in gold, and this, added to their already enormous burdens, is more than they can bear.

England demonetized silver in India, and through its American allies is seeking to do the same thing here. What was the effect on the price of silver after it was demonetized there? Why, in three days the price dropped 19 points. What would be the result to this, the greatest country the world ever saw, if this Congress should do the same thing? It would absolutely destroy one of the greatest productions on the American continent, that of silver. It would throw out of employment thousands of willing, earnest laborers. It would leave the country without money to handle the fruits of the farmers' honest toil and produce in the country an army of beggars and tramps.

Mr. Speaker, as the representatives of the people, what should we do to relieve them?

First. We should pass the Bland substitute, repealing the Sherman law, and give to the people the free and unlimited coinage of silver. This would increase the volume of money as our domestic trade expands and be a restoration of the coinage system that existed in the United States for the first eighty years.

Second. We should repeal all class legislation, and, above all, we should repeal the unconstitutional McKinley bill, which illegally takes from the people millions of dollars annually as taxes to the Federal Government, and many millions more as tribute to rich manufacturers, for which the people receive no consideration.

Third. We should impose a graduated income tax upon the millionaires of the country, and thus force the wealth they possess to bear with the common people the burdens of the Government. Let the banking law be so amended as to force the bankers to issue in currency the full face value of their bonds on deposit. This would increase the currency from eighteen to twenty million dollars, which would go at once into the hands of the people and relieve their present pressing necessities.

Fourth. The law in favor of national banks, imposing a 10 per cent tax on other circulating currency, should be repealed at once, and thus destroy the monopoly the national banks now have as to our currency and enable the States upon proper security and under proper regulations to issue a currency which will supply the demands of the people of the several States.

The passage of any one of these acts will not bring complete relief to the people, but the passage of all of them will relieve them; and I, for one, say that it is our duty to stay here until this legislation is accomplished. When it is done we will turn our eyes back to the people and find them prosperous, happy, and contented.

So long as I represent my people here there is no power above, below, or here that can drive me from these positions or into breaking a single pledge or promise that I made to them.

Others can do as they like and answer to their constituents for their action, to whom they alone are responsible. [Applause.]

Mr. BLAND. Mr. Speaker, I would like to have printed in the RECORD a communication from the Director of the Mint showing the amount of standard silver that a dollar would contain at the different ratios proposed in these amendments.

There was no objection.

The communication is as follows:

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., August 14, 1893.

To the Hon. DIRECTOR OF THE MINT:

Please give me the number of grains of standard silver in the dollar at the ratios of 17, 18, 19 and 20 to 1, respectively, and oblige,

Yours, etc.,

R. P. BLAND.

BUREAU OF THE MINT, *August 14, 1893.*

Ratio 1 to 17: Standard grains in a silver dollar, 438.60.
Ratio 1 to 18: Standard grains in a silver dollar, 464.40.
Ratio 1 to 19: Standard grains in a silver dollar, 490.20.
Ratio 1 to 20: Standard grains in a silver dollar, 516.00.

R. E. PRESTON, *Acting Director Mint.*

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted to Mr. SCHERMERHORN, for one week, on account of important business.

And then, pursuant to the special order (at 5 o'clock and 1 minute p. m.) the House adjourned until to-morrow at 11 o'clock a. m.

SENATE.

WEDNESDAY, *August 16, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

Mr. VOORHEES presented a petition of citizens of Noblesville, Ind., and a petition of the Local Trades Labor Council of Fort Wayne, Ind., praying for such financial legislation as will secure bimetallism; which were referred to the Committee on Finance.

Mr. VOORHEES. I present a petition of a number of citizens of Cass County, Ind., praying for relief against the manifold iniquities of the present civil service administration, a prayer in which I heartily concur. I move that the petition be referred to the Committee on Civil Service and Retrenchment.

The motion was agreed to.

Mr. PEFFER presented a petition of the Farmers' Alliance of Franklin County, Kans., praying for the passage of a free-coinage bill, and the repeal of the so-called Sherman silver law; which was referred to the Committee on Finance.

He also presented the memorial of J. M. C. Miller and other citizens of Hillsdale, Oregon, and the memorial of L. G. Wood and other citizens of Marshall County, Minn., remonstrating against the repeal of the so-called Sherman silver law, unless legislation be enacted to fully remonetize silver; which were referred to the Committee on Finance.

Mr. SHERMAN presented a petition of the Hardware Jobbers' Association of Cleveland, Ohio, praying for the repeal of the so-called Sherman silver law and for a short session of the present Congress; which was referred to the Committee on Finance.

He also presented a petition of the old soldiers of Senecaville, Ohio, praying that the record of three thousand soldiers taken promiscuously from the pension rolls, be examined by a committee of two members of the Grand Army of the Republic and three citizens, and that where fraud is discovered the pensioner be dropped, and that the records of all such soldiers be published; which was referred to the Committee on Pensions.

Mr. McMILLAN presented a petition of sundry citizens of Elyria, Ohio, praying for the enactment of legislation to investigate the subject of the desirability of legislative action looking to the improvement of country roads; which was referred to the Committee on Agriculture and Forestry.

Mr. VILAS presented a large number of petitions from members of the Hat Trade Credit Associations throughout the United States, manufacturers of and wholesale dealers in hats, praying for the immediate repeal of the silver-purchasing clause of the Sherman law; which were referred to the Committee on Finance.

Mr. PASCO presented a petition of the Board of Trade of Tampa, Fla., praying that an appropriation be made for the deepening of the waterway from Tampa to the Gulf of Mexico; which was referred to the Committee on Commerce.

BILLS INTRODUCED.

Mr. FAULKNER introduced a bill (S. 455) to authorize the Secretary of War to cause to be investigated and to provide for the payment of all claims for the use and occupation of church, college, and school buildings for Government purposes by the United States military authorities and the value of any such buildings destroyed during such occupation by the United States, and all claims for repairs to any such buildings and the furniture of same rendered necessary by such occupation by the United States Army; which was read twice by its title, and referred to the Committee on Claims.

Mr. DUBOIS introduced a bill (S. 456) for the relief of William H. Rhett; which was read twice by its title, and referred to the Committee on Claims.

Mr. TELLER introduced a bill (S. 457) authorizing certain Cherokee allottees or claimants to purchase certain tracts held and claimed by them; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. WHITE of California introduced a bill (S. 458) for the relief of Maurice G. Griffith; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 459) for the relief of B. F. Myres; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 460) granting to the State of California 5 per cent of the net proceeds of the cash sales of public lands in said State; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. KYLE introduced a bill (S. 461) to provide for the time and place of holding the terms of the United States circuit and district courts in the State of South Dakota; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. MANDERSON. I introduce by request two bills that have relation to the present financial condition, which I ask be read by their titles, and referred to the Committee on Finance. I desire simply to say that I send with the bills to the committee accompanying letters from a gentleman of high standing in financial circles, and I think the bills are well worthy of their very careful consideration in connection with the financial question.

The bill (S. 462) directing the purchase of silver bullion and the issue of Treasury notes therefor, for the appointment of a mint commission, and for other purposes, was read twice by its title, and, with the accompanying paper, referred to the Committee on Finance.

The bill (S. 484) providing for the issuance of clearing-house certificates by clearing-house associations of central reserve cities, and the purchase thereof by the Secretary of the Treasury, the issue of Treasury notes, their redemption, and for other purposes, was read twice by its title, and, with the accompanying paper, referred to the Committee on Finance.

Mr. MANDERSON introduced a bill (S. 463) to reimburse the State of Nebraska the expenses incurred by that State in repelling a threatened invasion and raid by the Sioux in 1890–'91; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 464) for the issue of ordnance stores and supplies to the State of Nebraska to replace similar stores destroyed by fire; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 465) for the relief of Thomas Fletcher Foley, alias Thomas Fletcher; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 466) for the retirement of John Tempany, veterinary surgeon, Ninth Cavalry, United States Army; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 467) for the relief of Brig. Gen. John R. Brooke, United States Army; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 468) to remove the charge of desertion standing against John W. Wacker; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 469) for the relief of Adolph von Haake; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 470) for the relief of George H. Jewett, of Arlington, Washington County, Nebr.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 471) to relieve John Friedlin from the charge of desertion; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 472) for the relief of William W. Lowe; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 473) to remove the charge of desertion from the military record of Jeremiah L. Daly; which was read twice by its title, and referred to the Committee on Military Affairs.

He also introduced a bill (S. 474) for the relief of Wells C. McCool; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

He also introduced a bill (S. 475) for the relief of John Little and Hobart Williams, of Omaha, Nebr.; which was read twice by its title, and, with the accompany papers, referred to the Committee on Indian Affairs.

He also introduced a bill (S. 476) for the relief of John Palmier, of Pine Ridge, Shannon County, S. Dak.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Indian Affairs.

He also introduced a bill (S. 477) extending relief to Indian citizens, and for other purposes; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Indian Affairs.

He also introduced a bill (S. 478) to increase the pension of Lila L. Egbert, widow of the late Capt. Augustus R. Egbert, United States Army; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 479) to increase the pension of Isabella Morrow, widow of the late Bvt. Col. Henry A. Morrow, United States Army; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 480) for the relief of Theodore L. Van Doren; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 481) for the relief of A. H. Raynolds; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 482) to make payment to Samuel J. Haynes of money erroneously and by mistake paid on his homestead entry; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 843) to establish postal savings banks, and to encourage small savings; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. PEFFER. I introduce two bills by request. I will state to the Senate that I present them in the form that they came to me. The grammar is not very good, and in some respects I do not agree with the provisions of either of the bills, but they have been sent to me in this form, and it is proper, I think, that they should be cared for, and referred to the Committee on Finance.

The bill (S. 485) to authorize the purchase of gold and silver bullion and to pay for the same in legal-tender paper was read twice by its title, and referred to the Committee on Finance.

The bill (S. 486) to authorize the issue of $600 of money, and for other purposes, was read twice by its title, and referred to to the Committee on Finance.

Mr. DAVIS (by request) introduced a bill (S. 487) for the relief of the widow and heirs of Samuel Cramer; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. PERKINS introduced a bill (S. 488) providing for a naval training station on the Pacific coast; which was read twice by its title, and referred to the Committee on Naval Affairs.

He also introduced a bill (S. 489) for the relief of Mary A. Swift; which was read twice by its title, and referred to the Committee on Foreign Relations.

He also introduced a bill (S. 490) for the relief of Ames & Detrick, of San Francisco, in the State of California; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. CHANDLER introduced a bill (S. 491) granting a pension to Alice K. Potter, widow of Gen. Joseph Potter, deceased; which was read twice by its title, and referred to the Committee on Pensions.

Mr. FRYE introduced a bill (S. 492) for the relief of F. F. White; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 493) to provide for the punishment of offenses on the high seas; which was read twice by its title, and referred to the Committee on the Judiciary.

He also introduced a bill (S. 494) to amend an act entitled "An act to aid in the construction of a railroad and telegraph line from the Missouri River to the Pacific Ocean, and to secure the Government the use of the same for postal, military, and other purposes," approved July 1, 1862; also to amend an act approved July 2, 1864, and also an act approved May 7, 1878, both in amendment of said first-mentioned act; and to provide for a settlement of claims growing out of the issue of bonds to aid in the construction of certain of the railroads, and to secure to the United States payment of all indebtedness of certain of the companies, therein mentioned; which was read twice by its title, and referred to the Committee on Pacific Railroads.

He also introduced a bill (S. 495) to establish a marine board for the advancement of the interests of the merchant marine; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 496) admitting to American registry vessels built in the United States and owned by citizens thereof residing abroad, and for other purposes; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 497) to amend "An act to amend section 4400, of Title LII, of the Revised States of the United States, concerning the regulation of steam vessels," approved August 7, 1882; and also to amend section 4414, Title LII, of the Revised Statutes of the United States, "Regulation of steam vessels;" which was read twice by its title, and referred to the Committee on Commerce.

Mr. VOORHEES introduced a bill (S. 498) for the payment of Sewell Coulson for legal services; which was read twice by its title, and referred to the Committee on Claims.

Mr. HALE introduced a bill (S. 499) to provide for the adjustment and payment of the claim of Thomas Rhys Smith for work done and materials furnished for the breakwater at Bar Harbor, Me.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. DANIEL (by request) introduced a bill (S. 500) to amend an act entitled "An act to incorporate the Washington and Arlington Railway Company of the District of Columbia;" which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. SHERMAN introduced a bill (S. 501) granting a pension to John P. Biehn; which was read twice by its title, and referred to the Committee on Pensions.

He also introduced a bill (S. 502) for the relief of John A. Lynch; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

Mr. HARRIS introduced a bill (S. 503) for the relief of Mary Ellen Abkinson, administratrix of the estate of Richard Abkinson, deceased; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Claims.

Mr. McPHERSON introduced a bill (S. 504) for the relief of the Berdan Firearms Manufacturing Company; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 505) for the relief of the New York, Lake Erie and Western Railroad Company; which was read twice by its title, and referred to the Committee on Post-Offices and Post-Roads.

Mr. VOORHEES introduced a joint resolution (S. R. 14) providing for the purchase of historical manuscripts relating to the District of Columbia, and to the public buildings, public institutions, and memorial works of art in said District; which was read twice by its title, and referred to the Committee on the Library.

Mr. CALL introduced a joint resolution (S. R. 15) providing for a survey of the harbor at Canaveral, Florida; which was read twice by its title.

Mr. CALL. In connection with the joint resolution I present a letter of the Secretary of War and a memorial of the Legislature of Florida, etc. I move that the joint resolution be referred, with the accompanying papers, to the Commtitee on Commerce.

The motion was agreed to.

PARITY OF GOLD AND SILVER.

Mr. MORRILL. I expect to be compelled to leave the Senate some day next week, and I therefore shall ask on Monday next, immediately after the morning business, the privilege of addressing the Senate on the joint resolution of the Senator from Missouri, [Mr. VEST]—very briefly, however.

ERNEST ULRICH.

Mr. COCKRELL. On the 8th instant I introduced a bill (S. 188) for the relief of Ernest Ulrich, a bill which had been reported favorably in the Senate in the last Congress and passed by this body. I at that time forgot the fact that the relief prayed for in the bill had already been secured by me through an order of the War Department. I therefore ask that the Committee on Military Affairs be discharged from the further consideration of the bill, and that it be indefinitely postponed.

The VICE-PRESIDENT. Without objection it will be so ordered.

PAYMENTS TO CHICKASAWS AND CHOCTAWS.

Mr. PLATT. I submit a resolution calling on a Department for information, and ask for its present consideration.

The resolution was read, as follows:

Resolved, That the Secretary of the Treasury be directed to transmit to the Senate a statement showing the amounts paid out under the appropriation

of March 3, 1891, for the benefit of the Chickasaw and Choctaw nations of Indians, giving copies of the warrants for the payment, copies of the drafts drawn, and of the records of the deposits made in pursuance of said warrants with the Treasurer of the United States or any assistant treasurer, and, in addition, in case the sums paid remained either as gross sums or in subdivisions in the hand of said Treasurer or any assistant treasurer or any depository of the United States, and were subsequently drawn by checks, or drafts, or orders issued by the Chickasaw or Choctaw nations, or the treasurers or any agents thereof; also giving copies of said checks, drafts, or orders, and, further, giving all other information within the possession of the Treasury Department, showing what persons, either immediately or ultimately, received said amounts paid out or any portion thereof.

Mr. JONES of Arkansas. Let the resolution lie over that I may have an opportunity to examine it.

The VICE-PRESIDENT. The resolution will go over under the rule.

THE MALTBY BUILDING.

Mr. QUAY. I submit the following resolution, the immediate consideration of which I ask:

Resolved, That the Architect of the Capitol be directed forthwith to make thorough examination of the Government property known as the Maltby Building, and to report whether or not the structure is secure and may be occupied with safety to life and property.

I will state in explanation that facts were developed at a meeting of the Committee on Public Buildings and Grounds this morning which satisfy me that the resolution should be adopted.

The resolution was considered by unanimous consent and agreed to.

NATIONAL PARK NEAR FLORENCE, S. C.

Mr. VEST. I ask leave to submit two reports from the Committee on Public Buildings and Grounds.

The VICE-PRESIDENT. The reports will be received.

Mr. VEST. I am directed by the Committee on Public Buildings and Grounds, to whom was referred the bill (S. 274) making appropriation for the establishment of a national park near Florence, S. C., to ask to be discharged from its further consideration, and that it be referred to the Committee on Public Lands. It was sent by mistake to our committee.

Mr. BUTLER. I ask that the bill, which I had the honor to introduce, be referred to the Committee on Military Affairs.

Mr. VEST. There is no objection to that reference.

The VICE-PRESIDENT. It is so ordered, in the absence of objection.

HALL OF RECORDS.

Mr. VEST. I am instructed by the Committee on Public Buildings and Grounds, to whom was referred the bill (S. 22) making appropriations for the purchase of ground, and the erection thereon, in the city of Washington, D. C., of a building to be used as a hall of records, to report it favorably with amendments, and to ask for its immediate consideration.

A bill similar to this has passed the Senate three times unanimously, but it has never been acted upon for some reasons in the coördinate branch of the National Legislature. A great exigency, an immediate exigency, has arisen for the construction of a hall of records. The great disaster which occurred in the city of Washington during the adjournment of Congress called public attention very earnestly to this question. Since I have been made chairman of the Committee on Public Buildings and Grounds I have examined personally the buildings which are rented by the Government in the city of Washington. Among them is the Maltby Building, purchased and now occupied by the Senate. I discovered, as Senators will see, that public documents are piled up with such enormous weight upon the first floor of that building as to be now virtually pulling it apart.

It was constructed, as all of us know, for a hotel, and bought from a lady who had received the property from her husband. It was never intended for a warehouse. The officers of the Senate were notified at the time by myself and the Senator from Vermont [Mr. MORRILL], who had a great deal to do with the purchase, that it must not be used as a warehouse. Instead of obeying those instructions they immediately proceeded to pile in books and documents until they have injured the building. I took the responsibility of having it repaired the best way possible during the adjournment; I was there a few days ago, and I find that the crack in the building has widened in the last six weeks on account of the enormous weight. The same thing happened at the Busch Building, just in the rear of the Post-Office Department, but the employés were taken out of that building immediately after the disaster to which I have alluded, because it was believed not to be safe. That building had some 40 tons put in it, although it was never intended for a warehouse, and any man of common intelligence and prudence would have seen it.

The folding room of the Senate and the Maltby Building together now have 1,184,000 books and documents belonging to Senators that are not taken out, and a large proportion of which I assume never will be taken out. We are continuing to print them, and we are continuing to deposit them; and there is no place for these documents. The departments are full. The Quartermaster-General's Department to-day is retarded in its business by the files of vouchers in claims of all sorts against the Government, and if a fire should occur there it would cost the Government millions of dollars.

Mr. HALE. Will the Senator, right in the line he is pursuing, let me ask him a question?

Mr. VEST. Certainly.

Mr. HALE. I think it must be a great surprise to the Senate to learn the facts stated by the Senator from Missouri with reference to the occupation of these buildings by documents, especially the Maltby Building. The Senator will remember that it was only a short time since we purchased that building, when almost new, and it was understood to be for the convenience of the Senate and House in additional committee rooms. I knew something, as the Senator did, at that time as to the intention of the use of that building. To me, for one, it is a great surprise and wonder that anybody has been allowed to fill up the building with books.

I wish to ask the Senator whether it has been filled mainly with books and documents from the Senate, or who has put them there; and further, if the officials about this building have not been able to find places for the storage of books in the large rooms in the terrace? I gave up long ago the idea that those could be utilized for committee rooms, although that was the original intention, but we were told that there was ample and immense space there for the lodgment and custody of books and documents. It would seem as if that has been abandoned, and that this building, taken for another purpose, has been occupied in this way. I should like the Senator to tell us who has done it.

Mr. VOORHEES. If the Senator from Missouri will allow me to answer, having reasonable intelligence on the subject, I will state that I do not think there are any books stored at the Maltby except in the basement. I do not think the building is considered a proper one to put heavy documents in higher than the basement. I do not think it is unsafe as a tenement building, but it would be as a warehouse. I do not think there is any space occupied by documents there that could be utilized for committee rooms. I think the building, as was designed, is in a shape to be used by committees for all that it is worth, and if there are documents there, and I believe some have been piled in there, they are on the ground floor and not in the way of committees.

Mr. VEST. True, they are on the lower floor; yet the weight is so tremendous that it is pulling down the upper stories and affecting the walls. The Sergeant-at-Arms informed our committee this morning that he proposed, in order to save the building from further injury, to remove a portion of those books, if not all of them. I went myself through the basement a few days ago, and found that it is almost impossible to work there.

Mr. McPHERSON. When the Senator speaks of the lower floor does he mean the basement floor or the one above that?

Mr. VEST. The basement floor, I suppose it would be termed, but not down upon the ground.

Mr. HARRIS. Not down in the cellar, but upon the floor above.

Mr. VEST. Yes, the basement floor, it might be termed. If any Senator will go to see it, no question can exist with him that this tremendous weight put upon this floor has injured the upper stories, especially the story immediately above. These books are constantly accumulating. They were put there by the Sergeant-at-Arms, I will say to the Senator from Maine, the predecessor of the gentleman who now holds that position.

Mr. HALE. Did he need to put them there?

Mr. VEST. He could find no other place, I suppose, without renting a house. I will say to the Senator from Maine that the rooms in the annex to the Capitol to which he refers have been utilized as far as possible for storage.

Mr. HARRIS. May I ask the Senator from Missouri if these are books and documents of Senators, or books and documents of the Government?

Mr. VEST. They are books and documents of Senators. For instance, any Senator who will go there will see two or three thousand old maps of the public lands, etc., of the Government, Government publications, RECORDS of preceding Congresses, and the quota of documents issued to Senators, piled up there—all this old worthless débris which is accumulating with us session by session, costing hundreds and thousands of dollars both for printing and transportation.

Immediately after the Senate adjourns, the upper story, the second story, through which I go to my committee room on Public Buildings and Grounds, is piled up seven or eight feet high with bags of books, five to each Senator, making nearly five hundred of these bags. The question with every Senator is what to do with them.

I attacked this abuse four or five years ago, and immediately Senators arose in every part of this Chamber and said the people were crying for these documents like children cry for milk in the night, and they wanted them all, and here are 1,180,000 accumulating now which Senators do not go and get and send to anybody.

The stench from this folding room is terrible—I was about to say enough to produce pestilence. I would not live in it a day at any price. Let any Senator walk down there and open the door, and the old, fetid smell of decaying paper immediately meets him. It affects the whole Capitol. With all our improved sanitary arrangements here we are polluting the air all the time with this nuisance. The employés can scarcely get through the little narrow passages, and they have to climb over piles of books in order to get to those behind. I think Senators will be astonished to go there and find how many of their public documents are there now. There are but one or two Senators who have taken out the quota allowed them. The balance are accumulating day by day, and there is no place to work there.

The great necessity, however, is in the Executive Departments. There are books not needed for immediate reference, but invaluable for contingencies that may occur hereafter, vouchers of all sorts, piled up in the halls. The Patent Office has lately hired a building outside in order to store its valuable papers. The thing goes on from year to year.

Immediately after the great disaster which lately occurred here the newspapers were filled with inquiries as to what Congress had done; why did not Congress make some provision for these papers in order to prevent this terrible weight upon rented buildings never intended for warehouses.

I ask for the immediate consideration of the bill.

Mr. HOAR. Mr. President, I believe there are public libraries all over the country—I know that there are public libraries in the section of country where I live—who would receive all these public documents greedily. They seem to be a mass of dreary and desolate and effete matter—thought, I would say, if "matter" is not the proper word—but there are very few of the public documents of the United States, especially of those published within the last twenty years, which do not contain the result of somebody's hard work—hard work by a good brain, by an industrious man on some subject which has been at sometime very important, and is very likely to be important again. There are investigators all over the country who are studying these matters historically and scientifically, and it is more and more the fashion of our institutions of education, colleges, high schools, and advanced schools to have their pupils instructed, not in ancient or classical history, but in the living topics of the day, or topics which, at any rate, relate to the legislative history of their own country.

I believe if the Committee on Printing or some other committee would make arrangements for sending these documents to some central library in every State in the Union, with the direction that duplicates should be given to other libraries in their neighborhood, we should find in every State some institution that would undertake the office, and these records would be preserved and be accessible to students, and would be of very great importance and value.

Mr. MCPHERSON. In view of the statement which has been made by the Senator from Missouri [Mr. VEST], and with the swamping, if I may so speak, of the Ford Building, which happened here a few weeks ago, it seems to me, upon the strength of the notice given this morning by the chairman of the Committee on Public Buildings and Grounds, that there should not be one moment's delay in causing the books or documents referred to, to be removed from the Maltby Building. As I understand, they are now piled up on the basement floor; below the basement floor there is a subcellar, and that the placing of this weight upon an insecure foundation has resulted already in tearing the building apart.

If that be true, in order to escape another calamity such as the one which already disgraces us, I think the Committee on Public Buildings and Grounds should take it upon themselves and see that these documents are removed from the Maltby Building—not next week, not to-morrow, but to-day, now—and let us try to avoid further calamities of this character.

Mr. VEST. The Sergeant-at-Arms will attend to that immediately. He can take out enough of the books to remove any danger there is. What we need now is to get this legislation passed here, so as to pass it through the other House as soon as possible.

Mr. HALE. I did not hear the bill read, and I do not know its scope; but I wish to ask the Senator from Missouri, who has great intelligence and knowledge upon this subject, whether he has not in view some scheme that will relieve this immense glut of books, documents, and papers in all the departments?

Mr. VEST. Mr. President——

Mr. BUTLER. If the Senator will allow me one moment, I have a resolution which I think will meet his inquiry in one particular, if he will allow me to have it read.

Mr. HALE. I was going to ask that it be read.

Mr. BUTLER. I do not know whether or not I have selected the proper official, but there ought to be something done. I present the resolution in pursuance of the suggestion made by the Senator from Massachusetts [Mr. HOAR]. I ask that it be reported.

The VICE-PRESIDENT. The resolution will be read.

The Secretary read as follows:

Resolved, That the Sergeant-at-Arms of the Senate be, and is hereby, directed to distribute to the public libraries in the United States all public documents found on hand and not claimed by Senators on the 15th day of September next.

Mr. HALE. My inquiry did not lead in that direction, but to what, I hope, is in the mind of the Senator from Missouri, as the chairman of the Committee on Public Buildings and Grounds, for some kind of a building or buildings, built in the firmest fashion possible, plain and unornamented, but roomy and safe, for books and documents that glut all the departments. Neither he nor I can go upon business to hardly any of the departments to-day without being obliged to pick our way through the corridors, which ought to be free and unvexed by a single pile of documents or papers. We can hardly go to the office of the head of a department, certainly not to the offices of any of the subordinates, without finding our way almost blocked. It is unsightly; it is unhealthy, and in some buildings it becomes dangerous.

I hope the Senator will characterize his chairmanship of this committee by giving the Senate an opportunity at an early day to provide for something that shall relieve this difficulty. I take some reproach to this side of the House that we have not done it before.

Mr. VEST. This bill, if enacted into a law, will relieve the difficulty in regard to the Executive Departments.

As to the folding room of the Senate, a bill is now being prepared, in fact I have already prepared it and have had the plans and specifications also prepared, for the erection of a folding room—a warehouse you might term it—for Senate documents upon the vacant ground adjoining the Maltby Building. We already own that ground, 35 feet front, and there is no edifice upon it. We can put up a building there which will last one hundred years, for all the purposes of the Senate, at a cost of $7,500. The building is to be very simple, and it will be strong and very capacious, 35 feet front by 92 feet deep; and such a building, a story and a half high, would give us all the room we need, and would be not only secure, but would relieve the Capitol.

Mr. HALE. And transfer the folding room to that building?

Mr. VEST. Yes; transfer the folding room and take all these documents out of the document room.

Mr. HALE. That would be an admirable thing to do.

Mr. VEST. I shall be prepared to submit that bill to the Senate to-morrow or next day. In the meantime this bill, which has passed the Senate three times already, is intended to relieve the Executive Departments from the very evils which the Senator has mentioned. Therefore I ask for its passage now.

The VICE-PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 12) making appropriations for the purchase of ground and the erection thereon, in the city of Washington, D. C., of a building to be used as a hall of records.

Mr. CALL. I wish to say a word. I have been at the Maltby Building, I think, every day—I have had a room there, when I was in the city—for the last two years, and I have never seen any accumulation of books on any floor of that building, except in the basement.

Mr. VEST. That is the floor where they are stored.

Mr. CALL. There is no subcellar there, as I understand the matter, nor am I aware of there being any damage to the building which was not done before its occupation by the Government. Perhaps the building may be unsafe. I do not pretend to say as to that; but I wish to say this much in justification of the late Sergeant-at-Arms.

Mr. VEST. Before that building was purchased, the Senator from Vermont [Mr. MORRILL], the Architect of the Capitol, and I went over it from basement to roof, examined every room very critically, and there was not one single flaw or defect in it. Every Senator who cares anything about it can go there now and see the cracks, which, as I say, were repaired partially during the recess, but are now in a worse condition than ever. It is beyond any sort of argument that this enormous mass upon the basement floor has caused that trouble.

Mr. HAWLEY. The pressure upon the foundation of the building is precisely the same, whether the books are stored in the second or the seventh story.

Mr. VEST. Of course.

Mr. McPHERSON. May I ask the Senator from Missouri if the bill now before the Senate is a copy of the bill we passed at the last session of Congress for the purpose of providing a hall of records?

Mr. VEST. Yes, sir; with some slight amendments it is the same bill that was recommended by the Secretary of the Treasury some years ago, and which has been recommended by the Departments at every session for the last seven or eight years. After we had a fire in the Quartermaster's Department—some six years ago, I think it was—which came very near destroying all the public documents there, a special message was sent in on this subject, and our committee then reported a bill which passed the Senate three times, but failed of action in the other House.

Mr. HALE. Let us have the bill read.

The VICE-PRESIDENT. The bill will be read.

The Secretary read the bill.

Mr. MANDERSON. As there is no copy of the bill within reach, I wish the Senator from Missouri would inform the Senate if the proposed building is to be fireproof, and whether it is so nominated in the bill?

Mr. VEST. That is the statement in the bill.

Mr. MANDERSON. I ask that that portion of the bill be read.

The Secretary read as follows:

That the sum of $300,000, or so much thereof as may be necessary, be, and the same is hereby, appropriated for the purchase of a site in the city of Washington, D. C., and the erection thereon of a brick and metal fireproof building, to be used for the safe-keeping of such records of the executive, legislative, and judicial departments as are not required in said departments for constant reference.

Mr. HALE. I do not want to hinder the passage of the bill, but I would suggest to the Senator from Missouri that I think he will find, before this important building is finished, that the sum of money proposed by the bill will be entirely inadequate. Unless the Senator has made an investigation which will satisfy him and me, I should doubt whether $100,000 would be enough for the land and $200,000 enough to erect upon it a suitable building.

Mr. VEST. If the Senator will permit me, the amount will be ample. I have the plans and specifications in my committee room, prepared by Gen. Meigs, the same gentleman who prepared the plans for the Pension building, and I think that $200,000 will be more than sufficient. The building will be a very simple one, and the plan is an admirable one.

Mr. HALE. Does the Senator think that suitable land in a convenient, central place can be got for $100,000?

Mr. VEST. I think we can find some ground already belonging to the Government. I think I know of a piece of ground that will be suitable.

Mr. HALE. Is that alternative provided in the bill?

Mr. VEST. Yes, by an amendment which I will ask the Secretary to read.

Mr. HALE. It seems to me that it ought to be. I hope this will turn out as the Senator believes, and that we shall be able to do it inside the amount proposed to be appropriated, but whether that be so or not, such a building should be erected.

Mr. BUTLER. We ought to make a beginning, at any rate.

Mr. VEST. All I can say is, that we have taken every possible precaution to ascertain what it will cost, and I think I am authorized in saying that $200,000 will be ample, and I hope that we can get a site without purchasing an inch of ground. I will say now, so far as I am concerned, that I think it ought to be the policy of the Government to use what ground we have before we purchase any more. I ask that the amendment be read.

The VICE-PRESIDENT. The bill is before the Senate as in Committee of the Whole, and the amendment reported by the Committee on Public Buildings and Grounds will be read.

The SECRETARY. In line 9, section 1, after the word "required," it is proposed to strike out "in said Departments," and insert "in the opinion of the heads of said Departments"; so as to read:

To be used for the safe-keeping of said records of the executive, legislative, and judicial departments as are not required, in the opinion of the heads of said departments, for constant reference.

The amendment was agreed to.

The next amendment reported by the Committee on Public Buildings and Grounds was to add to section 1:

Provided, That said building shall be erected upon ground owned now by the United States, if the Secretary of the Treasury, Secretary of War, and Secretary of State shall determine that a suitable site can be had upon Government ground, and agree upon the same.

Mr. HOAR. I think there is an etiquette about these matters which arranges the order in which these officers are named in legislation. The Secretary of State should be named first.

Mr. VEST. I have no objection to that.

Mr. HOAR. The order should be "the Secretary of State, Secretary of the Treasury, and Secretary of War."

Mr. VEST. That is the order of the Presidential succession, I know, but as this relates to a public building, and the Supervising Architect is an officer of the Treasury Department, we thought the Treasury should come first. If it was a matter of succession to the Presidency, I should agree with the Senator from Massachusetts.

The VICE-PRESIDENT. The amendment to the amendment will be stated.

The SECRETARY. It is proposed to amend the amendment so as to read "if the Secretary of State, Secretary of the Treasury, and Secretary of War shall determine."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. ALLISON. I desire to call the attention of the Senator from Missouri to the fact that there is Government ground adjacent to the present building occupied by the Department of Justice. I hope, however, that it will not be expected that this warehouse will be put upon that ground.

Mr. VEST. No, I had not thought of that location.

Mr. ALLISON. I do not know, myself, where there is suitable ground now owned by the Government for such a purpose. If the Senator has it in his mind I should be glad to have him indicate where the Government is in possession of suitable ground for this building.

Mr. VEST. The Government owns 24 acres of ground, known as the Garfield Park, which is not used as a park and never has been so used really. It is within about three blocks of the Capitol. Whether that can be utilized, in the opinion of these Cabinet officers, I will not undertake to say. There are other pieces of ground which I do not know that I can now identify exactly as to locality, nor would I undertake to say that they are large enough; but it seems to me that on the public ground owned here we might be able to find a site. That, however, is a question, of course, in the future, because these three Cabinet officers will have to determine it.

Mr. ALLISON. I mentioned it at this time for the reason that from the phraseology embraced in the amendment the Cabinet officers may feel that they are under some obligation to find public ground upon which to place the building.

Mr. VEST. There is nothing mandatory about that.

Mr. ALLISON. I understand, but I should like to put in at least a little protest against the use of the public ground which I have named for the purpose.

Mr. McPHERSON. I should like to ask the Senator from Missouri what possible objection there would be to locating a building of this kind on Judiciary Square, or upon the large number of acres of ground we have down in the southwest quarter of the city occupied by the Agricultural building, the Smithsonian, the Bureau of Engraving and Printing, and the Monument. It seems to me there could be no possible objection whatever to such a location. Inasmuch as the records stored are to be old records that will be but seldom used, proximity to the Capitol or to the Executive Departments would be of no particular consequence. With the hundreds of acres of land the Government owns in the city of Washington, without encroaching at all upon any of the parks injuriously, certainly there could be a location found.

Mr. CALL. Mr. President, for one I am unwilling to vote for any encroachment upon the public grounds of the Smithsonian Institution or the Bureau of Engraving and Printing. The comfort and the beauty of this city depend on the preservation of the various parks, and as this country increases, if we are to put upon the open spaces all the public buildings that are required they will soon be entirely disfigured and rendered unfit for the uses to which they are now subjected.

It seems to me that this appropriation ought to be made in connection with the building for the Public Printer; that when that building is provided for, arrangements should be made to include in it a proper place for the safe-keeping of the old records and the storage of documents. That would seem to me the economical and just arrangement, instead of an appropriation of $300,000 for an inferior building and an inferior site.

The VICE-PRESIDENT. The last amendment proposed by the committee will be stated.

The SECRETARY. In line 1, section 6, after the word "site," insert the words "owned or;" so as to make the section read:

That the building to be erected upon the site owned or so acquired by the Government shall be constructed under the supervision and direction of the Supervising Architect of the Treasury Department, on plans and specifications approved by the Secretary of the Treasury, the Secretary of War, and the Secretary of State.

The amendment was agreed to.

Mr. VILAS. Mr. President, I take this opportunity to sug-

gest whether it would not be well for Congress to adopt as a policy in reference to public buildings in this city, and especially buildings of this nature, the selection of sites on the south side of the Avenue. Such a policy has already been indicated by the selection of a site there for the city post-office. It is obvious that the Government must continue to buy more or less ground during coming years for public buildings, and if sites were selected on the south side of the Avenue it need not be long probably before the greater part of the ground lying between it and the public grounds on which the Smithsonian Institution, the Agricultural Department, the Bureau of Engraving and Printing, the Monument and the park around it, could be embraced by Government purchases, and the whole property lying to the south of the avenue for some distance be made available for a Government reservation, to the great addition of beauty, it seems to me, and to a change in its uses very much in the public interest.

I therefore venture to submit for the consideration of the Senate an amendment. I move that after the words "District of Columbia," in line 6, where it is stated that a site is to be purchased in the city of Washington, D. C., there be inserted the words:

Situate on the south side of Pennsylvania avenue, between First and Fifteenth streets.

Mr. VEST. I am in sympathy with the idea that the public buildings shall hereafter be placed upon the south side of the Avenue. I was upon the select committee of the two Committees on Public Buildings and Grounds of the House and Senate that selected the present site of the city post-office, and I expressed then, in debate here, my opinion upon the subject.

I urged the selection of that site, and have never regretted my action in the matter. But I hope that question will not be injected upon the pending bill. If the amendment of the Senator from Wisconsin be adopted, confining the selection of the site to the limit named, the immediate effect would be to put up the price of the available ground there to such an extent that it would cost the Government a very large amount of money. My experience upon the Committee on Public Buildings and Grounds confirms me in one thing, and that is that the smallest possible encouragement should be given property holders to put up prices on the Government. The facility with which they charge enormous prices as soon as they know the Government wants a piece of ground is absolutely marvelous. Jonah's gourd is not a circumstance compared with the facility with which the real estate men in this city put up the price of ground on the Government of the United States.

I say to my friend from Wisconsin that at the proper time I shall unite with him as far as I can in the selection of a site south of the Avenue, but I would not put such a limitation in the bill. We have here the three Cabinet officers to select a site, and it seems to me that we ought to be able to rely upon their discretion in the matter. Therefore I ask him not to press the amendment now.

Mr. VILAS. I am not disposed to urge the amendment upon my own view against the judgment of the committee; but I will make one observation to the distinguished chairman of the committee. We never can purchase a piece of ground which is wanted by the Government in the city of Washington without encountering the particular greed that will seek to get as much as possible from the Government. I had that in view when I wrote the words which I have suggested as an amendment.

There is a space of ground lying between the entire public reservation and Pennsylvania avenue, from First to Fifteenth streets. As to which part of that this hall of records shall be located on entire discretion will be vested in the members of the Cabinet designated, a discretion, it seems to me, ample enough to prevent particular combination in respect to price; and they never can procure the ground or execute this policy without encountering this objection. It seems to me desirable that we should not, for fear of that objection, deprive ourselves of the excellence of the policy which seems to have the approbation of the Senator himself.

I will not insist upon the amendment if there is very strong feeling on the subject; but I think it ought to be adopted.

Mr. MILLS. I desire simply to ask the chairman of the Committee on Public Buildings and Grounds if his committee has ever considered the propriety of building along the Botanic Garden, fronting on Pennsylvania avenue?

Mr. VEST. Yes; I will say to the Senator from Texas that matter has been discussed in the committee, and we have always encountered opposition from the fact that it would deface the public reservation. I myself think there is not much in the objection. My friend from South Carolina [Mr. BUTLER] was just suggesting to me that a portion of that ground could be utilized with great benefit to the public.

Mr. MILLS. The business of the legislative department is becoming more and more intimate with the Executive Departments of the Government, and it is a long way for members of the legislative department to go to all the different sites of the Executive Departments all over this city. It seems to me it would be a wise thing to bring some of the public offices closer to the Capitol, and I think it would be a very good thing to put this public building on that reservation.

The VICE-PRESIDENT. Does the Chair understand the Senator from Wisconsin to withdraw his amendment?

Mr. VILAS. I withdraw the amendment, at the request of the chairman of the committee.

The VICE-PRESIDENT. The amendment is withdrawn. If there be no further amendment, as in Committee of the Whole, the bill will be reported to the Senate.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. BUTLER. I move that the resolution which I offered a few moments ago be referred to the Committee on Public Buildings and Grounds.

The motion was agreed to.

INCREASE OF NATIONAL-BANK CIRCULATION.

Mr. BERRY. If the morning business is concluded, I should like to call up the joint resolution introduced by the Senator from Missouri [Mr. VEST] on the subject of bimetallism.

M. VOORHEES. Will the Senator from Arkansas allow me to make an announcement?

Mr. BERRY. Certainly.

Mr. VOORHEES. I gave notice yesterday that I would call up to-day and ask the consideration of Senate bill 453, which I reported from the Committee on Finance, in regard to the issue of additional currency, but I have been appealed to by several Senators who want a little more time, and I in deference, and very proper deference, I think, to their wishes, give notice that the bill will go over until to-morrow. I shall not ask for its consideration to-day.

Mr. COCKRELL. I offer to that bill an amendment which I ask may be read.

The VICE-PRESIDENT. The proposed amendment will be read.

The SECRETARY. Add to the bill the following additional section:

SECTION —. That, upon the delivery and surrender of any of the United States bonds known as the funded loan of 1891, continued at 2 per cent interest and payable at the option of the United States by the holder and owner thereof to the Secretary of the Treasury, the Secretary of the Treasury shall receive, cancel, and destroy such bond or bonds, and shall issue and deliver in exchange and payment therefor an amount of United States legal-tender notes, commonly known as greenbacks, in the same form and words of said United States notes equal in amount to the face value of such bond or bonds with the accrued interest thereon.

The VICE-PRESIDENT. The amendment will be printed.

Mr. SHERMAN. As the amendment has been read, I wish to make one or two observations upon it now—not to make a speech, but to call the attention of the Senator from Missouri to the attitude——

Mr. BERRY. I was entitled to the floor and yielded to the Senator from Indiana to give a notice. I yield to the Senator from Ohio, however.

Mr. SHERMAN. I will yield to the Senator from Arkansas. I did not know he had the floor.

Mr. BERRY. I yield the floor to the Senator from Ohio.

Mr. SHERMAN. Oh, no; I will yield if the Senator from Arkansas has the floor. Go on.

Mr. BERRY. I have yielded the floor to the Senator from Ohio.

The VICE-PRESIDENT. The Senator from Arkansas yields to the Senator from Ohio.

Mr. SHERMAN. I simply wish to make one remark. As a matter of course we all have the same desire to not only relieve the people of the United States but the Government of the United States. I wish to call the attention of the Senator from Missouri to the effect of his amendment. It is a proposition on the part of the United States to pay a bond which is now no burden whatever to the United States, which draws interest at only 2 per cent, and which really can be met without any doubt of our ability to meet the interest; a trifling sum indeed. Now it is proposed by the amendment that any holder of those bonds may surrender them to the Government of the United States and the Government is to pay for them in its promissory notes. Those promissory notes, the very moment they are paid out to anybody, can be presented to the Government of the United States for payment in coin.

Besides that, it is an increase of the amount of Government notes outstanding. They must be new Government notes, new greenbacks. All those notes are in circulation. So we would be engaging in the unbusinesslike operation of paying off a bond

which is not pressing at all upon us, which is not due until we choose to pay it, and giving our notes for it, which may be presented at any time on a demand for gold, and complicate the very situation in which we are placed.

The President of the United States, in clear and forcible language, called attention to the fact that the Treasury notes issued under the act of 1890 were presented for redemption in gold, and that caused the first falling off of the reserve of $100,000,000. I think as a financial proposition it would be the most dangerous that could possibly be proposed. I know that a similar one has been made in the other House. The honorable gentleman who proposed it there is a very clever gentleman and a very good business man, but it is what no business man would do at any time under any circumstances, and what the United States ought not to do, especially at the present time. This is all I wish to say. I will let these remarks go with the amendment, which is to be considered hereafter.

Mr. COCKRELL. Will the Senator from Arkansas permit me to say a word?

Mr. BERRY. Certainly.

Mr. COCKRELL. The Senator from Ohio says no business man would pursue such a course. I say any honest business man who had his own solvency at heart would pursue exactly this course. A man would be a very poor business man who could float his indebtedness in a noninterest-bearing obligation and would prefer to float it in an interest-bearing obligation.

The Senator from Ohio says there is danger in issuing $25,000,000 of United States legal-tender notes to the credit of the United States, but there is no danger in allowing the national banks to issue from $17,000,000 to $25,000,000 of their money, not a legal tender in payment of debts, and paid interest upon the bonds, while they are loaning their money out at any rate of interest they can get.

This is no compulsory payment. It is no such proposition. We have heard so much of patriotism recently that I supposed the holders of the $25,000,000 of 2 per cent bonds, redeemable at the pleasure of the United States at any time, and drawing 2 per cent interest, and payable in September, 1891, would rush to the Treasury of the United States and in a patriotic spirit would surrender those bonds to the Government of the United States and take out in exchange United States legal-tender notes, and that they would do it gladly, as the same men are paying 3 per cent premium on legal-tender notes and even silver certificates in the city of New York.

It is said that we want more money, an increase of circulation; but the moment we offer to increase the circulation the distinguished gold monometallist from Ohio, representing the banking interests of this country, comes to the front to repudiate and reject the proposition. Why shall the national banks be allowed to increase the paper circulation of the United States $17,000,000 to $25,000,000, and yet the holder of a United States bond bearing 2 per cent interest not be permitted in his patriotic spirit to help a distressed country and come to the Treasury and give up his bond and accept United States legal-tender notes? Oh, no; it would not be business! No, it is not businesslike for a holder of a bond bearing 2 per cent interest to surrender it and take a legal-tender note, and yet it would be business to allow the national banks to take out dollar for dollar on every one of their bonds and receive the interest on them, and loan out the whole amount at 6, 10, 15, or 20 per cent. That is patriotism, and that is honesty, and that is business, according to the Senator from Ohio!

Mr. SHERMAN. The Senator from Missouri does not seem to appreciate the fact that when a bank takes out its notes the bank promises to pay those notes.

Mr. COCKRELL. Is that promise any better than the promise of the United States?

Mr. SHERMAN. No; but it is a burden upon the bank, and not a burden upon the United States.

Mr. COCKRELL. Is not the United States able to bear a burden of $25,000,000 when it bore a burden of $2,844,000,000 in its depressed and downtrodden condition in 1865, and has removed that burden and stands unequaled by any nation on God's green earth in its financial condition and prosperity?

Mr. SHERMAN. There is no doubt of all that. The United Stated is good for every dollar that it owes; but is it wise for the United States now to raise the question of issuing more greenbacks for bonds that it need not pay except at its pleasure, bearing but 2 per cent interest? When the banks, on the other hand, come forward and deposit the bonds, they assume the burden of payment; they are bound to pay, and they file security in the Treasury to pay. They therefore assume a burden equal to the advantage they gain by having the notes to issue.

Mr. COCKRELL. A wonderful burden! The United States has to be backed by five individual citizens incorporated as a national bank to relieve it from the burden of paying these notes. Oh, Mr. President, what ridiculous stuff that is! The Senator from Ohio knows as well as he knows anything that nobody cares whether a national bank is worth a dollar or a million dollars. Every man, woman, and child in the United States will take the note of a defunct national bank that is not able to pay 1 per cent upon its deposits just as quick as they will take the note of the best United States bank in the world. Nobody pays any earthly attention to the indorsement of the United States of America by a national bank. The ridiculous idea that before we can float money in this country we must have the indorsement of a national bank beats anything ever heard before in a legislative body.

Mr. MITCHELL of Oregon. May I ask my friend from Missouri a question?

Mr. COCKRELL. Certainly.

Mr. MITCHELL of Oregon. I believe there are only about $22,000,000 of those bonds.

Mr. COCKRELL. Twenty-five million dollars.

Mr. MITCHELL of Oregon. Is it not the fact that the greater portion of those bonds are now on deposit by banks in order to secure circulation?

Mr. COCKRELL. Twenty-one millions of them—a little over.

Mr. MITCHELL of Oregon. Does the Senator think that if his amendment should be adopted any considerable portion of those bonds would be surrendered for notes?

Mr. COCKRELL. I think every one of them would be surrendered.

Mr. MITCHELL of Oregon. Those that are on deposit now to secure bank circulation?

Mr. COCKRELL. I suppose when we shall have adopted this amendment we will put another clause in another part of the bill providing that no national bank shall get any circulation on these bonds.

Mr. MITCHELL of Oregon. That clause is not in the bill now.

Mr. COCKRELL. It will be in before we get through with it.

Mr. McPHERSON. Will the Senator from Missouri yield to me?

Mr. COCKRELL. Certainly. It will be in there. I have guarded all those points.

Mr. McPHERSON. I wish to call the attention of the Senator from Missouri, and the Chair, and the Senator from Ohio, and all other Senators to the fact that the chairman of the Finance Committee asked unanimous consent that the bill to which this is offered as an amendment should go over until to-morrow morning. Really there seems to be nothing before the Senate except the formal offering of the amendment, which is to be considered when the bill comes up.

Mr. COCKRELL. I thank the Senator from New Jersey for explaining what everyone of us knew.

Mr. PEFFER and Mr. ALDRICH addressed the Chair.

Mr. COCKRELL. I yield first to the Senator from Kansas [Mr. PEFFER], and then I will yield to the Senator from Rhode Island [Mr. ALDRICH].

Mr. PEFFER. I should like to ask the Senator from Missouri whether there is any law now prohibiting a surrender of bonds upon the terms provided in his amendment; whether the Secretary of the Treasury would not be permitted now to pay for any of the outstanding bonds of 1891 at their face in Treasury notes, and if the owners of the bonds ever requested it?

Mr. COCKRELL. I do not understand that there is any law authorizing the Secretary of the Treasury to issue and deliver in payment and exchange for any of the United States bonds now outstanding additional United States legal-tender notes.

Mr. ALDRICH. Will the Senator from Missouri now allow me to ask him a question?

The PRESIDING OFFICER (Mr. JONES of Arkansas in the chair). Does the Senator from Missouri yield to the Senator from Rhode Island?

Mr. COCKRELL. Certainly, with pleasure.

Mr. ALDRICH. I understand the Senator from Missouri to say that in his opinion the credit and resources of the national banks add nothing in value to the notes of the United States. I should like to ask him in that connection whether a deposit of 412½ grains of silver, or any other amount of silver, in his opinion, adds to the value and currency of notes of the United States?

Mr. COCKRELL. We will discuss that when the silver question comes up.

Mr. ALDRICH. It seems to me it is up now.

Mr. COCKRELL. We are now discussing the proposition whether we shall allow the national banks to take out dollar for dollar of their bonds and draw interest upon the bonds, and then

loan the money out at from 6 to 25 per cent, and get interest from the taxpayers en masse—interest on their bonds and then interest from the persons to whom they have loaned their notes. We are now providing an amendment which will authorize anybody who has one of these $25,000,000 of bonds to take it and voluntarily surrender it to the Secretary of the Treasury, and receive in exchange an amount of the United States legal tender notes equal to the face value of the bond, and the interest thereon up to that date.

Mr. GRAY. Will the Senator from Missouri yield to me a moment for a question?

Mr. COCKRELL. Certainly.

Mr. GRAY. I understand that the Senator from Missouri objects to the bill reported by the chairman of the Finance Committee on the ground that the notes which are received by the banks upon a deposit of the United States bonds can only get into circulation by being loaned by the banks at some rate of interest to borrowers who need the money. That is the point of his objection?

Mr. COCKRELL. I am not discussing that proposition at all. I am——

Mr. GRAY. Am I misstating the Senator's position?

Mr. COCKRELL. No; I am not objecting on that ground, because I am not discussing that proposition; but whatever the proposition is, I want individuals to have the same rights that banks are to have.

Mr. GRAY. Very well; then I think I am not misstating the Senator's position that he objects to these notes going to banks, because after the banks have deposited United States bonds and received this currency they can loan it at some rate of interest to the borrowers who need it. He much prefers——

Mr. COCKRELL. Not at all. Do not state a proposition and then argue against me on a proposition I have never stated.

Mr. GRAY. Then that is not the Senator's position?

Mr. COCKRELL. I am not saying a word about that.

Mr. GRAY. Then the Senator has been very much misunderstood by those who are around him.

Mr. COCKRELL. I say this bill proposes to do that. Now, I say while that is being done let us do something else.

Mr. GRAY. Very well. Now I was coming——

Mr. COCKRELL. That is the proposition. I am not making it as an argument against the bill, but I am giving it as a reason why something more should be done. That is the point.

Mr. GRAY. If the Senator will allow me, when he has been courteous enough to yield——

Mr. COCKRELL. Certainly.

Mr. GRAY. Then the use of the English language, in the use of which the Senator from Missouri is justly distinguished for perspicacity and clearness, has failed him this time, because not only I, but those who are around me, understood him to object to the fairness of this proposition, and to contrast it with the justice and equity of another proposition which he proposes by way of amendment, that everyone who has United States bonds shall be allowed to take them to the Treasury and receive United States legal-tender demand notes therefor.

Now, I wish to ask the Senator if, when the poor, honest farmer of Missouri—I will say of Missouri, for that condition of things certainly does not exist in my own State or in any other farming State with which I am familiar; I presume it must exist in Missouri from the argument of the Senator—when the honest farmer of Missouri, who is struggling with these hard times, goes to his hair-covered trunk or his tin box and takes out from his pile of United States bonds a certain number which he is willing to change into currency, and goes to the Treasury to get it, will he part with that currency to the borrower who needs it without receiving interest therefor? I ask the Senator whether, if those who are so favored, this favored class who are so fortunate in these times as to have United States bonds, change them for currency, there is any other mode known under the sun by which that currency can get into circulation except by being borrowed from the men who receive it, and, we will presume, unless human nature is entirely changed, upon a contract to pay interest therefor?

If that is the case, how is the burden of the masses of the people who need the money, the borrowers who are now suffering because they can not borrow money, to be lightened by the alternate proposition of the Senator from Missouri? I do not mean that that is the only objection to his amendment, but I ask now on his own statement if there is to be any betterment of the condition of the masses of the people by it?

Mr. COCKRELL. This is a proposition not about United States bonds in general, but $25,364,500 of bonds known as the funded loan of 1891, payable with interest at that time at 4½ per cent. The money not being in the Treasury to redeem them, they were continued at the option of the Government at 2 per cent interest. I do not suppose any farmer has one of them. Nobody was ever so silly as to think the farmers had them We know exactly where they are.

Mr. GRAY. How is that going to help the farmer, then?

Mr. COCKRELL. We will see whether it will help the farmer or not.

I know where the bonds are. I was not disposed to discuss that point, because I supposed that the national banks in their patriotism and devotion to the best interests of this great country would rush with alacrity to our Treasury and surrender those bonds and take out legal-tender notes. They are demanding the right to issue additional money because there is not money enough in the country. We propose to give them that right and we ought to give them an additional right, whether they ask for it or not. We ought to give them $20,000,000 of United States legal-tender notes in lieu of those bonds. Then we will discuss the other propositions about the bonds and the interest.

Now, where is there any inequality in this proposition? Where is there any injustice in it? Why should not the banks be allowed an opportunity to display to the country their patriotism and their devotion to its best interests? Why should they not be given an opportunity to show their anxiety to alleviate the country from its distressing and abject condition and to put into the currency of the country an additional flow of pure, genuine blood that will give it strength and vigor and throw off this nightmare? Why should they not do it? I supposed that the friends of the national banks would come tumbling upon each other, heels over head, to vote for this proposition. I never dreamed that anybody would oppose it. I thought I had accidentally discovered what would be a wonderful benefit to them, and I confess that I am astonished when the friend and patron of the national banks, the Senator from Ohio [Mr. SHERMAN], comes in here and offers opposition to it, and my good friend from Delaware [Mr. GRAY] criticises it, and my friend from Rhode Island [Mr. ALDRICH]; I am astonished. I had hoped and expected that the very moment I had it read (and I had it read simply that my friends might see it and be prepared) they would rush to its defense. I am mortified to find that it meets with such resistance.

Mr. GRAY. Will the Senator allow me to ask him a question?

Mr. COCKRELL. Certainly.

Mr. GRAY. Where does the Senator get the information that the national banks are holding a large amount of these bonds quietly in their vaults without using them for obtaining currency? I ask the question, not in any sense to make an assertion in the face of his superior information, but I think I know that when a United States bank wants to have a circulation or to increase its circulation it goes into the market and buys United States bonds and deposits them in the Treasury. It does not take from a hoarded supply of bonds that it keeps on hand. If you had a United States bank to-day that had either started or had been in operation and discontinued its currency and wanted to resume it, you would find it in the market bidding for United States bonds, in which its circulation would be held.

Mr. COCKRELL. Oh, no. If the Senator will spare the time to read the report of the Comptroller of the Currency for 1892 and go over its tables and analyze the elements of national banks and of banking institutions in this country, he will find out exactly the figures I have given. The national banks have them. They have not issued dollar for dollar, nor 90 per cent even. They have not issued the paper money that they are entitled to issue. I have not made an exact calculation, but it is a considerable amount that they have not issued. They have got more bonds than they have 90 per cent of circulation—largely more. I supposed this would be a golden opportunity for the banks to show their patriotism. I confess that I am amazed that any friend of the national-banking system should come in here with any opposition to my amendment. It gives them cash money better than gold, money that is good the world over, United States legal-tender notes, a legal tender for all debts, public and private, throughout the length and breadth of the Unites States, and receivable for all public dues and demands.

But, Mr. President, I did not propose to enter into this discussion. The Senator from Ohio provoked it, and I had to say a few words. When the measure comes up I shall hope then, when the Senator from Delaware, the Senator from Rhode Island, and the Senator from Ohio shall have calmed down and examined it and seen the patriotism in it, that they will come to its rescue and it will unanimously pass to-morrow.

Mr. GRAY. I think the suggestion of the Senator from Missouri to calm down is always one that ought to be heeded, but if he will allow me, I ask him again for information (and I have no doubt he has studied the report to which he has referred with his usual assiduity) whether he has included in the number of bonds held by United States banks upon which no currency has been issued and owned by them those bonds that are held by them as security for the deposits of the United States?

Mr. COCKRELL. Oh, yes, that is all included.

Mr. GRAY. That accounts for a very large proportion, if not all. They are required by law to hold bonds as security for those deposits.

Mr. ALLEN. I submit an amendment, intended to be proposed to Senate bill 453, which I should like to have read and lie on the table.

The amendment was read and ordered to lie on the table, as follows:

Amend by adding:

Provided further, That the bonds used as a basis for the notes issued under this act shall cease to draw interest during the time said notes, or any part thereof, are outstanding and unredeemed; and the issuance of said notes under this act shall be deemed and taken to be conclusive evidence that the owner of such bonds assents to this proviso; and

Provided further, That nothing in this act contained shall be so construed as to commit the Government to the policy of a permanent national debt, or to prevent the prompt payment of all outstanding interest-bearing obligations as fast as they mature.

PARITY OF GOLD AND SILVER.

Mr. BERRY. Mr. President, I desire to submit some remarks upon the joint resolution introduced by the Senator from Missouri [Mr. VEST] in regard to bimetallism. I ask that it be read.

The PRESIDING OFFICER. The joint resolution will be read by title.

The SECRETARY. A joint resolution (S. R. 4) to maintain the parity of gold and silver.

Mr. BERRY. Mr. President, I think there has never been a time in the history of this Government, except possibly that immediately preceding the war, when the action of the Congress of the United States was awaited with the same interest as that of the present Congress. There has never been a time when so many people of the United States centered their hopes upon the action of a legislative body. This interest is not confined to the cities, the great centers of trade, to the great business world, as it is called, but it extends to almost every workshop and every farmhouse throughout the Republic. It is not alone the banker, the railroad president, the owner of Government bonds, the dealer in stocks, and the merchants who are looking to Congress; but the mechanic and the tiller of the soil have an interest, if not so great in dollars and cents, equally important to them.

The evil effects of long years of Republican misrule are upon us, and the people look to this Congress for relief, when for the first time for more than a quarter of a century the Government is Democratic in all of its branches. It would not only be cruel, but it would be a great crime to disappoint these hopes if it is possible to avoid it, and it therefore devolves upon us to meet the great questions presented for our consideration without passion, and if possible without prejudice; without self-seeking, and with an earnest hope of reaching some conclusion which will give relief to the country.

It is not a time to seek to gratify individual ambition or to seek to gain party advantage; but if a fair and candid consideration of the causes which have produced this unfortunate condition will show that it is attributable to the wrongful action of one of the great political parties of the country, then that party should bear the responsibility, and no party and no individual should shrink from such investigation, or attempt to evade it.

If it has been through the unwise legislation of any party or the unwise leadership of any individual that this distress has been brought upon the country, then it is not safe to trust that party or that leader to relieve us of our difficulties.

The condition of to-day has long since been predicted. It has been asserted again and again upon the floor of this Senate and in the House of Representatives that if the policies of the Republican party were continued sooner or later evil would come. Business depression so universal and widespread as that which exists at present does not come as the sudden effect of one single act, but it comes from a certain defined policy.

A long series of legislative acts, all tending in one direction, all having the effect to foster and promote the interests of certain classes of our citizens engaged in certain pursuits, which have naturally and necessarily had the effect to depress and destroy other interests of other classes engaged in different pursuits, and finally the wrong and injustice so long perpetrated against the interests of the people of the Southern and Western sections of the Union have reacted, and the people of the East, as well as those of the South and West, are reaping the consequences of bad legislation intended to promote the special interests of one section.

The legislation of the General Government since the war has been such as to collect and concentrate the capital and the wealth of the country into one section only, and the time came when that capital and that wealth absolutely dominated the Republican party, and in every contest here between those who controlled that capital and the people at large that party was found upon the side of capital. It was this conviction, gradually forced upon the minds of the people, that had more to do with the Democratic victories of 1890 and 1892 than any other cause.

The injustice of tax laws which were gradually sapping the foundations of prosperity and depleting the resources of one section and building up immense fortunes in the hands of a few individuals, the constant attempts to contract the currency in the interest of creditors and those who owned the capital, and the reckless expenditure of the public moneys most conspicuously shown in the appropriation of nearly $200,000,000 annually for pensions, all tended to show that the Republican party was no longer the friend of the laboring classes, and the people swept them from power; but it was too late to escape the evil consequences of their wrongful acts.

That power so long held by the Republican party has come to the Democratic party, and it seems to me the best way to keep that power and to retain the confidence of the people is not to follow in the footsteps of our Republican predecessors, who have already been discredited, but to keep our pledges to the people, and look to the interests of the great body of our fellow-citizens, whose interests have been so long neglected, and not to seek to promote the special interests of those who were so long the beneficiaries of class legislation.

This extraordinary session was called by the President to pass laws relating to our currency. I believe it to be to the interest of the American people that whatever laws are passed should be permanent in their character, and not merely a temporary expedient. The simple repeal of the Sherman law will not settle permanently the laws of our currency. Permanent settlement can be had now as well as at some future time, and I am therefore in favor of including in the same act which repeals the Sherman law other provisions which will determine definitely our policy.

The Sherman law treats silver as a simple commodity and not as money. I therefore voted against it and am in favor of its repeal. To repeal it and put nothing in its place is to put us at once upon a gold basis. I am opposed to a single gold standard. I therefore favor a bill which repeals the Sherman act and at the same time provides for the coinage of both gold and silver in such way as will cause the two to circulate upon terms of equality, as we promised to do in the Democratic platform at Chicago.

I think it is almost universally agreed that the present law, the law of 1890, known as the Sherman act, is thoroughly bad. There are few if any Senators who will stand on this floor and defend that law. The author of it, the man whose name it bears, the Senator from Ohio himself, has said that it ought to be repealed. We all agree that it is a law which should never have been passed, and I am peculiarly gratified at the fact that not a single Democratic vote was cast for it, either in the Senate or the House of Representatives. In an evil hour for the country the free-silver Republicans parted company with their Democratic friends on this side of the Chamber, and consented to this law and the repeal of the Bland act.

While we are all agreed that the Sherman act should be repealed, we are not agreed as to what should take its place. The simple repeal, without other legislation, in my opinion places us at once upon a gold basis, gives us the single gold standard, prevents the future coinage of any silver, and, in fact, at once and forever practically destroys silver as a money, and will eventually place it upon a footing with lead, iron, tin, and other metals, as a simple commodity. This is the issue, and it can not be disguised. There is no issue upon the repeal of the Sherman act. All agree that it should not remain upon the statute books. But the real issue is, shall we hereafter have the single gold standard, or shall we have a double standard, of both gold and silver, as was clearly contemplated by the Constitution of the United States?

Mr. President, I for one believe in the double standard, and I am not willing to cast my vote for the single gold standard of money; and in this belief I am in full accord with all that the Democratic party has ever taught. From its first existence to the present day the Democratic party has uniformly and without a shadow of turning, insisted upon the use of both gold and silver as money, and has always been a party in favor of bimetallism; and no declaration can be found by any of its conventions, or of the actions of its members in Congress, which would in any way show that it was a gold or single standard party. I can not think that it is possible that this great party has totally changed its views within the short period of twelve months, upon a question of such vast importance, and which has been so thoroughly discussed and debated for so many years.

When the representatives of that party met in Chicago in July, 1892, they declared their position upon this question in the following words:

DEMOCRATIC PLANK.

We denounce the Republican legislation, known as the Sherman act of 1890, as a cowardly makeshift, fraught with possibilities of danger in the

future which should make all its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against metal, or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Now, in the face of this resolution, are we willing to-day to declare that this solemn declaration was a fraud and a mere pretense to catch votes? Does any Senator here to-day believe that when the convention met, if we had declared that when we repealed the Sherman act we would substitute nothing in its place, and that gold alone should be the standard and the only money to be coined, we could have elected a Democratic President, a majority of the House of Representatives, and a majority of this Senate? And if we could not, does any Senator believe that it is just and fair to juggle with the people in this way?

Will the people trust our promises again? Will not all the resolutions hereafter adopted in the conventions be regarded as farces, as promises to catch votes but not to be performed, if we, after deliberately declaring in favor of the double standard, come here and by the very first act of the Democratic Congress declare for the single gold standard? I do not know what views others may take of this, but it seems to me that it would be a violation of faith for which there could be no excuse, and that the party thus disregarding their solemn promise would, to a large extent, lose the confidence of the American people. We not only promised it upon the platform, but upon every rostrum throughout the United States.

Democratic Senators and Democratic Members and Democratic speakers declared that such was the fixed policy of the party, and they pointed to the platform made in Chicago as evidence of it; to the votes cast here and in the other House of Congress in favor of it; to the speeches of our great leaders, and to the letter of acceptance of our standard bearer, the candidate for President of the United States.

We pledged ourselves to the repeal of the Sherman act, and in the same clause and same section of the platform we pledged ourselves to bimetallism; and the pledge there made to repeal the Sherman law is not more binding than the pledge for the double standard, to give both gold and silver equal rights and chances under the law. And all that we ask to-day is that you who are members of the same party as we keep the promises in their letter and their spirit. We are ready to vote for the repeal of the act, but the same law that accomplishes this repeal should also carry out the other promises. The one promise is not more binding than the other. To repeal the Sherman law and put nothing in its place is to keep only a part of the pledge, and to make it impossible that the other part can ever be redeemed.

We who believe that the adoption of the single gold standard would be ruinous to the best interests of the country; we who as members of the Democratic party contributed our part toward the great victory of 1892, ask you as members of the same organization to carry out, not a part of the platform on the question of the currency, but to give full force and effect to all that we jointly promised. It is not a compliance with it to say that we will repeal the Sherman law now and at some time in the remote future, when we can get other nations to agree to it, that we will then vote for a double standard.

This, Mr. President, as I see, without meaning to be offensive to any man, would be an effort to avoid responsibility, and those who attempt it underrate the intelligence of the American people. We all know that under the present condition of affairs, unless the same act which repeals the Sherman law provides for the coinage of silver on some terms, silver as a money is doomed forever, and gold alone will be the money of the United States.

This, Mr. President, is a great issue with which we are confronted. We fully realize the tremendous power of those who are arrayed against us. We know that for a long series of years the owners of Government bonds, the owners of State, county, and municipal bonds and individual bonds, those who have fixed incomes, those who own the principal wealth of the country, have fought for this end—that is, to destroy silver and make gold the one standard of value. They have denied it in the past; they boldly avow it to-day. They have pursued this course with an energy and perseverance worthy of a better cause; and no sentiment of compassion, no sympathy for those whose fortunes would be ruined or for those whose productions would be so largely decreased in value has ever restrained them or caused them to halt or hesitate in the pursuit of a purpose which they believe will largely increase the wealth they already have. They were temporarily successful in 1873, when they stopped the coinage of silver.

But when the people came to fully understand the situation, they became aroused, and in 1878, but for the skillful management of the enemies of silver in the Senate of the United States, the law which had existed for so many years prior to 1873 would have been restored to the statute book. But as it was, it resulted in the passage of what is known as the Bland-Allison bill, a compromise measure which partially, but not fully, restored silver to its original position.

Again in 1890, when the majority of the people demanded the free coinage of silver, its enemies succeeded in thwarting the public will in the passage of the Sherman law, and now, when its evil effects are seen, the very men who are responsible for it take advantage of the disaster entailed by their own act, and, with an assurance that I have never seen equaled, come forward and ask that they shall be granted all that they demand, because of the evil effects of their own law, and which was so strongly opposed by every Democrat on this floor.

Mr. President, I think it may be well to refer to the RECORD to show some of the acts of Congress which have been passed since the close of the war in regard to our currency. These records have been recited before, but they can not be recited too often, and perhaps at this time, when the people are studying and looking to this subject as they never looked before, their repetition may arouse the people to a sense of their danger, and thereby induce them to hold up the hands of all who are here, determined, come what may, to resist at all costs this attempt to destroy the money of our fathers and to force upon us a measure that will still further impoverish the great agricultural States of this Union.

In 1869 the outstanding principal of the Government debt was more than $2,600,000,000. The principal of this debt was clearly payable in legal-tender notes. The bonds issued stated that it was only the interest that was payable in coin while the principal of the bonds was payable in legal-tender notes, commonly called "greenbacks." This no one could deny. The holders of these bonds had purchased them with greenbacks when greenbacks were worth 50 cents on the dollar as compared with gold and silver.

Then the holders of these bonds came to Congress and asked that they be paid in coin, legal-tender notes then being worth 66 cents on the dollar, giving as their reason why an act so unjust on its very face should be passed by Congress, that such an act would tend to preserve the public credit. And Congress, then controlled in both branches by the Republican party, yielded to this exorbitant and unreasonable demand, and over the protest of every Democrat in the Senate acceded to this proposition, and on the 14th of July, 1870, passed a law refunding the debt and making the new bonds payable in coin, and these bonds were exempt from taxation of all kinds.

The following will show the character of the new bond:

Extract from face of United States 4 per cent. bond:

"This bond is issued in accordance with the provisions of an act of Congress entitled 'An act to authorize the refunding of the national debt,' approved July 14, 1870, amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States after the 1st day of July, A. D. 1907, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof at the rate of 4 per cent per annum, payable quarterly on the 1st day of October, January, April, and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority."

It will be seen by this that they were not payable in gold, but in coin, either gold or silver of the present weight and fineness, at the option of the Government of the United States. It would seem that this ought to have been sufficient to have satisfied the avarice of the ordinary man. They had secured the passage of a law giving them a coin bond worth a hundred cents on the dollar in lieu of a bond payable in legal-tender notes worth 66 cents on the dollar, and which they had purchased with legal-tender notes worth 50 cents on the dollar.

But they were not content, and they conceived the idea that if they could destroy silver, stop its coinage, and destroy one-half of the money of the United States, they would thereby reduce by one-half the money in which the bonds were payable, and necessarily the remaining money would appreciate in value to such an extent that its purchasing power would be largely increased and the value of their bonds greatly enhanced. It mattered nothing to them that the result would be to force down the price of all farm products. It mattered not to them that every debtor would be compelled to double his labor in order to meet his obligations.

Disregarding all these considerations, they secured the passage of the act of 1873 stopping the coinage of silver. Whether it was done secretly, as has been charged, or openly, the evil effects were the same, a general distress following its passage.

When the people came to understand the situation and fully realize the wrong and injustice practiced upon them, unorganized as they were, they rallied in such force as to elect a Demo-

cratic House of Representatives, which in 1878 passed a bill restoring the law and providing for the free and unlimited coinage of silver.

But when the bill came to the Senate, under the skillful leadership of the Senator from Iowa [Mr. ALLISON] they succeeded in amending the House bill, and finally the Bland-Allison bill became a law over the veto of President Hayes. It provided for the coinage of not less than two millions of silver dollars per month. The holders of the bonds submitted, and even consented, for the time being, to the passage of this modified act, because they knew it was the only way to defeat the restoration of the law that stood until 1873. But they were not content, and in 1885 they made an effort to repeal the Bland act, but failed.

In 1890 the friends of the people, the friends of free coinage, made a strong effort to restore silver to the position it occupied before the passage of the act of 1873, but they were again defeated by the passage of what was called a compromise measure, the Sherman bill, but for which no Democrat cast his vote. This was not the law of the friends of free silver, and while some of the free-silver Republicans cast their vote for it, yet it was peculiarly and especially the product of the enemies of free silver. This law is so thoroughly bad that the President has been compelled to call us together to repeal it.

But the same act that takes it from the statute book should also provide for the free coinage of both gold and silver in such a way that will cause them both to circulate upon terms of equality. Those who are trying to establish a single gold standard take advantage of the odious character of the Sherman law and try to make it appear that the issue is upon its repeal. But this is not the issue. The issue is, shall we have hereafter a single or a double standard? We say the law was bad when it was passed. We say that it is bad now. We said it ought not to pass; and we say it ought to be repealed. You now agree with us that you were wrong when you passed it, and you agree with us that it ought to be repealed; but you say in lieu of it you want a single gold standard.

We say we want a double standard, both gold and silver, as was provided by the Constitution of the country. Try to disguise it as you may, it is an issue between creditors on one side and debtors on the other; between owners of stocks and bonds on the one hand, and the producers of the country on the other; between those who desire a limited and contracted currency and those who believe in sufficient money to do the business of the country. It is an issue between those whose interest it is to have cheap farm products, and those whose interest it is to secure the largest price for wheat, and corn, and cotton, and other products of the agricultural States.

All outstanding contracts, all obligations of the Government and of individuals, unless it is specifically provided otherwise, are payable in either gold or silver, at the option of the debtor, and it is false to say that it is either dishonest or a repudiation to pay them as the contract provides. It is decidedly dishonest to strike down and stop the coinage of one of these metals, and thereby force the debtor to pay gold only, when he has the right by the terms of his contract to pay in either gold or silver.

It is absolutely certain that, if you make gold the only money, the value of the obligations of all bonds, of all evidences of indebtedness, will be largely increased; and it is equally certain to my mind that all farm products will be still further depreciated in value. How any man residing in an agricultural State, unless he be a banker or a bondholder, can favor a single gold standard is to me utterly incomprehensible.

The PRESIDING OFFICER. The Senator from Arkansas will suspend. The hour of 2 o'clock having arrived, it is the duty of the Chair to lay before the Senate the unfinished business.

The SECRETARY. A resolution providing that Lee Mantle be admitted to a seat in the Senate from the State of Montana.

The PRESIDING OFFICER. On this resolution the Senator from Florida [Mr. PASCO] is entitled to the floor.

Mr. PASCO. I ask that the pending resolution be temporarily laid aside until the Senator from Arkansas has concluded his speech.

Mr. CHANDLER. It is understood that that will be done by unanimous consent.

Mr. PASCO. I ask unanimous consent.

The PRESIDING OFFICER. The Chair hears no objection, and the Senator from Arkansas will proceed.

Mr. BERRY. When our population was far less than it is at present, when the business of the country and the exchange of products was far less than it is now, it required all the gold and all the silver that could be procured from the mines of the earth to do the business of the people, and no one ever complained that we had too much of either of the precious metals.

It is admitted that the population and the business of the country have increased more rapidly than the production of either gold or silver; yet you say it required then both gold and silver, while gold alone is sufficient now, notwithstanding the increased population and the increased business. It required both then, and is it possible one alone is sufficient now? But we are told that 95 per cent of the business of the country is done on paper—bank checks. If this be true, this paper, these bank checks, are based upon gold and silver.

Take away the gold and silver, and the paper—the bank checks—is worthless. It is only good because it is based upon and is redeemable in gold or silver. If this is not true, if the bank checks and paper are sufficient in themselves, if they are money, then you admit the theory of our fiat-money friends and both gold and silver are useless as money, because paper is far more convenient than either of them.

So, Mr. President, you can argue the question as you will, you can cover the pages of the RECORD with statistics showing the amount and value of gold and silver at different periods in the history of the world, you can give many theories as to why different nations have adopted the one standard or the other, or both, but after all it comes back to this: that the people residing in the Eastern States who have, under the operation of unjust tax laws, accumulated vast fortunes, who have been enabled to collect into the hands of comparative few individuals the great bulk of the wealth of the country, and who have invested this money in Government bonds, in State, county, railroad, and municipal bonds, who have loaned this money to the farmers of the West and the planters of the South at ruinous rates of interest, are anxious to double their wealth and the value of their securities and holdings.

Mr. MCPHERSON. Would it interrupt the Senator from Arkansas if I should ask him a question?

Mr. BERRY. Not at all.

Mr. MCPHERSON. I have heard it often stated in this Chamber, and I have heard it repeated to-day by the distinguished Senator from Arkansas with emphasis, that the purpose os this proposed legislation, to wit, the repeal of the Sherman law (as I suppose that is the measure to which he refers), is to do away with the silver money of this country, putting us entirely upon a gold basis with a gold currency. Will the honorable Senator tell me where he has ever heard a declaration, either in this Chamber or out of it, in which there was any disposition shown on the part of those who think as I think to do away with one dollar of the silver circulation to-day in this country, amounting to some $650,000,000? The object is to maintain it; and speaking for myself——

Mr. BERRY. I yielded for a question; not for a speech.

Mr. MCPHERSON. Very well. I wish to know, then, where the Senator has ever heard the utterance, either in this Chamber or elsewhere, of any such disposition as he avows?

Mr. BERRY. I assert, in answer to the Senator from New Jersey, as I have already said, that there are men who will vote for unconditional repeal who do not believe in the single gold standard, but I said that such would be the effect of the act that it would stop the coinage of silver; that it would discredit it; that it would have the effect throughout the civilized world to show that one of the greatest nations no longer wants to recognize silver as one of the metals.

I tell the Senator he can find it in Republican papers of the East, many of them, and if I am not mistaken he will find it in speeches in the RECORD, not made in the Senate, where the speakers announced that they were in favor of selling the silver bullion as a commodity and eventually disposing of even the silver dollars now in circulation. I say to the Senator that of course the simple repeal would leave the silver money now in circulation as part of the money, but I have asserted that eventually the effect of such an act would be to put us on a direct gold standard, and I repeat it to-day.

As I was saying when I was interrupted, in speaking of those who said it was to increase the value of their securities, they come to the Congress of the United States and say, while it is true that we agreed to accept either gold or silver in payment of our debts, at the option of the debtor, yet we ask you to stop the coinage of silver, to use the power intrusted to you for the benefit of all, to force our debtors to pay in gold alone. They ask this when they well know that all gold will necessarily become more valuable.

The Senator from New Jersey himself can not deny that if we stop the coinage altogether of one of these metals the other metal will necessarily appreciate in value and purchase more of the products of this country than it would if we coined both gold and silver.

They ask it when they know it will be far more difficult for their debtors to meet their obligations, when they know it will largely decrease the price and thereby largely increase the amount of all farm products required to meet these obligations in this more valuable metal. And the only reason they give for asking it is, that foreign nations demand it; and that by reason

of unwise laws heretofore passed at their bidding, confidence has been destroyed and the people no longer trust the banks, and they ask it with the more assurance because they have never made a demand of a Republican Congress that has not been acceded to, and they hope a Democratic Congress will be equally accommodating.

Mr. President, the monstrous injustice of this scheme is such that it seems to me that it would only require to be stated in order that it might be defeated. But in every paper, in all resolutions passed by boards of exchange, boards of trade, and by bankers' conventions, we are told that it would be dishonest to pay these debts in a depreciated silver dollar. In the first place, the silver dollar is not depreciated. It is as good to-day as a gold dollar and passes everywhere for its full value.

But suppose it were depreciated, how can it be dishonest to pay according to the terms of the contract? The contract says that the debtor may pay in either gold or silver, at his option, and I assert that there can be no dishonesty in forcing the creditors to stand by the contracts. If one of our citizens agrees to pay his neighbor so many bushels of wheat or corn at a stated period, and at the option of the debtor to pay in either wheat or corn as he might choose, if, when the time comes, wheat is high and corn is low, does any man call it dishonest to pay in the cheaper product?

It can not be because that was the agreement, and the creditor took the risk when he made the contract. And so, when these creditors of the Government, and of individuals, agreed to accept either gold or silver at the option of the debtor, they took the risk and they can not complain that they are not paid as the contract provided they should be. If they had the option does any man doubt that they would demand the most valuable metal, and could anyone call them dishonest for so doing?

It is the creditors, the holders of these securities, who are seeking to repudiate their obligations and ask the Congress of the United States to aid them in forcing those who are already overburdened to pay more than they promised to pay. Hence it is, Mr. President, that all the publications, all the resolutions, all the letters with which our mails have been flooded for the last few months, asking for the gold standard only, come from those who hold these obligations, come from those who own the capital of the country, and not one from a farmers' organization or a laborers' union.

Men instinctively know where their interests are, and the profound solicitude of those who demand a single gold standard for the benefit of the laborer and the producer, who they say would be most benefited, deceives no one. The same cry was raised in 1869, when they secured the coin bond in lieu of the greenback bond; the same cry has been urged from year to year in support of tariff laws, which have constantly robbed the laborer and the farmer; the same cry was put forth in support of the act of 1873, and the history of the world shows that whenever capital has sought legislative aid in its unjust schemes; and whenever it has attempted to rob the laborer of the just rewards of his toil it has been done under cover of well-laid schemes of professed solicitude for the laborer—the producer.

But, Mr. President, these are not the only objects sought by those who advocate the single gold standard. Behind these, already avowed by some and will soon be openly advocated by others, stands the scheme to force the Government to issue additional bonds, and, of course, with such bonds comes the chance of large speculations.

We all remember a few months ago what a pressure was brought to bear upon the Secretary of the Treasury to issue additional bonds. If such bonds could be secured the national banks might be indefinitely continued. And those who were pressing the Secretary to issue these bonds were so eager for gain that they well nigh produced a panic throughout the country, regardless of the injury and suffering which would come thereby.

If the gold standard be established as the only money of the country, who can assure us that the next move will not be to retire our greenback circulation and thereby give the national banks absolute control of our paper circulation? By a combined effort of the banks of the country, they can collect together and demand a redemption of a sufficient amount of legal-tender notes in gold to force the Secretary of the Treasury to sell bonds and procure the gold. He will have no choice in the matter and they will be absolute masters of the situation.

The only restraint they have upon them now is the power of the Secretary to pay silver at the option of the Government, and if the Secretary of the Treasury had exercised that power a few months ago in the payment of Treasury certificates issued for the purchase of silver bullion, as so many of his friends throughout the West and South hoped he would do, I firmly believe that the attempt to repudiate the promises of the Chicago platform and force us to a gold standard would have been speedily abandoned.

Repeal this law, Mr. President, and put nothing in its place, as you say you desire to do, and thereby place us upon a single gold standard, and what will be the result? We all know that there is not sufficient gold in the world to do the business of the entire world. Mr. Rothwell, special agent of the Eleventh United States Census, on gold and silver, says, in a recent publication, that the Director of the United States Mint estimates that the business of the world is carried on with $3,632,605,000 in gold and $4,000,000,000 in silver, and that 67 per cent of the population do their business on a silver standard and the rest of the world use both gold and silver.

Let the conviction once become general that silver has to be destroyed, and the action of this Government in adopting a gold standard would largely increase that belief, and what would be the consequences? There would at once commence a general scramble for gold. Each nation would seek to increase its gold reserve, and in their eagerness to obtain it its value would increase enormously, and it would force a universal reduction of wages, and no man can calculate or estimate the suffering and distress that would result from this universal derangement of business and decrease of values. Farm products would fall lower and still lower in price, and it would be impossible to meet the existing obligations in a money so largely increased in value, and universal bankruptcy would follow. And can any man who loves his country and sympathizes with his people look without fear and apprehension upon any bill which promises to be the means of destroying one-half of the money of the world and to still further lower the price of the products upon which our people are dependent to meet their obligations and to retain their homes?

But we are told that while the double standard is right, yet we can not adopt it, for the reason that European nations will never consent to it, that we are not strong enough within ourselves to regulate and direct the character of currency necessary to do the business of the people; that the principal European nations have the gold standard, and therefore we must also have the gold standard. Our forefathers did not so think.

Mr. President, I have no doubt that away back in the days of 1776 many men were found who argued that while a republican form of government was best, yet most European governments had kings for rulers, and we therefore must have a king also. If such argument had prevailed our Republic would not have existed. If Europe is to dictate our financial policy, then the declaration of Mr. Jefferson, that these were free and independent States, is not a true declaration. If we are to wait for Europe to act, if we can do nothing without her consent, then we are not an independent people, but the slaves and dependents of a foreign power. It seems to me we ought to adopt a policy for ourselves and provide that which we think best for our own people, without regard to foreign governments.

We have been told often recently by the Republican press, and doubtless will be told again by Republican Senators, that we should follow in the footsteps of England. They point to England as a guide in this matter, and say that England, by the adoption of the single gold standard, has brought universal prosperity upon her people; yet these same Senators have stood upon this floor within a few years and pictured the inhabitants of England as being in the most deplorable and distressed condition of any people upon the globe, and attributed the poverty of the people of England to her policy of free trade.

When they desire to increase the wealth of the East at the expense of the South and West by unjust tax laws, then they point to the people of England as being in such a helpless and depressed condition as to excite the sympathy of all mankind; but when they seek to rob the South and West by a contraction of the currency, then they point to England as a model of prosperity and a country whose example we ought to follow.

Mr. President, it is the prosperity of the people of the forty-four States of the Union in which I feel the most interest, and it is the distress of the people of the South and West that excites my greatest sympathy. It is for the American people that we are here to make the laws, and I believe this Republic is strong enough to define its own policy and make its own laws without submitting to the dictation of any other power or government.

I have not gone, Mr. President, into statistics at any length to show the use in the different nations of gold and silver, to show the rate of increase as to population, the increase of the business of the American States, nor have I produced figures to show that this increase of population and this increase of business has been far greater than the increase in the production of gold and silver; but this fact is admitted and will not be denied by anyone. Nor have I thought it necessary to show the various prices of cotton, of wheat, of almost every other farm product, getting lower and lower year by year, and dating their fall with the date of unfriendly legislation to silver, attributable, as I believe, in a large measure, to the high tariff and contracted currency.

My reasons for not collecting these figures are that my experience here has taught me that men can juggle with statistics and figures to prove almost any proposition they may desire, and that there is no surer way of confusing and misleading than a long array of figures, often untrue and incorrect. But there are certain great facts that all the world knows and no man ought to dispute; and it is upon these facts that I rest my cause. One of these is, that to destroy one-half of the money in the country will enhance the value of and increase the purchasing power of the remaining half.

Another fact is, to force men to pay their debts in gold alone when that gold has been by unfriendly legislation to silver largely increased in value, when they have agreed to pay in either gold or silver, is legalized robbery. Mr. Beck said in a speech delivered in this body in 1885, and I have never heard it denied, that—

> There is not an outstanding obligation of the United States or of any State, municipality, corporation, or individual, which can not be legally and acceptably discharged by payment of the present standard silver dollar.

Another fact is, that the contraction of the currency, a reduction in the circulating medium, will reduce the price of every farm product throughout the agricultural States.

Another fact is, that if it required both gold and silver to do the business of the country while we had a limited population, and much less business than now, then there is not sufficient gold alone to do that business when both the business and population have increased vastly.

It is upon these propositions that I stand, and if they be true, then the adoption of the single gold standard would be a crime and would result in the most disastrous consequences to the people.

I regret, Mr. President, to differ with some of my Democratic friends upon this question. I believe in the Democratic party, and have followed it with the same faith and devotion that our blind chaplain has followed his God; and whatever may be its acts, as a party, it will receive my loyal support, and I will rally under its banner as long as it floats, as I believe it is founded upon the true principles of free government; and in taking the position I do here to-day, and in voting to substitute in the place of the Sherman law a bill which will provide for the coinage of both gold and silver I know that I am in the exact line with the Democratic platform passed at Chicago in 1892, and upon which we elected the President and both Houses of Congress.

I believe that the President of the United States is a man of the highest, and most patriotic purpose; a man of great ability, thoroughly honest, and absolutely fearless in the expression of his opinions. He has often declared in favor of bimetallism. He stated it in his letter of acceptance, when he was nominated at Chicago, and was elected on that promise; and I am confident, notwithstanding his failure to discuss bimetallism in his message, that he will approve any bill which both repeals the Sherman law and provides for the circulation of both gold and silver, on such terms as will give them equal value.

Give us a chance to try our plan. You have tried yours, first in 1873 and again in 1890—by passing in 1873 a law which demonetized silver, and by passing the Sherman law in 1890. Both have proven disastrous failures. You have by these and other laws in the interest of wealth and capital well-nigh ruined the country. Let us try our plan. It is not a new or unheard-of plan. It was in force in this Republic for more than three-quarters of a century. It worked well then, and prosperity prevailed; why can not it work for the interest and welfare of the people to-day? Give us both gold and silver free coinage; give both an equal chance before the mints. If they will not circulate upon terms of equality at the present ratio of 16 to 1, then we can change the ratio.

I am not wedded to any particular ratio, but I believe at the present ratio every dollar coined would be as good as a gold dollar. I ask that we do as we promised the people when they gave us power, that we will give each of these metals an equal chance at some ratio, and I believe in good faith that we should keep these promises. It is not fair to obtain the votes of the people by definite and specific promises and then violate the promise. As I before stated, I regret that the Democratic party can not present a united front upon this question, and I regret that some of my Democratic associates have different views from my own, but my first duty is to the people of my State, whose commission I hold and whose agent I am; and, believing as I do that their interests will be promoted by the adoption of a double standard, I shall so vote.

The low price of cotton, so long continued, has forced many of the people of the South to borrow money and to mortgage their farms for its payment. To compel them to meet these obligations in gold alone, and pass a law that would further depreciate the value of their cotton, which is their sole dependence, is equivalent to an act of confiscation of their homes. It will be in the changed condition of affairs an impossibility for them to meet their obligations, and the representative from the South who votes for the gold standard assumes the responsibility, as I believe, of forcing the sale of the homestead of many of his constituents—of forcing from the place of his birth the man whose ancestors had occupied it for a hundred years—of forcing him to part with his home, with all its traditions and associations so dear to his heart, and see it pass into the hands of a stranger from another land.

This, Mr. President, I can not do, let the consequences be what they may. The saddest thing to me since the war has been to witness the hopeless struggle of the planter of the South, contending often against floods and the various causes which bring destruction to his crops, but above all weighed down and handicapped by unjust laws, which force the price of his cotton lower and lower, and even below the cost of production, yet manfully contending for the traditions of his fathers, fighting against overwhelming odds and against fate, as it were, to retain the home of his ancestors.

If I should desert him now and violate a promise so often given, and should cast a vote that I believe would add to his burden and make his contest more difficult, as I earnestly believe a vote for the single gold standard would do, I would feel that I had done a deed almost as dishonorable as though I had deserted the flag under which I had enlisted when the tide of battle pressed hardest against it.

Mr. PASCO. Mr. President, I will take the floor on the resolution reported from the Committee on Privileges and Elections in relation to the Montana contested-election case, and then give way to the Senator from New Hampshire [Mr. GALLINGER], who, I understand, desires to make some remarks upon the resolution offered by the Senator from Massachusetts [Mr. LODGE], which was under discussion yesterday. I do this with the consent of the Senator who has the matter in charge.

PROPOSED FINANCIAL LEGISLATION.

Mr. GALLINGER. I ask that the resolution of the Senator from Massachusetts [Mr. LODGE] and the amendment proposed by myself may be reported.

The PRESIDING OFFICER. The Senator from New Hampshire asks that the regular order be informally laid aside for the purpose of taking up a resolution, which will be read.

The Secretary read the resolution submitted by Mr. LODGE August 8, 1893, as follows:

> Whereas Congress has been called in extraordinary session on account of the unfortunate condition of business: and
>
> Whereas some measure of relief can be obtained by the immediate and unconditional repeal of the purchasing clauses of the silver act of 1890: Therefore
>
> *Resolved*, That the Committee on Finance be instructed to report at once to the Senate a bill to repeal the purchasing clauses of the silver act of 1890, and that a vote be taken in the Senate on said bill on Tuesday, August 22, at 2 o'clock p. m., unless it is sooner reached.

Mr. GALLINGER. Now, let my proposed amendment be read.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. It is proposed to add to the resolution the following:

> And that said committee be also directed to report to the Senate that in its opinion it is inexpedient and unwise for Congress to attempt to radically change the existing tariff laws of the United States prior to March 4, 1897.

Mr. GALLINGER. Mr. President, in common with the junior Senator from Massachusetts, and New England Republicans generally, I favor the repeal of section 1 of the so-called Sherman silver law, and am ready to vote for it at the earliest possible moment. But I do not agree with the Senator that this much-abused law is largely responsible for existing financial evils. I admit that the repeal of the purchasing clause of this statute will undoubtedly do something toward restoring confidence abroad in our financial system, and that as a result we will be benefited by an increased demand for our securities in foreign countries, for which we shall receive gold in exchange.

I do not pretend to special knowledge of the financial question; but after reading innumerable so-called "solutions" of the problem, and listening to the able speeches already delivered on both sides of this Chamber, I am irresistibly led to the conclusion that one might as well attempt to cure bunions with sweetened water as to expect that the repeal of the purchasing clause of the Sherman silver law will entirely remove the existing financial stringency.

Recalling the strong words uttered against introducing political arguments into this discussion, I nevertheless propose to speak plainly what I believe, whether it be political or otherwise, and whether it pleases or displeases my associates on either side of this Chamber.

And in this connection it should not be forgotten that the political gauntlet was thrown down by the President himself, when he charged that the business and monetary disturbances of the country are due to unwise laws enacted by the Republican party.

I believe, Mr. President, that the Sherman silver law has infinitely less to do with business depression to-day than the anticipated onslaught of the party in power on the McKinley tariff law. A prominent newspaper in my State has well said:

Of all the senseless theories ever projected by a desperate party to account for hard times the one now advanced by the Democracy, that banks are suspending, factories closing, merchants failing, and business generally is being paralyzed simply because the Government is adding to the circulating medium of the country four or five million just such coins as have been in use for fifteen years, and are now eagerly taken by everybody at their face value, is the silliest. Hard times are upon us. Harder times than the American people have seen or dreaded since 1857, and they grow harder every day. They are hard and are growing harder because a party which has declared "war to the death upon the protected industries of the country" is in undisputed control of the legislative and executive branches of the Government. They will grow no better until it is certain that this party can be turned from its purpose or forced to stay its hand; until it is settled that the protective tariff is not to be smashed.

It is a singular circumstance that in the history of the country the cry of distress is always uttered by a Democratic President. No Republican President ever found it necessary to tell the people of this country that its monetary and business interests were in a deplorable condition. True, we had something of a panic in 1873, due to overspeculation and the investment of fabulous sums of money in railroad construction, but that was of small account to the industrial interests of the country as compared to the present alarming state of things. In 1857 a like disaster to the present one overtook the country, and the similarity of language then used by a Democratic President to that of the present Chief Executive is strikingly instructive, even to the extent of suggesting plagiarism. Look at the deadly parallel:

BUCHANAN, DECEMBER, 1857.

The earth has yielded her fruits abundantly; our great staples command high prices, and up till within a brief period our mineral, manufacturing, and mechanical occupations have largely partaken of the general prosperity. We have possessed all the elements of material wealth in rich abundance, yet, notwithstanding these advantages, our country in its monetary interests is at present in a deplorable condition.

In the midst of unsurpassed plenty, we find our manufactures suspended, our public works retarded, our private enterprises abandoned, and thousands of useful laborers thrown out of employment and reduced to want. Under these circumstances a loan may be required before the close of your present session, but this, although deeply to be regretted, would prove to be only a slight misfortune when compared with the suffering and distress prevailing among our people.

CLEVELAND, AUGUST, 1893.

With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that securities they offer for loans, though heretofore satisfactory, are no longer accepted.

Values supposed to be fixed are fast becoming conjectural, and loss and failure have involved every branch of business.

Mr. President, it is well understood that when the last Democratic national platform was constructed the party did not expect to come in possession of all departments of the Government. They hoped for the election of their candidate for President, and expected to carry the popular branch of Congress; but they had no expectation that the Senate would be Democratic. Under that condition of things they made a declaration which they did not themselves believe, expecting to be able to hide behind a wicked Republican Senate, and lay upon that body the blame for failure to legislate on the tariff. Why, Mr. President, if the Democratic party really believe what their platform declared—if a Democratic President and Democratic Senators really believe it—what a spectacle it is for them to allow an unconstitutional law to remain on the statute books for over five months of Democratic ascendancy without an effort to repeal it!

The fact is they do not believe that high tariff laws are unconstitutional; for they know that the Supreme Court of the United States has repeatedly affirmed the constitutionality of such legislation.

My amendment gives the Democratic party an opportunity to escape from their own folly. It puts off tariff legislation until 1897, when the Republican party will again be in power, the only party that has shown a capacity to deal with great economic questions in this country.

Mr. President, we had prosperity for nearly three years under the Sherman silver law, during which time we had a Republican President and a Republican Senate.

But the Democratic party wanted a "change." They induced the laboring men of the country to vote with them, and the change came. It came on the distinct issue that the existing tariff law is a fraud and unconstitutional.

Then came unrest on the part of business men and manufacturers. They were confronted by this astounding Democratic platform upon which the country had been carried. Business operations were curtailed; capital, always timid, began to hide; manufacturers became alarmed, and the small investors clamored for their money. The result is known to all men.

This is a currency panic, not due to a scarcity of money in the country, but due to hoarding, principally as a result of apprehension that the business of the country will be harmed by a repeal of the tariff laws now on the statute books.

Mr. President, the manufacturers of New England are to-day in actual distress, as the junior Senator from Massachusetts has truthfully depicted.

In the last Congress, the Senator from Missouri [Mr. VEST] grew eloquent over a report that reached his ears that the Middlesex mills in Massachusetts had paid a 36 per cent dividend. Of course no such dividend had ever been paid, but it did service in the campaign which followed. To-day, instead of the mills of Massachusetts or of New Hampshire paying 36 per cent or 6 per cent dividends, their doors are closed, their spindles are idle, and there must be some reason for this outside of the silver legislation of the Republican party.

Let me call the attention of the Senate to three object lessons that came to my attention only a few days before I left my home. In the city of Nashua, N. H., is one of the largest boot and shoe manufacturing establishments in the country. It employs almost 1,000 men, and for the months of June and July the books of that establishment show that over $450,000 worth of manufactured goods were sent away and less than $40,000 in cash was returned to that establishment. Does any sane man believe that this condition of things is due to the silver legislation of any party in this country?

Another object lesson is to be found in the great Amoskeag corporation, in the city of Manchester, N. H., employing thousands of men, the largest cotton-manufacturing establishment, I believe, in the entire country. To day, for the first time in its history, the doors of that great manufacturing establishment are closed and every spindle in it is silent.

Mr. PEFFER. Will the Senator permit me to ask him a question for information?

Mr. GALLINGER. With pleasure.

Mr. PEFFER. I ask as to when the particular establishment to which the Senator has just referred was organized and began business? Along in the fifties, was it not?

Mr. GALLINGER. About that time, as I remember.

Mr. PEFFER. How did that establishment manage to get along under the tariff of 1857?

Mr. GALLINGER. I have only this to say, that they did manage to get along under the tariff of 1857, but they were not so prosperous at that time as they have been of late years, and besides, they did not pay one-half the wages under the low tariff of 1857 that they have paid under the Morrill and the McKinley tariff laws. They managed to get along during the troublous times of 1873 without closing their doors, but to-day, for the first time in their history, their doors are closed and their spindles are silent. How long that condition of things will continue I do not know, but I do know that absolute alarm pervades the manufacturing circles of New England to-day, and that they are very fearful that disasters, such as language would be inadequate to portray, are going to overtake the manufacturing industries of that portion of our country.

Now, Mr. President, does anybody suppose that the wholesale dry goods houses are refusing to buy Amoskeag ginghams because they are afraid that when the bills come due they will be allowed to pay them in dollars worth only 60 cents? Is it strange that people do not buy Amoskeag ginghams for future use when the great Democratic party is pledged to practically abolish the duty on them, and open the home market to the stocks that have been accumulating in England since the passage of the McKinley bill?

Is it any wonder that manufacturers hesitate about piling up goods which they may be obliged to sell in free competition with those produced abroad by labor costing only two-thirds what they pay for it here? What is there strange about that, and how will the repeal of the Sherman law help out that condition of things?

Is there anything mysterious in the fact that with an avowed bitter and all-powerful enemy of every protected industry in the White House, and with both Houses of Congress pledged to carry out his destructive purposes, capital goes into hiding, industry ceases, and bankruptcy runs riot through the country? I discover nothing mysterious in this matter. It is the logical outcome of the triumph of a party pledged to the destruction of high protection in this country.

The third object lesson that came to my attention was the fact that the Antrim cutlery establishment in my State, a large manufacturing industry employing several hundred hands, that has built up one of the most beautiful villages in New England and has given steady employment and high wages to an intelligent community, has recently closed its doors for three or four days each week for the first time in its history. Almost at the very moment when that establishment was closing its doors the consul of the United States, Benjamin Folsom, a cousin of the President of the

United States, was making a speech to the operatives in cutlery in the city of Sheffield, in England. What did that officer of the United States, a cousin of the President of the United States, say to the men who are making cutlery in competition with the cutlery manufacturers in this country? Among other things he said to them:

There are many things I should like to say. There are two or three practical things I can say to you which are of more importance than any résumé of our history. England's greatest customer has been the United States; and, in spite of tariffs that have been raised against foreign countries, there is, and must continue to be, a great and gigantic trade flowing from England to America.

And as Mr. Folsom uttered those sentiments to that great meeting, being about to take his leave as consul to Sheffield, his English hearers admiringly cried out, "Hear! Hear!"

You have passed——

Mr. Folsom said—

the worst period; you have crossed the highest barrier that can be raised between the United States and England in the way of trade obstruction. [Applause.] I will tell you why this is. For the first time since the year 1860 the Democratic party, which has been the party of free trade, is for the first time in power, not only in the executive, but in both its legislative branches. [Applause.] During the former term of Mr. Cleveland he was blocked by the Senate standing between him and the House of Representatives, which was Democratic, and therefore no bill could be passed which was not in the shape of a compromise. When the struggle came on for the Presidential election last year the Democratic party, for the first time in its history, took fair and square ground, and made a straight out-and-out issue between protection and tariff for revenue only. [Hear, hear.]
